- He alleged that the smallest children of arriving prisoners were yanked from their parents' arms and thrown on a big pile of 40 or 45 infants. Those on the bottom of the heap are said to have been crushed and smothered. From there, he said, the infants were tossed in a lorry and then thrown alive into roaring crematorium furnaces.
- He says that arriving children became so desperate on the ramp because of the brutality of the SS people that they hugged the legs of the SS men and were then shot by them.

L: Panicky children hugging the legs of someone of whom they are deathly afraid?

R: Here is a scene described by Röger that is a downright classic (cf. Rudolf 2003h, p. 354f.):

"After the arrival of another prisoner transport in Auschwitz II B o g e r took one of the babies that lay on the floor, unwrapped it from its diapers, so that it was completely naked, took it by the legs and hit it by the head against the iron edge of the goods car, at first lightly and then with much greater force, until the head was completely squashed. Then he twisted around the arms and legs of the already dead child and threw it to the side."

L: That sounds like the incubator lie invented by Hill and Knowlton to convince the United Nations to go to war against Iraq in 1991 (p. 35).

R: Correct. Only Rögner probably had no professional advice about this. But it is true that stories about atrocious baby murders have the highest psychological impact. Rögner claimed to have witnessed this same scene on another occasion, when he hid behind a non-existent tree at the ramp in Birkenau...

4.5.14. E. Rosenberg, J.-F. Steiner, Y. Wiernik *et al.*

R: As our next-to-last example of fantastic accounts, let us review some statements made by various witnesses about the alleged burning of corpses under the open sky at Treblinka.

First is that of Eliahu Rosenberg, one of the witnesses who appeared at the

Demjanjuk trial, which was rejected as incredible even by the Israeli court. He reported.³⁸³

“After Himmler inspected the camp he ordered the burning of all the bodies lying in the pit [...]. For this purpose, two iron rails were placed on the ground parallel to each other, and the bodies that were dug out of the pit with excavators were stacked on top of each other like fire logs. It frequently happened that the corpses, especially those just freshly killed, didn’t burn well, and so we had to pour gasoline over them.”

III. 219: Eliahu Rosenberg

L: Is he saying that the old, exhumed corpses, that is, most of them, did not need gasoline, but burned by themselves?

R: Would you please stop stealing my point! In his testimony in Jerusalem, he repeated the same nonsense (HT no. 34, p. 24):

“In Treblinka we learned that little children burn better than grown men. All it takes is a match to light them. That’s why the Germans, damn them, ordered us to put the children in the pit first.”

L: Does anyone believe such claptrap?

R: Only 99% of all people on this pitiful planet.

L: It makes you wonder whether homo sapiens is really an intelligent species.

R: Well, most people don’t know any of these details. If they did, I suppose most of them would quit believing, which is why we have this presentation – and why authorities the world over want to suppress it.

Anyway, the witness Szyja Warszawski, who arrived at Treblinka in July 1942, testified that at least 10,000 persons per day were gassed with chlorine, and then cremated as follows (Rudolf 2019, p. 496):

“The grates, which consisted of iron rails, were supported by cement posts about two feet above the ground. [...] A fire was started underneath. Bodies were layered on the burning grate with an excavator machine. Once the bodies caught fire they would continue burning by themselves.”

R: Yankiel Wiernik, the only witness who admitted having directly participated in the process of extermination over a long period, wrote (Donat 1979, p. 170):

“It turned out that bodies of women burned more easily than those of men. Accordingly, the bodies of women were used for kindling the fires.”

Wiernik also claimed that millions of Jews were killed at Treblinka and that a quarter of these victims had been cremated within a few days. Whereas orthodox historians claim that some 870,000 victims were cremated within 122 days (see Table 18, p. 272), Wiernik’s claims would mean that at least 500,000 were cremated within a few days, or some 100,000 per day, which would have resulted in pyres 370 m high (1,200 ft) when using the data of Table 18!

Richard Glazar, who wrote down his memories only late in life, made this succinct

³⁸³ Rullmann 1987, pp. 141f.; for the following explanations cf. Neumaier, in: Rudolf 2019, pp. 495-500.

observation (Glazar 1995, p. 29):

“Bodies don’t really burn that well. They burn very poorly, in fact. You have to build big bonfires and put a lot of kindling in among the corpses, and then douse the whole thing in something very flammable.”

R: In addition, he related that he and 24 other Jews were the only ones allowed to work outside the camp, collecting branches to camouflage the fence. He also stated that he had to climb the trees in order to break off branches (*ibid.*, pp. 56, 127f.). Thus, according to Glazar, there was no tree-cutting detail at all at Treblinka, only a detail to gather branches for camouflage purposes. In other words: According to Glazar, human bodies may have burned poorly, but they still burned by themselves.

Jewish mainstream author Rachel Auerbach compiled various witness accounts and summarized them as follows (Donat 1979, pp. 32f., 38):

“Polish people still talk about the way soap was manufactured from the bodies of Jews. The discovery of Professor Spanner’s soap factory in Langfuhr proved that their suspicions had been well founded. Witnesses tell us that when the corpses were burned on pyres, pans would be placed beneath the racks to catch the fat as it ran off, but this has not been confirmed. But even if the Germans in Treblinka or at any of the other death factories failed to do this, and allowed so many tons of precious fat to go to waste, it could only have been an oversight on their part.

In Treblinka, as in other such places, significant advances were made in the science of annihilation, such as the highly original discovery that the bodies of women burned better than those of men.

‘Men won’t burn without women.’ [...] [T]he bodies of women were used to kindle, or, more accurately put, to build the fires among the piles of corpses [...] Blood, too, was found to be first-class combustion material. [...] Young corpses burn up quicker than old ones. [...] [W]ith the help of gasoline and the bodies of the fatter females, the pile of corpses finally burst into flames.”

L: Here we have all the lies rolled up in one: The collection of human fat, soap made of human fat, and blood (which is 90% water) as fuel.

R: And all this in the book praised by Yad Vashem as the standard work on Treblinka. The other book that is likewise recommended as a standard work on the three alleged pure extermination camps – Treblinka, Belzec, and Sobibór – also contains the same fantastic material (Arad 1987, pp. 175f.):

“[...]T]he SS men in charge of the cremation became convinced that the corpses burned well enough without extra fuel. Yechiel Reichman, a member of the ‘burning group,’ writes: ‘The SS ‘expert’ on body burning ordered us to put women, particularly fat women, on the first layer of the grill, face down. The second layer could consist of whatever was brought – men, women, or children – and so on, layer on top of layer [...]’

III. 220: Yankiel Wiernik

These [fresh] bodies did not burn as well as those removed from the ditches [i.e., the graves] and had to be sprayed with fuel before they would burn."

R: There was one orthodox Holocaust writer who did not fail to notice that something was wrong, however. Jean-François Steiner, whose book on Treblinka is categorized as a novel,³⁸⁴ graphically described the actual problems that would have developed from such a gigantic demand for cremation wood (Steiner 1966, p. 294):

"The costs proved to be insurmountable. In addition to huge amounts of gasoline, they would have needed as many tree trunks as they had corpses. It was not a rational undertaking because, even if they were able to cut down all the forests in Poland, they would still run out of gasoline. The battle for Stalingrad had been lost, and the rich oil fields of the Caucasus disappeared like a mirage."

L: It is really sad that it requires a novel writer to get at least some realism into this entire affair!

R: How true, how very true! But J. F. Steiner, who likewise compiled a great deal of testimonies, found a way out of that impasse by joining in the discovery of self-incinerating corpses (*ibid.*, p. 295):

"Some corpses were fireproof while others burned easily. The trick was to use the flammable ones to burn the others. According to his (H. Floss's) research – apparently they were quite extensive – old corpses burned better than new ones, fat ones better than thin ones, women better than men, and children better than men but not as well as women. It turned out that the decomposing corpses of fat women were the best of all."

R: According to the testimonies of several people, there really were several detachments in camp whose task it was to gather firewood. While A. Krzepicki, S. Wilenberg, and R. Glazar were aware only of the detachment that gathered branches from trees in order to camouflage the camp (Donat 1979, pp. 124-192), Y. Arad describes a wood-gathering detail that originally gathered just enough wood for construction and heating needs, but later had to supply wood for cremation as well (Arad 1987, p. 110). However, the witnesses and true Holocaust believers all agree that the wood was lit only like a campfire under the heaps of corpses, until they caught fire and burned by themselves.

L: Abra Cadabra.

R: That's the easiest way to solve evidence problems. Or as one could read in a Swiss Jewish paper in 1993 (*Jüdische Rundschau Maccabi*, Basel, November 11, 1993):

"Every Jew can deduct from our Parsha and can live with this insight that the Jewish people is not subject to the limitations of natural laws."

L: Nor were the SS men in those camps, apparently. And that is the way we got court-imposed "common knowledge."

R: Rachel Auerbach unwittingly gave the proper comment on all this nonsense about Treblinka when she stated (Donat 1979, p. 48):

"As the Italian saying goes: 'Se non è vero, è ben trovato.'"

Which translates to:

"Even if it is not true, it is well invented."

³⁸⁴ https://en.wikipedia.org/wiki/Jean-François_Steiner (accessed on April 14, 2017).

4.5.15. Elie Wiesel

R: In conclusion of our consideration of incredible testimonies, and as introduction to testimonies that are more credible, we will now consider the statements of our last witness. Since Wiesel does not claim that homicidal gas chambers existed at Auschwitz (see Table 27, p. 439), he had to come up with a different way of exterminating his fellow Jews.

In order to murder his victims, Wiesel hit upon the idea of having the victims of Auschwitz burned alive in huge open fires. Here is his account of what he claimed to have witnessed in May 1944:

“Not far from us, flames were leaping up from a ditch, gigantic flames. They were burning something there. A lorry drew up at the pit and delivered its load – little children. Babies! Yes, I saw it – saw it with my own eyes... those children in the flames. (Is it surprising that I could not sleep after that? Sleep had fled from my eyes.)

So this is where we were going. A little farther on was another and larger ditch for adults. [...] ‘Father,’ I said, ‘if that is so, I don’t want to wait here. I’m going to run to the electric wire. That would be better than slow agony in the flames.’” (ibid., p. 30)

R: The French original actually reads “vegetating for hours in the flames” (1958, pp. 58f.), an exaggeration which obviously had been edited out in the English translation. As we all know, he did not have to “vegetate for hours in the flames,” though, nor spend any time there at all.

Since Wiesel claims that he was led straight to these pits after having alighted from the train at Birkenau, it follows that these flaming infernos must have been

III. 221: *Painting by David Olère, which may have inspired Elie Wiesel.*

close to the Birkenau railway ramp, although all historians agree – and several air photos of spring and summer 1944 confirm – that there never were any cremation pits anywhere near the ramp. Hence, Wiesel saw flames where there were none. Here are two more examples (Wiesel 1960, pp. 25, 28):

“[...] the flames were gushing out of a tall chimney into the black sky. [...] Do you see that chimney over there? See it? Do you see those flames?”

R: At any rate, Wiesel was saved by a wondrous event (*ibid.*, p. 31):

“Our line had now only fifteen paces to go. I bit my lips so that my father would not hear my teeth chattering. Ten steps still. Eight. Seven.

We marched slowly on as though following a hearse at our own funeral. Four more steps. Three steps. There it was now, right in front of us, the pit and its flames. I gathered all that was left of my strength, so that I could break the ranks and throw myself upon the barbed wire. In the depth of my heart I bade farewell to my father, to the whole universe; and, in spite of myself, the words formed themselves and issued a whisper from my lips: Yitgadal veyitkadach shmé raba... May His name be blessed and magnified.... My heart was bursting. The moment had come. I was face to face with the Angel of Death... No. Two steps from the pit we were ordered to turn to the left and made to go into our barracks.”

R: Wiesel's statements of his alleged experiences at Auschwitz and later toward the end of the war at Buchenwald are full of factual and chronological impossibilities which I cannot deal with here, but which have been thoroughly discussed elsewhere (Routledge 2020).

In a different context, Elie Wiesel himself gave us a clue of what to think about his writings (Wiesel 1982, p. viii):

“‘What are you writing?’ the Rebbe asked. ‘– Stories,’ I said. He wanted to know what kind of stories: true stories. ‘About people you have known?’ Yes, about people I might have known. ‘About things that happened?’ Yes, about things that happened or could have happened. ‘But they did not?’ No, not all of them did. In fact, some were invented from almost the beginning to almost the end. The Rebbe leaned forward as if to measure me up and said with more sorrow than anger: ‘That means that you are writing lies!’ I did not answer immediately. The scolded child within me had nothing to say in his defense. Yet, I had to justify myself. ‘Things are not that simple, Rebbe. Some events do take place but are not true; others are – although they never occurred.’”

L: But it is not certain that Wiesel meant his Auschwitz memoirs with this.

R: No, but it is certain that his Auschwitz tale is neither true nor did it take place, so I guess that he is covering himself here. But wait a little while, for Wiesel's amazing finale is still to come.

III. 222: Elie Wiesel

4.6. Critique of Testimonies, Part 2: Plausible Statements

4.6.1. Elie Wiesel, Primo Levi, Israel Gutman

R: The end of Elie Wiesel's testimony on Auschwitz includes a very strange episode. When the Red Army was about to overrun Auschwitz in January 1945, the Germans evacuated the camp, but left it up to the sick inmates to decide whether they wanted to flee with the Germans or await the arrival of the Red Army. Some of Wiesel's exact words on how he and his father made their decision read as follows (Wiesel 1960, p. 78; cf. Berg 2003):

"The choice was in our hands. For once we could decide our fate for ourselves. We could both stay in the hospital, where I could, thanks to my doctor, get him [the father] entered as a patient or nurse. Or else we could follow the others. 'Well, what shall we do, Father?' He was silent. 'Let's be evacuated with the others,' I told him."

R: You need to fully realize what this means: For years Elie Wiesel and his father, so they claimed later, had been living in hell, where people had been burned alive in masses. The living inmates had been abused and mistreated with all methods one can think of. Then early in 1945 there was a chance to escape the clutches of these mass murderers and to be liberated by the advancing Russians. And how did they decide? They decided to flee from their liberators with their diabolic mass murderers. They decided to remain slave workers in the hell created by the evil Germans. They decided to reach out for the uncertainty of the cold and dark night under the guard of their German Satans.

Ladies and Gentlemen! Here the key to the truth lies hidden! Elie Wiesel and his father feared the liberation by the Red Army more than they feared whatever the Germans or whatever fate would do to them when fleeing.

L: You did not quote that honestly, for something else results from the context.

R: What do you mean?

L: Briefly before this passage, Wiesel reports how the inmates were talking to each other about rumors that all inmates staying behind would be summarily executed and brought to the crematorium, or that the entire camp would be mined shortly before the SS leaves, and that it would be blown up.

R: And shortly before that, Wiesel mentions that it had turned out that all inmates who had been left behind were simply liberated by the Soviets. Hence these rumors were all wrong. Apart from the fact that at that point in time, all the crematories had already been dismantled or dynamited. And apart from the fact that the Germans permitted that Elie, who was unable to work due to an injury to his foot, was not only not killed, but was actually transferred to the camp hospital in January 1945 and even underwent surgery. Wiesel knew full well from his own experience that the SS wasn't murdering sick inmates but took care of them and nursed them back to health.

L: But the rumors explain why Wiesel fled with the Germans.

R: Only I don't buy it, because by early 1945 everybody knew, Wiesel included – he even writes about it in his book several times – that Germany had lost the war. Hence the SS had to leave the inmates behind at some point. The later and closer to the German surrender that happened, the more desperate the SS men would be,

and the more likely violent excesses became. Under such circumstances, any rumor that inmates staying behind would be executed should have been an even bigger motivation to get away from those German devils at the first opportunity. But no, in spite of his open, bleeding foot injury, he ran away with the Germans.

In order to show that this is not a single case, I may support this with statements by Primo Levi. In his entry of January 17, 1945, Levi writes in his book *Survival in Auschwitz*, how he would have followed common instincts and would have joined the other inmates who fled with the SS, if only he had not been so sick (Levi 1986, p. 154):

“It was not a question of reasoning: I would probably also have followed the instinct of the flock if I had not felt so weak: fear is supremely contagious, and its immediate reaction is to make one try to run away.”

III. 223: Primo Levi.

R: Keep in mind: The fear he writes about here is the one that drove the inmates – he talks about the instinct of the flock – and which drove them to flee *with* the Germans. They therefore did not fear the Germans, but apparently the Russians. And Levi even gives us the result of this “referendum by feet”: 800 mostly incapacitated inmates decided to stay in Auschwitz, but 20,000 others joined the National Socialist mass murderers.

Wiesel and Levi, two of the most influential atrocity propagandists against the Germans, admit here in the midst of their most important propaganda works – unnoticed by a world lulled into believing their atrocity stories – that they did not really fear the Germans. How would we have expected them to react, if they themselves had believed in their own stories?

L: They would have longed for liberation by the Russians and would have done anything to get away from the Germans.

R: You said it. Gilad Atzmon has quoted yet another stunning example of such voluntary joining of the alleged death marches (Atzmon 2010), which he found in a Hebrew book written by none other than Israel Gutman (1957, p. 168):

“One of my friends and relatives in the camp came to me on the night of the evacuation and offered a common hiding place somewhere on the way from the camp to the factory. [...] The intention was to leave the camp with one of the convoys and to escape near the gate, using the darkness we thought to go a little far from the camp. The temptation was very strong. And yet, after I considered it all, I then decided to join [the march] with all the other inmates and to share their fate.”

L: This was written by one of Israel's leading Holocaust scholars?

R: Yes, that very person. He preferred staying with the Germans, too, rather than trying to escape and being "liberated," which makes me wonder whether he really believes what he has written in his many books on this topic. The importance of the decisions made by Levi, Gutman, Wiesel and his father as well as by many hundreds or even thousands of their co-inmates cannot be overestimated. Or as American revisionist scholar Friedrich Paul Berg put it (Berg 2003, p. 39):

"In the entire history of Jewish suffering at the hands of gentiles, what moment in time could possibly be more dramatic than this precious moment when Jews could choose between,

on the one hand, liberation by the Soviets with the chances to tell the whole world about the evil 'Nazis' and to help bring about their defeat – and the other choice of going with the 'Nazi' mass murderers and to continue working for them and to help preserve their evil regime. [...]

The momentous choice brings Shakespeare's Hamlet to mind: 'To remain, or not to remain; that is the question' [...] Oh what heartache!"

R: Elie Wiesel reports, you decide!

On January 27, 2005, the 60th anniversary of the occupation of Auschwitz by the Red Army, the *Chicago Tribune* wrote:

"Although the Soviets were welcomed as liberators, it was only a matter of weeks before they began plundering and raping those they liberated. Women who survived the Nazis were raped to death by Soviet soldiers, according to survivor testimonies.

Ten thousand Soviet war prisoners were sent to Auschwitz in 1941, and a grim fate awaited the survivors among them. Stalin decreed that there were no Soviet 'prisoners,' only 'betrayers of the motherland.' Thus classified, they were rounded up and sent to languish in Siberia.

Many in Eastern Europe saw the Soviets 'not as liberators but as aggressors – it was a second occupation,' said Piotr Setkiewicz, director of the archives at the Auschwitz-Birkenau state museum."

L: So Elie Wiesel made the right decision.

R: Quite so. Others were less fortunate, as they had no choice and at best ended up in Stalin's GULag (see the example given on p. 294). One has to keep in mind the reign of terror, which the Soviets unleashed in the areas they occupied in eastern Europe, in order to understand that the Red Army could not and would not liberate anyone (cf. J. Hoffmann 2001, pp. 279-327; Kopanski 1998; Zayas 1993; Nawratil

III. 224: Israel Gutman, testifying during the Eichmann Trial in Jerusalem in 1961.

2003).

Reading survivor literature with a critical attitude and an open mind can reveal many similar statements elsewhere as well. Let me give you two more examples.

The father of Anne Frank, Otto Frank, married a second time. The daughter of his second wife wrote a book in 1991 in which she relates the story of her parents. In the context of the evacuation of prisoners from Auschwitz to other camps she wrote (Schloss 1991, p. 117):

“Our rows got thinner. Every couple of days the SS took thirty or forty women out of the barracks in order to send them to the west to central Germany. The danger for me to be selected for these transports as well grew with every day. Whenever the SS came I kept my head down, braided my rope, and prayed.”

L: So they did not want to be transferred away from Auschwitz.

R: Right. Very similar to this is the statement by French-Jewish Auschwitz inmate Marc Klein, a professor at the medical faculty of the University of Strassburg, Alsace (M. Klein 1946):

“It was always an unpleasant menace to be transported [away from Auschwitz], because one instantly lost all material advantages, the big ones and the little ones, which one had gained in a camp in the long run. It was a departure to the unknown, paired with the burden of the travel and the difficulties of the new environment in a different camp. Despite all, at least for the Jews, who were always threatened by massive Jewish gassings, a transport could sometimes be a path of rescue. [...] One day a transport left for Natzweiler/Struthof. I was intensely tempted to be a part of it, because that would get me home to the Alsace. But from a safe source I had learned that this would be a Himmlerfahrtskommando,^[385] so that I renounced.”

R: Hence, the threat of the gas chambers cannot have been that real after all, if a mere rumor makes him decide to stay in Auschwitz. We will meet Prof. Klein again in just a few moments. But before we do, I have one more revisionist impertinence: What would you think if it turned out the Elie Wiesel was actually never incarcerated at Auschwitz, that his entire life is that of an imposter, a case of identity theft?

L: I think I'd declare you insane.

R: Or Elie Wiesel, if it's true. I haven't made up my mind myself about this, but intrepid revisionist researcher Carlo Mattogno picked up and substantiated allegations made by Miklós Grüner (Grüner 2007), a former deportee to Auschwitz, who steadfastly claims that the Elie Wiesel the world knows is not the same he knew in Auschwitz (Mattogno 2010c-e; Routledge 2020). So stay tuned. There is always more to learn!

4.6.2. “Opera during the Holocaust”

R: The following article was published on May 1, 1997 in the Australian newspaper *Killoy Sentinel* (New South Wales). It speaks for itself:

“We are all familiar with the name Auschwitz. Most people could identify Auschwitz as a ‘death camp’ for the Jews. Many people might be capable of recalling that it was located in Poland. Many would be uncertain of details, but

³⁸⁵ Ascension to heaven command = certain death assignment.

would be at least familiar with the name. In any case, it is a part of modern culture.

Auschwitz is usually depicted as the place of incessant, methodical and centrally-planned extermination of the Jews (not the Jewish race, as there is none.)

There are many accounts and descriptions about the total horror, the pervasive atmosphere of suffering and the impending assembly line of death. Could such a place possibly have had a swimming pool for the prisoners? Could it have been equipped with a social-educational centre, organized discussion groups, concerts, theatre, a children's choir, opera performances – all run by, and for, the internees? Impossible! That wouldn't fit in with the image with which we are all familiar.

Anyone prepared to search books, papers, and videos presenting the non-establishment evidence and opinions – material which, significantly, is never available in mainstream book shops – will become familiar with this information.

The swimming pool has appeared in published reproductions of various war-time air photographs. Of course, these photos could be fakes; but the prisoners' pool – now seen close-up – appears in a video filmed in modern-day Auschwitz. This video includes a rather surprising interview with the head tour guide and the director of the modern-day camp, Dr. Franciszek Piper. The film was made by David Cole.

Mr. Cole is an American Jew. Perhaps the video is a forgery. But if the other facilities did, in fact, exist, then the swimming pool is quite plausible.

For evidence of the reality of the other facilities, let's turn to no less a source than the Jerusalem Post (domestic edition), January 25, 1995, (Features), page 7. This present writer has the original copy, it was sent to him from Israel. One half-page article is entitled 'Amidst the Killing, Children Sang of Brotherly Love.' 'In 1943, 10-year-old Daniel K. arrived in Auschwitz. Now a university professor, he looks back at a different face of the death camp,' runs the introduction. Professor K. writes: 'The Chorale from (Beethoven's Ninth Symphony) was... performed by a Jewish children's choir at Auschwitz-Birkenau in 1943... I was a member of that choir... I... remember my first engagement with culture, with history, and with music – in the camp...'

'In March 1944, I was severely ill with diphtheria and was sent to the camp hospital barracks. My mother had asked to be transferred to stay with me in the hospital. (Response not stated)... Nurses, doctors, and patients survived...'

Why nurses, doctors, even hospitals, for people who were sent there to be killed? Why was the boy fed, clothed, and housed for between two and three years? Daniel K continues:

'One of the youth leaders of our group... asked to establish an education centre for children. He was given permission, and in a short time the education centre became a spiritual and social centre for the family camp. (The family camp!) It was the soul of the camp.

'Musical and theatrical performances, including a children's opera, were held at the centre. There were discussions of various ideologies – Zionism, Socialism, Czech nationalism... There was a conductor named Imre... (who) organized the children's choir. Rehearsals were held in a huge lavatory barracks

III. 225: Inmate swimming pool in the Auschwitz Main Camp with three starting blocks and a three-meter diving board. Photo taken in spring 2001 (German-quality work. It still holds the water!). © Dr. Robert H. Countess

where the acoustics were good...

'(In) the fall 1944... huge masses of inmates fit for labour were being sent to Germany.' (End quote.)

Ah, so 'huge masses' of them were kept fit to work! I have deliberately ignored the many usual references to extermination, gas ovens, and so on; they are available *ad nauseam* all around us.

My purpose is to bring to attention the admitted existence of these leisure facilities. Their existence can no longer be doubted. Their existence throws a new and thought-provoking light on those familiar stories we all know: Could it be that Auschwitz was not quite the type of place usually described?"

R: The eye-opening video by David Cole mentioned in this article can be watched for free on the Internet (Cole 1993a). The leisure activities mentioned in the above article did indeed exist and are by no means unknown to the normal literature about Auschwitz, as claimed in the article. There are many references in the survivor literature referring to things which are in extreme contrast to the notion of Auschwitz as an extermination camp. For sake of brevity, I shall only reproduce a very concise list here:³⁸⁶

Culture

Work and Family

Harmony between Aryan and Jewish colleagues and colleagues in higher positions;⁴¹⁶ women labor camp with sewing room and weaving mill;⁴¹⁷ only a fraction of all inmates works, in May 1944 11,331 are not capable of working;⁴¹⁸ family camp for Gypsies;⁴¹⁹ inmates wear civilian clothes and long hair, many births within the camp;⁴²⁰ children's block for orphans;⁴²¹ family camp for Jews from Theresienstadt.⁴²²

Food and Health

Inmate canteen;⁴⁰⁰ inmate hospital with several hundred beds;⁴²³ sick books;⁴²⁴ recovery for future labor;⁴²⁵ double food rations, surgery rooms, X-ray equipment;⁴²⁶ dental office;⁴²⁷ woman confined to bed due to nerve disease well taken care of, testifying after war;⁴²⁸ typhus epidemic in summer 1942: more than 200 casualties each day, also among civilians and SS staff; SS physician Dr. Schwela succumbs;⁴²⁹ proper food for inmates;⁴³⁰ 1,800 calories per day;⁴³¹ foreign workers at hard labor get up to 4,000, more than a German engineer; 4,800 sick and immobile inmates remain in Auschwitz under care of physicians;⁴³² inmates oppose relocation to other camps;⁴³³ SS planned and built gigantic hospital complex for inmates (Mattogno 2016a).

R: Although this list contradicts the common notion of Auschwitz, it certainly fits well into all the other evidence we have learned about during these lectures.

To give you one example of the mind-boggling admissions of former Auschwitz inmates, let me quote what former inmate Prof. Dr. Marc Klein wrote in his memoirs under the headline "Auschwitz I Main Camp":⁴³⁴

"During Sun- and holydays, when most commandos had the day off, working hours were different. The roll call took place at noon; during the evening one relaxed or dedicated his time to a selection of athletic or cultural activities. Soccer, basketball, and water ball games (in the outdoor pool that had been built by inmates within the camp) attracted the spectator masses. It should be

noted that only the fit and well nourished inmates, who were spared from hard labor, could get engaged in such games that attracted the vivid applause of the masses of the other inmates.”

R: Such descriptions do not dominate the survivor literature, of course. They are usually mentioned only in passing, beside the well-known horrors and atrocities. Only when intentionally searching for these things and putting them together, one realizes how paradoxical the image is that the witnesses draw of Auschwitz – and not just of Auschwitz. This should indeed be thought-provoking to all of us. A systematic analysis of the witness testimonies, which in the meantime spread out endlessly, has yet to be done. Who dares to tackle this thankless task?

L: Do you want to suggest with this that the inmates had a nice time in Auschwitz?

R: No, that is not what I am saying at all. The positive sides of the Auschwitz Camp mentioned in the survivor literature are only of limited value to assess the mental and physical well-being of the inmates. But one should neither demonize those who mention these things nor keep these things secret, just because they do not fit into one's concept. You can draw your own conclusions from these positive sides. Because the space in this book is restricted, I need to limit our discussion mainly to the issue of mass extermination, which is why I will not dwell any further on the joys and sorrows of the inmates who were not murdered.

Fact is that almost all statements by witnesses contain both true and false claims. Nobody has a perfect memory, and not everybody is an upholder of perfect moral standards. The art of separating the plausible from the implausible has almost been forgotten when it comes to statements on the Holocaust.

4.6.3. Statement Excerpts from the Auschwitz Files

R: In closing the fourth lecture I will now list several witness statements that I consider to be believable mainly because I cannot see a reason why former inmates should invent exonerating claims, or what external circumstances could “create” such exonerating statements.

L: Well, some inmates could have felt threatened by organizations of former SS members or even by the German government.

R: It can be ruled out objectively that the postwar German authorities posed any danger to inmates. The behavior of inmates and inmate organizations in postwar Germany also clearly indicates that they never perceived the new German authorities as a threat.

I consider the claim that SS organizations could have been perceived as a threat to former inmates as a bad joke. Former SS members were fair game without any legal protection everywhere in Europe and almost all over the world after 1945. No such organization with any noticeable influence ever existed, in contrast to the very influential and well-organized former inmates.

But let me now get to my excerpts of credible statements of former inmates. Not all claims of these witnesses are necessarily plausible, which I have shown elsewhere (Rudolf 2003d,g-i; 2004b,c,f; 2005e), but in the following I will limit myself to the plausible aspects of them.

I already mentioned and analyzed the statements made by Maryla Rosenthal. De-

spite massive pressure of her environment, she remained steadfast that she could not remember any atrocities during her stay in Auschwitz (see p. 368 and following). I also pointed out earlier the sincere statement of former Auschwitz inmate Jakob Lewinski about the forced-labor camp Auschwitz Monowitz (see p. 179) as well as the testimony of Emil Behr, who during his stay in Auschwitz was an electrician and a colleague of Adolf Rögner, but who could confirm nothing of what the professional liar Rögner had alluded to (see p. 386).

4.6.3.1. Artur Hartmann

R: Soon after arriving at the camp Hartmann injured his foot and was sent off to peel potatoes. According to his recollection, he found a number of prisoners there who were ill or otherwise unfit for work, something that contradicts the received version of events that such prisoners were immediately gassed. He reports of an SS man who mistreated prisoners but who was then sentenced to death for that mistreatment. Otherwise he could not complain about being mistreated by concentration-camp personnel (Staatsanwaltschaft... 1959; vol. 1, p. 132; all subsequent volume and page numbers refer to these investigation files, unless mentioned otherwise).

4.6.3.2. Henryk Bartoszewicz

R: Bartoszewicz worked in the Auschwitz tannery. Owing to his membership in the camp partisans he was kicked about during interrogations, but he did not mention any other forms of torture (vol. 2, pp. 223ff.).

4.6.3.3. Aleksander Gorecki

R: Gorecki reports on a prisoner who had just had a bladder operation and who was about to have prostate surgery. Interestingly, such facts as that prisoners were operated on at Auschwitz to keep them alive receive little attention (vol. 2, p. 226).

4.6.3.4. Adolf Rögner

R: Even some statements by Rögner are not a lie, for example when he claims that during his stay at the Dachau concentration camp in May 1943 he was treated at the hospital in such a way that he was again fit for work (vol. 2, p. 250).

4.6.3.5 Konrad Lang

R: Lang was incarcerated between 1940 and 1945 at Auschwitz and in 1943 became senior inmate supervisor (*Kapo*) at the *Deutsche Ausrüstung-Werke* (German Equipment Works), where he had 2,000 prisoners under him. He stated that he dealt with Boger only once during an investigation of an attempted act of sabotage. The West German officer who interrogated Lang in 1958 summed up Lang's statement as follows:

"Lang has only heard secondhand that Boger was 'very keen' and that the prisoners were afraid of him. Lang claims he has never heard of killings or shootings of prisoners by Boger or on Boger's orders."

R: Obviously Lang was high up in the prisoner hierarchy where he had contact with many prisoners and those responsible for the camp. This makes it all the more ex-

traordinary that he didn't know anything about the alleged murderous activities of Wilhelm Boger.

L: Perhaps on account of his collaboration with the Germans, Lang was compromised. He possibly maltreated the prisoners under him.

R: That is conceivable, but that would mean he could have been blackmailed, hence one would assume that he would have done anything in order not to upset the organizations of former inmates, that is to say, he would have spoken against Boger, even if it was not true. This tactic of hiding your own misdeeds was used by, for example, Eugen Kogon, as I already mentioned (see p. 60). But Lang does not incriminate Boger. Besides the love of truth, I don't know what else would have motivated Lang in making his statements in the way he did (vol. 2, pp. 279f.).

4.6.3.6. Moritz Salomon

R: Salomon states that he was so badly mistreated by Boger that thereafter he was "fit for 'gassing.'" But then a wonder occurs and Salomon is taken to the camp hospital, where he recovers (vol. 2, p. 283).

4.6.3.7. Jakob Fries

R: Just like Rögner, Jakob Fries was at Auschwitz as a professional criminal. During his interrogations he was serving a 14-year prison sentence. At Auschwitz Fries was the work foreman for all the work groups at Auschwitz Main Camp. According to his interrogators, Fries stated the following about Boger's alleged crimes (vol. 3, p. 437R.):

"He claims not to have heard anything about shootings in Auschwitz. [...] He merely remembers that in Auschwitz, inmates who had tried to climb over the fence were shot by guards. He also claims to have heard nothing about other crimes against inmates. He claims to have learned only after 1945 and through media reports what had been going on in Auschwitz and especially in Birkenau."

R: Here we have a witness who is either capable of differentiating between personal experience and that which he heard about after the war, or here is someone who collaborated with the Germans to organize forced labor and therefore adjusted his statement for tactical purposes of avoiding self-incrimination.

L: But I thought that inmates were not prosecuted?

R: Sure they were, in particular if they did not support the legend and had made enemies among other inmates. Take the fate of Emil Bednarek as an example. He was incarcerated in Auschwitz for allegedly belonging to a Polish underground movement. During his activity as an inmate overseer of the penal commando of Auschwitz, he was claimed to have murdered 14 other inmates, for which he was sentenced to a life term in prison (cf. Sagel-Grande *et al.* 1979). Remember that the influential and well-organized associations of former inmates, like the VVN, put their fellow inmates under massive pressure right after the war – including threats and intimidations (Oscar 1950, p. 85.; see p. 411). It was easy for them to cook up some charges against noncompliant former co-inmates. In Western societies, these inmate organizations were the real and only threat to former inmates, and we must therefore expect that many former inmates adjusted their statements accordingly.

Hence, if Jakob Fries adjusted his testimony, he would have done it in a way to avoid anything that antagonized the former prisoners' organizations and investigators alike. It is therefore more likely that he would have supported the legend, if he had some dirty laundry in his closet. But despite this danger for himself, he did not support it.

We can dismiss Fries's claim that he did not know what was happening at Auschwitz because he had as his immediate superior *Hauptsturmführer* Aumeier, who was the head of the protective-custody camp and assistant commander of Auschwitz.

4.6.3.8. Alfred Korn

R: Alfred Korn was initially incarcerated at Plazow camp, where he enjoyed a number of freedoms, because Plazow became a closed camp only in 1943. At the end of 1943, he volunteered to go to Auschwitz, where the SS supervisors treated him fairly. Once he was interrogated by the camp Gestapo, but it did not have any consequences for him. He said he knew of camp atrocities from camp gossip that he heard, but could not give any details of such allegations. The only factual incident he claimed to recall about atrocities was in relationship to a gassing in November 1944. But even according to orthodox historical writings it is claimed that the extermination facilities in Auschwitz had ceased operation a while before that and were being dismantled at that time (vol. 3, pp. 571-576).

4.6.3.9. Otto Locke

R: Otto Locke reports how Boger maltreated him. He subsequently spent four weeks in the prison hospital, apparently either for a malady he contracted in the isolation bunker or because of typhus (vol. 3, pp. 578-584). Locke also reports that Boger behaved himself towards Locke since spring 1943, on the orders of the camp commandant Liebehenschel that prisoners were not to be beaten. Boger's bad reputation stems from the time when beatings were still tolerated during interrogations. Locke refused to lodge a formal complaint against Boger.

4.6.3.10. Rajzla Sadowska

R: As a Jewish prisoner at Auschwitz, Mrs. Sadowska had suffered such a serious work-related accident that she could not work anymore. She reported (vol. 5, pp. 657, 684, 676, 678f.):

"Since I now was no longer fit to work, I feared that I would be gassed. It had become general knowledge that all those unfit for work were gassed."

R: She was therefore selected and, no, not gassed as she feared and must be expected if the legend were true, but taken to the camp hospital until she made a recovery. After seven days she was once again selected, this time by the notorious SS Dr. Mengele. He is claimed to have conducted very painful experiments on Mrs. Sadowska, which she did not specify. She claimed to have been a cripple after these experiments. If the legend were true, then she had to be gassed after that, because now she was not only unfit for labor, but also unfit for further experiments, as she stated. But another miracle happened: she was again nursed back to health (vol. 5, p. 684).

Note what happened here: A female Jewish inmate in Auschwitz had a severe accident and was sent to the hospital, where she was treated well for a week. Next, an SS doctor did some unpleasant surgery on her, after which she was allowed to completely recover to good health. This clearly proves that the SS did everything – including surgery – to restore that woman’s health in order to keep her fit for work. But in her postwar interview, Mrs. Sadowska tries to turn her positive experience of healthcare in Auschwitz upside down. Note also that the investigating officer interviewing her in 1959 did not try to find out what kind of experiment (=surgery) had been performed on her. This proves once more the complacent naïveté of these interrogators.

That Mrs. Sadowska’s experiences in Germany during the war cannot have been all that horrible is also proven by the fact that Mrs. Sadowska chose to live in Germany after the war, because she didn’t like the climate in Israel.

Into this pattern fits a “selection” that Mrs. Sadowska claimed to have experienced immediately after arriving at the camp. Destination: Three months’ quarantine for all those new prisoners who arrived with Mrs. Sadowska. After this quarantine was over and in order to ensure that all prisoners were healthy, these women were subjected to yet another selection, after which most of them were transferred into other huts. Later they were transported away by trucks, upon which these ladies are said to have sung their “final song,” as Mrs. Sadowska claims.

L: How did she know that this song was their final song?

R: As a matter of fact, she didn’t. She only concluded from the fact that she never saw these women again that they had been killed. But that is, of course, nonsense, because had murder been the intention of the SS, then they would have saved themselves the trouble of feeding these women for three months during the quarantine time. Also, people singing songs while being transported on trucks hardly support the thesis that they thought they were being driven to their executions.

4.6.3.11. Hugo Breiden

R: A similar paradox appears in the statement by Hugo Breiden, who claimed during his second interrogation that an eleven-year-old Jewish boy – who contrary to received opinion and in spite of his age was not gassed on arrival – was given all the care he needed for weeks on end to recover from typhus, just to be selected after that – allegedly for a lethal injection. The final fate of this boy, however, Breiden knows only from hearsay (vol. 5, p. 701).

4.6.3.12. Erwin Valentin

R: The statements of former inmate Valentin contain contradictions as well. He claims that he had filed a criminal complaint against the commandant of the work camp Neutomischel, Stülpnagel, as a result of which Stülpnagel was sentenced to 18 months in prison for stealing food. Stülpnagel spent his

III. 226: Hugo Breiden (*Fritz Bauer...*, images).

time at Stutthof concentration camp (vol. 6, pp. 841-843, 847f.).

L: Food thieves among the SS were punished but not murderers?

R: That is what they want us to believe. Valentin also claimed that on account of his incessant complaining he was eventually sent to Auschwitz where he contracted pneumonia.

L: He volunteered to be transferred to Auschwitz?

R: Yes.

L: So the reputation of the Auschwitz Camp could not have been too bad after all.

R: Not in his mind at that time at least. Instead of being selected for the gassing, as was allegedly done with other severely sick patients, Valentin was well looked-after in the Auschwitz hospital, since he was a doctor and surgeon. Furthermore he reported that as head physician of Block 9 of the prison hospital he worked under Dr. Hans Münch, and that there were up to 1,000 prisoners cared for at any one time in that hospital, most of whom suffered from typhus and dysentery. This does, of course, not fit into Valentin's assertion that severely sick prisoners were selected and gassed. Valentin does not comment further on the selection and gas-sings, and so one may assume that his views about gassings arose from postwar impressions.

Valentin knows about Boger's misconduct only through rumors. His own experience is the following:

"[...] I was addressed politely by Boger – for the first time as an inmate in Auschwitz."

R: And his own experiences as a doctor are also positive, and about his superior SS doctor he can say "nothing detrimental."

Everything Valentin knows about mass killings comes from hearsay, as he himself admits (vol. 6, pp. 862-867; here supplement of May 16, 1945):

"Everything that is reported about the procedures during the gassings and incinerations of the unfortunate victims is for the most part based on 'hearsay.'"

4.6.3.13. Walter Mosbach

R: The statement by Walter Mosbach is also internally contradictory. He recognized this himself and therefore offered an explanation (vol. 6, p. 931):

"I would like to split [SS] Dr. Fischer into two persons: as a physician he behaved correctly, he even took the side of the inmates; however, as SS member, to give an example, he sent inmates, which he had treated well a quarter hour earlier and had protected in front of the inmate physicians, into the gas chamber during the selections."

L: According to this, this SS doctor was usually nicer to the inmates than the physicians recruited from among the inmates.

R: Right. This is a clear paradox: The *nice* SS doctor Fischer who sends his beloved inmate patients to the gas chamber with a warm smile. The paradoxical nature of Mosbach's testimony is dissolved, however, if we just delete the words "into the gas chamber" from his statement, that is to say, if we assume that Fischer was convinced that his selection of certain inmates did not happen with the prospect of having them murdered in a gas chamber, but with the prospect of a different, harmless destination, like their assignment to the camp hospital or to certain labor

tasks. By the way, the official member lists of the Waffen SS of that time show that Horst Fischer was merely a paramedic (B. Meyer 1987). So he was in no position to make any far-reaching decision anyway.

4.6.3.14. Max Willner

R: Another ex-prisoner, Max Willner, constructed a similar internal contradiction in his statement. First he reported how he had been selected for suspicion of typhus and transferred to the hospital section at Birkenau, where he recovered, although he was a Jew incapable of working. On the next page he claims that prisoners at Birkenau were categorized according to their illnesses, but this time for the purpose of dying in the gas chamber – about which he has nothing to report, much like anything else that he claims remains vague. Yet on the gassing issue he is firm (vol. 6, pp. 934f.):

“[...] Even with the best of intentions I can no longer remember any specific cases. I will strive to sit down shortly with some more former Auschwitz inmates residing here in order to talk everything over with them and to report in detail about the findings of the Central Office of State Administrations of Justice in Ludwigsburg – Mr. Public Prosecutor Schüller [recte: Schüle].”

R: This proves that witnesses systematically coordinated their statements already years before the start of the Frankfurt trial and with the assistance of public prosecutors. At least Willner is honest about this.

4.6.3.15. Wilhelm Dibowski

R: Wilhelm Dibowski was in Birkenau from the winter of 1941/1942 until February 1943 because he was a member of the Communist Party of Germany. He reports on the mass gassings (vol. 7, pp. 1007-1013), but his statements are peppered with expressions such as “among prisoners it was said,” “later one spoke,” “I don’t know personally,” “I have heard,” “never saw myself,” “he is supposed to have boasted,” “through Polish prisoners [...] became known,” “these two [...] told me,” “I cannot say anything about selections,” “I only know from hearsay,” “I don’t know them,” “I know the name Mengele from a book,” “I don’t know,” “it means nothing to me,” “in the camp this was known,” “I cannot give you any more details on this,” “also on this matter I cannot say anything else.”

L: That such witnesses are taken seriously at all...

R: But one thing Dibowski knows with certainty (see Ill. 227):

“I cannot say anything about the large gassings in Birkenau, because in my opinion these were carried out after my time at Auschwitz. I therefore also don’t know who has decisively contributed to the carrying-out of these gas-sings.”

L: But the mass killing is supposed to have started in early spring of 1942 at Birkenau in the bunkers, where thousands of Jews became victims of the gigantic smoking and fire-spewing pyres in huge pits.

R: Add to this implausibility that the witness was also involved in constructing the Birkenau camp, so he knew exactly what was happening there. But considering all the things he did not really know because he learned about them only from hearsay, he was absolutely certain about one thing: that during his presence in Birke-

Über die großen Vergasungen in Birkenau kann ich nichts aussagen, da diese m.Erachtens, da diese erst nach meiner Zeit in Auschwitz durchgeführt wurden. Ich weiß deshalb auch nicht, wer maßgeblich an der Durchführung dieser Vergasungen mitgewirkt hat.

III. 227: Wilhelm Dibowski doesn't know anything... (vol. 7, p. 1011)

nau there were no “large gassings.”

L: Hallelujah!

R: Dibowski's statement also indicates how terrible the SS was in Auschwitz:

“I knew the Oscha. [correct: Stubaf.] Bischof [sic], who was at the Construction Office. [...] Bischof lived in Essen after 1945, and I visited him once myself in his dwelling in Essen. I visited him in 1950, and at that time he lived in Essen, Klappstr. 78. Later he moved to Essen-Steele. [...] I have a neighbor, who was with the guards in concentration camp Auschwitz. [...] I cannot say anything bad about him; to the contrary, I can only say good things about him.”

R: Karl Bischoff was head of the SS Central Construction Office at Auschwitz, under whose direction the huge extermination sites would have been erected, had such ever existed. And because Dibowski was involved in building the camp, Bischoff was his superior.

L: With whom he remained on good terms after the war, as was the case with one of his former guards.

R: Yes, this proves that every SS man must have been a terrible criminal.

4.6.3.16. Hans Röhrig

R: Röhrig was imprisoned since 1936 for being a communist and for high treason. Early 1942 he was transferred to Birkenau. Röhrig reports how at some point a guard, who had shot an inmate without any reason, was arrested by the SS and led away (vol. 7, pp. 1127, 1129).

L: So arbitrary killings were pursued as a crime after all!

R: Exactly. The fact is that at that time there was an SS order according to which the mishandling of prisoners was to be severely punished.⁴³⁵ How far the order was followed and if SS men who contravened this order were consistently punished, is of course a different matter.

In June 1942 Röhrig became incapacitated through typhus, and he was “selected” – no, not for the gas chamber but for the hospital at Auschwitz Main Camp, where he remained until August 1942 and recovered thanks to the medical care of the SS.

This covers some examples from the first seven binders of the investigation files leading up to the Frankfurt Auschwitz Trial in 1964/65. Since these excerpts contradict the dogma, you will probably never read or hear about them in the mainstream media and literature.

⁴³⁵ “Der Inspekteur der Konz.-Lager und Führer der SS-Totenkopfverbände,” Berlin, June 4, 1937, Befehlsblatt SS-TV/IKL no. 5, May 1937, no. 29: “Mißhandlung von Häftlingen, Strenge Behandlung von Mißhandlungen, Degradierung, Ausschluß, Strafgericht” (mistreatment of inmates, severe punishment of mistreatment, degradation, exclusion, prosecution)

There are 77 investigation files altogether, and at some point, when the authorities stop chasing me all over the world for this my work, I might find the time to analyze them all and write a comprehensive history of this most prominent of all modern-day German show trials.

Fifth Lecture: On Science and Freedom

5.1. Pseudo-Science

R: I would like to round out this consideration of revisionist arguments by getting back to the question whether Holocaust revisionism is pseudo-scientific or not.

L: What do you mean by “pseudo-scientific”?

R: “Pseudo” is Greek and means not-authentic, bogus, a sham, thus false science.

L: So pseudo-scientific is another word for non-scientific.

R: No, pseudo-science is non-scientific findings that claim to be scientific.

L: That is why the revisionist writings are generally considered to be pseudo-scientific, not really scientific.

R: That is the view held by most governments and by most media outlets, though the revisionists assert the opposite.

L: And how do you distinguish scientific work from non-scientific work?

R: Well, I recently had plenty of time and a good reason to think this over thoroughly, because in 2006 I was held in custody in Germany awaiting a trial for the very book you are reading here. So I got myself some good literature on the nature of science and compiled a list from it. The most helpful of the works I read was by Karl Popper, whom I have quoted before, so the following list is mainly based on his work (Popper 1968). The list you will read here was a motion I filed during the trial in early 2007, hence the introduction. My defense team had already located a professor in that field who was prepared to testify that this list is indeed a very good guideline to assess whether a work is scientific in nature. But, alas, the court rejected our motion, as it rejected all of our motions (save one: to read the book before they decided to have it burned). The reason for that rejection was that the judges allegedly possess sufficient expertise to decide on their own whether or not my book is scientific in nature (cf. Rudolf 2016f, p. 237).

This motion also covers an issue that is often falsely claimed, namely that scientific research results can potentially violate the human dignity of persons somehow affected by those research results. Or in plain English: revisionist assertions allegedly insult Jews and defame the commemoration of Holocaust victims. I’ll return to that issue later, but now first to my motion:

In the matter of Germar Rudolf I request that the Court may hear the expert witness [...name omitted], Professor emeritus for Philosophy with special knowledge in the field of theory of science, to prove the following allegation:

A. Human Dignity

I. Two of the most important reasons why the dignity of humans is in most cases rated to be qualitatively superior to that of other beings, are the following

III. 228: Sir Karl Popper

two, exclusively human, achievements:

1. *The capability of not having to uncritically take sensory impressions as true at face value, but of being able to doubt them and to scrutinize them critically. Doubt and the curious quest for the truth behind the appearance raise humans above animals.*
 2. *The capability to objectivize the results of the doubting quest, that is, to make them independent of the respective individual by the spoken or written word, by pictures or by other data types, in order that others can study them independent of the biological presence of this individual.*
- II. *It is therefore a serious assault on the dignity of a human to prohibit him to doubt, to seek the truth and to announce that which he considers to be true. Such a prohibition to use one's intelligence without guidance from others equals a disenfranchisement which is diametrically opposed to the spirit of enlightenment. By way of such a disenfranchisement, humans are forced down onto the intellectual and moral level of lower life forms.*

B. Science

- I. *The most important essence of science consists of two corner stones:*
 1. *Free choice of starting hypothesis: At the beginning of any knowledge-creating activity any assumption can be made, any question can be asked.*
 2. *Undetermined outcome: The answers to research questions can be determined exclusively by verifiable evidence, but not by standards set by scientific, societal, religious, political, judicial or other authorities.*

If answers, hence research results, are prescribed, then queries degrade to mere rhetorical questions, and the reasoning process turns into a farce. This is therefore not just an undermining of the essence of science, but in fact the complete abolition of science.
- II. *Four principles are indispensable to the process of gaining scientific knowledge:*
 1. *There are no (final) judgments, but rather always only more or less well-tested pre-judgments, that is preliminary judgments.*
 2. *The reasons (evidence) for our pre-judgments must be testable as well as possible (empirically falsifiable). It has to be possible to subject them to*

tests.

3. *One has to both actively and passively test and criticize by:*
 - a) *testing and criticizing the pre-judgments and reasons (evidence) of others;*
 - b) *inviting others to test and criticize one's own pre-judgments and welcoming this testing and critique, which includes a duty to publish;*
 - c) *mentioning the tests and critiques of others and testing and criticizing them likewise, i.e. no perfunctory backing down.*

The most rigorous attempts at refutation are not only admissible but even necessary, since they are the only possibility to determine the reliability or the degree of trustworthiness of a thesis. If one is forced to proceed from predetermined assumptions which moreover are withdrawn from any attempt at refutation, be it by taboos, prohibitions or research moratoria, then the process of scientific discovery is most severely impeded.

4. *One has to avoid immunizing one's own pre-judgments against attempts at refutation by:*
 - a) *avoiding auxiliary theories to shore up dubious main theses;*
 - b) *selecting data only according to objective criteria (source criticism);*
 - c) *using exact, consistent, and constant definitions of terms;*
 - d) *not attacking persons as a substitute for factual arguments.*

Any attempt to immunize against attempts at refutation is illegitimate.

III. Whether a work is scientific in nature can be perceived by way of the work's features due to formal criteria. The scientific nature of a work cannot be perceived by

1. *the starting assumption chosen (initial hypothesis);*
2. *the research results, as long as they have been arrived at by scientific means;*
3. *the religious, sexual, political or ideological orientation of the author;*
4. *the national or ethnic origin of the author;*
5. *the author's motivations or intentions.*

IV. It is the scientist's right and duty to make his research results publicly accessible for

1. *the scientific community;*
2. *the society at large.*

This duty results from the necessity

- a) *to expose the work to critique;*
- b) *to give account about one's own activities;*
- c) *to inform the society at large about new insights.*

The right includes the publication

- a) *of the scientific work itself;*
- b) *of unpolemical, popularized renderings of same in order to inform lay persons and pupils/students;*
- c) *objective promotion for a) and b) for publication and dissemination.*

Publications under b) and c) are formally seen as not necessarily scientific in nature, but they are nevertheless essential for science. If the right to publish is curtailed, then not only does the indispensable communication be-

tween scientist and society collapse, but also science itself comes to a standstill. This has moreover drastically detrimental repercussions for modern society based on the division of labor, which depends on science and communication with it.

L: Well, according to this, all the governments outlawing revisionism use the most-violent method possible to immunize their favored theory from being critically reviewed. So that means that those governments are enemies of science as such and, by your definition of us humans as creatures of curiosity, also enemies of human dignity.

R: Right. Let me cite my favorite Popper quote to emphasize this (Popper 1968, p. 280):

“Those among us who are unwilling to expose their ideas to the hazard of refutation do not take part in the scientific game.”

L: But that renders all the mainstream literature that ignores revisionism unscientific!

R: Correct, and justly so. You can go through that list once more and judge for yourself which side in this debate fulfills, or fails to fulfill, each of these criteria. Make up your own mind who is scientific here and who is not!

L: That does not look good.

R: Good for whom?

L: Well, it is obvious that the officially protected Holocaust research fulfills the criteria for being merely pseudo-scientific much more than does revisionism.

R: Exactly. I can cite supporting comments for this by German mainstream historian Prof. Ernst Nolte, who not only thinks that the quality of revisionist works “surpass those of the established historians” (Nolte 1993, p. 304), but who also accuses the Holocaust establishment of being nothing but pseudo-scientific (*ibid.*, p. 9):

“I soon formed the view that this [revisionist] school of thought is being countered in the established literature quite unscientifically, namely through mere rejection of arguments, by casting suspicions on the author’s intentions, and mostly through censorship.”

R: Remember that Prof. Nolte wrote these words in 1993. Meanwhile revisionism has made extraordinary progress, while the opponents have nothing equivalent to offer, but instead increased their persecution of revisionists.

L: Does that mean we can ignore these unscientific works?

R: No, because counter arguments have to be addressed even if presented in an unscientific framework.

L: If Leuchter’s report is nevertheless called unscientific by mainstream media and scientists, does that mean that Leuchter systematically ignored facts, sources, views, and results that would undermine his views?

R: Leuchter’s expert report was pioneer work, and it was the first of its kind in the world wherein the question of the gas chambers at Auschwitz and Majdanek was treated from a forensic point of view. One can hardly accuse him of having systematically ignored opposing views and results because such views basically did not exist. But Leuchter was never accused of that. He has been accused of having come to false conclusions based on false premises.⁴³⁶

⁴³⁶ Criticism of Leuchter, cf. e.g. Wellers 1989, pp. 45-53; S. Shapiro 1990; Bailer, in: Dokumentationszentrum... 1991, pp. 47-52; idem in: Bailer-Galanda *et al.* 1995, pp. 100-117; Wegner in: Backes *et al.*

L: Is this criticism justified?

R: In my view, partially yes.⁴³⁷ But that is not important for me here. The German Constitutional High Court has stated that even erroneous or deficient works are not necessarily unscientific and are therefore protected under the law. If having made errors were a criterion to deny a work's scientific character, then most scientists would be producing pseudo-scientific works, because everyone makes mistakes once in a while. It is therefore not possible to seriously argue like that.

The mindset that suppresses unpopular scientific research looks different and introduces the concept of human dignity, as hinted at before, but not the *researcher's* dignity – no, the dignity of those who may feel offended by the researcher's results. As an example, let me quote from Germany's most respected daily newspaper *Frankfurter Allgemeine Zeitung*, wherein a certain Patrick Bahners, whom I have quoted already earlier, reported on a speech given by Fred Leuchter in Germany (Bahners 1994):

“The state protects the freedom of science. It recognizes a scientist not by his correct results, but by his correct form. [...] But it is overlooked that the intention to incite [to hatred] cannot only be recognized by errors of form, which distinguishes beer table talk from a scientific lecture. Quite to the contrary, the incitement perfected in form is particularly perfidious. [...] But for the Auschwitz survivor there can be no insult more wicked than when an expert with spurious logical reasoning states that the survivor was never in danger of his life.

But the state is here also ridiculed. If Deckert's [=Günter Deckert translated Leuchter's speech] ‘Perception of the Holocaust’ is correct, then the Federal Republic [of Germany] would be founded on a lie. Each presidential address, each minute's silence, each history book would be a lie. By denying the murder of the Jews he disputes the Federal Republic's legitimacy.”

R: Please read through these sentences again and then look for argumentative flaws.

L: The revisionists do not assert that Auschwitz prisoners were never in danger of their lives.

R: Exactly, that is the first error. The raging typhus epidemic killed tens of thousands of prisoners. The leading revisionist Auschwitz expert, Carlo Mattogno, assumes a maximum number of Auschwitz victims of around 136,000 (Mattogno 2003e). Anything else?

L: In his article Bahners negates the freedom of science and turns it into its opposite: the more scientific something is, the more objectionable, and the more prohibited.

R: Right, and it is clear that the likes of Patrick Bahners are not arguing in accord with Germany's constitution. He begins from false premises: Firstly it is unclear how an intention to incite to hatred can be recognized if not by an unscientific, inflammatory form. Such argumentation turns all logic on its head. Secondly, no expert exists who claims that Auschwitz inmates were never in danger of their lives, and thirdly the view is absurd and profoundly wrong that the legitimacy of the Federal Republic of Germany to exist, or any other country for that matter, rests on the acceptance of the prevailing view about National Socialist persecution and

1992, pp. 450-476; cf. Rudolf/Mattogno 2017 and Rudolf 2016c.

⁴³⁷ See the critical edition of the *Leuchter Reports*, Leuchter et al. 2017. Anyone interested in the *Leuchter Report's* deficiencies may also consult Rudolf 2017.

extermination of the Jews. If the Federal Republic of Germany were actually founded on this historical detail, then it does not bode well for this state, because every state has to collapse sooner or later if its existence is based solely upon a certain view of history forced upon its citizens by criminal law.

L: In your opinion, on what is the modern German state founded?

R: Like every constitutional state of Western type: on civil rights, on the German people accepting this state, on its international recognition, on its political, historical, and cultural identity and continuity with predecessor states.

Unfortunately, even the German Constitutional High Court has adopted Bahners's strange logic when it found that even a scientific book can be subjected to book burning, especially when it allegedly subverts a Jew's human dignity by contradicting his testimony.⁴³⁸

Let me make two essential points clear:

1. No one has a right to any particular research results. That does not even change if the overwhelming majority of a society or of all scholars prefer certain results over others. Science is not a democratic process. It is a total dictatorship of verifiable evidence, like it or not.
2. No one's dignity or other civil right can be subverted by scientific research *results*. Just imagine what would become of science if creationists had their say, who feel offended by scientists refuting the claims of their "holy book" (which changes depending on which religion they adhere to). A conflict between freedom of science and other civil rights is possible *only* due to the means and methods used to gather evidence. Hence, only on the *path* from the question (hypothesis) to the answer (thesis) is such a conflict possible, but neither questions nor answers in and of themselves can violate anything. To give a historically relevant example: the question "How long can humans survive in very cold water?" is no crime, nor is the answer "5 minutes." But if you conduct experiments with humans to find the answer, especially if forcing those humans to undergo these experiments, as some German doctors did during World War II (*Trials of War...* 1949, vol. 1), *then* you are violating someone's civil rights, that is: with your methods of gathering evidence. Hence, the *results* of research as such are *never* in conflict with other civil rights!

Hence any court of law in the world deciding otherwise is violating their citizens' civil rights.

L: What kind of proof is offered when a revisionist work is defamed as pseudo-scientific?

R: Usually nothing. The assertion is often made without any reason given and without offering any kind of evidence. In most cases I even have the distinct impression that those using the term "pseudo-scientific" do not even know how to define it, as they have no clue what the nature of science is. Sometimes it is simply claimed – in blatant contrast to the truth – that revisionists merely quote one another. They call it the "quoting cartel of the deniers" or so.

⁴³⁸ Likewise the case of Wilhelm Stäglich, cf. Grabert 1984, Stäglich 1986/2015; this was also applied to Gauss 1994; cf. Rudolf 141-173, pp. 571-575; that "Holocaust denial" is equated by Germany's courts with denying Jews their human dignity and thus their right to live has been confirmed repeatedly, see, eg., the decision BVerfG, ref. 1 BvR 824/90, June 9, 1992; *Neue Juristische Wochenschrift*, 1993, 14, pp. 916f.

- L: That reminds me of many articles from “normal” scientific works where authors primarily refer to their own works as well as to the works of scientists whose mindset is similar, of their school of thought, so to say. This is something that is quite normal in science, though, because scientists working in a similar field on similar projects using similar methods simply tend to refer to each other’s works.
- R: Yes, but in this instance, it is claimed that counter arguments are ignored. But this backfires, because objectively seen the revisionists do the exact opposite: They take apart the assertions made by Holocaust believers – witnesses as well as historians – while the mainstream historians, energetically supported by politicians, the media, and the judiciary, vehemently resist to even take notice of any revisionist arguments, least of all to take these arguments seriously and to discuss them. In addition, revisionists are always accused of maintaining reprehensible – usually right-wing – political views, which are claimed to be advanced through revisionist arguments.
- L: To vindicate Hitler.
- R: That is the usual reproach.
- L: Vindicating Stalin and his accomplices is never regarded as pseudo-scientific, and it certainly would not lead to any book-burning.
- R: Let’s formulate it this way: as long as Hitler is trampled underfoot, you can do almost anything.
- L: But this kind of argumentation rests on circular reasoning, which is scientifically inadmissible and is in effect pseudo-scientific reasoning. A piece of work is unscientific if and when wrong and forbidden results are obtained, namely “Hitler’s vindication.” The author of such a work reaches false results because of his objectionable views. And his views are objectionable because his results are false, that is to say: because Hitler was, is, and must remain a devil. In summary: The author’s results are false because his results are false. Truth is set in concrete through dogma and taboo, which is enforced by the thought police. The falseness of revisionist works is thus automatic. You can stand on your head and change nothing because
- §1: The party is always right; and
- §2: If the party is wrong, then automatically §1 is activated.
- R: I see. I hadn’t thought of that. Permit me to widen our perspective by moving away from the revisionists. The problem of being accused of doing pseudo-science is of a general nature and it plays an important role in the sciences, especially when we consider scientific disciplines where outsiders explore exotic new sources of energy or work on alternative laws of nature. Established sciences – physics, chemistry, astronomy – see their paradigms challenged by such research and at times react quite allergically.
- L: But they don’t call for the prosecutor, do they?
- R: No, that is limited to Holocaust revisionists. But in other areas there is such a thing as censorship through scientific “authorities.” In such cases, single or whole schools of scientists, even scientific institutions, whose paradigms enjoy such high esteem within the scientific community that critical challenges of their paradigms activates a defensive reaction against the dissident, similar to the one that occurs in a society at large when social taboos are broken: refusal to publish papers, person-

al attacks, intrigues, and open attempts to remove dissidents from teaching posts and honors, etc. This especially applies to researchers who question or contradict the dogma of human equality (cf. Whitney 2002, Grubach 2003b). But even in subjects where one would not expect any political influences, as in physics, such censorship measures occur.

Halton Arp of the Max Planck Institute for astrophysics in Munich goes so far as to compare today's obsessive dogmatic behavior of scientists everywhere with the religions of the Middle Ages (Arp 2000):

III. 229: Prof. Dr. Halton Arp

"Science has become religion! [...] science, more importantly, has adopted the methods of religion. [...] The most damaging aspect of science today is widely promulgated theories that are contradicted by observation and experiment. In both cases, a story is mandated by authority and then defended by educational, economic, and sociopolitical agencies. [...] The most harmful aspect of what science has become is the deliberate attempt to hide evidence that contradicts the current paradigm. [...] In a quite human fashion, however, they act in an exactly opposite manner – judging that 'if an observation disagrees with what we know to be correct, then it must be wrong.' The tradition of 'peer review' of articles published in professional journals has degenerated into almost total censorship. [...] scientists, in their fervid attachment to their own theories, have now mostly used their selection as a referee to reject publication of any result that would be unfavorable to their own personal commitment. [...] The only comparable interaction I have heard of is the passionate wars between different religious doctrines of past centuries. [...] The result is that real investigative science is mostly now an underground activity. Independent, often self-supported researchers are publishing in privately supported, small-circulation journals. [...]"

Again, as science organized, authority figures became associated with the 'laws' they were credited with discovering. Organized religion succeeded in killing a great number of people down through the ages on issues that were labeled 'belief and heresy' but were probably more fundamentally concerned with personal profit and power. Science has arisen some centuries later in less bloody societies but has killed and delayed many new ideas and discoveries and has made many mistakes, for perhaps basically the same reasons."

R: If such dogmatic behavior is found within scientific disciplines where no overt political and legal pressure exists, then what do you expect occurs amongst Holocaust historians?

Be that as it may, the fact is that those who have the political, legal, and media power reject the scientific nature of revisionist works so that it does not enjoy constitutional protection in many Western nations, although the constitutions of all of these nations formally guarantee freedom of scientific research.

L: And so nothing stands in the way of a book burning...

R: Right. The German edition of the *Leuchter Report* was banned at the behest of the District Court Bielefeld and subjected to book burning,⁴³⁹ and the same fate befell my *Rudolf Report*.¹⁸⁶

L: Why is there no protest against such authoritarian measures?

R: You can only protest against something that you have knowledge about. It is not possible to bring this topic into the public because all media give it the silent treatment, *i.e.* they call out, “get the Nazi,” and anyone who does not conform is silenced one way or another. The most effective means whereby to suppress thoughts about this topic are the magic words “Nazi” and “neo-Nazi,” because in all Western countries, and in particular in Germany, this will socially ostracize anyone. Who is prepared to listen to and perhaps even help a Nazi?

Take my example. Even though most people who know me are well aware that I am definitely not a National Socialist, an anti-Semite or a racist, it does not help me. The mass media and authorities still defame me as such anyway. And that goes for most revisionists. It is based upon yet another lie. Any effective protest against such defamation engendering persecution and book burning requires publicity. This is the only protection against arbitrary misuse of power by the authorities. But this is exactly what is not available to those who have “successfully” been defamed as National Socialists.

5.2. Violence

L: But don’t you think that National Socialists deserve to be shunned and ostracized?

R: Not automatically, no. It can’t be that people are being persecuted just because they carry a label or stigma. Whether it was foisted upon them or whether they carry it voluntarily doesn’t matter. Labels should never be a decisive criterion. Let me make it quite clear who in my view deserves to be excluded: Anyone who advocates, promotes, incites to, justifies or condones the violation of other people’s civil rights, plus those who actually do violate them, of course. Or more specific in our case: persons who advocate, promote, incite to, justify, condone or use force or even violence to suppress other opinions. The fact is that *not a single revisionist* has ever advocated or used violence against their opponents or anyone else for that matter. On the contrary, revisionists are peaceful and peace-loving people.

L: It appears to me that they don’t seem to have peaceful intentions towards Jews, though.

R: Prove this massive accusation! And harder still: prove anyone’s intentions! Show me concrete words and deeds instead!

What I can prove in response is the misuse of state powers to silence revisionists as well as actual brutal physical and illegal violence. Here are a few examples:

At the end of the 1970s, French journalist and leading politician of the right-wing *Front National*, François Duprat, published the revisionist brochure *Did Six Million Really Die?* in French, whose English original had been written by Richard Verrall (alias Richard Harwood, 1974). Duprat also published a revisionist work called *The mystery of the gas chambers*. He was only 38 years old when a bomb

⁴³⁹ HT no. 36; confiscated: German Federal Supreme Court, Ref. BvR 824/90.

exploded in his car on March 18, 1978 that killed him, while his wife lost both her legs. Two Jewish groups claimed responsibility for this terror act: a “Jewish Resistance Commando” and a “Jewish Revolutionary Group.” The murderers were never caught (Ratier 1995, pp. 232ff.).

French Professor Robert Faurisson was repeatedly assaulted, once almost fatally: On September 16, 1989, he went with his dog on his usual walk in the park of his home town Vichy. But on this day things were different. Three thugs attacked him in the park, sprayed tear gas in his eyes and beat him almost unconscious. Even as he lay on the ground, they kicked him repeatedly in the face and chest. “His jaw and face were smashed,” reported a fireman who came to Faurisson’s rescue. Doctors spent over four hours operating on him. One group named “Sons of Jewish Memory” (*Les fils de la mémoire juive*) claimed responsibility for this attack. In a statement by this group it said:

“Professor Faurisson is the first but not the last. May the Holocaust deniers tremble.”

R: That attack was also a reaction to the *Leuchter Report*, because Faurisson is its spiritual father. The French “Nazi hunter” Serge Klarsfeld, one of the most aggressive opponents of revisionists, commented thereon (Ratier 1995, pp. 250, 252):

“Someone who has provoked the Jewish community for years should expect this sort of thing. [...] one cannot defame the memory of the dead without consequences.”

R: The opponents of revisionists blatantly advocate force, including murder, something revisionists have never done – and yet it is the revisionists who are defamed as inhuman.

L: Surely that is not possible. Your argumentation must be faulty because there must be a reason why such violent acts were committed.

R: The motivation behind such murderous acts of the revisionist hunters was made clear in a quotation from the Jewish magazine *The Scribe* (Holocaust... 1998):

“The correct attitude to the Holocaust should be that it is not too late to deal out proper punishment to our enemies who are in fact the enemies of God. But who are our enemies? All those who deny that the Holocaust took place [...]. Anyone in the above categories must be regarded as if he had taken part in the Holocaust himself. He walks about with a death sentence on his head.

If our enemies can be made to experience the loss of 6 million people themselves they would no longer claim that the Holocaust did not take place. [...]

III. 230: All that was left of Duprat’s car (Ratier 1995, p. 233).

Only those who identify themselves as enemies of God will receive their punishment.”

R: Since they ascended to power, the National Socialists have been portrayed as physical embodiment of the devil, against whom all measures were justified to suffocate everything at its source: “The womb out of which it crawled is still fruitful.” Crawling is for vermin, beasts, monsters, and this is exactly how people respond. Nazis, monsters, devils. It is all the same. It is permissible to beat, kick, murder, as soon as one such monster has been identified. This is how Allied propaganda during World War II whipped up its own soldiers. In one way or another it still happens like that in any war to this day. But the propaganda of World War II has never stopped and continues to this day.

L: Because it proved to be true.

R: True or not, that is a personal judgment. But to portray one’s fellow humans as non-humans, as devils, as vermin, as sub-humans only because they entertain another opinion! Is that not what the National Socialists are accused of having done? Is that not deeply fascistic, nazistic, racist, to use the inflammatory adjectives once again?

Other forms of violence used against the revisionists are fire and bomb attacks. The editor of the *Journal of Historical Review* wrote on the back cover of Number 2-4 of 1984 (IHR 1984):

“At approximately midnight on the Fourth of July last [1984], the business office and warehouse of the publisher were burned to the ground by arson. [...] What you see before you could be called the ‘Phoenix’ issue of THE JOURNAL OF HISTORICAL REVIEW as it has quite literally risen from the ashes. Regrettably, more than \$300,000 worth of historical books, documents, files and equipment were not so fortunate.”

R: That these were not isolated cases is shown by compilations of physical aggressions against revisionists which list some 30 cases of physical assaults, arsons, shootings, pipe and parcel bombs, etc. (Plantin 2001a; also Faurisson 1996). In the first edition of this book I summarized these lists, which ended with entries of the year 1999 (Rudolf 2005d, pp. 498f.). I will abstain from repeating it here, not least because it looks like violence has considerably decreased over the past ten years. This may also be an effect of intensified government persecution in many Western countries, as a result of which those thugs no longer see a need to resort to lynch-mob justice.

That does not mean that violence has gone completely out of fashion, though. It is at times even advocated by individuals in the mainstream media. As one example,

III. 231: *There are those who use force if they run out of arguments. Prof. Faurisson after his beating by Jewish thugs, September 16, 1989.⁴⁴⁰*

⁴⁴⁰ *The Globe and Mail*, September 18, 1989; *Le Monde*, September 19, 1989; *Sunday Telegraph*, September 24, 1989; cf. Weber 1993b.

III. 232: Pictures of the devastation caused by the firebombing of the printing works of the revisionist publisher Historical Review Press in Uckfield, UK, in September 1996.

© Tony Hancock

I may quote Fritjof Meyer, a former leading editor of Germany's largest news-magazine *Der Spiegel*. As the debate surrounding his article on the victim number of Auschwitz (F. Meyer 2002) petered out, he stated the following (F. Meyer 2004):

"The impression is now growing that they [the "right-wing radicals" or "Auschwitz deniers"] could succeed in again exploiting my theses: for propaganda of belittlement. For that reason I would not like to continue the debate in public. [...] In view of the current dangers in Italy, France, Russia, and the U.S., the fascists must continue to be beaten wherever they are met."

L: That sounds like a call for violence against those who think differently.

R: Yes. Such individuals are called armchair perpetrators, whose activity is of an inciting nature. So much for the culture of debate of this leading editor of *Der Spiegel*. It shows that Meyer is an opponent of National Socialism to the point where he is prepared to use violence against presumed adherents of that ideology. Yet still, with his controversial 2002 paper he has confirmed that revisionists are at least partly correct with their historical claims. This is the best endorsement one can possibly get.

Despite Meyer's faux pas, probably caused by exasperation, it seems that random violence has decreased in the 2000s, maybe because it has been replaced by drastically increased government persecution, as I will show in the next chapter. Hence, knowing that governments all over the world do their dirty work, the terrorists have ceased to strike out.

As an anecdote I may add that privately Meyer thinks even more revisionistically than is implied by his 2002 Article. I learned about this in the summer of 2009

III. 233: Fire damage to the Zündel house after the arson attack on May 7, 1995. © Ernst Zündel

from a German historian who is a friend of mine. This historian had met Meyer by chance during a conference. During a private side conversation at the hotel's bar, Meyer recounted how he had argued with Polish Auschwitz historian Franciszek Piper about Meyer's Auschwitz article. In this context Meyer remarked that, if he continues to be attacked so unobjectively by Piper, he would go even farther with his revisions in public and would make even the last gas chamber come tumbling down. In other words: Meyer knows full well that the stories about homicidal gas chambers at Auschwitz are a lie. He simply doesn't say it publicly.

5.3. Censorship

R: The shocking thing about the above-listed acts of violence against revisionists is that none is ever legally pursued. For example, if individuals attack revisionists within the body of a court, then surely such perpetrators should be arrested and charged. But this never happens. Should someone by chance be arrested, then that person is soon released by order from above. In other words: Violence against revisionists is condoned by the government, and is thus welcomed.

This is not surprising if you look at how the governments of the Western world behave towards revisionists. All sorts of ways and means are employed to hinder, to limit, or even to stop their activities. That is why we shall look in more detail at the various forms of censorship that we have come across during these lectures.

In Europe, censorship of revisionism is quite differentiated, although the European Union tries to coax all member states into outlawing revisionism (European Union 2007). Many countries such as Ireland and the Scandinavian countries do not impose any censorship. Some of the eastern and southeastern European countries do not have similar laws, but there are initiatives under way to change this. Poland, for example, enacted such a law shortly before joining NATO. The Czech Republic introduced an anti-revisionist law in 2001. Hungary enacted such a law in 2010 (Butz 2010), but by so doing it triggered a major debate about revisionism instead of stifling it (Graf 2010). In Bosnia and Herzegovina, initiatives to outlaw genocide denial were nixed by the Serbs.

L: They probably fear to become victims of such a law for what happened during the Balkan wars in the 1990s.

R: Maybe. In a desperate attempt to boost Russia's self-confidence, any revisionism of the "Great Patriotic War," including the Holocaust, was outlawed there in 2014, with a maximum penalty of five years (Reuters 2014). Italy enacted a law in 2016 which bans Holocaust denial only when it is committed in conjunction with explicit incitement to discrimination against Jews, however that is defined (Hernández 2016). The maximum prison term is six years.

Spain used to have such a law, but its Constitutional Court threw it out in late 2007 as a violation of constitutionally guaranteed free speech. The Netherlands outlaws revisionism via their anti-hate law.

England seems to be divided over the issue. In July 2008 two Britons received prison terms based on Britain's Race Relations Act for distributing a comic booklet conveying revisionist arguments in a quite extreme, at times tastelessly satirical

manner (Mann/Hoffman 1989; cf. www.heretical.com). On the other hand, in November 2008 Australian revisionist Dr. Fredrick Toben, who had been arrested while in transit through London-Heathrow pursuant to a German arrest warrant, was released because his writings were not considered incitement to racial or religious hatred (Fletcher 2008). Hence as long as you don't use crude cynicism and satire, revisionists should be fine in England for now.

Energetically enforced laws are to be found in France, Belgium, and in all German-speaking countries (Germany, Austria, Switzerland, Luxembourg, Liechtenstein). The harshest punishment against revisionists is meted out by Austria with a maximum of ten years imprisonment (under special circumstances even 20 years), followed by Germany, Portugal and Romania with a maximum of five years (as does Israel), then Poland, Greece, Czechia and Switzerland with up to three years, followed by Liechtenstein with up to two years, France, the Netherlands and Belgium with a maximum of one year, and last but not least Luxembourg with up to six months.⁴⁴¹

L: Does this mean that suppression of revisionism is restricted to Europe?

R: By no means. Other countries have developed no-less-effective ways to protect this taboo. Canada, for instance, used to have a law permitting the suppression of any view considered wrong, but in 1992 the Canadian Supreme Court threw it out as unconstitutional, as a result of Ernst Zündel's legal battles. Yet Canada's pressure groups found other ways to curtail revisionists and other heretics through their newly created so-called human-rights tribunals, which Australia promptly copied. These tribunals operate independently of the criminal justice system and silence dissidents by imposing all court costs on them even if they win the case, plus fines and court orders in case they lose. Any violation of such court orders is then a criminal matter and pursued as such, as the cases of revisionists Dr. Fredrick Toben in Australia (www.adelaideinstitute.org) and Ernst Zündel in Canada have clearly shown (www.zundelsite.org, now offline; cf. Rimland 2003).

Thanks to the First Amendment of the U.S. Constitution, there is practically no censorship by U.S. authorities. Unfortunately, the mass media are concentrated in a few hands, and so a plurality of opinions does not exist there either anymore. A large part of the mass media is in the hands of eight large corporations,⁴⁴² which also control the advertising market, on which the rest of the media depends. The U.S. media are essentially fed with one news outlet – the Associated Press. The U.S. wholesale book trade is essentially in the hands of one firm – Ingram. The retail book market is increasingly dominated by Amazon with a 41% market share in 2014, and growing (Bercovici, Packer). This explains why it is far more difficult in the USA to find historical publications wherein the clichés of the victorious Allies of World War II are challenged than is currently the case in Germany, in spite of all the persecution and prosecution there – except for Holocaust revisionism, of course, which is completely outlawed in Germany.

Amazon's market share is also steadily growing in Europe, especially in England.

⁴⁴¹ For more details see http://en.wikipedia.org/wiki/Laws_against_Holocaust_denial (accessed on April 14, 2017), which was a little outdated that last time I visited it.

⁴⁴² McChesney 1997 & 2000; more recent: http://en.wikipedia.org/wiki/Concentration_of_media_ownership (accessed on April 14, 2017).

Hence, particularly strong pressure was exerted by the Board of Deputies of British Jews to suppress revisionist writings. In March 2017, Amazon finally caved in and has since suppressed all titles considered inconvenient by the lobby. The primary victims were revisionist books on the Holocaust, especially almost all volumes and editions of the revisionist series *Holocaust Handbooks* and its German equivalent *Holocaust Handbücher* (CODOH 2017; see the ads in the back of this book).

Things escalated even more in 2022, when Germany and Israel submitted a resolution to the General Assembly of the United Nations, asking all governments of the world to do anything in their power to combat and suppress Holocaust revisionism,⁴⁴³ which is in clear violation of the United Nation's Declaration of Human Rights (Preamble and Art. 19).⁴⁴⁴ Within a few days after this resolution had been accepted, the Ingram Content Group, which has a monopoly in the U.S. on book distribution, took all books published by Castle Hill Publishers off the worldwide market, probably bullied to do that by Amazon (see Rudolf 2022 for details and more on censorship). With one click of the mouse, all of Castle Hill's books disappeared from the entire world. They can since be bought only from their own website and from a few minor retailers buying them from Castle Hill.

Although the USA to date has no criminal laws against revisionists, it does everything possible to suppress revisionist work in foreign countries. In 1992 the FBI "Nazi hunter" section OSI sent from the American consulate in Frankfurt/Main a report about revisionism in Germany, a copy of which was anonymously sent to the Institute for Historical Review (Office... 1992). Interestingly, the report was also distributed directly to the Israeli Embassy in Bonn, the Israeli Consulate in New York and the B'nai B'rith Lodge in London. The OSI therefore works closely together with the Israeli State and with this Jewish lodge. This report states at Point 3 that the German Federal Bureau of Investigation (*Bundeskriminalamt*) promised that it would initiate criminal proceedings against anyone possessing revisionist material.

L: In other words: if the U.S. justice department could do as it wants to, censorship laws would be introduced in the U.S. as well.

R: If push comes to shove, the judges on the Supreme Court may be the last stronghold to safeguard the First Amendment. Time will tell.

It thus cannot surprise that the USA engages the world over in activities that undermine revisionist conferences and publications, as I explained in Chapter 2.16, regarding the Muslim world.

L: And they do not hesitate to deport revisionists to persecuting countries so that they are prosecuted and incarcerated there for things that are perfectly legal in the U.S. This has happened to Simon Sheppard and Stephen Whittle, the two Britons you mentioned earlier. They had fled to the U.S. in 2008 and had asked for political asylum, but the U.S. authorities promptly detained and deported them back to the UK, where they were duly processed.

R: Right. This has also happened to the author of this very book. I came to the U.S. in 1999 and applied for political asylum in 2000 due to the ever-increasing persecu-

⁴⁴³ <https://undocs.org/en/A/RES/76/250>

⁴⁴⁴ <http://www.un.org/en/about-us/universal-declaration-of-human-rights>

tion in Europe. Even though the judge adjudicating my case admitted during the hearing in 2001 that he has never seen such a well-documented application for political asylum, he denied it anyway, even claiming without proof that my application had been fraudulent. Although this untenable valuation was later overturned by a Federal Court, the denial of asylum as such was not. Things got complicated, however, due to the fact that in 2004 I had married a U.S. citizen, and at the beginning of 2005 I had become the proud father of our daughter.

L: Doesn't that give you the right to stay in the U.S. with your wife and daughter? After all, they are U.S. citizens and have a right to their husband and father.

R: No, they do not, as we found out the hard way! On October 19, 2005, immediately following an Immigration and Naturalization hearing in Chicago that acknowledged my marriage to be genuine, and after receiving the certificate of approval, I was arrested on the pretext that I had allegedly missed an interview appointment five months earlier which had actually never existed to begin with. Although this claim was dropped later on, the order came from Washington directly to deport me to Germany anyway. Neither my recognized marriage to a U.S. citizen nor the well-documented fear of government persecution by way of a long-term imprisonment in Germany were considered a reason to exempt me from deportation by the U.S. Federal Court in Atlanta. The U.S. Supreme Court did not even bother to look at the case. Hence, on November 14, I was deported to Germany, where German officials immediately arrested me in order both to have me serve the outstanding prison sentence (14 months) that I had received back in 1995 for my expert report (see the current edition: Rudolf 2017), and to face a new criminal trial initiated against me for my publishing activities of the previous nine years while residing in England and the U.S. Although my publishing activities were completely legal in those countries, the German authorities opine that they have to apply the German Penal Code to legal activities in foreign countries.⁴⁴⁵

L: So how did it all end?

R: With a total of 44 months in various German prisons. But here I am, alive and kicking!

L: The German-Canadian revisionist Ernst Zündel has fared similarly, hasn't he?

R: Quite so, even though in his case he actually missed his marriage interview, so they didn't have to make one up, as in my case. But the effect was the same. Only he received five years after having been deported to Germany, and the two years he had to spend in solitary confinement in Canada prior to his deportation – the U.S. had deported him to Canada rather than to Germany – were not recognized by the German court. So he spent a total of seven years in jail for his dissent.

L: And then the U.S. authorities claim that they cannot deport those millions of illegal immigrants! Well, they don't *want* to. If they can deport perfectly legal residents, then why should it be impossible to deport the illegal ones?

R: Because it all boils down to politics, to lobby influence, pressure groups, media reporting, etc. Legal considerations are mere fig leaves, and if in the way, they are brushed aside.

L: It's obvious how hypocritical U.S. propaganda is when it claims to be spreading freedom and democracy to other countries.

⁴⁴⁵ For a case description and documentation see www.germarrudolf.com; cf. Rudolf 2016e&f.

R: All charity has its limits. In any case, the main victor of World War II is the USA, and this they wish to remain so. The strong Jewish lobby in the USA must not be forgotten (cf. Findley 1985, Goldberg 1996, Mearsheimer/Walt 2007), because if it had its way, it certainly would eliminate the First Amendment for this issue. But even in the USA there has been an ongoing assault on civil rights since 2001. Bush's "Patriot Act" after September 11, 2001 opened the door for such attacks. The surprising thing about censorship in Western democracies is that a large majority of the population in those countries either accepts such censorship measures or is at best indifferent to them. This in spite of the fact that only a small percentage of citizens nurture any radical views that would fanatically incline them to suppress unwanted views. This powerful and unified front against any major revision of historiography can be understood, if we consider the interests of those groups who demand and support this censorship most intensely: Zionism and other forms of imperialism, international high finance, corporate capitalism, egalitarian ideologies (Rudolf 2005f). But I do not want to get into a political discussion here. The most glaring example of censorship is Germany, for the reasons I have mentioned in Chapter 2.15. I don't want to go into details here, but refer the interested reader to what I have written elsewhere (Rudolf 2005c, Rudolf 2003e&f, cf. Rudolf 2005d, pp. 500-510, 2016e).

As the final aspect of censorship to be dealt with here, I would like to point out that even the United Nations has passed a resolution urging all nations of the world to reject revisionism wherever they encounter it (United Nations 2007a; similar 2005, 2007b, 2009):

"The General Assembly [...]

- 1. Condemns without any reservation any denial of the Holocaust;*
- 2. Urges all Member States unreservedly to reject any denial of the Holocaust as a historical event, either in full or in part, or any activities to this end."*

R: Hence it's now official: we have the whole world against us (except for Iran, which distanced itself from that resolution).

L: May I ask: Why don't you revisionists present all the evidence which you have presented in this book to the judges prosecuting you?

R: Because they wouldn't let us. After all, I was on trial for this very book, and all motions to introduce such evidence were rejected. In the end, in the court's eye it doesn't matter what opinions you harbor and whether they are right or wrong. The only thing that matters is that you are not allowed to say them in public. Period.

L: That's a rather cynical stance to take.

R: Maybe, but that's the way it is. The German judge who sentenced German revisionist Ernst Zündel to five years' imprisonment for his views argued along this line, as the media reported (Klingelschmitt 2007):

"At the end, the court rejected all motions with the succinct reason – which was shocking for some anti-fascists in the audience – that it is utterly irrelevant whether the Holocaust took place. Its denial is penalized in Germany. And that is the only thing that counts in court."

R: It isn't much different in the U.S., I may point out, although this topic is never dealt with in a criminal court. The one case in the U.S. during which the issue came up – the civil suit by Mermelstein, see Chapter 2.9. (p. 105) – ended just like

this: the judge disallowed any evidence by ruling that the Holocaust and the killing in gas chambers with Zyklon B are indisputable facts. Like basically all legal systems, the German legal system has that option also built into their criminal law (Article 244, Section 3), which permits judges to reject anything they deem self-evident. In a certain sense, such a rule is indeed helpful to restrict court cases to what is relevant.

L: But when dissidents are on trial for their views, aren't their views and the reasons why they have them absolutely essential?

R: One should think so, but the German judiciary is stern about it: the Holocaust is self-evident, and any attempt to cast doubt on any part of it or even to refute it has to be rejected. And worse still: in 2002 the German Supreme Court decided even that it is a criminal offense to file a motion which tries to introduce evidence supporting Holocaust denial, as this amounts to yet another denial, this time in the courtroom (see p. 427).

In my own 2007 court case I filed a motion to hear five mainstream historians, all of whom would testify that the only reason why historians don't show any dissent about the Holocaust is because they are scared of being persecuted and prosecuted for it. And what was the judges' reactions to this?

"[the Motions] are rejected, because the gathering of this evidence is irrelevant for the [Court's] decision, because even if the named persons would confirm the probative allegations, the Chamber would not question the self-evidence of the Holocaust [...]" (Rudolf 2016f, p. 247)

L: Which means that even if you came with a million professional historians all saying that the revisionists are right, the courts would still not be moved?

R: That's the gist of it. Hence, as a revisionist you may as well spare yourself the energy. If you end up in court with such a case, it is best to silence one's defense lawyer and merely point to the show-trial character, that is, the utterly illegal nature of the proceedings in a rational way, and to emphasize our right and moral obligation to peacefully resist such tyranny, which is what I have done (Rudolf 2016f). All else is a waste of time, energy, nerves, and money. Except, of course, if the courts get swamped with so many cases that there is a real chance that some judges will show backbone and refuse to send dissidents to jail.⁴⁴⁶

L: But England is different, as the Irving case has shown: there both sides could introduce whatever evidence they deemed relevant.

R: Yes, but David Irving, who has little knowledge about the Holocaust, initially tried to not even address the issue, but by the time he had realized that the defense would put it center stage, it was too late for him to muster an appropriate defense (see p. 145). Additionally, the legal situation for revisionists had become so precarious by that time that few, if any, were willing to risk public exposure and thus extradition requests from all over Europe, should they testify publicly during Irving's court case. I, for instance, had to flee from England because of the hype stirred up by the mass media shortly before the commencement of Irving's trial, and once I had applied for asylum in the U.S., I could no longer leave that country without losing my right to return. Carlo Mattogno will not leave Italy anymore, as

⁴⁴⁶ The first English edition of the present book contained a lengthy legal analysis of the situation in Germany, which I spare the Anglophone reader here (Rudolf 2005d, pp. 511-517).

many European countries have an eye on him, and Jürgen Graf and others are even hiding elsewhere in Europe for the same reason. And so it goes on. If it weren't for the Internet, which allows us to communicate even under these trying circumstances and thus keeps us going, there would be no revisionism in Europe anymore worth talking about. But there is still America...

5.4. Possible Solutions

L: Could you not expect a few human-rights organizations to help you against such injustices?

R: That's what one would expect, but unfortunately all human-rights organizations keep their heads down on this issue. The politically left-wing-afflicted Amnesty International (AI) specifically excludes such cases from support where a persecuted individual has incited hatred against others. That revisionists do not incite anyone to hate anything does not interest them. In this instance AI follows the general brainwashed pattern: revisionist = anti-Semite = persecutor, not persecutee.

There are, of course, other human-rights organizations that are far more objective, but even from them no support has been forthcoming. The reason is simple: Would you support and protect individuals who are defamed by the authorities and the media as Nazis?

In my asylum case, I had my lawyer approach all the major civil-rights organizations in the U.S. with the request to write an *amicus curiae* brief, that is, a document of support. Result: zero.

The chairman of the German *International Gesellschaft für Menschenrechte* (IGFM, International Association for Human Rights) addressed this clearly when he was approached to help those individuals who are persecuted in Germany today. Although this organization is aware of the persecution of so many researchers and publishers in Germany and other European countries, it decided not to help (Hafen 1996, cf. Rudolf 1997c):

"I believe that the IGFM does not have the energy to see through a trial without suffering damage to itself."

R: The background to this is that this organization has been, and still is, subjected to massive criticism from the media and left-leaning organizations because it stood firm against communism and because it helped ethnic Germans who were subjected to persecution after WWII – especially in Poland and former Czechoslovakia. Helping individuals who are persecuted because of their right-wing leanings could start a persecution campaign against the organization itself, something they believe might be fatal to their organization. That is why I don't think any effective help can be expected from this side.

L: Considering all the facts that you have presented here in this book, most of which are quite plausible and convincing, how can it be that most people still slavishly and blindly follow such nonsense as churned out daily by the mass media?

R: Let me explain this apparent problem with a historical parallel that was first suggested by Dr. Arthur Butz, and which I shall summarize here (Butz 1982). This historical parallel will also indicate how matters will develop for us in future. I

make reference to the so-called “Donation of Constantine.” It probably was the most successful documentary forgery in European history. Around 800 AD the Catholic Church asserted that Roman Emperor Constantine I, after converting to Christianity, handed over his worldly empire “the city of Rome, all Italian provinces, towns, as well as the western regions” as well as “the four large holy places of Alexandria, Antioch, Jerusalem, and Constantinople” to the Pope and granted the Pope some further privileges. So as to eliminate any doubt about this matter, it stated furthermore that Constantine would transfer the imperial capital city from Rome “to the province of Byzantium,” “where a city shall emerge that shall be named after us,” *i.e.* Constantinople.⁴⁴⁷

L: But Byzantium – that was Constantinople’s first name – had existed long before Constantine converted to Christianity.

R: Well noted. This is one of the two main points of evidence that the document is a forgery. The second is that according to all available evidence the imperial regime in Italy continued under Constantine and Sylvester, as well as under their successors. Although the forgery was so blatant, the authenticity of it was not questioned until the 15th century, although this document was the foundation of the power and the massive misuse of that power by the Catholic Church during the Middle Ages. Only in 1433 did there appear a well-founded critique of it written by Johann von Kues, alias Cusanus, at that time deacon of St. Florinus in Koblenz (Germany). His work *De concordantia catholica* did not cause a sensation, though, probably because it was written in a dispassionate style.

This serenity, however, lasted only until 1440, when the passionate and detailed work of Italian scholar Lorenzo Valla appeared – *De falso credita et ementita Constantini donatione declamation* (Valla 1994). He was the one who for the first time used forensic methods that exposed the forgery by, for example, looking at Roman coins after the Constantine era, which were produced not in the name of the Pope but in the name of the respective Roman Emperor. Valla’s critical revisionist method was at that time revolutionary. With the rise of book printing at the end of the 15th century, Valla’s writings were distributed far and wide, and it formed one of the pillars on which Martin Luther and his supporters based their Reformation. Martin Luther declared that Valla’s work had convinced him that the Pope was the embodiment of the Anti-Christ.

This historical example throws up two questions that also arise in the Holocaust-Lie matter:

1. If the lie was so blatant, why was it not quickly exposed as such?

The answer lies primarily in the power that the church at that time possessed. It decided what was permitted to be discussed, and it also decided what information people received. The actual learned individuals who could have tackled the topic critically were either honored members of the church, or if not of the church, then certainly dependent upon the church. Thus the prerequisites for “politically correct” stupidity had been fulfilled.

2. If a fearless and inquiring intellect can recognize so easily the forgery of the Donation of Constantine, then why was a detailed work such as Valla’s argumentative over-kill needed in order to defeat the myth?

⁴⁴⁷ See http://en.wikipedia.org/wiki/Donation_of_Constantine (accessed on April 14, 2017).

Valla's work contained intellectual material of such quality that the breakthrough could not be stopped. Collectors of coins gained prominence; specialists of Latin language and grammar felt encouraged to participate in the debate; experts on Roman history felt involved; church historians wanted to add their bit. In summary, voices from all sectors of society began to be heard amidst a massive political upheaval.

The analogy to the "Holocaust" legend is striking:

- a. Academics of the Middle Ages and the Renaissance who did not see the obvious remind us of the academics of our time. In view of the draconian social and criminal threats against dissidents, there is hardly anyone who has broken free of this Pavlovian conditioning and is prepared to become a martyr.
- b. The legend of the Donation was exposed as a forgery at a time when the Papacy was subjected to strong criticism, when it was fashionable to criticize the Catholic Church. Similarly, the "Holocaust" lie will be exposed when those upholding the post-World War II order and Zionism either do not need it anymore or can no longer sustain it.
- c. A further parallel is the extensive attention to detail on Valla's part, much like that of the revisionists. In both cases one can speak of "overkill." The people of the Renaissance simply didn't realize that the handing over of power from emperor to pope never happened, and we don't seem to notice that millions of "Jewish survivors" were still there after World War II, and that alone indicates that the "Holocaust" never happened quite as told.

Apparently, we have to investigate all possible details, which may appear like an overkill to posterity. For example, we are not satisfied that the Zyklon B allegedly used to kill Jews in Auschwitz was a mere pest control agent. No, we even have to exhaustively analyze each and every chemical aspect of this question!

L: But you cannot avoid analyzing in detail the assertions made by the official historians!

R: Quite right. This obsession with detailed analysis is to be welcomed, not only because we thereby counter the claim that we have run out of arguments, but most importantly we enable specialists from all different sectors of our society a point of entry and become involved in the controversy.

L: If you revisionists want to be successful, don't you think you have to declare in a credible way that you deplore the persecution of innocent victims by the Third Reich?

R: Absolutely. I have adopted the view that the persecution measures of the National Socialists against the Jews, according to today's international legal understanding, can be called genocide even if no physical extermination of Jews occurred, but "only" deprivation of civil rights, deportation, and subsequent damage to property, body, and soul (Rudolf 2019, pp. 35f.). So, strictly speaking, I have never denied that this was a genocide – one among many during World War II. According to today's international law, which has entered many countries' Penal Code (e.g. Germany's article 6 of its *Völkerstrafgesetzbuch*, international penal law), genocide is defined as:

"(1) Anyone who intends totally or partially to destroy a national, racial, religious, or ethnic group,

1. Kills members of the group,
 2. Causes members of the group to suffer serious physical or mental damage, especially as defined in Article 226 [serious bodily injury],
 3. subjects the group to conditions suitable to cause its total or partial physical destruction,
 4. adopts measures that prevent a group from procreating,
 5. forcefully takes children from the group and places them in another group,
- will be punished by life in prison.
 (2) In less serious cases, Section 1, nos. 2-5, the incarceration is not less than five years.”

L: The question is therefore whether National Socialism had the intention to totally or partially destroy the Jews as a group. After what you have presented here, even that could be in doubt.

R: The issue of intention brings us back to the ambiguous statements made by leading politicians of the Third Reich. Here I merely want to point out that, according to today's definition, you don't have to commit mass murder in order to commit a genocide.

L: But the same type of genocide happened to the Germans in eastern Germany.

R: Correct. The persecution of the Jews, according to revisionist interpretation, is comparable to what other people have endured during World War II. This does not diminish the tragedy they suffered nor does it lessen its importance. Only its unique character disappears, and so their fate becomes just one of many of the tragedies in human history.

You do not help a people if you fill their history of persecution with distortions, exaggerations, and lies. The liars are the real threat to the proper memorial of the real victims, whose story may not be believed anymore because people may conclude that it is all lies anyway.

The revisionists are merely the conveyors of the news that lies were told, and are believed – under force of law. That is why it is not the revisionists who endanger the acceptance and memorialization of the history of persecution, but the liars and those that cover up for the liars.

L: But there must be revisionists who do not even accept real persecution of the Jews as historical fact.

R: Perhaps, but I don't know of any. And if there are, it would be far fewer than those who deny the persecution of Germans at the end and after the war, and still fewer than those who deny that today dissidents are being persecuted. Anyone who claims he has learned something from past persecution should oppose today's persecution, especially if it concerns individuals whose opinions are unpopular.

L: My head is spinning after these lectures. I feel as if my whole view of the world has been turned upside down.

R: I felt the same when, as a 24-year-old, I first stumbled across these things. The initial confrontation usually causes great internal mental and emotional turmoil. After all, a part of one's worldview fractures if today's historical writings turn out to be wrong. Yet it is important to overcome these difficulties.

I think it is anyone's wish to have a secure and rigid worldview wherein to find mental and spiritual safety and peace. These lectures destroy this security because

now the possibility exists that the simple black-white picture of the evil Nazis and the dear Allies, of the cruel Third Reich and the paradise of Western civilization, has become shaky. That is one of the reasons why revisionism is so resisted and feared: It cannot be true what many do not wish to be true, because this would engender a change in the paradigm within which so many have found comfort. But you, as an intelligent person, should be aware that such good-bad dichotomies have never been serviceable in explaining a complex reality. And finally you should consider this: Even if there was no systematic mass extermination, and even if many other things of that period have not been presented correctly, this still does not turn the Third Reich, which was so far always perceived as devilish, into an angel.

L: Don't you think that with such interpretation you are supporting the political right-wing?

R: Is that a reproach?

L: Yes indeed.

R: Well, I will then add a little political excursion. You are aware that in every society there exists a political left. You may also know that there are certain topics that left-wingers hold dear. I ask you, is it a crime to talk about such topics, then?

L: How could it be?

R: The existence of a variety of different political opinions is the foundation of a functioning pluralistic democracy. Where there is a left wing, there ought to be also a right wing. For me there is nothing worse than to have a political worldview without an ideological opposition. Political opponents always force us to review our own ideological position. That is the reason why one-party systems always fail: They are not forced early enough to correct their errors. Only when it is too late and the errors cannot be fixed do the people rise up against their rulers in one way or another and overthrow the dictatorship.

We can also draw parallels with our historical writings: With all kinds of measures – in many European countries even with the help of criminal law – any opposition is suppressed, thereby preventing a critical confrontation. In this way biased historical writings will end up in various dead ends.

A world in which the public breaks out in hysteria when certain things are discussed, because that discussion actually or only seemingly is advantageous to the political right wing, is seriously ill. That has nothing to do with democratic discussions, but is rather the hallmark of a totalitarian synchronization of public opinion and the thinking of the entire society.

L: Well, I did not mean the right wing as such but the *extreme* right wing.

R: Your earlier choice of words is excused, if and only if it were the exception. Unfortunately, it is common usage now in Europe, for example as illustrated in German slogans such as "Rock against the Right," "Justice against the Right," "Network against Right," etc. In the public domain this kind of propaganda knocks over everything that is right of center. And who defines where the middle is?

But alright, let's focus on the extreme right. And let us also assume that you are right. What do you suggest then? Do you want to generally restrain the right from having a free and serious exchange of opinions and the freedom of scientific research for the sake of preventing a misuse of certain opinions or research results?

Do you want to eliminate the most fundamental civil rights just in order to make some left-wingers or Zionists feel more comfortable, so that they do not have to abide critical questions and a possible refutation of some aspects of their ideology? And since when is ideological “comfort” a civil right?

L: ...

R: You are directly following the path of undermining the most basic civil rights. Who ultimately determines which opinion is allowed and which is not? Who determines which opinion could be misused at some point in time and which one couldn't? With such an approach you would drastically change the legal interpretation of civil rights that can be manipulated and distorted at will! And further: You hand extremists – which way ever that is defined – a simple recipe with which they can monopolize any discussion and ensuing decisions.

Let us for a moment assume that the evidence I presented here is correct, something which can ultimately be found out only after a long, open and serious discussion. Which comprehensible argument can you come up with that would allow the prohibition of this possible truth? Is there a single argument that would justify continuously supporting a lie?

L: As you indicated, in these lectures you are moving beyond that which is permitted in many European and some non-European countries. Is a law-abiding citizen not obligated to avoid getting anywhere close to prohibited material?

R: A democracy can only function if its citizens critically partake in the ongoing political discussion of their country. Now let us assume for the moment that we could agree on the following assessment: censorship laws against historians – revisionist or not – are illegal, hence are a violation of civil rights. How is one to react to that?

Let me give you an answer by quoting from the classic text par excellence in which disobedience against an unjust state has been expressed, namely from the essay “Civil Disobedience” by the American Henry David Thoreau. This essay was written in the mid-1850s in view of the war of aggression of the United States against Mexico aiming at conquering Texas as well as in protest against slavery. I quote (Thoreau 1981, pp. 92, 94):

“Unjust laws exist: shall we be content to obey them, or shall we endeavor to amend them, and obey them until we have succeeded, or shall we transgress them at once? Men generally, under such a [democratic] government as this, think that they ought to wait until they have persuaded the majority to alter them. They think that, if they should resist, the remedy would be worse than the evil. But it is the fault of the government itself that the remedy is worse than the evil. It makes it worse. Why is it not more apt to anticipate and provide for reform? Why does it not cherish its wise minority? Why does it cry and resist before it is hurt? Why does it not encourage its citizens to be on the alert to point out its faults, and do better than it would have them? Why does it always crucify Christ, and excommunicate Copernicus and Luther, and pronounce Washington and Franklin rebels? [...]

A minority is powerless while it conforms to the majority; it is not even a minority then; but it is irresistible when it clogs by its whole weight. If the alternative is to keep all just men in prison, or give up war and slavery, the State will not

hesitate which to choose. [...]

Under a government which imprisons any unjustly, the true place for a just man is also in prison."

R: What powerful, courageous words! And he is not alone. Let me quote another giant of peaceful civil disobedience against unjust governments, namely Mahatma Gandhi:

"So long as the superstition that men should obey unjust laws exists, so long will their slavery exist." (Narayan 1969, p. 174)

"Democracy is not a state in which people act like sheep. Under democracy individual liberty of opinion and action is jealously guarded." (Ministry...1999, vol. 26, pp. 246.)

"In other words, the true democrat is he who with purely non-violent means defends his liberty and therefore his country's and ultimately that of the whole of mankind." (*ibid.*, vol. 75, p. 249)

"I wish I could persuade everybody that civil disobedience is the inherent right of a citizen. He dare not give it up without ceasing to be a man. [...] But to put down civil disobedience is to attempt to imprison conscience. [...] Civil disobedience, therefore, becomes a sacred duty when the State has become lawless, or which is the same thing, corrupt. [...] It is a birthright that cannot be surrendered without surrender of one's self-respect." (*ibid.*, vol. 25, p. 391f.)

R: So that is where we are! Mind you: as long as this is *peaceful* and *civil* disobedience. If you do not approach the boundaries of officially defined legality, which has become illegal, then you will never stop such tyrannical developments. If you place your finger in an open wound, then you naturally cause pain, but there is no other way. Abuse of power can only be curtailed or stopped if you confront the powerful. That the powerful then declare such actions illegal is the hallmark of dictatorships. Genuine constitutional democracies tolerate and encourage criticism and control of power.

Let me stress again what this is all about. Throughout these lectures I merely referred to serious sources and made scientific deductions from them. This activity occurs within the limits of the civil rights formally guaranteed even in all the European countries outlawing revisionism, and this activity categorically does not infringe upon any individual's rights.

Now along comes the public prosecutor and asserts that I am slandering, defaming or inciting third persons to hatred. What logic permits simple criminal law to overrule or suspend fundamental human rights? The authorities justify this by referring to the concept of human dignity, as I have mentioned before, although by so doing they implicitly declare that revisionists have no human dignity worth protecting. They claim that revisionists directly or indirectly assert that some Jews lied in their testimonies about their experiences – which some indeed did, but they were and are not the only ones. Such an assertion, in turn, allegedly violates the dignity of Jews in general.

L: How can that be? Do these authorities claim that Jews never lie, in contrast to all other human beings?

R: No. The logic goes like this: Claiming that the Holocaust is a lie will lead to some people blaming the most-likely culprit for such a lie: the Jews. As a next step,

some people will be inclined to see the inventors of this ultimate lie as the ultimate evil, and thus some of the former will strive to deny the latter their human dignity by persecuting them all over again.

L: Such scapegoating and retaliation against today's Jews must indeed be prevented under any circumstances.

R: Correct, but what the authorities do is to blame the messenger, the revisionists, for what some individuals in some remote and hypothetical future might want to do with some Jews. That is just outrageous, because a historical statement in and of itself is devoid of any inciting content.

You see from this that in many European countries there are unlawfully constructed constitutional conflicts, whereby the civil rights of a certain group (Jews) are expanded so far as to limit the civil rights of other groups (critical citizens): Due to these "laws," Jews (and all who join them on the topic) get a blank check to distort, lie, and exaggerate at will, and nobody is allowed to challenge their claims. That does not mean that all Jews and their associates in this matter actually do it, by any means. It just means that they can basically all get away with it, and that is not a strong incentive to stay truthful, honest and sincere. So, all these laws do is to increase the scope, scale and amount of lies and exaggerations by protecting them, thus engendering the need for, and eventual formation of, even more criticism, *i.e.* revisionism. It's a vicious circle.

If this is my scientific and earnest opinion as a democratic citizen, it is my responsibility to criticize this restriction of civil rights. In this case it is not I who acts illegally, but those authorities that violate the Universal Declaration of Human Rights. I refer here to the human right to freedom of thought, opinion, and expression. The human rights enshrined in the statutes of the United Nations.

L: But doesn't the resolution you quoted earlier show that the UN is obviously not inclined to grant those rights to revisionists?

R: So what? Who are the United Nations? When it comes to this topic, they are no more than an organization of persecutorial states! Do I have to get their permission to enjoy civil rights? These civil rights are inalienable. Not even the UN can withdraw them!

L: In my eyes you achieve only one thing with these lectures: You give the Nazis arguments with which they can propagate their misanthropic politics. With your comments you are enticing the brown rats out of their holes. This cannot be in anybody's interest.

R: What would happen if I followed your advice and had not held these lectures? Do you seriously mean that the "Nazis," whoever that may be, would leave the topic alone? In any case, your choice of words – "brown rats" – indicates your own misanthropic attitude. This kind of language is considered to be the domain of National Socialists. I thus request you to temper your use of language!

If you wish to prevent the misuse of scientific knowledge, then it is quite counter-productive to prevent a scientific discussion. One thing the history of science has proven is the fact that scientific knowledge cannot be banned. If it is not possible to refute revisionist theses in open and honest discussions, then one has to ensure that mainstream scholars use the revisionist approach themselves and bring the fruits of this research into their own political barn. In this way you also prevent a

possible misuse of this revisionist knowledge.

Also, suppressing discussions on undesirable topics is the final reason why populations in totalitarian countries lose their trust in their own authorities. Hence, if we wish to prevent totalitarian developments from taking place, then we are duty bound to discuss taboo topics seriously and to put them in the service of democracy so as to prevent any misuse.

L: After your lectures, my impression is that things weren't too bad in the concentration camps.

R: If mass extermination by the methods discussed here did not occur and far fewer people died as previously thought, then this chapter of history would not seem to be as bad as previously stated. But this is a comparison, a relative statement. That does not mean things really weren't bad at all. "Not that bad" is not an absolutist expression, and comparisons make up the essence of scientific inquiry.

L: Can you understand that people are upset when they are confronted with revisionist theses?

R: Yes, I too was upset by them until I was 24 years old. But you know what? If we have come to the conclusion that something is badly awry with our society, isn't it our foremost obligation to arouse, to upset, to unsettle, to reproach, to irritate?

For this I call to the witness stand no less a figure than the great Socrates. In ancient Greece he had been irritating his fellow citizens for years by questioning everything in the heavens and under the earth. He pushed his luck a little too far when he blisteringly criticized the warfare of the Generals of democratic Athens against Sparta. Hence, he was indicted for high treason. In his defense speech, before he had to drink the famous cup of hemlock, he stated the following, among other things (Popper, 1962, vol. 1, p. 194):

"I am the gadfly that God has attached to this city [...], and all day long and in all places I am always fastening upon you, arousing and persuading and reproaching you. You would not readily find another like me, and therefore I should advise you to spare me... If you strike at me, [...] and rashly put me to death, then you will remain asleep for the rest of your lives, unless God in his care sends you another gadfly."

R: There is an interesting parallel to this in revisionism, because U.S. historian and adversary of revisionism Michael Shermer had written in one of his books in a contribution on revisionism that the French revisionist Robert Faurisson is a gadfly, since he is extremely annoying with his uncomfortable questions and obtrusive demand for evidence (Shermer 1997, p. 190).

With Socrates I insist that in times like these it is a scientist's duty to upset.

But let me give you also another perspective, because I believe that, objectively seen, there is no reason to be upset about what revisionists say. The reason for getting upset lies in those upset minds. To recognize this, let me turn things around. Should each individual not be happy that, at a large accident or a massacre, it wasn't thousands who died but that it was only a handful or that it was a hoax? Surely the relatives of the presumed victims of such presumed tragedies should bristle with joy to find out that the fate of their relatives or friends was not as horrible as had previously been assumed.

In actual fact we observe the opposite. The relatives of victims cling desperately to

the view that a massacre occurred this way and no other way, and that exactly this number of individuals died as stated in an official report. Interestingly, it is not even permitted to offer relief to the relatives of the presumed *perpetrators* of such alleged crimes. The reasons for all this are manifold and require a psychological investigation. Some of the reasons that individuals resist the hearing of good news may be:

- If certain matters of contemporary history are fundamentally revised, then your own worldview may be fractured because to date it had been a comfortable home to which you were accustomed. The resulting mental dissonance will cause discomfort, something to be avoided.
- If you admit that you had been lied to and didn't notice it, then it is bad for your self-image. We usually attempt to avoid such self-accusation.
- If you realize that certain historical statements could be lies, then you can see yourself on the same level as those individuals you have collectively defamed so far as "Nazis," "anti-Semites," "brown rats," "extremists," and "mad." You try to avoid this comparison, even if it is against your own common sense. This, by the way, is the goal of the successful defamation campaign used against revisionists.
- Finally, only very few individuals can muster the courage and perseverance to oppose an overpowering public opinion, to constantly be persecuted by their environment, not to mention, in the extreme, the loss of job, financial ruin, and prosecution.

L: Wouldn't it have been better, before you commenced with this topic, to have clarified your position regarding the inhuman ideology and all the crimes committed by the Third Reich, and then to have distanced yourself from all that?

R: It is everybody's individual choice if he wants to do that. In my eyes, however, most people are merely driven by a Pavlovian reflex when enacting this anti-fascistic ritual. I don't think much of such rituals because only a few know what they are talking about. But I must confess that I have only superficially concerned myself with the ideology of the Third Reich and with the day-to-day doings of the Third Reich, so I cannot credit myself with any competence and comprehensive judgment about the Third Reich as such. When judging it in general, I must admit that I do rely on the image as it is presented by the mass media. But I don't consider that to be particularly objective.

On the other hand, it cannot be doubted that civil rights were drastically restricted during the Third Reich ever since the so-called "Enabling Act" was passed in 1933. As members of an oppressed minority fighting for its freedom of inquiry and speech, revisionists cannot and must not silently pass over the many violations of civil rights that did occur during the Third Reich. If we do not condemn this, we have no right to complain if they deny us our civil rights in a similar manner. If I condemn today's violations of civil rights, I must also condemn violations of civil rights in history. If I don't want to do the latter, I have no moral right to do the former. *Tertium non datur* – there is no other way.

Hence, it is rather trite to say that the Third Reich was a dictatorship where civil rights were violated to a large extent and in utterly unacceptable ways. I am therefore glad to live today, because with my loose tongue, I am sure I sooner or later

would have ended up in one of the Third Reich's concentration camps, and I might not have survived that.

L: Why do you lecture then?

R: I stumbled upon this topic quite accidentally. During the mid 1980s I had my first discussion on this topic with a gentleman who had half-revisionist views. The way he argued, however, was not to my liking because he insisted that it was "only" three instead of six million victims. Such a game with figures I found a waste of time, because it changed nothing about the matter itself. Finally, in 1989 a friend and member of a small German libertarian party presented me with the German edition of Rassinier's book *The Real Eichmann Trial*. It was only through this most-impressive book, and through open discussion with this libertarian friend, that I gained a serious entry into the topic. My own work then began after the *Leuchter Report* appeared. When I had the opportunity to contribute my own research at the instance of a lawyer's request, which would see me appear in court as an expert witness – at least that was the plan – I quickly became involved in the social and legal persecution mill that ultimately drove me into exile.⁴⁴⁸

An important motivation for my work is without any doubt my well-developed sense of justice, because I am upset that we are kept by force from asking questions, and that it is prohibited to spread dissenting answers. I am shocked to see that in Germany and other European countries once again dissidents are persecuted because of their views. Furthermore I want to mention my constant quest to understand the world we live in, that is to say, I am driven by curiosity and love of the truth. I call this the Eros of Cognition, the pleasure of discovering and understanding. And finally, there has to be a reason why the Holocaust is *the* taboo of our times. The slightest violation of this taboo enrages the entire world of historians, jurists, politicians, and media people to the point of utter panic. I think that Holocaust revisionists are most-relentlessly persecuted because those in power know that what we do is to challenge the ideological foundation upon which their abuse of power rests – their amoral foundation, to use their own kind of language. I also don't want this topic to be left to some ideologue or half-educated person. I thus regard it as my duty to ensure that revisionist works about this topic are serious, systematic, and produced competently. Or at least that call to duty was my stance until my arrest in 2005.

L: In your work, are you not in danger of producing results of wishful thinking?

R: As we are all human, it is not possible for a scientist to be totally divorced from the influences of our own wishes. But I shall do my best to ensure that I do not make such errors, because I would only deceive myself and thereby hurt myself in the process. Errors are ruthlessly exploited by the opposition. That should be enough reason for me not to produce predetermined, desired results.

In addition, revisionists are quite prepared to criticize and correct their own errors or those of other revisionists.

By the way, revisionists are often accused of working for the sake of sensationalism and financial gain. But if you look at the personal circumstances of most revisionists, then you will note that any publishing or other public revisionist enterprise will, as a rule, bring with it financial hardship and social ostracism. Most

⁴⁴⁸ See Rudolf 2016e, as well as www.germarrudolf.com.

likely it is more the case that revisionists, among them many idealistic academics, will continue to hold to their beliefs and work in spite of these difficulties, which may even be followed by divorces and family breakdowns.

As a matter of fact, this claim turns the truth upside down. Just consider the attention given to the fraudulent stories of self-proclaimed Holocaust survivors, and keep in mind the billions of dollars made with the help of the shoah business, and it is easy to see which side in this confrontation produces stories for the sake of sensationalism and financial gain.

Finally let me once again point out that defending a certain thesis, which may be consistent with what a scholar wants to be true, is in itself not unscientific. Of course every scientist wants to be right, and spends lots of energy to prove that he is indeed right. This competitive game of thesis and antithesis, in each case resting on the perception of reality by the individual scientist, is one of the motors of scientific research. It is this personal emotional engagement of the scientist, together with natural curiosity and instinct to play, that expands our knowledge. Only when scientists seek to support their thesis with distorted or falsified evidence and ignore counter arguments, does their work become unscientific. The prevailing situation is, however, that the powers-that-be prevent any discussion of revisionist theses, and that mainstream historiography, even in topics not related to Holocaust research, must accept the accusation that over decades it has defended a huge amount of falsified evidence and lies. Who, then, produces results of wishful thinking?

L: What advice do you have for the ordinary citizen?

R: Shy away from radical slogans because they would hurt yourself and revisionism. Be aware that we are dependent upon our human rights and therefore never fall into the temptation to deny our opponents their human rights, as this is bound to backfire sooner or later. Hence, never deny others what you claim for yourself! Take to heart these words from Immanuel Kant (1981, p. 30):

“Act only according to that maxim whereby you can at the same time will that it should become a universal law.”

R: I also share what Martin Luther said:

“All this I opine; I can do no other. God help me!”

R: And with Ulrich von Hutten:

“I dared!”

Acknowledgments

My friend Jürgen Graf and I initially planned to write this book together, but because of his extensive workload this plan had to be shelved. Jürgen did, however, find enough time to read through the manuscript critically and make corrections and suggest additions, for which I thank him.

Even more important than Jürgen's suggestions is Carlo Mattogno's fundamental historical and forensic research, which is the most important basis on which this book rests. Without Carlo's research this book could not have been written, just as Carlo's work would hardly be available to German and English readers, if it were not for Jürgen Graf's translating many of Carlo's work from Italian into German and English. And since Carlo's works are read only by a few people in Italy, I have had the honor to publish his works both in English and German, which I hope encourages Carlo to continue with his important research.

III. 234: Carlo Mattogno, currently the world's most prolific and knowledgeable Holocaust scholar

The trio Carlo Mattogno (researcher), Jürgen Graf (researcher and translator), and Germar Rudolf (researcher and publisher) has been the most productive that historical revisionism has seen to date. As soon as I was "knocked out" in 2005, productivity dropped precipitously. But now others have joined us, and so things are getting back on track.

This does not mean that the contributions of the many critical revisionist historians on whose works I have also based these lectures are lessened in any way. There are just too many to name them here, and so I say a general thank you to you all. You know who you are.

I also want to thank all those translators who volunteered to assist me in getting this book out in English as well: Regina Belser, James Damon, Henry Gardner, Carlos Porter, and finally my dear friend Dr. Fredrick Toben.

A cordial thank you also goes to Thomas Dalton, whose editing skills have been appreciated in order to get this new edition up to speed with recent developments and to make it more suitable for the English-language market. The first edition was too Germanocentric, he affirmed. Well, it no longer is. Blame him for it ☺.

Finally I wish to thank my wife who, during the work for the first edition in early 2005, looked kindly upon me when I was taking work home from the office so that this job could get done in due time. The project had just made it across the finishing line before I got arrested...

ATROCITIES IN SERBIA.

700,000 VICTIMS.

FROM OUR OWN CORRESPONDENT.

ROME, Monday (6 45 p.m.).

The Governments of the Allies have secured evidence and documents, which will shortly be published, proving that Austria and Bulgaria have been guilty of horrible crimes in Serbia, where the massacres committed were worse than those perpetrated by Turkey in Armenia.

The Italian Government has to-day published the testimony of two Italian prisoners who escaped from Austria through Serbia, and took refuge in Roumania. What these two prisoners saw and learned, however, was nothing compared with the evidence supplied by the Serbians themselves, and communicated by M. Psatich to the Italian Government and to the

Pope. According to reliable information, the victims of the Austrians and Bulgarians exceeded 700,000. Whole districts, with towns and villages, have been depopulated by massacres. Women, children, and old men were shut up in the churches by the Austrians, and either stabbed with the bayonet or suffocated by means of asphyxiating gas. In one church in Belgrade 3,000 women, children, and old men were thus suffocated.

Serbian refugees, not on oath, have stated that they were present at a distribution of bombs and machines for producing asphyxiating gas to the Bulgarians by the Germans and Austrians, who instructed the former how to utilize these instruments to exterminate the Serbian population. The Bulgarians used this method at Nish, Pirot, Prizrend, and Negotin, the inhabitants of which places died of suffocation. Similar means were employed by the Austrians in several parts of Montenegro.

III. 235: "According to reliable information, the victims of the Austrians and Bulgarians exceeded 700,000. Whole districts, with towns and villages, have been depopulated by massacres. Women, children, and old men were shut up in the churches by the Austrians, and either stabbed with the bayonet or suffocated by means of asphyxiating gas."

The Daily Telegraph, *March 22, 1916, p. 7*

GERMANS MURDER 700,000 JEWS IN POLAND

TRAVELLING GAS CHAMBERS

DAILY TELEGRAPH REPORTER

More than 700,000 Polish Jews have been slaughtered by the Germans in the greatest massacre in the world's history. In addition, a system of starvation is being carried out in which the number of deaths, on the admission of the Germans themselves, bids fair to be almost as large.

The most gruesome details of mass killing, even to the use of poison gas, are revealed in a report sent secretly to Mr. S. Zygielboim, Jewish representative on the Polish National Council in London, by an active group in Poland. It is strongly felt that action should be taken to prevent Hitler from carrying out his threat that five minutes

The Crucifixion of Jews Must Stop!

By MARTIN H. GLYNN

(Former Governor of the State of N. Y.)

From across the sea six million men and women call to us for help, and eight hundred thousand little children cry for bread.

These children, these men and women are our fellow-members of the human family, with the same claim on life as we, the same susceptibility to the winter's cold, the same propensity to death before the fangs of hunger. Within them reside the illimitable possibilities for the advancement of the human race as naturally would reside in six million human beings. We may not be their keepers but we ought to be their helpers.

In the face of death, in the throes of starvation there is no place for mental distinctions of creed, no place for physical differentiations of race. In this catastrophe, when six million human beings are being whirled toward the grave by a cruel and relentless fate, only the most idealistic promptings of human nature should away the heart and move the hand.

Six million men and women are dying from lack of the necessities of life; eight hundred thousand children cry for bread. And this fate is upon them through no fault of their own, through no transgression of the laws of God or man; but through the awful tyranny of war and a bigoted lust for Jewish blood.

In this threatened holocaust of human life, forgotten are the niceties of philosophical distinction, forgotten are the differences of historical interpretation; and the determination to help the helpless, to shelter the homeless, to clothe the naked and to feed the hungry becomes a religion at whose altar men of every race can worship and women of every creed can kneel. In this calamity the temporalities of man's fashionings fall away before the eternal verities of life, and we awaken to the fact that from the hands of one God we all come and before the tribunal of one God we all must stand on the day of final reckoning. And when that reckoning comes mere profession of lips will not weigh a pennyweight; but deeds, mere intangible deeds, deeds that dry the tear of sorrow and allay the pain of anguish, deeds that with the spirit of the Good Samaritan pour oil and wine in wounds and find sustenance and shelter for the suffering and the stricken, will outweigh all the stars in the heavens, all the waters in the seas, all the rocks and metals in all the celestial globes that revolve in the firmament around us.

Race is a matter of accident; creed, partly a matter of inheritance, partly a matter of environment, partly one's method of ratiocination; but our physical wants and corporeal needs are implanted

WHITMAN ?

in all of us by the hand of God, and the man or woman who can, and will not, hear the cry of the starving; who can, and will not, take heed of the wail of the dying; who can, and will not, stretch forth a helping hand to those who sink beneath the waves of adversity is an assassin of nature's finest instincts, a traitor to the cause of the human family and an abjurer of the natural law written upon the tablets of every human heart by the finger of God himself.

And so in the spirit that turned the poor widow's votive offering of copper into silver, and the silver into gold when placed upon God's altar, the people of this country are called upon to sanctify their money by giving \$35,000,000 in the name of the humanity of Moses to six million famished men and women.

Six million men and women are dying—eight hundred thousand little children are crying for bread.

And why?

Because of a war to lay Autocracy in the dust and give Democracy the sceptre of the Just.

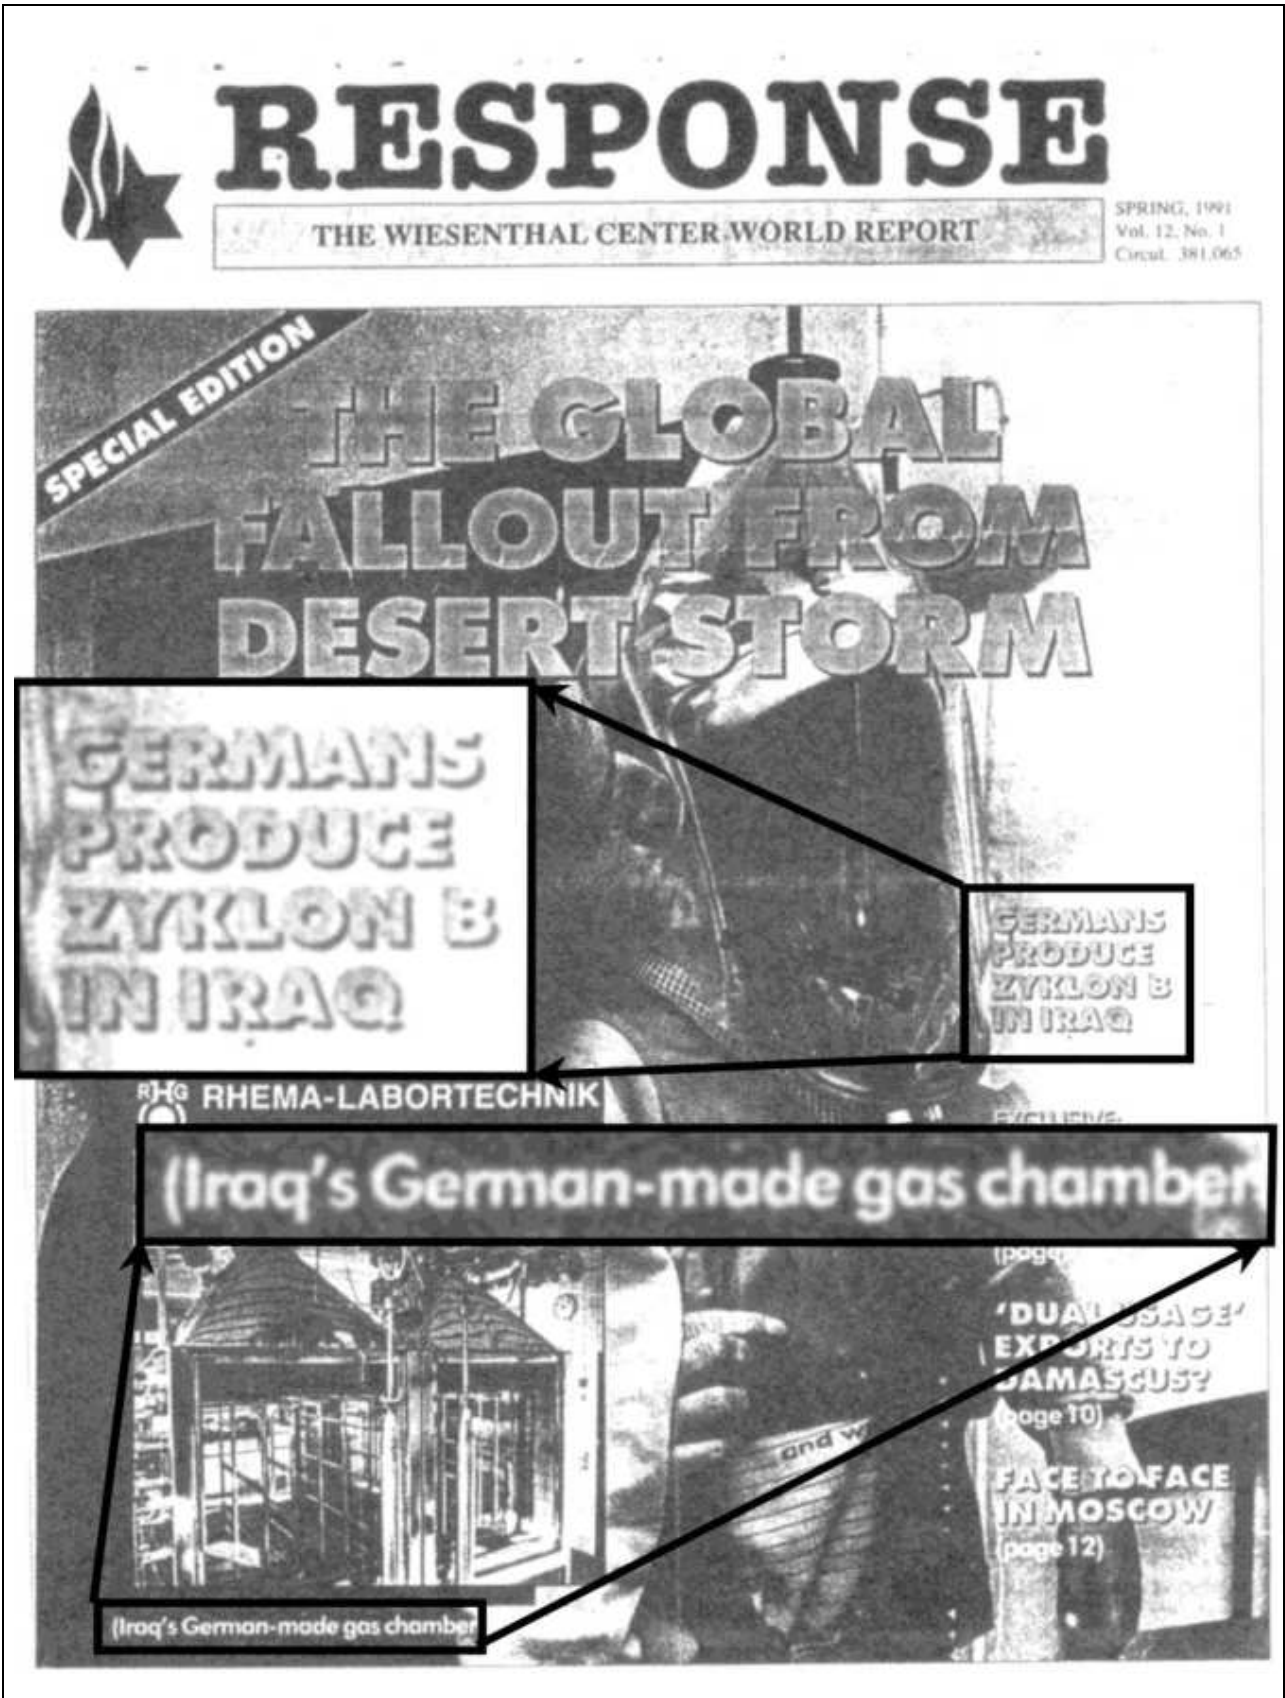

And in that war for democracy 200,000 Jewish lads from the United States fought beneath the Stars and Stripes. In

the 77th Division alone there were 14,000 of them, and in Argonne Forest this division captured 54 German guns. This shows that at Argonne the Jewish boys from the United States fought for democracy as Joshua fought against the Amalekites on the plains of Abraham. In an address on the so-called "Lost Battalion," led by Colonel Whittlesey of Pittsfield, Major-General Alexander shows the fighting stuff these Jewish boys were made of. In some way or another Whittlesey's command was surrounded. They were short of rations. They tried to get word back to the rear telling of their plight. They tried and they tried, but their men never got through. Paralysis and stupefaction and despair were in the air. And when the hour was darkest and all seemed lost, a soldier had stepped forward, and said to Col. Whittlesey: "I will try to get through." He tried, he was wounded, he had to creep and crawl, but he got through. To-day he wears the Distinguished Service Cross and his name is ABRAHAM KROTSHENSKY.

Because of this war for Democracy six million Jewish men and women are starving across the seas; eight hundred thousand Jewish babies are crying for bread.

III. 238: "From across the sea, six million men and women call to us for help [...] six million human beings. [...] Six million men and women are dying [...] in the threatened holocaust of human life [...] six million famished men and women. Six million men and women are dying [...]"

The American Hebrew, October 31, 1919, p. 582. Martin H. Glynn was governor of the state of New York between October 17, 1913 and December 31, 1914.

Whether there should be a war in Kuwait was something that was discussed loudly all over the world. The discussion took a decisive turn, particularly in the United States, on account of reports about unbelievable atrocities committed in Kuwait by the Iraqi troops. The impressive story told by a 15-year old Kuwaiti girl about babies that were ripped out of their incubators by Iraqi soldiers. One year after the Gulf War, Konrad Ebel and Mattias Werth have again looked at this girl and her story (Picture: The weeping girl, Nayirah, as an eyewitness before the Human Rights Committee of the U.N. Security Council):

"I saw Iraqi soldiers. They came into the hospital and took the babies out of the incubators. They walked away with the incubators and left the babies to die on the cold floor. It was horrible!"

(Picture: The eyewitness in tears before the U.N. Security council, she interrupts her report again and again, choking, and wipes the tears from her eyes.)

Everyone on the U.N. Human Rights Committee is shaken by this account of what were probably Saddam Hussein's troops' most cruel deeds. Nayirah's report has an enormous effect. Horrified, even President Bush [sr.] speaks about it: (Picture: Bush talks to soldiers in Saudi Arabia):

"The babies were yanked out of the incubators and strewn on the floor like firewood."

(Picture: Little graves for the allegedly murdered babies are shown).

Pictures proving that Saddam Hussein is acting like another Hitler and that his soldiers are cowardly baby butchers. (Picture: The Kuwaiti surgeon Dr. Ibrahim reporting before the U.N. Security Council):

"The hardest thing was to bury the babies. I have myself buried forty babies that had been taken out of the incubators by the soldiers."

Two days later, in a vote, the U.N. Security Council decides to approve military force against Iraq, after Amnesty International, in turn, spoke of 312 assassinated babies.

Meanwhile, the U.S. Congress was debating whether there should be a war. (Picture: A representative at the rostrum):

"The time has now come to stop the aggression of this merciless dictator whose troops impale pregnant women and tear babies from their incubators."

Impressed by all this, Congress finally votes in favor of war by a narrow margin! (Picture: Dr. David Chiu.) This is Dr. David Chiu, a biomedical engineer. He was sent to Kuwait by the World Health Organization (WHO) to assess the devastations. He visited several operating and delivery rooms. His surprising result is: the incubator story is a complete fabrication!

"I felt cheated. I was surprised to see so many incubators. I asked our guide what had happened and if the story we had been told was true. He said that not a single incubator had been taken away, the whole thing never happened."

The only thing that Dr. Chiu discovered was that dentist's chairs were missing (Picture: Dental surgery room without chairs).

The allegedly dismantled incubators were still there and the physician in

ARD (Association of German Radio Stations), April 8, 1992, 21:00 hrs.

charge clearly said “no!” when asked whether the Iraqis had torn babies from the incubators (Picture: Dr. Soa Ben Essa saying “no”).

Now John Stiles of Amnesty International, too, corrects himself:

“We have talked to more than a dozen doctors of various nationalities who were in Kuwait at exactly that time, but they could not confirm that story. We realized that this thing could not have taken place.”

But how could such a fabrication about the Kuwaiti incubators be concocted and influence the decision in favor of a war?

We found the answer in Manhattan, New York City, with the Hill and Knowlton company, the largest American PR firm. Their business is the professional manipulation of opinion. On behalf of the Kuwaitis, Hill and Knowlton organized a campaign for the unconditional approval of the military liberation of Kuwait by the American people. Budget: 10 million dollars. For this, Hill and Knowlton used methods tested previously for Pepsi-Cola. (Picture: A tester judges emotions when looking at various pictures). The computer shows positive and negative reactions of the public to certain items. President Bush, too, has been using this method in the war of words during his election campaigns. For the Kuwaiti job, this method was used to shape public opinion (Picture: An employee explains the procedure; a speech by President Bush runs in the background, complete with a curve showing the reactions of a test audience):

“We gave each person a small transmitter, palm-size, with which they could show whether their reaction to an item shown was one of pleasure or disapproval. The computer then tells us on the screen whether, for example, the Americans approve of what the President says or not.”

Kuwait wanted to find out, what the Americans would abhor most strongly. The result was: the murder of babies! That was the origin of the incubator lie.

“The objective of our work was the question: how can I move the people to the point, emotionally, where they would support action by the U.N. to throw out the Iraqis? And the emotions that would bring this about would be to convince the people that Saddam Hussein was a crazy guy who killed his own people and still had sufficient aggressiveness to cause yet more trouble!”

A free Kuwait for 10 million dollars!

In this way, public opinion in America was to be mobilized for the liberation of Kuwait. Hill and Knowlton coached so-called eyewitnesses for public appearances. [...] (Picture: Thomas Ross of Hill and Knowlton)

“Materially our task was limited to helping the people appear as ‘witnesses,’ and give their reports in decent English so that anyone could understand them.”

So all you did was help them with the translations?

“Well, we helped with the translation and we helped them with rehearsals for their appearances, and we coached them for various questions they might be asked.”

(Picture: The eyewitness in tears before the U.N. Human Rights Committee).

ARD (Association of German Radio Stations), April 8, 1992, 21:00 hrs.

She had apparently been well coached:

"It was horrible! All the time I had to think of my little new-born nephew who was perhaps already dead himself!"

Behind her, an allegedly neutral spectator and observer (Picture). It is her father, the Kuwaiti ambassador to the U.S. Hardly anybody was aware of this (Picture: photograph of Nayirah showing her the way she looks normally).

The Committee took her to be simply a child refugee. But she belongs to the royal family of Emir Al Sabah. Did the members of the Human Rights Committee know who she really was? How many people knew that she was the ambassador's daughter? (Picture: John Porter before the U.N. Human Rights Committee:)

"I didn't!"

There is another allegedly reliable witness who lied before the U.N. Security Council: Dr. Ibrahim. In real life he is a dentist by the name of Dr. Behbehani. After the war he revoked the incubator story.

"No, I cannot confirm this thing about the incubators."

Then you did not see anything?

"No, nothing!"

But by then, everything was over. Hill and Knowlton's lies had played a decisive role in getting the Americans to come out in favor of the war and to send soldiers to Kuwait. Was it a clever investment by the Kuwaitis to pay Hill and Knowlton 10 million dollars? (Picture: Thomas Ross of Hill and Knowlton)

"A very clever investment!"

WOCHENZEITUNG FÜR POLITIK · WIRTSCHAFT · HANDEL UND KULTUR

Keine Vergasung in Dachau

Weder in Dachau noch in Bergen-Belsen noch in Buchenwald sind Juden oder andere Häftlinge vergast worden. Die Gaskammer in Dachau wurde nie ganz fertiggestellt und „in Betrieb“ genommen. Hunderttausende von Häftlingen, die in Dachau oder anderen Konzentrationslagern im Altreichsgebiet umkamen, waren Opfer vor allem der katastrophalen hygienischen und Versorgungszustände. Allein in den zwölf Monaten von Juli 1942 bis Juni 1943 starben laut offizieller Statistik der SS in allen Konzentrationslagern des Reiches 110 812 Personen an Krankheiten und Hunger. Die Massenvernichtung der Juden durch Vergasung begann 1941/1942 und fand ausschließlich an einigen wenigen hierfür ausgewählten und mit Hilfe entsprechender technischer Einrichtungen versehenen Stellen, vor allem im besetzten polnischen Gebiet (aber nirgends im Altreich) statt: in Auschwitz-Birkenau, in Sobibor am Bug, in Treblinka, Chelmo und Belzec.

Dort, aber nicht in Bergen-Belsen, Dachau oder Buchenwald, wurden jene als Brausebäder oder Desinfektionsräume getarnten Massenvernichtungsanlagen errichtet, von denen in Ihrem Artikel die Rede ist. Diese notwendige Differenzierung ändert gewiß keinen Deut an der verbrecherischen Qualität der Einrichtung der Konzentrationslager. Sie mag aber vielleicht die fatale Verwirrung beseitigen helfen, welche dadurch entsteht, daß manche Unbelehrbaren sich einzeln richtiger, aber polemisch aus dem Zusammenhang gerissener Argumente bedienen, und daß zur Entgegnung Leute herbeieilen, die zwar das richtige Gesamturteil besitzen, aber sich auf falsche oder fehlerhafte Informationen stützen:

Gassings in Germany

A letter appeared on this page titled "Gas chamber error" (Jan. 5). Since I was quoted in this letter, I find it necessary to state the following:

It is true that there were no extermination camps on German soil and thus no mass gassings such as those that took place at Auschwitz, Treblinka and other camps. A gas chamber was in the process of being built at Dachau, but it was never completed.

Gassings did, however, take place at Mauthausen, which at that time belonged to Germany.

The Nazi euthanasia program included four institutions (Hartheim by Linz, Hadamar, Sonnenstein by Pirna, and Grafenegg), in which mentally and physically handicapped people were killed — very often with the help of gas. All four of those institutions were located on German soil.

They were closed following protests but before that served as a sort of school for mass murders; from 1942 the SS members who had been active there were assigned to the large extermination camps, such as Treblinka, Sobibor and Belzec in Poland.

III. 242: North side view and floor plan of Crematorium IV and V (mirror symmetrically) in the Auschwitz II/Birkenau camp.

1: alleged homicidal gas chamber, actual purpose unknown so far; 2: alleged Zyklon-B-insertion hatches; 3: heating furnace; 4: coke room; 5: physician; 6: morgue; 7: ventilation chimneys for morgue and furnace room – but not for the alleged “gas chambers”!; 8: drains; 9: furnace room; 10: cremation furnaces

III. 243: Death Rates of Dachau concentration camp according to evidence presented by the U.S. after the war.

III. 244: Allegedly a photograph taken in Auschwitz-Birkenau from Crematorium V, showing the yard to the north of the building. But this is clearly either a photographed drawing or a heavily retouched photograph (Pressac 1989, p. 422).

Auschwitz, den 17. September 1942

Reisebericht

über die Dienstreise nach Litzmannstadt.

Zweck der Fahrt: Besichtigung einer Sonderanlage

Abfahrt von Auschwitz erfolgte am 16.9.1942 5 Uhr früh mit PKW.
von Kommandantur des K.L. Auschwitz.

Beteiligte: ~~SS~~-Obersturmbannführer H ö B, ~~SS~~-Untersturmführer H ö B l e r
und ~~SS~~-Untersturmführer D e j a c o.

Ankunft in Litzmannstadt um 9 Uhr früh. Es erfolgte eine Besichtigung des Gettos, anschließend Fahrt zur Sonderanlage. Besichtigung der Sonderanlage und Besprechung mit ~~SS~~-Standartenführer B l o b e l über die Ausführung einer derartigen Anlage. Die bei der Firma Ostdeutsche Baustoffwerke, Posen, Wilhelm Gustloffstr. unter Sonderauftrag Staf. Blobel bestellten Baumaterialien sollen sofort für K.L. Auschwitz geliefert werden. Die Bestellung geht aus dem beiliegenden Schreiben vom W.V.H. hervor und soll der Abruf und die Umleitung der bestellten Materialien im Einvernehmen mit Ostuf. Weber vom Amt C V/3 von der hiesigen Zentral-Bauloitung sofort erfolgen. Frachtbriefe in der angeforderten Anzahl sind der oben genannten Firma zu übersenden.

Unter Bezugnahme auf die Besprechung des ~~SS~~-Staf. Blobel mit der Firma Schriever u. Co., Hannover, Bürgermeister Finkstr., soll die dort reservierte, bereits ~~in~~ beiseitegestellte Kugelmühle für Substanzen für das K.L. Auschwitz zur Lieferung gelangen.

Rückfahrt erfolgte am 17.9.42, Ankunft in Auschwitz um 12 Uhr

~~SS~~-Ustuf. (F)

Anlagen:

1 Durchschrift

1 Skizze

III. 245: A crematorium architect visits a special facility.

To deny the danger posed by the Holocaust religion and its followers is to be complicit in a growing crime against humanity and against every possible human value.

—Gilad Atzmon

It is my position that the veracity of Holocaust assertions should be determined in the marketplace of scholarly discourse and not in our legislature bodies and courthouses.

—Michael Santomauro, Ed.,
Theses & Dissertations Press

Of course, no physical evidence whatsoever was shown to verify the alleged homicidal gas chambers, despite knowledge of their existence being denied by every single defendant.

—Jason Myers, on the Nuremberg trials of 1946,
Smith's Report, July 2009

Foreword:

The Holocaust Narrative: Politics Trumps Science

“The fastest way to get expelled from a British university is by saying you are looking at chemical evidence for how Zyklon was used in World War II, with a discussion of how delousing technology functioned in the German World War II labour camps.” —Nicholas Kollerstrom

The situation is completely absurd. No subject generates responses as extreme and irrational as what has come to be known as “the Holocaust.” Unlike any other event in human history, including even the most sacred religious beliefs, for anyone to question, dispute or deny its occurrence qualifies as “a hate crime,” where Holocaust denial is even a prosecutable offense in certain jurisdictions. Unlike any other, this crime involves the expression of forbidden thoughts about a subject that has become taboo.

The underlying desideratum is whether history is supposed to be accurate and true or, as Voltaire put it, merely “*a pack of lies the living play upon the dead.*” Just so we know what we are talking about: In its broadest outlines, “the Holocaust” can be defined by means of its three primary elements, which I shall designate here as hypotheses (h1), (h2) and (h3):

- (h1) that Hitler was attempting to exterminate the Jews and succeeded by putting around 6,000,000 to death;
- (h2) that many of those deaths were brought about by the use of a form of cyanide gas in chambers for that purpose; and,

(h3) that the chemical agent that brought about those deaths was Zyklon B, to which the victims were subjected.

The science of the Holocaust does not leave any room for doubt about (h2) and (h3), since laws of biochemistry and of materials science—laws which cannot be violated and cannot be changed—entail that the bodies of those who are put to death using cyanide turn *pink*, while the walls of chambers used for that purpose would turn *blue*. But none of the bodies from those camps has been reported to have been *pink*; and examination of the “gas chambers” at Auschwitz has determined that none of them turned *blue*. Which means that (h2) and (h3) are not simply false but have been scientifically refuted.

As Nicholas Kollerstrom documents in this astonishing and brilliant book, the science of the Holocaust is this “cut and dried.” To the extent to which the Holocaust narrative depends on (h2) and (h3), therefore, it cannot be sustained. The questions that remain about (h1) are a bit more complex but appear to be equally contrived. There are more than 280 references to 6,000,000 Jews who are either in acute distress or about to be assailed in the newspapers of the world and other publications *prior to the Nuremberg Tribunal*—the first of which appeared in 1891. The number seems to have no basis in fact but to have theological origins—from a disputed passage in *Leviticus*—as to how many Jews must perish before they can return to “The Promised Land.”

To the extent to which the number of Jews who died in the camps can be objectively determined, the most reliable numbers appear to come from the records of the International Committee of the Red Cross, which visited the camps and kept meticulous records of the identities of those who died and their cause of death. Not one is reported to have been put to death in gas chambers, and the total it reported in 1993 for all of the camps was 296,081 combined. Even rounding up to an even 600,000 victims—gypsies, Jews and the mentally and physically infirm—the empirical evidence thus contradicts the contention that 6,000,000 Jews were put to death and thereby falsifies hypothesis (h1).

Counting deaths attributed to the Holocaust—apart from the records of the International Committee of the Red Cross—turns out to be an exercise in “fuzzy math,” because none of them add up. As Robert Faurisson observed during an interview on Dec. 13, 2006, the Yad Vashem database was built up by “simple unverified declarations emanating from unverified sources and processed in such a way that one and the same person can be recorded as having died several times, even, it seems, as many as ten

times.”¹ And even the most complete archives are not collated to make total numbers accessible but only individual cases—which appears an obvious measure to preserve the untestability of (h1), the hypothesis that 6,000,000 Jews had perished.

So, insofar as we depend upon empirical evidence and laws of science, the Holocaust story appears to be false and cannot be sustained. The question that therefore arises is how the Nuremberg Tribunal—widely cited as a paragon of intellectual integrity and of the application of moral principles to historical events—could possibly have produced such a highly misleading account of crucial events at the conclusion of World War II. The answer to this, I believe, has been provided by Faurisson in his paper “Against Hollywoodism, Revisionism,” who explains the daunting task confronting the Allies to conceal or justify war crimes that they had committed in winning the war.²

The Allies’ systematic and massive destruction of German cities not only brought about the deaths of hundreds of thousands of German civilians but also interdicted the railroad lines that would have re-supplied those camps, which were located near major industrial plants, and whose inmates were providing labour to run them. It would have been poor business practice to exterminate the work force, but the large number of deaths from starvation because the Third Reich could not re-supply them provided an opportunity to deflect responsibility from the Allies onto Germany, which the Allies seized. A Hollywood director was brought in and shot 80,000 feet of film at the camps, where 6,000 feet (7.5% of the total) was used to shift the blame for those deaths onto Nazi Germany, which was an easy sell, all things considered.

As Kollerstrom explains, Zyklon B *was* used at the labour camps, not as a method of extermination but for the sake of maintaining hygiene among the inmates. Typhus was an omnipresent problem against which Zyklon B was applied in copious quantities—but as a disinfectant, not as an agent for bringing about the deaths of millions of inmates. Indeed, as Faurisson has reported, during the second trial of Ernst Zündel in 1988 for the crime of Holocaust denial, Fred Leuchter—probably the leading expert on execution gas chambers in the world at the time—testified that he had visited the facilities at three concentration camps in Auschwitz, Birkenau and Majdanek,

¹ “Interview with Professor Robert Faurisson at the Guest House of the Ministry of Foreign Affairs of the Islamic Republic of Iran,” www.codoh.com, December 13, 2006. Cf. a series of papers in *Inconvenient History*, Vol. 9, No. 1; www.inconvenienthistory.com/9/1.

² www.codoh.com, February 3, 2012.

and had found no facilities that could have functioned as homicidal gas chambers, which means the Holocaust narrative could not be scientifically sustained.³

Among the most valuable contributions of this present study derives from Nick's use of classified records acquired by British authorities, who were skeptical of claims that mass gassings were being carried out, and had reports in hand of the use of Zyklon B for the purpose of delousing the inmates, where infestations had become alarming. Many tons of Zyklon B were consumed at Auschwitz-Birkenau from the summer of 1942 on, as Kollerstrom reports, which is easy to confirm *because it soaked into the walls of the disinfestation chambers and is still there*. His essays on the subject—"The Walls of Auschwitz," "Leuchter Twenty Years On" and "The Auschwitz Gas Chamber Illusion"⁴—became the cause of his removal from a post-doctoral post he had held for 15 years!

As a professional philosopher of science, I appreciate Nick's references to Sir Karl Popper, who advocated the *method of falsificationism*, whereby the truth of theories in science and in history can be tested by attempts to falsify them. When they resist our best efforts to refute them, then we have good reason to believe they might be true. But equally applicable here are the reflections of Imre Lakatos, who discussed *research programmes with hard cores of claims*,⁵ such as Newton's laws of motion or, in the case we are considering, the above-mentioned hypotheses (h1), (h2) and (h3). When the defenders of these hypotheses are confronted by the risk of refutation, they can appeal to *auxiliary hypotheses* in an attempt to deflect the refuting data and thereby preserve their theory.

A stellar example arises in the context of the attempt to explain away why the number of those who died as substantiated by the meticulous records of the Red Cross supports the inference that *less than 5% of the 6,000,000 claimed actually died from all causes—and none from death in gas chambers*. To cope with that finding, the claim has been made that the records are incomplete because large numbers of Jews were taken directly to the gas chambers and never registered—not even by name. Not only are contentions of this kind unfalsifiable, untestable and hence unscientific, but they reflect the degenerating character of the Holocaust paradigm, which

³ See current annotated edition with further research results: Fred Leuchter, Robert Faurisson, Germar Rudolf, *The Leuchter Reports: Critical Edition*, 5th ed., Castle Hill Publishers, Uckfield 2017.

⁴ See Nick's online papers at www.codoh.com/library/authors/1580/.

⁵ Imre Lakatos, Alan Musgrave (eds.), *Criticism and the Growth of Knowledge: Proceedings of the International Colloquium in the Philosophy of Science, London, 1965*, Cambridge University Press, Cambridge 1970.

has spawned no new data or research that could possibly overcome the mountain of evidence against it.

Another method for immunizing a hypothesis from refutation is by the exclusion of falsifying data.⁶ The defenders of hypotheses (h1) through (h3) have committed a mind-boggling example of fallacious science, which further manifests their commitment to a degenerating research programme. When the Auschwitz Museum was confronted with the fact that the innocuous *delousing* chambers at Auschwitz have blue walls—due to being saturated with blue iron cyanide compounds—but the alleged homicidal gas chambers have *not*, they commissioned their own chemical research. Instead of testing wall samples for the chemicals that had caused the blue stains, the researchers they commissioned simply *excluded* those chemicals from their analysis by employing a procedure that could not detect them.⁷

They justified this measure with the claim that they did not understand exactly how these compounds could form, and that they might therefore be mere artifacts. Researchers who don't understand what they are investigating have no business becoming involved. In this case, however, it appears to be deliberate. They have deliberately ignored an obvious explanation—that Zyklon B was only used for delousing—which would have remedied their lack of comprehension.⁸ As a result of this failure to adhere to the principles of science, they produced a report of no scientific value, which they used to arrive at a predetermined conclusion.⁹

That Nicholas Kollerstrom was booted from his post at University College, London—and without any hearing or opportunity to present his defense, where *the truth of his observations*, one might have thought, would have made a difference—is one of a large number of indications that even our best academic institutions and societies are not capable of dealing objectively with the history of World War II. Indeed, it struck me like a bolt of lightning out of the blue when, during a talk by Gilad Atzmon in Madison, Wisconsin, about Jewish identity politics, I realized that *the Holocaust mythology benefits Zionism and the government of Israel by playing, in the*

⁶ Sir Karl Popper systematically investigated the diverse methods of immunizing theories in his *The Logic of Scientific Discovery*, Hutchinson & Co., London 1968, pp. 82-97.

⁸ They quoted but ignored a book which had exposed their fallacious approach (Ernst Gauss, *Vorlesungen über Zeitgeschichte*, Grabert, Tübingen 1993; Engl.: G. Rudolf, *Lectures on the Holocaust*, 3rd ed., Castle Hill Publishers, Uckfield 2017).

⁹ See Germar Rudolf, “Polish Pseudo-Scientists,” in: G. Rudolf, Carlo Mattogno, *Auschwitz Lies*, 4th ed., Castle Hill Publishers, Uckfield 2017, pp. 47-70.

promotion of its political agenda, upon a Western sense of guilt for the death of 6,000,000 Jews during World War II. Which is why assaults upon Holocaust skeptics are so immediate and severe.

The claim that someone is “anti-Semitic” or a “Holocaust denier” is taken to be the most severe form of ethical damnation possible in this time and age. But distinctions must be drawn between *criticism of the acts and policies of the Israeli government* and *discounting the worth or value of human beings on the basis of their ethnic origins or religious orientation*. Condemning the Israeli government for its vicious and unwarranted onslaught of the people of Gaza, for example, is not “anti-Semitic.” And if exposing the Holocaust narrative as political propaganda makes one a “Holocaust denier,” all of us who put truth before politics ought to wear that label as a badge of honor.

As an illustration of the depths of depravity of those who would uphold the myth, consider that, as an historian of science, Kollerstrom was invited to contribute three entries—including that on Sir Isaac Newton, which is the most important—to the *Biographical Encyclopedia of Astronomers* (2007), which has more than 1,550 entries by some 400 authors from 40 countries. Yet Noel M. Swerdlow of the University of Chicago, a reviewer for *Isis*, the journal of America’s History of Science Society, recommended that the book be sent back to the publisher and pulped *because Kollerstrom had been involved in research on the Holocaust!* This was such an outrage that I wrote to the editorial board of *Isis*, which allowed a Letter to the Editor to appear.

Something is terribly wrong, when the world’s leading society on the history of science does no more to correct a grotesque abuse by one of its reviewers on a book that involved so many contributors and an enormous investment in time and money, where the moral issues are so blatant and obvious. It is ironic that the Nuremberg Tribunal would declare “collective punishment” a war crime. The Allies were responsible for the collective punishment of German civilians by their systematic bombing of German cities. *Isis* has committed a comparable intellectual crime by tolerating collective punishment of 400 scholars for the purported offenses of one. By acquiescing to its reviewer’s abuse, *Isis* has committed the fallacy of guilt by association and has displayed an appalling lack of journalistic ethics.

Nick Kollerstrom is the only party here who has displayed a commitment to exposing falsehoods and revealing truths. His defense is very simple: *the hypotheses on which the Holocaust narrative has been based are provably false and not even scientifically possible*. I have written about this

in my articles “*The War on Truth: Research on the Holocaust can end your career,*”¹⁰ “*ISIS trips, stumbles and falls,*”¹¹ and discussed it during my presentation at the 2014 conference “*Academic Freedom: Are there limits to inquiry? JFK, 9/11 and the Holocaust,*” at which Nick and I both spoke.¹²

But far better than reviewing them, read this brilliant study by the world’s leading iconoclast, Nick Kollerstrom, my dear friend, whom I admire beyond words as a splendid example of what historians should be doing in their professional work *by getting history straight*—lest Voltaire’s admonition continue to apply—including about the atrocities of World War II. There were real atrocities committed by all sides, just not the ones about which we have been told.

Prelude

“In centers recognized from time immemorial as epicenters for free thought and free debate, that so many would take hardened and unfalsifiable stances on the Holocaust is a paradox of the highest nature.” —Jason Myers¹³

I might as well write Britain’s only *Revisionist* textbook, on what has to be the most deeply forbidden topic in our modern world. Just say that word, “the Holocaust,” and people shudder – as indeed they are supposed to; but by the same token it is, I affirm, the most important topic in the world for us to find out about. We need to find out how to discuss it calmly, how to respect different viewpoints, and what are the primary sources we should be consulting. Can one hope to avoid abuse and insult while doing so? As the sole member of staff of University College, London (UCL), ever to have been expelled for ideological reasons (in 2008) – after having worked there as a science historian – I should be allowed to have an opinion as regards how the insecticide Zyklon had been used in World War II. That is essentially what drew me into the subject, and I still believe it is the best starting point.

Branded as a Heretic

After somewhat over a decade of quiet academic research, my life changed rather abruptly as I became ethically damned, thrown out of polite, decent groups, banned from forums and denounced in newspapers, with half my friends not speaking to me anymore – while the other half still would, provided I kept off “that awful subject.” So, as a philosopher I was granted an unusual and excellent opportunity to ponder the difference between what is real and what is illusory.

¹³ Myers, review of Mark Turley’s *From Nuremberg to Nineveh: War, Peace and the Making of Modernity* (Vandal Publications, 2008), *Smith’s Report*, July 2009.

I should be grateful to my fellow-countrymen for absolutely refusing rational debate on this topic, for insisting on my silence over it, and for transforming discussion into insult. I know what I have been through. I have been well-cooked, and what you have now in front of you is the end-result.

The damnation cast upon me was ostensibly political – people were suddenly averring that I was “far right,” and I had to try and figure out what that meant and why it was being applied to me – whereas no one seemed interested in what I had actually done, namely synthesize a couple of chemical investigations concerning residual wall-cyanide taken from World-War-II labour camps. The damnation cast upon me did not require any opinion from me to confirm it – I was merely informed. And it wasn’t just our corrupt media, the BBC, Sunday newspapers, radio stations; oh no, it was blogs as well.

Going into my local, or even my gym, I felt as if some Mark of Cain had been branded onto my forehead. I had done something so awful that we could not even discuss the matter. The Mediaeval crime of Heresy was back alive and well, even if I was not going to be tortured to recant. From *The Observer* to *Private Eye*, from the *Metro* to the *Morning Star*, from the *Jewish Chronicle* to the *Evening Standard*, readers perused the shocking news about my awful heresy, with me being allowed little or no right of reply.

I had long noticed how collective hate against the “Enemy” seemed to be the deepest emotion, collectively speaking, the British people got to experience, whereby for example during the Cold War one could be intensively damned if one did not sufficiently hate the Russians, Reds or Communists. NB, “holocaust” was then used in its proper sense, “the nuclear holocaust,” with no upper-case “H,” and meant a *fiery* process.

Then in 2009 I wrote a book about the new “enemy” of Islamic terrorists, explaining how this had been fabricated by the Establishment to warrant more wars. This got me further ethically damned as an “apologist for terror.” The media could not say why I was investigating the London bombings – *i.e.* writing the definitive book on the subject¹⁴ – so I was averred to enjoy a “ghoulish” interest in the dead.

The blessing which Jesus Christ promised to the peacemakers may finally come to them, but in the meantime, they are likely to get damned in a war-maker civilization like our own, where hating and fearing the correct enemy is a primary requirement of being a good citizen. That demonizing process is essential, in order that a politician standing up on his hind legs can bray about the “enemy” and thereby call for more military expenditure, a new war, more trashing of our democratic liberties etc. – as Adam Curtis

¹⁴ N. Kollerstrom, *Terror on the Tube: Behind the Veil of 7/7. An Investigation*, 2009.
www.terroronthe tube.co.uk.

described in that BBC classic trilogy *The Power of Nightmares*.¹⁵ But this rhetoric does a lot more than start new wars: it closes down your frontal-lobe capacity for higher reflective thought and erases what possibility we might have had, collectively, to ponder what it means to be human.

We here try to wonder, which Plato said was the beginning of philosophy, to open the gates of wonder. Please do not regard me as an expert, as you peruse these chapters. Maybe put some brown paper over the book's cover, or just read it as an eBook. We here look at the primal myth that keeps this nightmare, death-in-life Eternal-War civilization going. Why does the word "Nazi" conjure up images of hate far worse than any modern enemy image, as if the War had just ended yesterday instead of almost eighty years ago? I, as your guide through this minefield, am a mere science historian, struggling to seek out primary-source data on this matter.

The fastest way to get expelled from a British university is by saying you are looking at chemical evidence for how Zyklon was used in World War II, with a discussion of how delousing technology functioned in the German World War II labour camps. This is considered to be absolutely forbidden. How strange is that? After having been a member of my college for 15 years, I was thrown out with one day's warning, having been given no opportunity to defend myself, a fact announced on its website.¹⁶ What I had done was so terrible that it could not announce what my crime was: I felt like Faust caught making his pact with the devil. The British media had carte blanche for their character-assassination.¹⁷ Fortunately, a few friends could still bring themselves to talk to me.

I majored in the History and Philosophy of Science precisely because I believed that we are a science-based civilization, and that therefore controversial aspects of historic science and technology should be critiqued and studied. But generally, this seemed a crusty academic discipline about to disappear into oblivion under challenges from more exciting college courses.

One day it dawned upon me that there was a chemical angle to "the Holocaust," because a simple chemical reaction had taken place in walls where cyanide gas had been used in World War II. I understood that young men had gone out, illegally chipped away bits of old wall, then had their

¹⁵ 2004 BBC Documentary series, *The Power of Nightmares: The Rise of the Politics of Fear*: on YouTube.

¹⁶ UCL, April 2008: "The views expressed by Dr Kollerstrom are diametrically opposed to the aims, objectives and ethos of UCL, such that we wish to have absolutely no association with them or with their originator."

¹⁷ I was "promoting the Nazi agenda" according to a centre-page *Observer* article by Nick Cohen, "When Academics lose their power of Reason" (May 4, 2008), to which I was allowed no right of reply. It expressed a death-wish against me; that I needed to be stuffed and placed next to the effigy of Jeremy Bentham at UCL. (Bentham has been described as the "spiritual founder" of University College London; editor's remark.)

careers terminated by what they found out. I was intrigued by the permanence of the iron-cyanide bond, which promised a fairly simple approach to finding out what had happened, eighty years ago. Naively, I did not apprehend that what I reckoned or hoped to be a scientific question was apparently more like a deeply religious one.

As a founder-member of the dynamic 9/11 “truth” movement in London, I liked the people there and their angle on world affairs. I don’t know much about politics: I don’t read the papers or watch television, and I try to forget the names of politicians. I would learn at that group about current events, and hear experts – for that is what they were – debating the apocalyptic and ever-mysterious 9/11 event. Then in 2010 the group broke up, and I found myself being blamed for this and banned from their webforum. This damnation wasn’t because of anything I had said during the meetings, but because of something which they had discovered that I believed relating to events of eighty years ago in Eastern Europe. This turned out to be vastly more important than any mere discussion about 9/11, because it was totally fundamental. Well, if it was so important, could we not discuss the subject? No, it turned out that we couldn’t: the group did not wish to discuss so terrible a topic! After I was expelled, the group disintegrated, for there was nothing further it could do.¹⁸ The pressure of not being allowed to debate the subject, which was so awful that I had to be expelled, kind of made it impossible to meet any more. That’s why the two UK 9/11 truth websites both have disclaimers – in case you’re interested – asserting that no Holo-debate is permitted.

Hundreds of people – or maybe thousands, it’s hard to be sure – are in jail right across Europe¹⁹ for thought crimes, among them for trying to find the truth of what happened eighty years ago, and what calls itself a UK “Truth” movement cannot discuss the topic.

You’re reading a treatise about something in history which never existed, a process in history which never took place. The understanding of this will involve a Copernican revolution. I seem to be in the position of taking away from people their worst nightmare, which has been the very foundation of their Unbelief and denial of Divine Providence, and has given us

¹⁸ I became in 2012 the only Briton to have been invited to speak at a US 9/11 truth event, the Vancouver 9/11 symposium. My paper on what hit the 2nd tower is online: www.donaldfox.wordpress.com/2012/07/01/nick-kollerstroms-vancouver-presentation/.

¹⁹ According to official figures published by the German Federal Bureau of Criminal Investigations (*Bundeskriminalamt*), 412,442 criminal investigations were launched for “right-wing” thought crimes (officially listed as “propaganda offenses” and “stirring up the people”) during the years from 1994 to and including 2021. Germany has also become the only country in the Western world where defending oneself in court can be unwise, because it risks committing the very offence for which one is charged! Ask Sylvia Stolz (Germar Rudolf, “Discovering Absurdistan,” www.germarrudolf.com/?p=4134).

the comic-book concept of Pure Evil which endlessly enables our civilization to hate the collective Other, the Other-who-is-to-be-bombed.

That concept of Pure Evil has ruined our post-war culture. While being hammered with the Three Synonyms “*Nazi! Anti-Semite! Holocaust-Denier!*” I had cause to reflect upon what Jesus meant with his words about the Beam and Mote: we are required to perceive the view of the Other, who is being demonized.

Europe needs that honest debate, where people are allowed to express their views and conclusions about What Really Happened without continually having false motives attributed to them. Europe has no worthwhile future unless it is prepared to have that debate. In my opinion, Revisionists are now going to win any such debates, which is why they cannot be allowed to take place.

Plato’s Myth

The old, Platonic question about what is real and what is not has assumed a more ferocious and terrible meaning in this 21st Century. The Platonic image of citizens chained so they only see flickering shadows on the wall comes back to haunt us, does it not?²⁰ Can we continue to live a life corralled by war-making politicians, given false fears, believing what British/American military intelligence have constructed as a war narrative? This is a *post-Iraq treatise* because only after the trauma of that ghastly war based upon utter lies do we collectively become capable of doubting that the victorious allies administered Justice, pure and impartial, at Nuremberg.

In Plato’s myth, ordinary folk are chained in a gloomy cave and see only shadows, flickering on the wall. They cannot turn around and see the fire which is casting the shadows or the people who are making the shadow-pictures. This famous metaphor acquired a new lease on life with the 1998 film *The Matrix* which had a comparable theme. If any fettered victim were brought out into the sunlight, they would suffer unspeakable pain and take a long time to become accustomed to the light. Conversely, if any of them who had dwelt in sunlight tried to explain the world outside to the cave dwellers, he risked enraging them and being torn to pieces. I suggest this story, from twenty-five centuries ago, has a great deal of relevance to what you are about to read.

²⁰ Book VII of Plato’s *Republic*; for a post-9/11 discussion see Webster Tarpley’s *9/11 Synthetic Terror, Made in USA*, 2004.

Plato believed – some have argued – that any culture required a Primal Myth, which did not however have to be true, a notion which has come to be known as the “noble lie.” Karl Popper rebuked Plato for having done this, in his opus *The Open Society and Its Enemies*.²¹ We here try to develop a conversation on this theme, concerning what has to be the deepest, most fervently held belief of our present-day civilization. I say there cannot be a happy future for humankind, so long as this nightmare delusion that people call “The Holocaust” remains in place. This sacred and holy belief, so fervently held and yet undiscussable – the only thing today taught in schools both in history and religion lessons – will hopefully soon exist only in the museum of yesterday’s superstitions.

Current Euro-legislation (see Appendix IV) limits public debate on subjects whose discussion is allegedly liable to provoke violence against a social/ethnic group etc.; which may be another reason for going along with the angle here advocated, whereby one tries to avoid getting caught up in the endless psycho-drama of the “wicked Nazis” and “poor Jews.” A chemical angle has an advantage here: the chemistry of iron is fairly straightforward: the permanence of the ferrocyanide bond *carries the memory* of what happened some eighty years ago. We here seek to *remember what happened* then. Inorganic chemistry has the great advantage that experts are not going to disagree a great deal over it. In Germany the Leuchter Report was permitted to circulate for a while, while other Revisionist texts were and still are strictly banned and burnt.

The focus-on-facts approach here attempted will hopefully enable calm debate or at least debate where the other is still speaking to you after the conversation is over (although I can’t guarantee this). I suggest that the dam is about to break, so you might as well be informed about the matter for when this happens.

Clear, chemical logic drew me into this topic, and that remains the firm ground on which I stand. Simple chemistry isn’t everyone’s favourite topic, but I have put enough into this chapter just in case there are any science historians out there wanting to do their job properly.²² Not a single science journal in the English-speaking world has ever dealt with this subject nor will any history of science or history of technology journal touch it: the Greatest Lie Ever Told does not die that easily.

I came to check out the once top-secret British wartime intelligence documents, decoded at Bletchley Park and released into the public domain in the late 1990s, decryptions of weekly messages from the German labour camps. Once they were made public, experts had to be wheeled out to ex-

²¹ So e.g. did Arthur Koestler in *The Sleepwalkers: A History of Man’s Changing Vision of the Universe* (1959), Ch. 4. See Wikipedia, “Noble lie.”

²² It’s text taken from my CODOH Forum thread “Cyanide Chemistry at Auschwitz,” which has had one hundred and fifty thousand hits (2004).

plain the absence of anything resembling “the Holocaust” in these documents: had British Intelligence somehow “failed” to recognize that “the Holocaust” was going on? Or, do these messages demonstrate rather clearly that no “extermination” process was taking place over the year for which they were intercepted? Some colleagues and I have composed Britain’s only Revisionist website (www.whatreallyhappened.info) containing the texts of these decrypts plus helpful graphs and bar-charts, so you don’t even have to go down to Kew Gardens to read them. Normally, the hundreds of mainstream books published about “the Holocaust” ignore this most-reliable and detailed source.

Standing in the Wiener Library in Russell Square, with its thousands or tens of thousands of books about “The Holocaust,” I wondered about my arrogance – if that is the word – in writing one more: moreover, one that was going to disagree with *all of these*. Actually, I was not there to peruse this library, but rather to check out a data source that was just (2013) becoming publicly available: the great International Red Cross database on the German concentration camps, which had been kept and developed for years in the little village of Bad Arolsen in Germany. It had now been fully digitized, and copies were sent there and to other big Holo-centres around the world. I was allowed to peruse it, but to little avail, as we’ll see in Chapter 5.

A Burgeoning Industry

In today’s Britain, “The Holocaust” is big business, with the Holocaust Educational Trust (HET) receiving over two million pounds a year from the government, and various other UK Holocaust groups now benefitting from taxpayer money. In 2013, the Beth Shalom Holocaust Education Centre in Newark in the East Midlands got a million pounds, and the Holocaust Recalled Group in Swansea received £791,000, while the Lake District Holocaust Project and the Holocaust Survivors Friendship Association in Leeds have both been given around half a million. The HET has managed to get The Holocaust established as a central part of the National Curriculum, so every UK pupil between 11 and 14 has to learn about it: it is now a compulsory subject. Thereby London has become a major centre of Holocaust indoctrination. Prime Minister David Cameron is to chair the new Holocaust Commission; he has pledged to visit Auschwitz, and did not shirk from invoking “the Holocaust” to justify military intervention in Syria (August 2013). Some five million has been pumped into the prestigious Institute of Education’s new Centre for Holocaust Education, with a network

of Beacon Schools in Holocaust education set up across the country, offering them London seminars and trips abroad. The Anne Frank Trust currently has eight travelling exhibitions touring the country, government funded.²³

More than half of Britain's schools now take part in the HET's "Lessons from Auschwitz" programme, which has sent about 15,000 pupils on their pilgrimage to Auschwitz. The roots of the current boom go back to a 2000 conference in Stockholm when 31 nations agreed to subject their populations to mass compulsory Holocaust teaching – monitored by a body of government academics, bureaucrats and NGOs which call themselves the International Holocaust Remembrance Alliance. I guess that's enough, you get the message.

If anyone can figure out how to get a small fraction of one percent of this gravy-train to perform a repeat chemical analysis of cyanide levels in wall-samples from the old labour camp buildings, do let me know; but frankly I doubt whether this kind of factual issue is the "education" which the authorities here have in mind. We are here talking about education *in which doubt is prohibited*, which (in my humble opinion) more resembles trauma-based mind control than traditional British concepts of education. It is inflicted in History, Religion and Drama classes for a start, plus probably also political-correctness or social-awareness classes, making it the most-taught topic in the British educational syllabus.

Should such funding perchance become available, I would endeavour to approach the Holocaust Research Centre at the Royal Holloway College (part of the University of London), as to whether they would participate.

In our time, the sheer extent to which "Holocaust survivors" have been claiming cash from Germany has been progressively undermining the *primal myth* on which the whole story has been based. The totemic figure of Six Million Jews is real, as being the best estimate of the total number of Jews who have *applied for financial reparations from Germany* on the grounds of being a "Holocaust survivor." I believe it is now indisputable that the number of these claimants greatly exceeds the number of Jews that ever lived in nations under German control in World War II – even though the exact numbers themselves remain ever-elusive, as if the authorities were wishing to prevent them emerging into the light of day. These "survivors" who claim to be living testimonies to the Holocaust are, as Robert Faurisson has pointed out, by their sheer numbers more like living testimonies that it never happened.

*Who tapped the magic wand, at Nuremberg in 1946,
Whereby ordinary hygiene technology was forgotten
and replaced by – Everybody's Favourite Nightmare,
the Human Gas Chambers?*

*Some tribute to the handiwork of British torturers!
How did the Veil of Amnesia*

*descend over those actual gas chambers –
Still there today, unvisited and out of bounds,
glowing a gentle turquoise –
With all that iron cyanide?*

*Stop, why are you running away,
Does it hurt too much?*

*Is there a band around your head a-buzzing
Giving you that awful headache....*

*Control... you will forget these words...
Zion does not approve...*

Illusion holds you in its thrall.

*Hollywood gives you your Good/Evil polarities
Required by Empire for its wars.*

*The unhealable pain of Europe.
But No, let's be honest,*

We really cannot discuss the matter.

Let the Light shine in.

Let the Shadows of the Night flee away.

Let the Spell be broken.

Part I:
THE HISTORY
THAT NEVER HAPPENED

1. Reason Unhinged

The word Holocaust means “fiery sacrifice” as an old English word.²⁴ It cannot possibly mean, for example, death by gassing.

Applied to World War II, it could allude to the effect of the two and a half million tons of bombs which the US and UK dropped onto central Europe, especially Germany. Entering Germany after the war, the victorious Allies saw burnt-out cities like lunar landscapes, and German labour camps with their piles of dead bodies. We can’t take the blame for this, they soon decided.

The Germans had used hygienic gas chambers from 1942 onwards in all of their labour camps, once the typhus epidemics broke out. The insecticide Zyklon worked efficiently to kill bugs, and all clothing and bedding had to go into the gas chambers to keep the epidemics at bay: *i.e.*, they were for disinfection.

But did the British and American public know this? Could these cyanide gas chambers be revamped as nightmare killing machines that killed millions with cyanide gas? After all, British Intelligence had been broadcasting this story through the BBC over Poland since 1942.²⁵

This act of amnesia was accomplished at Nuremberg in 1946, using torture. Thereby the Allies were able to claim the moral high ground. Since then, the Powers That Be – whatever you want to call them – have maintained the story despite the *complete absence* of any corroborating physical evidence.

Alarmingly, in the new millennium it appears to be morphing into a compulsory new world religion, supported by burgeoning legislation and mushrooming Holo-temples in capital cities.

At Nuremberg, the foundation was laid for a civilization based upon Horror and Untruth: horror because we were asked to believe that six million Jews were gassed or otherwise killed for no reason whatsoever, and untruth because it never happened. Full-on propaganda began later, maybe during the late 1960s. It’s time now to let the light shine in, now that the marvellous simplicity of the chemical evidence has appeared. High cyanide levels appear in the walls of the still-existing delousing chambers, and this has *not* been replicated in the remains of any so-called “human” gas cham-

²⁴ A Middle-English word, having a Greek origin from *holos* “whole” + *kaustos* “burnt.”

²⁵ Samuel Crowell, *The Gas Chamber of Sherlock Holmes*, “First reports,” 2000, www.codoh.com/media/files/downloads/xsherlock.pdf; more recent as a book with the same title, Nine-Banded Books, Charleston, W.Va., 2011.

ber. This tends to indicate that mass-homicide cyanide gas chambers have never existed in our world. Frankly, I doubt whether *any* lethal mass gas chambers have existed in human history.

As the cyanide then percolated through those walls eighty years ago, our truth percolates though the solid walls of establishment Denial. The British-American war myths from Nuremberg are toxic to the soul.

A Triune Concept

No one speaks of a “holocaust” of Native Americans, though nine-tenths of them were wiped out by the white man, nor of a holocaust of Russians and Slavs during World War II,²⁶ nor of the Congo; or, if you wanted to, it would have a small “h.” “The Holocaust” is a triune concept, and you have to believe all three bits in order not to be a *denier*.

First, that an intentional, centrally planned programme existed in Nazi Germany to exterminate one particular race, viz. the Jews. It is uncontroversial to state that no documents whatsoever exist or have to date been found, demonstrating this. To believe, one has to accept that innocent-sounding terms such as “special treatment” (“*Sonderbehandlung*”) carried fiendish meaning; and to ignore all of the evidence that the policy was a territorial one of expulsion.

Second, that an especial and unique weapon of mass destruction was used: one which did not exist before the war, nor after the war, but only during it. This worked, you have to believe, in the manner that Auschwitz Camp commandant Rudolf Höss described. After being tortured for three days and three nights by a British army hit-team, Höss finally confessed, and later testified at Nuremberg as to how two thousand naked persons of both genders would be crushed into rooms of about 210 square meters in size, and some granules of “Zyklon B” insecticide thrown through holes in the roof onto the chamber’s floor. It takes a couple of hours for the cyanide gas to evaporate from these granules; however, you have to believe that in twenty minutes at the very latest everyone was dead. Did millions of people die in this unheard-of manner? Or maybe no one?

Not a single diagnosis of death by cyanide poisoning has been ascertained in the German labour camps, nor has any residual cyanide been found in the walls of any of the chambers that are alleged to have been thus used, above normal background levels.

Tons of Zyklon B were used in cyanide gas chambers in the German labour camps, from mid-1942 onwards, for delousing mattresses etc., a technology used since the 1920s. These rather small delousing chambers li-

²⁶ But they do in France: France has as of November 2011 passed *two* Holocaust Denial laws, the second being for the supposed Armenian genocide. Turkey is strenuously objecting to the latter.

censed by the firm Degesch are not normally the ones where human gassing is alleged to have happened.

Third, that six million Jews died from this process; you can reduce that to, say, four million, but take it down to one million and you're a "denier."²⁷ With the Iron Curtain descending and the vast diaspora of Jews from Eastern Europe, such a computation became extremely tricky. Over one million designated "Holo-Survivors" were apparently alive at the turn of the century,²⁸ sixty years after the event, most receiving lucrative pay-outs from the German Government. From this it would follow, using computations of life-expectancy, that around five million of them were alive at the end of the War. So how many died?²⁹

The Holy Six Million

Shifting national boundaries, the descending Iron Curtain, the Jerusalem authorities refusing to release their census data on total numbers of Jews, the vast diaspora of Jews moving out of Eastern Europe starting in 1938 just before the war, the British Mandate for Palestine collapsing at much the same time which had been preventing Jewish immigration – a host of ill-defined factors make it unfeasible to count the total number of Jews in Europe, before and after World War II. Who is a Jew anyway? It's someone who declares that they are, or that their mother is. A lot of people died in World War II, fifty or sixty million.

The mantric figure of "six million" thrummed its way through the late nineteenth and the Twentieth Century – see the 106 *citations* between 1891 and 1941 in Chapter 10. Here are some of the first few:

- 1891 – *The New York Times*, 26 January 1891: "Russia's population of five million to **six million Jews** [...] about **six million persecuted and miserable wretches**."
- 1900 – Stephen S. Wise, *New York Times*, 11 June 1900: "There are **6,000,000 living, bleeding, suffering arguments in favor of Zionism**."

²⁷ This is *not* the total number of Jews who died in World War II, and at no point are we concerned with attempting such an estimate; the definition of the H is unequivocal as "The murder of six million Jews by the Nazis" (the *Yad Vashem* memorial site, Jerusalem), and this is largely taken to mean: within the "death-camps" (which were, in fact, forced-labor and transit camps).

²⁸ "The state of Israel claims to have, alive today, nearly one million holocaust survivors." Gordon Duff, *Veterans Today*, Nov. 2010, "Who speaks up for Holocaust Survivors?"

²⁹ According to Walter Sanning (*The Dissolution of Eastern European Jewry*, 2015, p. 14), a million Jews died in the Red Army or in Siberian labour camps during WW2. Sanning has 1.1 million Jews "go missing" in WW2, as evaluated by Rudolf, Table 4.1 in "Holocaust Victims: A Statistical analysis," in: G. Rudolf (ed.), *Dissecting the Holocaust*, 3rd ed., Castle Hill Publishers, Uckfield, 2019, p. 194.

- 1902 – *Encyclopaedia Britannica*, 10th Edition, Vol. 25, 1902, page 482: “While there are in Russia and Rumania **six millions of Jews** who are being systematically degraded...”
- 1903 – *New York Times*, 16 May 1903, “More Details of the Kishineff Massacre”: “We charge the Russian Government with responsibility for the Kishineff massacre. We say it is steeped to the eye in the guilt of this **holocaust** [...] So long as a ‘civilized’ Government brands **five million** people as a perilous pest which must be slowly **annihilated**, so long its baser subjects will think themselves justified in accelerating the process of **extermination** with knives, axes, and hatches.”
- 1906 – *New York Times*, 25 March 1906, “Dr. Paul Nathan’s View of Russian Massacre”: “Startling reports on the condition and future of Russia’s **6,000,000 Jews** were made on March 12 in Berlin to the annual meeting of the Central Jewish Relief League of Germany by Dr. Paul Nathan... He left St. Petersburg with the firm conviction that the Russian Government’s studied policy for the ‘**solution**’ of the **Jewish question** is **systematic and murderous extermination**.”
- 1908 – *Deseret Evening News*, 17 March 1908: “... **poverty, starvation and disease** are the afflictions which now beset the **six million Jews** in that country and Roumania.”
- 1910 – “Russian Jews in Sad Plight,” *The New York Times*, 11 April 1910: “the **systematic, relentless, quiet grinding down of a people of more than 6,000,000 souls**,”
- 1911 – Max Nordau speaking at the 1911 Zionist Congress. Ben Hecht, *Perfidy*, NY: Julian Messner, 1961, page 254: “But the same righteous Governments, who are so nobly, industriously active to establish the eternal peace, are preparing, by their own confession, **complete annihilation for six million people**.”

Starting off as a fundraising ploy in America for suppressed and persecuted Jews in czarist Russia, it ended up in 1945 at Nuremberg as the “Six Million Murdered Jews,” a large part of which are said to have been gassed. It’s a mythic mantra for the number of Jews in Europe, *without anyone being counted*.

A staggering act of amnesia was achieved at Nuremberg, where nobody could show a single gassed body, yet the “gas chambers” and the “Six Million” suddenly became the new mantra. What an achievement, what marvellous collective amnesia, to forget all about the actual purpose of the Zyklon B throughout the German labour camps 1942-1945. Let us hope for open public debate, with moderators who will allow anger, rage and despair, but neither insult nor the accusation of dishonesty.

Franciszek Piper, Director of the Auschwitz museum in the early 1990s when David Cole got to interview him, shockingly reduced the number

who died in the Auschwitz Camp from four million to one, or 1.1 million – and he somehow kept his job. The notice up at Auschwitz saying four million had to be changed (to 1.5 million, so 400,000 more than what Piper claims), but the total remained:

Six million minus three million equals six million.

As regards the number of “Holocaust survivors” who are still receiving compensation almost eighty years after the war: around one hundred billion deutschmarks have been given by Germany to alleged H-survivors – it’s a very lucrative gravy-train.³⁰

Bradley Smith’s Challenge

An “official definition” of Holocaust Denial is provided by the American Anti-Defamation League (ADL) for the purpose of suppressing student campus debate.³¹ It makes *no mention* of gassing, alluding only to the first and third of the above threefold definition. Students have to believe that six million Jews were “destroyed” by the wicked Nazis.

The branch of the ADL responsible for thus looking after the welfare of American Jewish students is called “Hillel.” Hillel characterizes the Holocaust Denial position as “a propaganda movement which seeks to minimize or deny the reality of the Nazi regime’s systematic mass murder of six million Jews in Europe during World War II.” The hallowed six million figure activates deep levels of conditioning.

For many decades, Hillel’s whole argument about student campus debate, and how to stop it, has revolved around one single person: Bradley Smith, an impoverished elderly gentleman who lived in Mexico and established the Committee for Open Debate on the Holocaust (CODOH) in 1987.³² A small team of former Smith volunteers now runs CODOH and its website www.codoh.com, the world’s primary forum and online library for Revisionist thought and the only one where debate is civil and polite. Smith also used to issue his *Smith’s Report*, a monthly gossip and news journal for Revisionists (herein referred to as *SR*), about who has said what, who is being put in jail etc.³³ Hillel’s budget is \$35 million a year,

³⁰ “In the year 2000 Israel said there were one million holocaust survivors still alive and many are in financial need. That number is corroborated close enough by other Jewish sources... we are left with 3.5 million in 1945 as the minimum number of holocaust survivors... In 2004 Israel issued a more refined number still alive in that year, 1,092,000, for the purpose of actually filing lawsuits.” Matt Giwer, “Israel declares there was no Holocaust Extermination: 27 million Jews survived the holocaust” June 2007; www.giwersworld.org/holo3/holo-survivors.phtml.

³¹ ADL: “Fighting Holocaust Denial in Campus Newspaper Advertisements: a manual for Action”

³² Bradley Smith died on February 18, 2016, on his 86th birthday.

³³ Four or five Revisionist journals are available online: *Smith’s Report* is on the CODOH site; the new Journal *Inconvenient History* has its own site (I’ve had a couple of articles

and its entire “Manual for Action” on this topic used to focus on what to do when Bradley Smith tried to put an advertisement in a campus journal: how not to discuss the subject, how to appear as being hurt and offended, that sort of thing.

Bradley Smith has devised a challenge of marvellous simplicity, inviting anyone “to provide, with proof, the name of one person who was killed in a gas chamber at Auschwitz.”³⁴ Until he passed away, he kept publishing this challenge in newspaper ads and letters. Nobody could reply to this – of course, for an obvious reason. So, the Hillel briefing is concerned with how to deal with this and other challenges, without actually being prepared to debate anything. For example, if the disaster of a Bradley Smith ad had appeared, if all measures had failed to prevent this, then:

“If the newspaper does not denounce the ad, write a concise op-ed or letter to the editors stating that the systematic extermination of the Jewish people and the murder of six million Jews is a fact and is not debatable.”

A fact that is not debatable? Yes indeed: how did we ever get into a situation where facts are not debatable? Has the humanistic-rational-enlightenment era that began with Descartes, Spinoza, Locke etc., whereby rational men and women were meant to be able to debate and thereby reach agreement upon what was true – has that now come to an end?

Bradley Smith noted, “This Hillel Manual is meant to teach Jewish students how to suppress, censor and control debate about the Holocaust question,” adding that Hillel’s national office “is committed to the suppression and censorship of Revisionist arguments on some 500 campuses in America.”³⁵ Hillel’s guide advises on how to transform debate into insult, by call-

in it); there is also the now-defunct *Journal of Historical Review* (www.codoh.com/library/categories/1206/) plus the American *Barnes Review* which has quite a few back issues online. *The Barnes Review* featured an account on me being chucked out of my College written by Lady Michèle Renouf (July 2008), “First-hand Report on Persecution of a Scholar,” where she described me as “a real, live victim of ‘the holocaust.’” During the years 2011-2014, *The Barnes Review* also published a dozen *Holocaust Handbooks* on the subject (all of which, however, have been replaced by newer editions through Castle Hill by now). *The Revisionist* lasted only four years, also online: it bit the dust when its editor Germar Rudolf was arrested and deported.

³⁴ Bradley Smith first issued this challenge in February 2008 but found that no one would reply. Its initial form was: “Can you provide the name of one individual... who was intentionally killed in a German ‘gas chamber’?” He sent it to recognised experts like Deborah Lipstadt and Norman Finkelstein.

³⁵ *Smith’s Report*, March 2010. For three decades Bradley Smith called “for an open debate on the topic on U.S. college campuses. Though no such debate has yet taken place, his tireless efforts to give sanity a chance have left the Holocaust industry looking increasingly ridiculous... Holocaust Industry fanatics routinely slander Smith, disrupt his speaking engagements, keep him on the brink of financial ruin, and threaten to kill him, his wife and his children.” M. Smith, “Dogma, Double Standards and Doubt,” *Smith’s Report*, April 2010.

ing it “hate-speech” or “anti-Semitism.” But we should refuse to allow such guardians of the Holo-Faith to back off from the whole gassing scenario in their definition of “Denial,” merely because they are about to lose the whole argument.

As regards its mantra of “six million Jews,” Chapter 10 cites 106 such media accounts, over the period from 1891 to 1941, and all about Jews under threat or dying or being tormented in one way or another, all appearing *before* the claimed Jewish Holocaust is said to have started. They come from a time before anyone could possibly have totted up the dead from World War II. Many even predated the war itself and even Hitler’s rise to power. This list indicates how the six-million figure kept being cited through the late 1800s and the first half of the Twentieth Century as alluding, in a general sort of way, to the number of Jews living in Russia or Eastern Europe.

Hillel gives no hint to college students as to where they should turn for evidence concerning the six million figure, if indeed they should turn anywhere at all, but does affirm that a “collection of archival material” resides at the Yad Vashem museum in Jerusalem. That is sort of the case (Chapter 5), whereas authentic archival material concerning the World War II labour camps as collected by the International Red Cross resides in the Bad Arolsen archive in north Germany.

The Hillel statement is a sterling tribute to the power of one dogged, under-funded truth-campaigner. Bradley Smith has to be up there with the heroes:³⁶ Fred Leuchter, Germar Rudolf, Robert Faurisson and David Cole.

The Power of Taboo

Humanity wants to believe the dreadful story, very much resembling the Greek legend of a Hellmouth where one could descend to Hades. I’d like to see visitors to Auschwitz allowed to see a fumigation gas chamber with its blue, blue walls – and the swimming pool. Yes, the swimming pool. It’s still there – out of bounds, of course, to normal scheduled visits. I had the temerity to describe it as “elegant” and – worse – to indicate that it was used by the inmates on weekends. A swarm of bloggers denounced me for an indescribable callousness and hardness of heart for so belittling the dead. Should I not “recant,” concerned friends asked me? Well, excuse me, as a science historian I like to rely on concrete, physical evidence that is really there, as a record of the past.³⁷

³⁶ For Bradley Smith and David Cole debating with a TV audience back in 1994 see the video *Holocaust debate with David Cole* (made by “Denierbud”). It’s hard to recall any public debate on the topic since that event.

³⁷ There were two people who helped me to preserve my sanity by listening to my story. One was James Thring, who runs the “Ministry of Peace,” which I support; the other was Lady Michèle Renouf, who interviews people around Europe put in jail for their beliefs.

Illustration 1: The growing cancer of Holocaust dictatorship in Europe. Dark: countries where Holocaust dissent is illegal, with the year given when the respective law was enacted. Grey: countries where denial is illegal only if done together with mocking or denigrating the Jews.

Spain changed its law prohibiting Holocaust Denial in 2011 to allow denial (only justifying genocide is prohibited), but Hungary then passed such a law. In 2014, Russia passed a law of this type, and so did Canada in 2022. Italy enacted a vague anti-denial law in 2016, but the world’s most prolific Revisionist, the Italian Carlo Mattogno, has never been prosecuted there. The UK created case law in 2017 with a court ruling that public Holocaust denial in conjunction with disparaging or mocking the victims is “grossly offensive” and therefore a violation of the 2003 Communications Act.³⁸ Laws with similar approaches exist in Portugal and Greece. So, if we

I came within her radar upon being thrown out of my College. Both wanted to hear about my view on how the Leuchter and Rudolf investigations supported each other. Soon after, the Zionically-funded *Searchlight* came out with a big article on how they had found three “Nazis” in the UK: yes, they meant us three.

³⁸ This concerns the sentencing of British songwriter Alison Chabloz for her satirical songs

don't count Italy, Portugal, Greece and the UK, there are currently 18 European nations where proclamation of the normal working of hygiene technology in World War II is a crime (see Illustration 1).^{39,40}

I thought a "taboo" was something that anthropologists found in darkest Africa. But, here is a sociology lecturer's take on the subject.⁴¹

"Occasional experiments that I have conducted in my seminars convince me that 'Auschwitz' [the most well-known site of the Holocaust] is ethnologically speaking one of the few taboo topics that our 'taboo free society' still preserves. [...] While they did not react at all to other stimulants, 'enlightened' central European students who refused to accept any taboos at all, would react to a confrontation with 'revisionist' [denial] texts about the gas chambers at Auschwitz in just as 'elementary' a way (including the comparable physiological symptoms) as members of primitive Polynesian tribes would react to an infringement of one of their taboos. The students were literally beside themselves and were neither prepared for nor capable of soberly discussing the presented theses. For the sociologist this is a very important point because a society's taboos reveal what it holds sacred."

Anyone wanting to put the definite article "the" before the word "Holocaust," and spell it with a capital "H," *should* be, I suggest, alluding to the extermination of some fifty million or so Native Americans, around 9/10th of their total population, while the puny European holocausts by comparison should be spelt with a small "h." Whether or not genocide has taken place in Europe should be debated.⁴²

The Primary Affirmation

"The Holocaust" is a steel trap that closes – clunk! – terminating discussion. You get a brief sound bite if you're lucky. We here endeavour to move

on the Holocaust; see <https://alisonchabloz.com/2019/02/14/holocaust-trials-another-harsh-but-predictable-ruling/>; in contrast to this, the world's most productive revisionist media publishers, Castle Hill Publishers of Uckfield, East Sussex, have never been under any criminal investigation for their revisionist activities.

³⁹ See Appendix IV for whether your legal rights to freedom of expression may afford protection against these national Holocaust-denial laws.

⁴⁰ Not on the map is Israel, which passed its Holocaust Denial law in 1986. Spain used to have such a law for a short while, but the Spanish High Court revoked it. Cf. somewhat outdated J. Bellinger, "The Prohibition of Holocaust Denial," *Smith's Report*, Sept 2009; http://en.wikipedia.org/wiki/Holocaust_denial; http://en.wikipedia.org/wiki/Laws_against_Holocaust_denial.

⁴¹ Quote from sociology professor Dr. Robert Hepp, in Germar Rudolf's *Lectures on the Holocaust* (2017), p. 11; original in: Robert Hepp, "Die Kampagne gegen Hellmut Diwald von 1978," in: Rolf-Josef Eibicht (ed.), *Hellmut Diwald: Sein Vermächtnis für Deutschland. Sein Mut zur Geschichte*. Hohenrain Verlag, Tübingen 1994, p. 140.

⁴² There was the Albigenian crusade during the 13th century where whole communities in southern France were wiped out, which you might view as genocide?

away from a futile and perpetual discourse, concerning the “wicked Nazis” and “poor Jews.” Rational, scientific debate has become possible because the two chemical investigations are concordant and support each other: those of Fred Leuchter and Germar Rudolf.

I suggest a simple, primary affirmation. Try using it as a miasma-dispelling incantation:

“Mass human cyanide gas chambers have never existed in human history.”

The affirmation here is that normal hygiene technology functioned in an ordinary, normal manner in the German labour camps: *that is the core essence* of what is today meant by “Holocaust denial.”

When the Holo-topic arises, people will affirm that six million died, didn’t they? Maybe you ought to resist the temptation to comment – that figure is a holy and sacred icon for our civilization, and once you “deny” it, your opportunity for debate can be quite suddenly over – you have suddenly become the wicked Holocaust Denier, and how could you be so callous? It may be wiser to reply: “Well, they didn’t die from cyanide poisoning.” It may also be wise to avoid having your view expressed as “no Jews were gassed.” That’s why the word “cyanide” has to be there in the “primary affirmation” above. One-third were (traditionally) gassed by Diesel fumes.

The German army’s truck fleet ran mainly on Diesel fuel, not petrol, and Diesel exhaust *isn’t actually lethal*: it would just have given everybody a very bad headache. *One Third of the Holocaust* is a powerful three-hour online video documentary about the topic.⁴³ But maybe that is better kept as a *second stage* in the argument. Don’t ask people to accept too much, all at once.

2. Illusion versus Reality

We’ve seen how the concept people call “Holocaust-Denial” means an affirmation concerning the manner in which normal hygiene technology worked, namely the opposite of what was affirmed at Nuremberg in 1946 – by US/UK military “intelligence” – whereby merely producing a can of Zyklon was taken as evidence of mass human gassing. A remarkable act of amnesia was then accomplished over the hygiene technology which used this product – which later became defunct as DDT replaced it.

⁴³ If you like *One Third of the Holocaust* (YouTube, 2013) by “Denierbud” in San Francisco, you’ll also like his newer video, *Auschwitz: the Surprising Hidden Truth*; see the video section at www.HolocaustHandbooks.com.

The ethically damned “denier” is one who realizes that, in response to the arrival of typhus epidemics in the German labour camps in 1942, delousing technology was installed throughout all of the German labour camps, so that safe-to-use cyanide gassing technology killed bugs in all clothing and bedding put into them; and that it didn’t have any other use – there’s the rub.

We’ll aim to get a closer focus on this matter in Chapter 5, from a bit of number-crunching, showing that, following the arrival of Zyklon in mid-1942, mortality of Jews at Auschwitz went down, not up. As a former maths schoolteacher, I need to have some proper raw data to grapple with. The virtue of the British Intelligence decrypts gathered at Bletchley Park is their status as an unquestionable primary source.

But in addition, a metaphysical issue here strangely appears, which turns out to be far from merely a matter of discussing the figures, the data. Oh no, don’t you realize – and here we have the *gassed-on-arrival* axiom – Jews arriving at the camps were *not* registered, were *not* tattooed with a number, but were quickly gassed, their bodies incinerated and ashes thrown into the Vistula River. This you will find in the great Holo-textbooks. This can increase the numbers by a factor of, say, twenty: *a factor of twenty!* But is it legitimate, or does Occam’s Razor⁴⁴ need to be applied here? In due time, we may hope to find out. In the meantime, we hope that this book is more firmly based upon primary-source data than any other book on the subject you are likely to come across; and less reliant on stories, films etc.

With my training as a science historian, I must give priority to physical-material and primary-source documentary evidence, and if you don’t like that, put this book down now!

The Alleged Duality of Zyklon B

Auschwitz is the spiritual centre of our modern world, a place of awesome pilgrimage. Planeloads of British schoolchildren, government-subsidized, are flown there every year. They return humbled, mesmerized and filled with fear – and with disgust, if not hatred, for the Germans.

Only at Auschwitz, in the Main Camp and in the Birkenau Camp, and nowhere else in the world, is there evidence for *two kinds* of Nazi gas chambers to be found that are spatially separated.⁴⁵ Remains of the delous-

⁴⁴ “Entities are not to be multiplied without necessity”; see https://en.wikipedia.org/wiki/Occam%27s_razor.

⁴⁵ The orthodoxy claims that the Zyklon-B delousing chambers in the Stutthof and Majdanek Camps were also used for mass murder, so that their cyanide-laden, blue-stained walls serve the orthodoxy to “prove” both events (cf. the books by J. Graf and C. Matogno, *Concentration Camp Stutthof* and *Concentration Camp Majdanek*). There are four small circulation delousing chambers at the Dachau Camp, whose walls were painted

ing chambers exist, whose walls, saturated with iron cyanide, have a charming turquoise-blue hue, but only ethically damned Revisionists seek them out. Remains exist of buildings which – the big Holocaust textbooks claim – was where IT took place, the nightmare technology of mass-destruction using cyanide gas; that which had never existed before World War II, nor after it. These remains *always fail to show* any significant elevation of wall-cyanide above normal, background levels.

An estimated thirty million have passed through the homicidal “gas chamber” by the Auschwitz Main Camp. How strange that the tourist queue continues even after David Cole showed that it had been “reconstructed” under the aegis of a Stalinist Polish government in 1947, after the war. This brilliant young Jew made his classic 1991 video on Auschwitz, which everyone should watch.⁴⁶ A part of that large chamber used to be a washroom. Its floor still has a large drain in the middle – what more do you want?

The actual German cyanide-operated fumigation gas chambers tend to be closed and out of bounds to tourists. The more-modern ones among them, the circulation fumigation cubicles as installed at Dachau, were developed and licensed by the “Degesch” Company.⁴⁷ The Degesch experts were proud of their safe operating procedure, whereby operators did not even need a gas mask. After being “Zykloned” for an hour or two, clothing and bedding would be hung out to air for any remaining cyanide gas in them to blow out.

The storybook gas chambers were imagined in April 1946 at Nuremberg, when the Auschwitz Commandant Rudolf Höss, *after having been tortured for three days and three nights*, and after his family had been

with an impermeable coating preventing the walls from accumulating cyanide and thus from turning blue. The homicidal gas chamber on display at the Dachau Camp is said to have been used at most for a test gassing, but even that is doubtful, considering that the absurd equipment of that room makes that claimed use unlikely. (See the passages on Dachau in the second part of F. Leuchter, R. Faurisson, G. Rudolf, *The Leuchter Reports*, 5th ed., Castle Hill Publishers, Uckfield 2017; see also G. Rudolf’s documentary *Probing the Holocaust: The Horror Explained (Part 1)* at www.HolocaustHandbooks.com).

⁴⁶ Two recommended videos on the topic are the David Cole video (1992), plus *Holocaust, Hate Speech, and Were the Germans So Stupid?* (2012) by Anthony Lawson (all at www.HolocaustHandbooks.com). After being forced by a Jewish hit-team to recant, David Cole vanished for many years, and everyone wondered what had happened to him; then he returned (2013) as David Stein, averring his beliefs had not changed! (See David Cole, *Republican Party Animal*, 2014.) For this diverting tale, see Kevin Barrett’s account on *Veterans Today* (www.veteranstoday.com/2013/05/04/cole-stein/).

⁴⁷ Deutsche Gesellschaft für Schädlingbekämpfung, German Company for Pest Control. The inmate reception building at the Auschwitz Main Camp was planned to have 19 such chambers, but that plan was later dropped in favour of the world’s first microwave facility, which was used at Auschwitz to save the lives of inmates by killing pest and microbes. See W. Wallwey, “Microwave Delousing and Gastight Doors at Auschwitz”, *Dissecting the Holocaust*, (note 29), pp. 305-329, here pp. 311-327. I get briefly back to this in Chapter 13.

threatened, “confessed” to killing two and a half million Jews using cyanide gas. The cyanide gas was poured through openings in the ceiling, he explained, and everyone was dead in fifteen minutes.⁴⁸ The clear, defining feature of his story was its *physical impossibility*. It did not become public knowledge that Höss had been tortured until 1983, and so a generation believed that Höss’s story was genuine.⁴⁹

In 1988, Fred Leuchter sampled the walls of Auschwitz and had their cyanide contents measured, indicating the very-high levels present in the blue delousing chamber walls.⁵⁰ After that, the big Holocaust textbooks had to start arguing for a *dual-use policy*, whereby some of the Zyklon went to delousing chambers in order to save lives, while the rest went to homicidal gas chambers for taking lives. I’ve never met anyone who believed this view. On the ethically damned Revisionist view – for expressing which one can be jailed in eighteen European nations⁵¹ – the Zyklon was used for what it said on the can, viz. delousing, the alleged homicidal gas chambers having been either washrooms or morgues.

This latter view implies that the three victor nations, Russia, America and Britain, collaborated together at Nuremberg to fabricate the horror-illusion, which would enable the US/UK to gain the post-war moral high ground, even after incinerating the German cities with two million tons of bombs. People were loath to believe that such a thing could have happened – until maybe after Iraq, when we saw how British-American intelligence

⁴⁸ What Höss actually said, on the morning of 15 April 1946 at Nuremberg, was that everyone was dead 3-15 minutes after sprinkling the Zyklon – with the Sonderkommando members entering half an hour later to drag the stiffes out!

⁴⁹ In 1983, Rupert Butler described the capture in his *Legions of Death* (Arrow Books, London, 1983, acknowledgments page and pp. 234-238). The book does not apprehend the significance of what it described, viz. that the torture of Höss *created* his confession: that insight fell to Prof. Faurisson, who published his account in *The Journal of Historical Review*, Vol. 7, No. 4 (Winter 1986-87), pp. 389-403: “How the British Obtained the Confession of Rudolf Höss.” Höss was arrested on 11 March; then the torture began. On 14 March at 2 am Höss signed an 8-page “confession.” Then on the 15 April the Assistant Prosecutor at Nuremberg read out the supposed confession by Höss, and Faurisson spoke: “On that day was launched a lie of world-wide dimensions: the lie of Auschwitz.” For a detailed documentation of how Höss’s family was threatened and tormented to reveal Höss’s whereabouts, and on how Höss was subsequently arrested and tortured, as well as a thorough analysis of his many absurd and contradictory postwar testimonies see C. Mattogno, R. Höss, *Commandant of Auschwitz: Rudolf Höss, His Torture and His Forced Confessions*, 2nd ed., Castle Hill Publishers, Uckfield 2020.

⁵⁰ Guards patrolled the snowy walls of the Majdanek disinfection chamber in February 1988, preventing Fred from taking any samples. He returned home having only one single wall-sample from a delousing chamber. Yet, that sufficed to bring a world focus of attention upon them – they had been successfully written out of history until then. Germar Rudolf, who also did some research at Auschwitz a few years later, in contrast sampled quite a bit from these chambers, which is why their two surveys complemented each other so well.

⁵¹ Austria, Belgium, Czechia, France, Germany, Greece, Hungary, Liechtenstein, Lithuania, Luxemburg, Netherlands, Poland, Portugal, Rumania, Slovakia, Switzerland.

had fabricated the Weapons of Mass Destruction (WMD) lie without a tremor of conscience. Only then, I suggest, does it start to dawn upon the world that the notion of big homicidal gas chambers was the original WMD hoax.

I'm used to expressing offbeat views, but only on this topic do I encounter a frightening wall of silence. People just do not want to discuss the duality: on the one hand the actual fumigation gas chambers, which really functioned in a normal, humdrum manner – which no one in the UK is interested in, and which the media are certainly not about to start discussing – and on the other hand, hovering like a nightmare-hallucination around these, are the phantom gas chambers in which people allegedly perished by the million, and in which everyone is required to believe with a fearsome intensity. The former have a concrete location and normal design structure, e.g. a heating unit to make the Zyklon granules release their cyanide gas swiftly.

Thus, the delousing chambers were installed into all of the German labour camps in 1942, halfway through the war, because that was the year in which the great epidemic of typhus arrived and people started dying like flies. Standard Holocaust texts state that “the gas chambers” started to work in 1942 and 1943. If you wanted to gas millions of Jews, would you really wait until halfway through the war before starting? Their story has to begin then, because the supply of massive quantities of the Zyklon to the actual gas chambers began exactly then. The gassing stories started to be fed back into Poland by the BBC in 1942. Once belief in the illusion had been made legally compulsory at Nuremberg in 1946, memory of the actual use of the Zyklon faded away.

The average level of cyanide measured in the delousing chamber walls has come out at around five thousand parts per million, which is half of one percent. Whereas, in contrast, the mean background level of cyanide in kitchens, bedrooms etc. in the labour camps came to two parts per million.⁵² The mean level in samples taken from the rooms which allegedly functioned as homicidal gas chambers comes out at between two and three parts per million. That alludes to the total content of iron cyanide, where each average comes from a dozen or so samples – chiselled out from historic walls that were *standing during World War II*.⁵³ The chemistry shows *no significant difference* between cyanide in samples taken from the alleged (tourist) gas chambers and the control levels in samples taken from innocuous buildings.

⁵² This means, the weight of iron cyanide is 0.0002% or 2mg/kg (milligrams per kilogram) or 2µg/g (micrograms per gram) of the weight of the brickwork.

⁵³ See my “Three Interesting Numbers” (www.thetruthseeker.co.uk/?p=13060) or “The Walls of Auschwitz,” www.codoh.com/library/document/675/.

The textbooks have long committed themselves to where the human (cyanide) gas chambers were allegedly located. Wall samples have been taken and measured; it's been done. Iron in the walls holds onto the cyanide for centuries – that's why we Revisionists win the argument.

A phantom was fabricated for the people to fear. "Military intelligence" practices this damnable art, damnable because it uses media outlets which people are brought up to believe they can trust. It ratifies the war. Nuremberg was called a "Military tribunal," and it had been given that structure so that the defeated Nazis could not have an opportunity to justify themselves or present their arguments, or have proper legal counsel. The military were controlling the arguments, with newly made-up crimes retrospectively applied just for the occasion. In this situation, the philosopher distinguishes between what is real and what is illusory, for which he does not expect gratitude.

Your Favourite Nightmare

"After three days of torture and sleep deprivation, flogged after every answer, naked and forcibly alcoholized, the first interrogation came about under 'striking evidence,' as Höss reported later: 'I have no idea what is in that confession, even though I signed it. The alcohol and the whip were too much for me.'" —Fritjof Meyer⁵⁴

Not only are the modern-style fumigation chambers with sophisticated equipment too small for the imagined story, but their delicate apparatus would easily have been smashed to bits by desperate, dying humans. So what do "they" really look like, you ask? That's easy to answer: they have never existed, they are a nightmare-hallucination of the same status as the satanic witches' sabbaths used to convict witches centuries earlier. But to describe the *actual* German gas chambers: these are a humdrum affair, seemingly of interest to no one in England:

1. They were ten cubic metres in volume.
2. They were manufactured under the license of the Degesch firm, which was a subsidiary of the I.G. Farbenindustrie trust, which also owned the patent for Zyklon B.
3. They blew hot air onto the Zyklon granules to evaporate the hydrogen cyanide gas.
4. They had a fan to circulate the gas inside the chamber.

⁵⁴ Fritjof Meyer, *Osteuropa*, May 2002, p. 639 (www.vho.org/D/Beitraege/FritjofMeyerOsteuropa.html); English at www.vho.org/GB/c/Meyer.html); see also Santiago Alvarez, "British Torture: What Does It Mean for Revisionism?," *The Barnes Review* newsletter, 31 October 2012 (www.codoh.com/library/document/5404/); see also Ian Cobain, *Cruel Britannia*, 2012.

5. They afterwards vented out the cyanide gas and replaced it with fresh air.
6. They often had a washing line outside, so after “Zykloning” the clothes and mattresses for an hour or two, they were put out to air.
7. Four delousing chambers of this kind exist to this day at the Dachau camp.

Admit it – that is the first description of German gas chambers you have ever read! You can’t have humans tossed into them. The former Auschwitz commandant Rudolf Höss came up with a different story, which all the world now believes in – a tribute to the efficacy of British torture techniques.

Höss’s story, given at Nuremberg on 15 April 1946, was of long, thin rooms, with one or two thousand entering at a time, believing they were shower units; naked and mixed sexes, of course, as one expects from a nightmare hallucination; then Zyklon B was dumped through holes in the ceiling. After twenty minutes at the latest, everyone was dead. On the other hand, a number of other witnesses claimed that, instead of water, cyanide gas came out of the shower heads! That was actually the first version of the story invented as early as 1942,⁵⁵ but as Zyklon granules could not easily produce such gas, the granules being slow-release and the resulting gas not being under any pressure, later tellings had the granules tumble down hollow columns protruding through the roof, etc.

That is the myth which created Israel – British wartime atrocity propaganda elevated to a transcendent plane... *of a world religion*.

The alleged procedure has to be based upon the confession of Rudolf Höss, because he is the primary source of the story. At Nuremberg the vanquished German war leaders were in bewilderment and denial over the story they were told concerning mass gassing. However much they were grilled, they still wouldn’t accept it. Only the *Kommandant* of Auschwitz affirmed that it had happened: he gave to his torturers their story.

A weapon of mass destruction was thereby envisaged. Initial stories had them in Germany, but because those sites could be visited easily, they were quickly ridiculed into absurdity. Only on the inaccessible other side of the Iron Curtain could the nightmare image endure – in storyland. Höss’s story kept changing with each retelling, as one would expect from a nightmare dream sequence, beginning with cyanide gas emerging from shower pipes

⁵⁵ In a letter allegedly written in Auschwitz Camp dated August 29, 1942, as published in “Obóz koncentracyjny Oświęcim w Świetle akt Delegatury Rządu R.P. na Kraj” (Auschwitz concentration camp in the light of the Polish Governmental Delegation in the country), *Zeszyty Oświęcimskie* (Auschwitz Notebooks), Special Edition I, Auschwitz 1968, p. 43; on the various early – and evidently mendacious – rumors spread about Auschwitz see C. Mattogno, *Auschwitz: A Three-Quarter Century of Propaganda. Origins, Development and Decline of the “Gas Chamber” Propaganda Lie*, Castle Hill Publishers, Uckfield 2018.

and ending with the granules of Zyklon B being dropped through three or so holes in the roof. Eventually there were columns through which the granules fell onto the floor or were hoisted in and out in baskets.

But one thing remained constant through each re-telling, namely that all of the victims, usually a couple of thousand in one large room, would be dead in twenty minutes at the latest, usually even much faster. He never saw any left alive, Höss declared. Höss was surely salvaging his own conscience by constructing a story so manifestly impossible – yet the world believed it.⁵⁶

A difficulty with the idea of several million Jews gassed by Germans in World War II comes from the *kinetics of gas evaporation and dissipation*. The liquid hydrogen cyanide in the Zyklon granules boils at 25.7°C. For a lethal effect, it would have to evaporate into a gas, which would then have to dissipate throughout a large chamber. Höss's story has two thousand or somewhat less persons enter a large room, thirty metres or so in length. If it happened on a cold winter's day, then the evaporation could take longer than an hour, and the dissipation even longer than that. That is the core of the impossibility of the alleged weapon of mass destruction. It couldn't have operated the way it is claimed.⁵⁷

But maybe, you say, it did indeed take longer, say a couple of hours for everyone inside to die? The problem here is that you have to have an airtight room for this process to work at all, without all the evil Nazis outside being gassed also. And it will not escape your attention that, if you could somehow cram a couple of thousand persons into one single large room, they would all have died from asphyxiation long before the slowly evaporating, dissipating cyanide gas got to them at, let's say, 500 parts per million. Plus, it would be infinitely easier to extract the tangled mess of dead bodies, if they were not all mixed up with cyanide granules still releasing their cyanide. In other words, one could have calmly awaited the death of those locked up inside with no need to use the dreaded Zyklon at all.

But maybe, you say, they just poured in more and more Zyklon until they had "enough"? Well, in order to reach high concentrations of the gas swiftly using Zyklon B but without a hot-air fan evaporating the poison, so much would be necessary that one would end up having concentrations near the pellets exceeding 6% by volume, beyond which point the air-gas mixture is explosive, and the whole thing could blow up, from one spark of

⁵⁶ In contrast, a real order given by Höss (Aug. 12, 1942), while he was the Kommandant at Auschwitz, stated: "on opening rooms used for [disinfestation] gassing, SS [men] not wearing masks must wait at least five hours and keep at a distance of at least 15 meters from the chamber." J.-C. Pressac, *Auschwitz: Technique and Operation of the Gas Chambers*, p. 201.

⁵⁷ Paul Grubach, "The Non-Existent 'Auschwitz Gas Chambers' of Deborah Lipstadt and Robert Jan van Pelt," 2006, on www.codoh.com/library/document/966/.

a shoe's nail on the concrete floor or a ring scratching along a wall (as Fred Leuchter pointed out).⁵⁸ Remember that the cremation furnaces were probably next door, so you cannot have an explosive gas mixture anywhere near it.

But maybe, you say, they did have fans and heaters to speed up the evaporation and dissipation, as they existed in the Degesch circulation devices? If the story were true, German engineers certainly would have come up with a solution like it, but not a single piece of material, documentary or anecdotal evidence points in that direction. Talking about the alleged equipment of these rooms – or the lack thereof – brings us to the question of where did the hellish nightmare take place? It would have to be in shower-rooms or morgues, take your choice.

A so-called “Holocaust denier” is one who *does not believe in the use of torture*. Rudolf Höss was seized by a British army hit team and tortured until he gave his torturers the story they wanted. It was staggeringly successful; all the world soon believed. He apologized to his wife for what he had said,⁵⁹ and he also had a conversation with the journalist Moritz von Schirmeister who was sitting behind him in a car during a transfer from one prison to another, telling him how his confession had come to be.⁶⁰ But the Jewish psychologist who interviewed Höss in prison believed that his story was the truth. Höss stayed with his story.

A civilized nation is one which does not believe in the use of torture to extract truth. Or rather, which does not believe in the use of torture, *period*. When Gandhi was asked what he thought of Western civilization, he replied that he thought it *would be* a good idea. British Intelligence persistently uses torture and equally denies using it, and of late the US/UK has developed the horrific practice of flying suspects, usually Muslims, to other countries which have to do the torturing on behalf of the US/UK. Going back a few centuries, Lord Macaulay has been criticized for his essay upon Sir Francis Bacon, Lord Chancellor of England in Elizabethan times, where he described Bacon as gathering information from a victim who was being tortured; and even that he knew the information to be false while he was getting it.

⁵⁸ On the controversy surrounding the explosivity of Zyklon fumes see Germar Rudolf's presentation *Is Zyklon B Explosive?*, <https://codoh.com/library/document/is-zyklon-b-explosive/en/>.

⁵⁹ David Irving, *Nuremberg: The Last Battle*, (online) p. 246: Höss's letter of apology to his wife for his bogus confession (not delivered).

⁶⁰ Moritz von Schirmeister was travelling in a car to Nuremberg with Rudolf Höss 31 March 1946 and the two were able to talk freely. In a two-page statement Herr Schirmeister recalled Höss's words to him: “Certainly, I signed a statement that I killed two and a half million Jews. But I could just as well have said that it was five million Jews. There are certain methods by which any confession can be obtained, whether it is true or not.” Höss was hanged in April 1947. (NB: the documentary evidence for this quote has been challenged by “Holocaust Controversies.”)

That is the crux of the matter. A nightmare delusion has come into our world – to poison the language of discourse, to legitimate war and extinguish hope – and it came in through the testimony of a torture victim. When a man’s genitals have been smashed to pieces, when he has been deprived of sleep for several nights, when threats have been made against his wife and children, what kind of person will believe what he says?⁶¹ That one is easy to answer: the world did not know of this matter, it was not reported until 1983, and it took that discerning master of modern Revisionism Robert Faurisson to point out the full picture. I doubt whether many Britons are to this day fully cognisant of what was perpetrated. We should reject unconditionally the value of confessions made under torture.

Unless we want to embrace the values of the Marquis de Sade (“The only happily governed countries are those where the Inquisition reigns”), then we should consign the entire Höss confession into a glass cabinet labelled “torture victim confession.” Do you want nightmares to shape our future? The Masters of War want you to believe in them, because your fear and terror will always help fill their coffers – and get them ready for their next war.

May the Power of Truth cause the shadows of the night to flee away!

Our common security comes from the building of bridges of trust, friendship and mutual understanding, not in armaments. One thinks here of the picture by Goya, “When Reason Sleeps, Monsters Are Born.” Let us not live in the sleep of reason. I was thrown out of my UCL college department, Science and Technology Studies, for an essay upon the Auschwitz gas-chamber illusion. Fair enough; it was too shocking for them. But let that college cease claiming to be the bastion of freedom of thought which it was set up to be. If we insist upon the centrality of the chemical-physical evidence, we should succeed. Our opponents want instead to rely upon torture-extracted confession. They will lose that argument.

Cyanide, Red or Blue?

Death by cyanide is swift and sure, and leaves a pink corpse. Ditto carbon monoxide. Both gases block body oxygen absorption, although at different points of the oxygen metabolism. These are the only two gases alleged to have been used to kill millions in “Nazi death-camps.”

In the case of cyanide, the red corpse colour is due to the blood being full of oxygen: oxy-haemoglobin (*i.e.* blood carrying oxygen) is bright red. The haemoglobin in human blood is meant to carry the oxygen and release

⁶¹ “All but two of the Germans [in Allied captivity], in the 139 cases that we investigated, had their testicles kicked in beyond repair. This was standard operating procedure with our American investigators.” 23.1.49, *The Sunday Pictorial* (quoted in *For Those Who Cannot Speak*, M. McLaughlin, Historical Review Press 1979, p. 21.)

it out at the periphery, from where it carries back the carbon dioxide. All our life it goes through this dynamic cycle. Cyanide terminates this cycle by preventing any oxygen from entering body tissue; the oxygen therefore remains in the blood.

Had cyanide been used lethally in the German labour camps, as alleged, there would have been hundreds of thousands of pink corpses lying around – but, *there weren't any*.

Ditto for carbon monoxide: this compound forms an extremely strong bond with the haemoglobin molecule in the blood, preventing it from carrying any oxygen. This process is rather slower than in the case of cyanide, *i.e.* carbon monoxide is not quite so deadly.

Hence, a cyanide-killed body is one whose tissue has been denied the ability to absorb oxygen from the blood, whereas a carbon-monoxide-killed body is one whose blood has been denied the ability to absorb oxygen from the air. In both cases one ends up with a corpse having a pink hue.⁶²

For a pathologist, detecting death by cyanide is dead easy, if you'll excuse the expression. Agatha Christie readers will be familiar with the bitter-almond smell that hovers around a cyanide-killed corpse. And did we ever hear of that in a German labour camp? No, never.

The insecticide Zyklon was known as Zyklon B (there was an original Zyklon A in liquid form, which was replaced by the stabilized 'B' form which was safer to use).⁶³ At Nuremberg, "witnesses" testified that blue-hued corpses were seen – or sometimes with a greenish pallor – evidently imagining that the Zyklon somehow produced this, perhaps inspired by the German word for the poison: "*Blausäure*" – blue acid.⁶⁴ In this they erred.

The US army sent its top pathologist Dr Charles Larson to inspect the camps at the war's end, in 1945, to find out what had caused all the deaths. After visiting several labour camps he concluded that they had died from famine and disease, largely typhus.⁶⁵ He didn't exactly say he had found no deaths by gassing, but said (as quoted in the book about him) no systematic, mass cyanide gassing. That is a wise position. He conjectured that a few mentally ill people were maybe gassed using Zyklon, presumably to avoid

⁶² Sometimes, if a body is anaemic, this pink hue may not appear. That was not notably the case for labour-camp inmates. One would have expected around 90% of deaths to show the pink hue, had CO or cyanide been the cause of death.

⁶³ See Horst Leipprand, *Das Handelsprodukt Zyklon B: Eigenschaften, Produktion, Verkauf, Handhabung*, Grin publishing, Mannheim 2008, p. 4; www.grin.com/de/e-book/150878/das-handelsprodukt-zyklon-b.

⁶⁴ See the CODOH Forum thread "Testimonies on corpse colour." The German word for hydrogen cyanide comes from the fact that this colourless chemical compound forms very stable blue pigments when brought together with iron compounds of mixed valence – the famous turquoise hue staining the delousing-chamber walls.

⁶⁵ J.D. McCallum, *Charles Larson: Crime Doctor*, 1979.

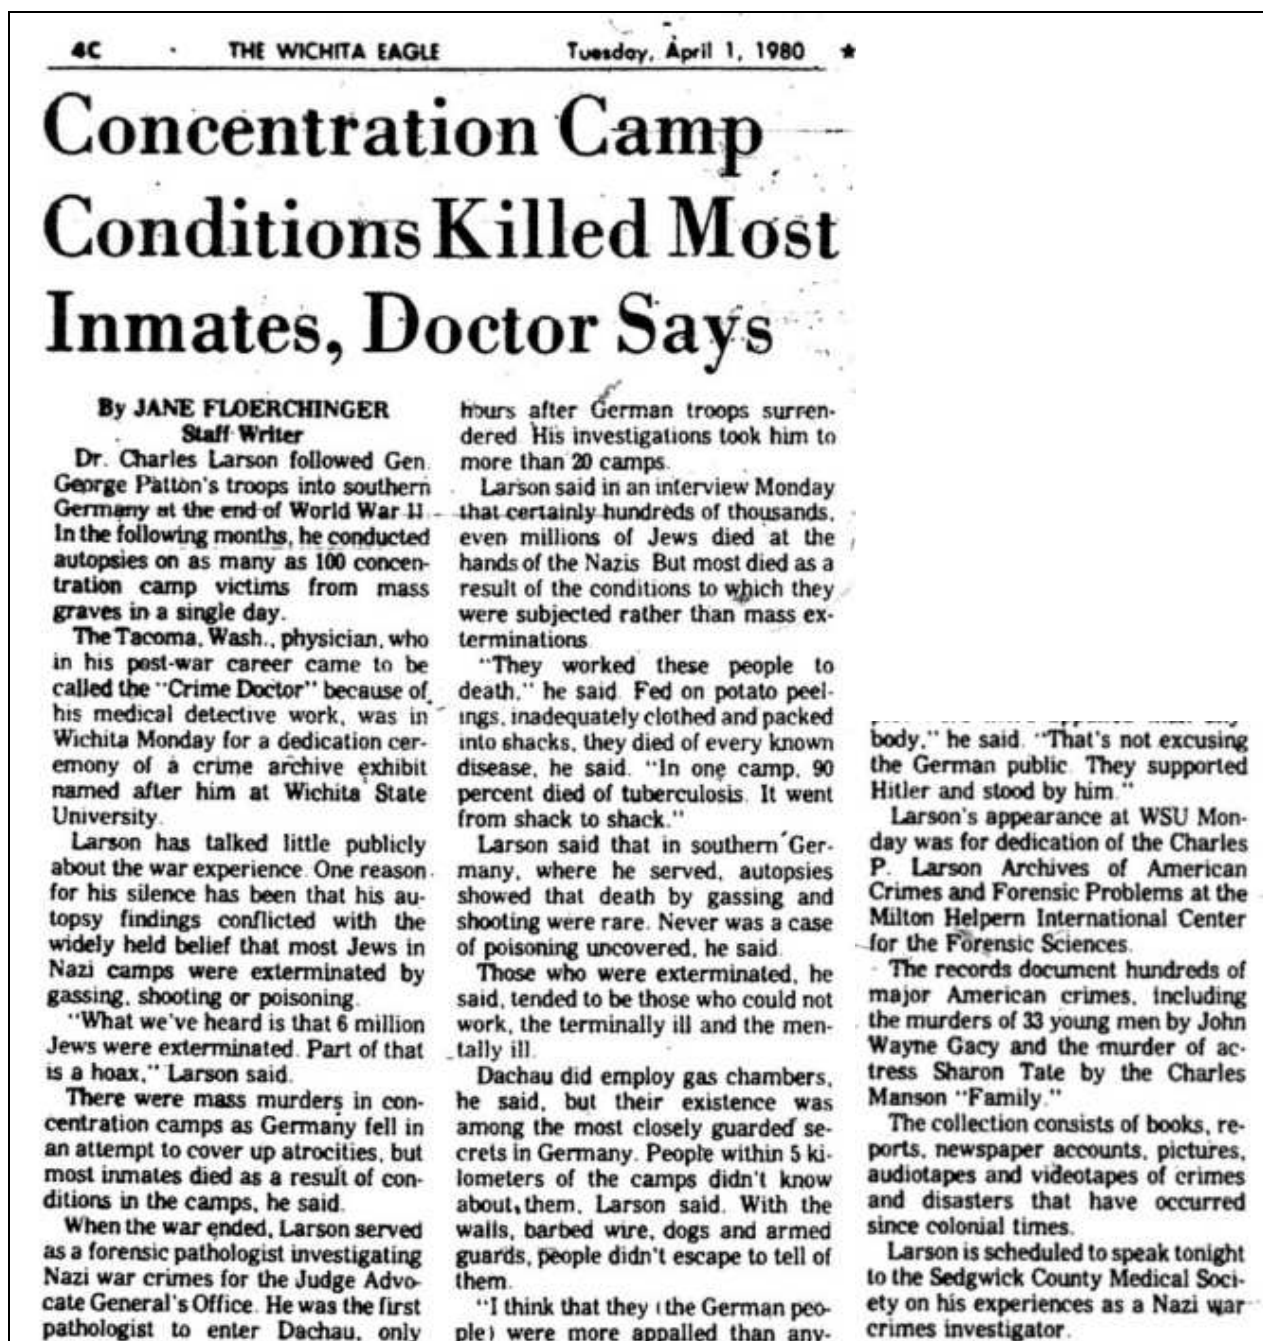

Illustration 2: Dr. Charles Larson interviewed by a local U.S. newspaper in 1980.

having the "no Jews were gassed" denier label hanging around his neck for the rest of his life; but then, years later in 1980, he told his local paper, "never was a case of poison gas uncovered."⁶⁶

Other lesser-known camps – Treblinka, Belzec and Sobibor (so-called "Aktion Reinhardt" camps in eastern Poland) – have stories of carbon-monoxide gassing, up to two million. The truth of these stories falls at many hurdles, including an absence of any reference to pink corpses being seen.⁶⁷

⁶⁶ Jane Floerchinger, "Concentration Camp Conditions Killed Most Inmates, Doctor Says," *The Wichita Eagle*, April 1, 1980, p. 4C; see Illustration 2.

⁶⁷ "In all of the fatalities from acute carbon monoxide poisoning in which the victim was found dead at the scene, a conspicuous finding was the characteristic pink or cherry red post-mortem lividity of carboxy-haemoglobin in the skin of the dependent portions of the body. These are readily distinguishable, because of their color, from ordinary post-

A definition of *Holocaust denial* could here be relevant. Instead of trying to answer the question, “Are you denying the Holocaust?” we endeavour to rephrase it with something constructive like, “How was the Zyklon used?” That way, we have a question that can be answered. One is making an affirmation, not a denial. The instructions on the Zyklon can could have been more explicit – ah, how history would have been different! A Zyklon can said it was made by a pest-control company, and urged caution was advised because the substance in it was lethal: it showed the German Pest Control Company emblem and the brand name Zyklon, and “to be used only by trained personnel.” Many tons of Zyklon were used in the German labour camps from 1942 onwards, once the typhus epidemics had broken out, and *a Holocaust denier is a person who affirms that it was used as per the directions on the can*. That is the damnable heresy.

Far Too Many “Holocaust Survivors”

At war’s end, there seem to have been around five million Jews remaining who at some point were present in countries that were temporarily under some German control,⁶⁸ a number which has two sources. Firstly, several surveys have shown that one million designated “Holocaust survivor” Jews were alive at the turn of the millennium.⁶⁹ From simple demographics people have extrapolated from this a figure of four or five million who must therefore have been alive at the war’s end. Secondly, the German government has given out “reparations” to at least four million individuals who have put in claims of being “Holocaust survivors.” Although not all of them are Jews, the vast majority of them probably are (or claim to be). The sheer number of Jews who have held out their hands for cash as being “Holocaust survivors” has greatly shattered their claim to have had six million of their kin exterminated.

Supporters of the Holocaust legend cannot have it both ways. If they are taking endless “reparations” from Germany claiming to be “Holocaust survivors,” then how can they allege that such numbers of Jews were liquidated in Europe?⁷⁰ Does not one claim negate the other? In the first half of the

mortem lividity.” *American Journal of Public Health*, March 1952, p. 262 (with gratitude to F.P. Berg).

⁶⁸ This isn’t the same as “Jews in Europe,” for it includes those who emigrated from Europe in the great exodus which began just before World War II.

⁶⁹ From *The Jewish Week*, 28 November 2003: Sergio DellaPergola, a demographer for the Institute of Contemporary Jewry at the Hebrew University of Jerusalem, found 1,092,000 Holocaust survivors worldwide. Lawrence Eagleburger, chairman of the International Commission on Holocaust Era Insurance Claims, commissioned this survey for helping to distribute the yearly “humanitarian” funding.

⁷⁰ What we may call “Faurisson’s paradox” – “Each survivor who dares to testify that people of his or her category were systematically slaughtered is making, by the sheer fact of still being alive, a self-refutation argument: he or she is ‘living proof’ that the statement is absurd” (Robert Faurisson, “The Victories of Revisionism (continued),” 11 Sept.

20th Century, in the decades 1920-1940, Jewish press releases were consistently alluding to the number of Jews in Europe as being six million (see Chapter 10). That canonical number was being alluded to as the number of Jews in “central and eastern Europe.” The inferred aggregate number of designated Holocaust survivors seems now to be approaching that figure.

German demographer Walter N. Sanning arrived at slightly under three million Jews who in 1941, just before the Holocaust is said to have started, lived in areas of Europe that were or later came for a short time under the German sphere of influence: Germany & Austria: 214,000; France, Benelux: 460,000; Denmark, Norway: 8,000; Italy: 48,000; Greece: 65,000; Yugoslavia: 68,000; Hungary: 400,000; Czechoslovakia: 254,000; Rumania: 465,000; Bulgaria: 48,000; Poland: 757,000.⁷¹

We are not concerned with Jews in Russia, mainly because the German pay-outs for “Holocaust survivors” excluded these until the collapse of the Soviet Union.

The huge numbers were in East Europe, because, as some historians believe, the Khazaria nation was overrun by Mongol hordes a thousand years ago (Chapter 9), so that the Khazars who had converted to Judaism were driven out and went westwards, into Poland, Austria and Hungary. That would appear to be *how* they got there, as *non-Semitic* Jews.⁷²

The German government pays out reparations to people who can show, with some documentary evidence, that they were “Holocaust survivors.” Some non-Jews may have received this, but mainly it goes to persons designated by Israel as being Jewish. Such persons fall into three categories: those who were in a German labour camp sometime in World War II; those who fled or were exiled, *e.g.* Jews who decided to leave Nazi Germany in the 1930s, as a majority of them did; and thirdly, those who had lived in a “regime of duress” in some way, under the Nazis. In total it has been estimated that there were 1,092,000 of these alive in the year 2001, of which 213,000 fell into the first category.⁷³

2011) – thus becomes valid in case of a sufficiently large number of “survivors.”

⁷¹ Sanning also stated: “In 1941, 2,847,000 Jews lived within the German sphere of influence in Europe (excluding the USSR and the Baltic countries). After allowing for war losses, those missing in Soviet prisons, emigration and very low birth rates during the war ... and the return of Polish-Jewish refugees from the USSR after the war, 2,712,000 Jews should have been counted in these countries after the War.” (*The Dissolution of Eastern European Jewry*, 2nd ed., Castle Hill Publishers, Uckfield 2015, p. 153.) However, here is what he did find: “After World War Two, 2.4 million Jews were found to be alive in the former German-occupied European countries (excl. the USSR),” p. 180. That drop in numbers is compatible with the figures we are here looking at.

⁷² Or so it was argued by Arthur Koestler in *The Thirteenth Tribe* (1976) and more recently by Shlomo Sand, *The Invention of the Jewish People* (2009).

⁷³ See Sergio DellaPergola, *Jewish Demographic Policies, Population Trends and Options in Israel and in the Diaspora* (2011, online, Table 16, p. 221). The one million figure includes some who lived in French North Africa.

Today in Germany there is a growing reaction, whereby people fed up with having to obey laws imposed by the victorious Allies set out to get themselves arrested. A Mr Kevin Käther did so in 2009, and he told the Court.⁷⁴

“During my readings, I happened to come across the number of reparation suits filed by alleged victims of ‘Holocaust.’ According to the Finance Ministry, this number comes to 5,360,710.”

He asked the Court:

“By paying these 5,360,710 claims for indemnity, didn’t the Finance Ministry deny its own official version of the ‘Holocaust’?”

He then cited the well-known comment by Norman Finkelstein’s (Jewish) mother:⁷⁵

“If everyone who claims to be a survivor at Auschwitz really is one, then whom did Hitler kill?”

Mr Käther evidently did not see a great deal of difference between the number of “reparation suits filed by alleged victims” and paid-out “claims for indemnity.” But the latter group has to be smaller than the former; and it has been estimated that that number of claims made implies at a minimum four million actually paid out by Germany’s Finance Ministry.

Germany has paid out over one hundred billion deutschmarks in this way,⁷⁶ so each claim accepted would have received somewhere around twenty thousand deutschmarks. The number of these acknowledged indemnity claims has now exceeded the number of Jews in total who ever lived within Hitler’s sphere of influence. The reparations handed out by Germany seem to have reached that number somewhere in the 1960s.⁷⁷ German statisticians need to be permitted to discuss this matter: we in the rest of the world need to hear their view, for they alone can clarify it.

The tragedy of the Shoah alludes primarily to those Jews who lived and died in the German labour camps. We’ve shown how within the Nazi

⁷⁴ “The Growing Self-Accusation Movement in Germany” by Kevin Käther, *Smith’s Report*, January 2009. At the court hearing of 18 Nov. 2008, Käther was sentenced for eight months. We may concur with what he told the Court about the Nuremberg trials: “The International Military Tribune was not a legitimate court of law, but rather a vehicle for vindictive ‘victor’s justice’ in legal disguise, which acted in defiance of international law and was therefore criminal in nature.”

⁷⁵ Norman Finkelstein, *The Holocaust Industry*, 2000, p. 85.

⁷⁶ That figure was reached in 2002: “Germany Has Paid Out More Than \$61.8 Billion in Third Reich Reparations,” *The Journal of Historical Review*, Vol. 17, No. 6 (Nov./Dec. 1998), p. 19. Wikipedia has more recent figures: http://de.wikipedia.org/wiki/Deutsche_Wiedergutmachungspolitik#Summe: 74.5 billion Euros (some £60 billion/\$100 billion) by the end of 2016.

⁷⁷ The Bonn Government had received “3,375,000 applications for restitution” as of 1965: W. Stäglich, *Auschwitz: A Judge Looks at the Evidence*, 3rd. ed., Castle Hill Publishers, Uckfield 2015, p. 54. The number reached 4.4 million in 1992, see Jörg Fisch, *Reparationen nach dem Zweiten Weltkrieg*, C.H. Beck, München 1992.

sphere of influence during World War II there had lived somewhere around three million Jews in total.⁷⁸

Revisionists are hard to come by, but I met one in the Hope and Anchor pub at Highbury, and the conversation turned to how there had been a million registered “Holocaust survivors” drawing funds from Germany at the dawn of the new millennium. In the very pub where the punk rock movement had begun, with platinum discs a-gleaming on the walls, he said to me:⁷⁹

“Of the four million Jews under Hitler in WW2, six million died, alas, and only five million remained.”

He explained how, after the war, Poland still had a lot of Jews in its government who were basically still running the country, as did Hungary.⁸⁰

Alice in Numberland

People used to believe in bars of soap and lampshades made from the bodily parts of Jewish victims of the gas chambers. (Visiting the International Court of Justice at The Hague I once saw such a “lampshade” on display.)

⁷⁸ See on this also Johannes P. Ney, “The Wannsee Conference Protocol: Anatomy of a Fabrication,” in: G. Rudolf (ed.), *Dissecting the Holocaust* (online only: www.vho.org/GB/Books/dth/). Only German references are given for this number. Including German-occupied areas of the Soviet Union, Walter Sanning quoted 3.5 million, in *The Dissolution of Eastern European Jewry* (2015), pp. 177, 195. Stäglich’s book averred there were “no more than 3,000,000” Jews in total (*Auschwitz*, 2015, p. 54), albeit relying on R. Harwood for that figure; however, he also quoted the Nazi Heydrich (June 24, 1940) – who should have known (p. 51): “There are about three and a quarter million Jews in the territory now under German control.” The final figure would be higher than this, for after June 1940 there were further Nazi conquests. No one will find an exact value for this figure.

⁷⁹ On the CODOH Forum he’s called “Kingfisher.” A similar quip was made on Rense: “In all of German-occupied Europe, there were 2.4 million Jews. After the war, 3.8 million Jews applied for Holocaust reparations. Tragically, the remaining 6 million were lost.” Edgar Steele, “How not to be interviewed by CNN about the Holocaust.”

⁸⁰ Istvan Deak, a Professor of History at Columbia University and a specialist of Hungarian history, has written of the post-war period there: “...Most of the police interrogators, nearly all of the Hungarian Stalinist leaders, and most of the Communist victims were Jews... Most of the Hungarian Communists were Jews.” Source: I. Deak, “Hungary: The New Twist,” *The New York Review of Books*, August 18, 1988, p. 4. Commented Jürgen Graf, “[Jews] almost completely dominated the Communist Party and the dreaded secret police during the first years of the brutal Soviet-imposed regime headed by the Jew Matyas Rakosi. For a time in the early 1950s, there was only one non-Jew in the Central Committee of the ruling Hungarian Communist Party. (According to a popular joke of the time, he had been given this position to ensure that someone in the Central Committee would be able to sign death sentences on the Sabbath.)” “What Happened to the Jews Who Were Deported to Auschwitz But Were Not Registered There?,” *The Journal of Historical Review*, Vol. 19, No. 4 (2000), pp. 4-18; www.codoh.com/library/document/2915/. In 2004 the Hungarian government announced that the “long-sought Nazi-era lists with the names of the Jewish victims” no longer exists (*Jerusalem Post*, 25 March 2004) – which seems odd, if over half a million Hungarian Jews did indeed “perish in the Holocaust.”

Such accusations were made in detail at Nuremberg,⁸¹ but started to fade away once forensic testing showed such products to be from animal sources. The disappearance of these unthinkable-but-once-accepted horrors left many people wondering, *what else* was untrue?

Well, let us imagine...

Alice was thinking of all the busloads of young schoolchildren going out to Auschwitz and trooping through its big “gas chamber.” Browsing through Professor Robert van Pelt’s big book about the history of Auschwitz, she read how this chamber was *just a post-war mock-up* made for tourists.⁸² As a professor of architecture, he ought to know! She wondered, did people *enjoy* the illusion? Maybe there was need for a sign like the enigmatic one that had been up at Dachau, once announcing that here was the “gas chamber” – but, that it was “never used”? Or, she wondered again, maybe it was more like the notice in English, French and Hebrew beside the swimming pool at Auschwitz saying it wasn’t a swimming pool, but just a water reservoir?

Then Alice wondered, what was a “Holocaust survivor?” She heard on the news that there were a million of them alive at the turn of the 21st Century. Projecting this number backwards in time she calculated that there must have been at least *four million* of these survivors in 1945. If six million of them had died, how could four million have survived the war?

Alice tried to go over the arithmetic one more time. Jewish publications had always claimed there were six million Jews in Europe, or at least cen-

Illustration 3: from *Tales of the Holohoax*, a Journal of Satire, 1989⁸³

⁸¹ In 1990 the *Yad Vashem* Holo-museum officially announced that the soap stories were untrue (Reuters, “Jewish Soap Tale ‘Was Nazi Lie’”, *Daily Telegraph*, April 25, 1990). – The best exposé on this question is Joachim Neander’s paper “The Danzig Soap Case: Facts and Legends around ‘Professor Spanner’ and the Danzig Anatomic Institute 1944-1945,” *German Studies Review*, 29(1) (Feb. 2006), pp. 63-86; search the IMT volumes by inputting “‘Avalon Project’ site:yale.edu,” adding “soap” or “lampshade,” then use Ctrl-F to scroll down to the word.

⁸² Van Pelt, *Auschwitz: 1270 to the Present* (1996), pp. 363f. (search “fpp Auschwitz Pelt”). When David Irving challenged van Pelt over this in his trial (Irving vs. Lipstadt, Old Bailey, 2000), the latter tried to back away from the plain meaning of his text: van Pelt, *The Case for Auschwitz* (2002), pp. 120f.

⁸³ Two men were jailed in the UK in 2009 for distributing this comic (Appendix IV) made in the USA.

Illustration 4: Dachau notice (no longer there).

tral and Eastern Europe, around the beginning of the twentieth century. Later, the Nazis had reckoned there had been altogether three million Jews within their sphere of influence, *i.e.* in countries they occupied. So how then could four million Jewish “Holocaust victims” come forward after the war and take money off Germany?

Alice was puzzled that Germany was prosecuting thousands of its own citizens every year, because they could not accept the official story. Year on year the number of incarcerated Germans increased.⁸⁴ Germany continued jailing its own citizens because they refused to believe the British military’s story of what happened eighty years ago in Poland. “Why would anyone want to believe a story from British military-intelligence?” Alice wondered to herself.

Perusing books concerning the Holocaust and Auschwitz, Alice noticed the authors: Robert van Pelt, John Zimmerman, Hannah Arendt, Yehuda Bauer, Michael Berenbaum, Deborah Lipstadt and Raul Hilberg. “They’re all Jewish” she exclaimed.⁸⁵ Then, turning to the Revisionist books she saw

⁸⁴ The German Government calls them “enemies of the constitution,” and its account of those so prosecuted is called “Report on the Protection of the Constitution.” Germany doesn’t as such have a constitution, it only has what the US/UK dictated to it at the end of World War II; S. Alvarez, “Germany Proud of Persecuting Dissidents,” *The Barnes Review* newsletter, 5 August 2012; www.codoh.com/library/document/5403/.

⁸⁵ See Germar Rudolf, *Lectures on the Holocaust* (2017), p. 56, for the large preponderance

they were all written by non-Jews.⁸⁶ My, this is a strange business, she reflected.

She pulled from the shelf a smart new book about genocide and the law.⁸⁷ This too was written by Jews she noticed, feeling vaguely guilty that this thought had popped into her mind. She wondered about the extermination of Native Americans. That had been the worst of genocides, hadn't it? What was the number, fifty or a hundred million?⁸⁸ But here this event was not even mentioned. Also, had there not been a huge extermination of the Russian middle classes soon after the Bolsheviks got in? Twenty million, or was it more? That wasn't mentioned either, but then it had been mainly Jewish Bolsheviks that led this slaughter.⁸⁹ She found there had been a very brief mention of an "Armenian" genocide, but on the whole the book was just about the Jews. It said anyone who did not believe in six million gassed in gas chambers was a "denier" and should be put in jail.

Alice looked nervously around. "But that's absurd!" she exclaimed. All these very-much-alive Jews talking about gas chambers that no one had seen was making her quite confused. Why, it was worse than listening to the Mad Hatter.

She had read the Anne Frank diary. Anne and her Father had spent a while in Auschwitz, where her Father got ill, was looked after in the hospital *and recovered*. Toward the end of October 1944, Anne Frank and her sister Margot were evacuated westwards. Arriving at Belsen, another labour camp, she and her sister succumbed to the typhus epidemic; had there maybe been, Alice wondered, *not enough Zyklon* to protect her from the illness?

Alice felt one thing was certain: once Humpty-Dumpty falls off the wall, no one will ever be able to put the pieces together again.

of Jewish names; also Thomas Dalton in *Debating the Holocaust*, 2009, Chapter 1, points out the one notable exception to this Jewish literary genre: the Frenchman Jean-Claude Pressac as a non-Jew who has contributed to the subject with his books *Auschwitz: Technique and Operation of the Gas Chambers* (1989) and *Les crématoires d'Auschwitz* (1993) where he defends the orthodox Holocaust narrative; in his second book, however, he drastically reduced the death toll. (The 1989 book is available online: www.historiography-project.com/books/pressac-auschwitz/).

⁸⁶ This is at least true for English-language books; but, NB, see David Cole's *Republican Party Animal*, published in 2014, and Gerard Menuhin's 2015/2017 *Tell the Truth and Shame the Devil*. Both books deal mainly with other issues but do contain revisionist statements.

⁸⁷ See Appendix IV, *Genocide denials and the Law*, Oxford University Press 2011.

⁸⁸ One hears conjectural numbers here, from twenty-five to a hundred million: "The American holocaust was and remains unparalleled, in terms of its scope, ferocity, and continuance over time," Stephen Lendeman, "Lakota Sioux Nation Leaves America" Information Clearing House, 1 Oct. 2012; www.informationclearinghouse.info/article32607.htm.

⁸⁹ Mark Weber, "The Jewish Role in the Bolshevik Revolution and Russia's Early Soviet Regime," *The Journal of Historical Review*, Vol. 14, No. 1 (Jan./Feb. 1994), pp. 4-14.

3. Unweaving the Spell

The Primary Axiom

The Primary Axiom will dispel the shadows of the Night.

If any building in German World War II labour camps was regularly exposed to hydrogen cyanide, then it must of necessity have significantly elevated levels of iron cyanide in its present-day remains of bricks and mortar.

There is no exception to this, no escape from its implications.⁹⁰

Let the Enemies of Truth rage in vain, let the edifices of Zionist nightmare threaten us as they will, let the Media moguls continue to censor every story – the truth will out. The lever and fulcrum – what Archimedes said he required to move the world – is this simple fact. However terrible your story about mass gassing, however wicked and fiendish you believe the Nazis were, you are, I say, obliged to give a location for where it happened. Where was it? O, you reply – yes, I know what your reply will be – those fiendish Nazis blew up the gas chambers before they left. Really? That sounds like, why there are no traces of bodies anywhere as remains from the six million gassed. Or, why there are no documents anywhere indicating anything resembling a German programme to gas humans. Or, why not one single record exists documenting any death by cyanide poisoning in any German labour camp.

No, you do really have to say where it happened. A physical location has to be given, to where you believe that your tremendous nightmare took place. But, the big Holo-books all do this; they say where, at Auschwitz, the sacred horror took place. The one where thirty million have trooped through,⁹¹ for a start, where compulsory school visits are taken, where sampling of walls gives *no significant elevation* of iron cyanide. So, IT didn't happen. That is the power of our Primary Axiom. It's pretty simple, really. The big textbooks specify the locations of alleged homicidal gas chambers at Auschwitz, and so the collecting of wall samples has taken place there.

Anyone who wants to “prove the Holocaust” just has to get some wall samples from where they believed the human gassings took place, and show significantly elevated cyanide levels present. Eighty years of wind and rain cannot wash it out! An unexpected chemical fact turns out to be pivotal. Out of bounds and locked away, the little delousing chambers have

⁹⁰ However, the walls of the Dachau delousing chambers were coated with a sealant, an eggshell paint, which would prevent cyanide-gas absorption.

⁹¹ See R. Faurisson, “The Victories of Revisionism,” paper presented at *The International Conference to Review the Global Vision of the Holocaust*, Tehran, 11 December 2006; www.codoh.com.

walls a-glow with blue – blue for the same reason that a tube of blue oil paint has that colour: it contains ferrocyanide. That is where the Zyklon was used, really, really used, day in day out, year by year – tons of the stuff were consumed. Every mattress, every shirt, was de-loused regularly.

But why, you ask, can we not claim that humans were gassed in the delousing chambers? Well, Wikipedia sort of does that, in that it gives a local habitation and a name to some homicidal gas chambers: the one just mentioned that thirty million have trooped through, and the delousing chambers of Majdanek.⁹² The latter has “*Disinfektion*” and “*Gaskammer*” written up in large letters on its walls. Wiki is here cheating bigtime. This “*Gaskammer*” won’t fit the bill for “human” use.⁹³

Visitors to Auschwitz are not taken to see the historic fumigation gas chambers, but instead are trotted round a post-war “reconstructed built-by-Stalin” model, with four holes in its roof etc. to make sure everyone gets the message.⁹⁴ Some of that post-war “reconstructed” chamber has real old brickwork, and measurements of cyanide in it – and from various other alleged homicidal gas chambers – show *no* significant elevation in cyanide above “control” samples. It’s way down around one or two parts per million.⁹⁵ Nothing could be clearer. Nothing could be more unequivocal. More research is not needed.

That chemical result, that huge contrast between samples from delousing-chamber walls and walls of alleged homicidal gas chambers, only applies at Auschwitz. For two other camps, in what is Poland today – Majdanek and Stutthof⁴⁵ – it is claimed that their blue-stained Zyklon disinfestation chambers were simultaneously used for mass homicide, while the various claimed “extermination camps” of the “Aktion Reinhardt” – Belzec, Sobibor, Treblinka – had after the war no trace remaining of what are alleged to have been homicidal gas chambers. In addition, the gas allegedly used there – engine exhaust – wouldn’t have left chemical

⁹² http://en.wikipedia.org/wiki/Gas_chamber; interestingly, the website Wikipedia quoted for this claim does not mention Majdanek at all:
www.ushmm.org/wlc/en/article.php?ModuleId=10005220.

⁹³ For a thorough study of the Majdanek Camp see J. Graf, C. Mattogno, *Concentration Camp Majdanek*, 3rd ed., Castle Hill Publishers, Uckfield 2016.

⁹⁴ Remarkably, Robert van Pelt admitted this in his 1996 opus: “Visitors are not told that the crematorium they see [at Auschwitz] is largely a post-war reconstruction... the guides remain silent when they take visitors through this building that is presumed by the tourist to be the place where *it happened*.” “It” really happened at Birkenau, two miles away, he explained: “...crematorium I was reconstructed to speak for the history of the incinerators at Birkenau” (*Auschwitz: 1270 to the Present*, pp. 363f.). Van Pelt’s terminology is here confusing because crematoria are places where cremation takes place, but he’s using it to denote a gas chamber. Among other things, van Pelt presumably had in mind a highly-visible Birkenau site next to the inmates’ football field.

⁹⁵ N. Kollerstrom, “Leuchter Twenty Years On (2008),” *Smith’s Report*, No. 153, Sept. 2008; www.codoh.com/library/document/634/.

traces anyway. If you want, you can believe that “it” happened at any of them – no one can disprove that.

The Bad Arolsen archive is the central database for all Holocaust death and Holocaust survivor records, and in 2005 its manager declared that amongst its millions of documents it had no record suggesting death by cyanide⁹⁶ – not one, anywhere! So here it depends upon how far you are prepared to continue believing these horror stories when there is zero documentary evidence, other than forced confessions and “survivor” testimonies, to back them up.

Forbidden Science

What is the technology of which you cannot be told, where you can get prosecuted for “hate crime” for talking about it? It’s a humdrum, normal process, whereby Zyklon was used day in, day out, in the delousing chambers. It had been normal German technology since the 1920s, if not earlier, and largely ended in 1944/45 when DDT was developed, replacing it.

Some European companies preferred to keep using Zyklon, although its name was changed later on, for furs for example, preferring its delousing action to that of DDT. Churches in Germany get debugged using the Zyklon, but if it is inaptly applied, their walls can go a patchy blue afterwards from the iron cyanide, as has happened in two known cases.

The American army used Zyklon, once the typhus epidemics started to arrive around 1942. A 1921 report in the *New York Times* titled “New Delousing Plant”⁹⁷ described how immigrants potentially infested with lice were treated on Hoffman’s Island, New York. Their clothing was gassed with cyanide gas using their equivalent of Zyklon, while the immigrants had their hair cut off and were put through showers; then their clothes were returned.⁹⁸ It was the same process as in the German camps.

The Italian author Primo Levi described in his book *Survival in Auschwitz* (1961) the Nazi delousing procedure:⁹⁹

“Unexpectedly the water gushes out boiling from the showers – five minutes of bliss; but immediately after, four men (perhaps they are the barbers) burst in yelling and shoving and drive us out, wet and steam-

⁹⁶ On 27 November 2006 the Manager of the Arolsen Archive, Udo Jost, replied thus to a query by Mr Mannstein (see CODOH Forum thread).

⁹⁷ Richard Widmann, “Delousing American Style” (online), *Smith’s Report*, September 2009, No. 165.

⁹⁸ For how Zyklon was used, in a collection of US public health reports for 1931, see “Some Aspects of Ship Fumigation.” www.codoh.com/library/document/875/.

⁹⁹ This vivid first-hand account was composed in 1947, published as *Se questo è un uomo*, “If This Be a Man.” Before the shower, hair was shaved and shoes were taken away. There is a mere hint or rumour about “gas chambers” in this story, for he worked at the Buna chemical plant at Monowitz. He sees no one being killed. Decades later, however, Levi appeared with a greatly “enhanced” memory of the fabled gas chambers.

ing, into the adjoining room which is freezing; here other shouting people throw at us unrecognizable rags and thrust into our hands a pair of broken-down boots with wooden soles; we have no time to understand and we already find ourselves in the open, in the blue and icy snow of dawn, barefoot and naked, with all our clothing in our hands, with a hundred yards to run to the next hut. There we are finally allowed to get dressed."

Let's consult an engineer's wartime view, reviewing how efficiently the German gas chambers worked:¹⁰⁰

"For the entire war until now, at 226 different sites, a total of 552 chambers with hydrogen-cyanide circulatory fumigation systems and an additional 100 or so chambers without such equipment, but using hydrogen cyanide nonetheless, are either completed or under construction almost exclusively for the purpose of delousing. [...] Thanks to the many delousing facilities which are already in operation and to the other stringent preventive measures, it has been possible, fortunately, to reduce dramatically the number of cases of typhus and the mortality in stark contrast to the earlier years. [...] The increasingly widespread, harmless application of hydrogen cyanide, in itself highly toxic, in delousing chambers equipped with DEGESCH circulatory systems is a good indication of the dependability of this method, [...]"

He seems proud of their safety record, and gives no hint of a criminal use.

Advice for Spellbreakers

I suggest for Spellbreakers, those who wish to do their bit to unweave the nightmare hallucination, this supreme Sacred Myth of the modern world, that they should focus upon practical details of how the delousing agent was actually routinely used. We affirm that this method of delousing using cyanide was employed rather efficiently over a couple of decades, and regret that it is forbidden to discuss this in any British university.

Herr Richard Baer, who became commandant of the Auschwitz Main Camp (*Stammlager*) in 1944, always adamantly refused to make any statement about the accusations made against him.¹⁰¹ He was the main defendant during the pre-trial investigations leading up to the great Frankfurt Auschwitz Trial in 1964/65, but half a year before the trial itself started, he mysteriously died in his prison cell.

¹⁰⁰ Emil Wüstinger, "Vermehrter Einsatz von Blausäure-Entlausungskammern" (Increased Use of Hydrocyanic Acid Delousing Chambers), *Gesundheitsingenieur*, 67(7) (1944), pp. 179f. (a translation can be found in the Appendix of F.P. Berg, "Zyklon B and the German Delousing Chambers," *The Journal of Historical Review*, Vol. 7, No. 1 (spring 1986), pp. 73-94 (www.codoh.com/library/document/983/).

¹⁰¹ See www.nizkor.org/hweb/people/e/eichmann-adolf/transcripts/Testimony-Abroad/Richard_Baer-01.html.

Auschwitz was a bit like the setting for a horror story, not yet scripted. The Germans set up a large labour camp in the area due to the rich coal reserves in its vicinity and large quantities of fresh-water reserves supplied by the nearby Vistula and Sola Rivers. Both water and coal were the essential raw materials for the chemical industries the Germans wanted to build, where the camp inmates would be deployed as slave labourers.

Mass graves in that area were a major health risk due to the high water table. Hence, all corpses had to be cremated. When the *Endlösung der Judenfrage* (“final solution”) was in full swing, *i.e.* deportation of Jews eastwards out of Germany and other European countries, there were supposedly up to a hundred thousand persons in Birkenau – or at least, quite a few tens of thousands – passing through, among them also frail, elderly and infirm people. Once the typhus epidemic had arrived in the summer of 1942, there could be as many as two hundred and more people a day dying. At that time, the crematorium at the Auschwitz Main Camp was the only one in operation in the area, but it was vastly overtaxed at that point in time. First the chimney started to crumble, then the smoke flues collapsed. The new crematoria planned for the Birkenau Camp only became operational starting in March of 1943. Hence, in the summer of 1942, while the crematorium at the Main Camp was being repaired at a frantic pace, Auschwitz had *no* cremation capacity at all, and this with hundreds of victims of the epidemic every single day!

With this sight and smell of hundreds of people dying and dead, would rumours of cyanide “gas chambers” for mass murder fall on fertile ground? With delirium being a symptom of typhus, one can see how the dreadful nightmare took form with rumours racing around,²⁵ especially with the BBC helpfully proclaiming homicidal gas chambers from 1942 onwards.

Spellbreakers need protection if they are going to unweave this favourite *Ur*-nightmare: the very bastion of modern Nihilism and Unbelief. Is not the Creator accused, judged and found wanting because of the “six million?” If you’re pulling the rug from under this story, just don’t expect gratitude. It’s the Zionic mental enslavement that people have grown to believe that they need.

The magnificent post-war refashioned “Gas Chamber” building with cremation furnaces at Auschwitz has a huge chimney next to it which is *not connected to anything*. It is totemic, if that is a polite word. Even the cremation furnaces that can be inspected in the furnace hall are totemic in nature, because the faulty way the Auschwitz Museum assembled them after the war makes them inoperable: they forgot to include the coke-fired gas generators in the back of the furnaces which were used to heat the devices. No fire, no cremation...

“Krema” is the word used in the big Holocaust-Auschwitz books to signify a building of mass extermination that is said to have contained homicidal gas chambers, whose victims were subsequently incinerated in furnaces. Sometimes the gas chamber even merges with the furnaces, creating the term “gas ovens” in which the Jews allegedly perished. The use of terms such as furnaces, ovens and crematoria when talking about homicidal gas chambers is at times a deliberate scheme to confuse the public, because it insinuates that innocuous objects such as crematoria and cremation furnaces had a sinister meaning.

When Jean-Claude Pressac wrote his big 1989 hard-to-get book about the design plans for Auschwitz, looking for what he called “criminal traces,” he did not show any buildings specifically designed to be conveyor-belt-style mass-extermination facilities. So, what allegedly began halfway through the war to murder millions of Jews – one million of them at Auschwitz – did not use chambers designed for that purpose. You might have thought that such a big monster project, knowing German thoroughness and attention to detail, would at least have custom-designed buildings, but no. Actually, the cremation furnaces they built at Auschwitz were *less* efficient, and their cremation muffles *smaller* than the equivalent devices installed at that time in civilian crematories. The SS evidently wanted only a cheap quick fix for a limited, temporary problem: getting an epidemic under control.

Rational argument here is maybe pointless, because it can never take place. No British university student can be allowed to evaluate this question on a topic having the miasmal unreality of the satanic sabbaths of centuries ago, used as a justification to burn witches. In those days, judges being *too lenient* could be sentenced as accomplices to Satan. Today, judges sentencing revisionists *too leniently* can be reprimanded, transferred elsewhere for disciplinary reasons, or forced into early retirement to avoid prosecution. Increasingly, lawyers are unwilling to defend a “Holocaust Denial” case lest they also find themselves prosecuted; ask the brave Sylvia Stolz.

Every schoolchild passing through this chamber should watch the David Cole video before going, then should demand to be taken to see the swimming pool, and ask, why is it out of bounds? Then, when they get to the swimming pool, they should mull over the notice saying it was just a water reservoir. They should express incredulity at being brought all the way to Auschwitz and not being shown the gas chambers – the real ones. Am I asking too much of intelligent sixth-formers? I don’t think so. I merely ask them to do their little bit to bring the whole house of cards tumbling down. I suggest bringing a tube of Prussian Blue, made of the same ferrocyanide they will see in the walls. The teacher should bring a design plan

of the gas chamber as designed by Degesch, or maybe the article titled “Blausäure-Gaskammern zur Fleckfieberabwehr” (Hydrogen-cyanide gas chambers for the prevention of epidemic typhus). One would see or read about the sophisticated system to swiftly release the poison from the pellets, and the efficient ventilation system for flushing out the cyanide vapours after each delousing operation, and be allowed to laugh at the absurd and theatrical “reconstructed” homicidal gas chamber at the Main Camp shown to tourists which has *neither* a way of swiftly releasing the poison vapor *nor* any ventilation system at all to get the poison out of the room after the deed.¹⁰² That’s another thing the Museum “forgot” to consider when “reconstructing” the place.

David Cole in his video walks around the dreaded chamber. He points to an ordinary thin wooden door, opening inwards, with a thin glass panel (see Illustration 5). Clearly, this and the door itself would have been immediately smashed if one attempted to put loads of people inside and gas them. Then Cole points to a central drain in the floor.

An astute observer would even notice two more drains near the wall separating this chamber from the furnace room (see Illustration 6). These were once toilet drains. Toilets in a gas chamber? Well, no, another Museum screw-up during reconstruction, actually. These toilets were installed in 1944 when this room was subdivided into several air-raid shelter rooms. The area where the toilets were located wasn’t even part of the original morgue aka “gas chamber.” It was instead part of the adjoining washroom.

When the Museum “reconstructed” that room, they accidentally removed a partition wall too many, making the chamber larger than it had ever been. That also explains the above-mentioned flimsy wooden door with the window pane. It opened into the washroom, not into the original morgue. The door that once connected the washroom with the morgue has

Illustration 5: Flimsy wooden door with window pane connecting the former laying-out room with the rear section of today’s “gas chamber” that used to be a separate wash room. That washroom was once connected with the morgue, too, but that door has not survived.

¹⁰² See my heavily-reviled CODOH essay, “School Trips to Auschwitz” www.codoh.com/library/document/876/.

Illustration 6: *Two toilet drains with imprints of the toilets and the stall walls still visible on the floor of what tourists experience as “the gas chamber” at the Auschwitz Main Camp. The toilets were added in 1944 in the wash room adjoining the morgue (aka “gas chambers”) when the building was converted to an air-raid shelter, and accidentally included in the “gas chamber” when the shelter’s partition walls were torn down by the Auschwitz Museum in 1947 during their “reconstruction.”*

not survived, but there is no evidence indicating that it was anything else but a simple wooden door either.

Another “reconstruction” mishap is the opening in the wall connecting the chamber with the furnace room, see Illustration 7. It is asymmetrical, has neither frame nor door, and was broken through that wall only in 1947. The original door had been walled up in 1944 during preparation to turn the place into an air-raid shelter. The current one is in the wrong spot and also too large.

Had the Museum really been serious about this “reconstruction,” they would have put a door into that opening that reflects what used to be in there, as can be gleaned from all surviving wartime blueprints: a swinging door. Now, sealing such a door against poison-gas leakage would have been just as impossible as locking it securely against a panicking, suffocating crowd struggling for survival...

Auschwitz today is just a theatre designed to bamboozle an unsuspecting, unenlightened public. It is a success, one must admit this, because thirty million people have trooped through it to receive their tingle of terror.

Early versions of the gassing story contradict later ones; first, several witnesses claimed that gas came out of shower heads, but since that was physically impossible (to drive gas through pipes, it needs to be under

pressure, but Zyklon B releases its gas without pressure through slow evaporation), this version did not prevail in the orthodox Holocaust literature. The next version has it that the Zyklon pellets were simply dumped through openings in the ceiling or wall onto the floor among the victims. In the case of the alleged gas chamber of the Main Camp, this required that such opening existed in the ceiling to begin with. Since no such openings existed when the Germans left the camp in early 1945 and the Stalinists took over, they added four holes during their “reconstruction” in 1947.

Although the Museum claims that the current holes were hacked out in 1947 exactly where traces of the “original” holes could be seen, they have no proof to support this claim, since the 1947 “reconstruction” was done without anything being documented. Just as thieves in the night would have done it...

Simply dumping out Zyklon pellets among the victims would have caused massive problems, however, because it would have been impossible to remove the pellets after the end of the mass execution. It would have kept releasing more poison gas for up to two hours, thus greatly delaying a successful ventilation. Hence, this version was also eventually abandoned, and it was agreed that the claimed gas chambers inside Crematoria II and III at Birkenau – “modernized” versions of the gas chamber at the Main Camp – were equipped with wire-mesh columns reaching from the ceiling to the floor. The pellets are said to have been poured into a removable, smaller wire-mesh insert, and this was then lowered into the wire-mesh column. There, the gas slowly evaporated. After termination of the gassing procedure, the inner insert was allegedly removed, and the pellets disposed of.

There is not the slightest trace that any of these devices ever existed, but all the world believes in them; they are at the core holy of holies of the Mystery. And be ethically damned at your peril if you don’t believe. The big Holo-textbooks have detailed design plans of the wire-mesh columns

Illustration 7: Fake wall opening connecting the alleged homicidal “gas chamber” (foreground) with the furnaces room (background) inside the old crematorium at the Auschwitz Main Camp, the Auschwitz Museum’s main attraction.

into which the Zyklon pellets were lowered from the roof, and you have to pinch yourself to remember that these are just dreamed up.

The “gas chamber” exhibit that tourists traipse through at the Auschwitz Main Camp expresses the second stage of the lore. Although you can see four holes in the roof, there aren’t any wire-mesh columns running from the roof to the floor. A floor drain might give the impression that the room also served as a fake or real shower room. The Poles have done their best, compelled by law to believe.

Let us disenchant these myths; they have only the semblance of being; they are not real.

A Chronology

History cannot be permanently falsified. Step by step, glimmers of truth emerge.

After Nuremberg, when the Greatest Lie Ever Told had been signed, sealed and delivered, and the Nazi war generals executed, then Mother Nature played her card: certain fairly small buildings, unnoticed and written out of the history books, slowly turned blue. Maturing with the rain and sunshine, the turquoise hue appeared on both sides, inside and out, indicating that the cyanide gas had soaked right through the walls. No trace of this blue hue could be detected in the much bigger walls of the chambers where the gas had allegedly been used according to the Nuremberg story.

1983 – disclosure that Rudolf Höss had been tortured for three days and three nights by a British army hit-team before signing his “confession,” giving his torturers the story they wanted.⁴⁹ Over several decades – 1946-1983 – people had believed his story was genuine.

1988 – The second trial against Ernst Zündel in Toronto led to Fred Leuchter being located and asked if he would visit the Auschwitz and Majdanek camps in order to give his opinion as a professional homicidal cyanide-gas-chamber expert – maybe the only one then in the USA – as to how they had worked; and to take some wall samples. The result was the so-called *Leuchter Report*, the real beginning of modern Revisionism. Swiftly translated into many different languages and published all around the world, it was equally swiftly banned and denounced.¹⁰³

1992 – David Cole gives a tour round Auschwitz. You can see him making the discovery that the tourist gas chamber which thirty million have

¹⁰³ When his *Report* was published, the House of Commons had a vote denouncing it: 100 MPs voted on July 20th of 1989, denouncing it as “Nazi propaganda” and a “fascist publication.” Then in November 1991, when Leuchter was about to speak at Chelsea Town Hall (invited by David Irving), he was arrested onstage by the police at the request of the Board of Deputies of British Jews and hustled back to the United States. There has been no UK public debate on the topic since then.

been through was a post-war fabrication. Death threats shut him up, and the classic video is all we ever got from him.

2000 – publication of the English edition of the Bible of modern Revisionism, *Dissecting the Holocaust*, with 23 contributions by 17 different authors, a book thoroughly burned and banned in Germany as early as 1995 (it had appeared there in 1994). The current edition has six hundred pages of rather small print, and you may prefer reading the web-version.

2003 – Publication in English of the classic *Rudolf Report*, showing how his chemical investigation compared to Leuchter's (the German original had appeared in 1993).

2006 – A letter from the manager of Arolsen archive, Mr. Jost, stated that their complete records (for fifteen of the German labour camps) showed not one case of death by cyanide poisoning.⁹⁶

2008 – I get thrown out of my college UCL, and become the most heavily-vilified person in the UK. My crime was that of integrating the Leuchter and Rudolf databases.

2009 – The online *Inconvenient History* journal started up, edited by Richard Widmann, setting a new high standard of scholarship and integrity.

2013 – David Cole reappears as David Stein, and he refuses to apologize or “recant.”¹⁰⁴ Britain's revisionist website www.whatreallyhappened.info evaluates and publicizes the British Intelligence decrypts from Bletchley Park.

Power of Heart

There is a permanent “Holocaust exhibition” in the Imperial War Museum in London, a huge exhibition spanning two floors. Nowhere does it say or imply that cyanide gas chambers had people in them. A can of the Zyklon insecticide is on display – and visitors are informed it was used in the delousing chamber (its only mention of the delousing chambers).

The topic strangely appears to be more about enchantment than science. Beside the elegant swimming pool at Auschwitz, now well-reconstructed, is a notice in English, French and Hebrew “This is not a swimming pool.” People believe the notice! They look at the swimming pool, look at the notice denying its existence or rather its function, and believe the notice... It is rather obviously a swimming pool.

Where did the spell come from? How come the *primary myths* of our civilisation appear to be war-ratifying illusions? Who is weaving them?

¹⁰⁴ See e.g. Kevin Barrett's *Veterans Today* article. Quote: “My situation involves matters that I believed to be historically factual. If people think I erred, they can show me my mistakes, and I will admit any error. But apologize? Cave in because someone calls me ‘racist,’ or because my conservative friends apparently believe that recantation at the point of a sword is how historical debates are settled? Hell no. Never.” Well said there, David.

A Revisionist is a person who seeks a more fair and balanced account of World War II. One is here guided by the words of Jesus concerning the Beam and the Mote,¹⁰⁵ whereby we examine first our *own* truthfulness and *our* side's crimes, before blaming the Other. When assailed by bogus claims of alleged political motives, I suggest remembering Faurisson's definition of Revisionism, as "a quest for historical exactitude."¹⁰⁶ It will no doubt have political implications, but these should not be the motive for the enquiry.

On the CODOH website, Friedrich Berg made this courageous generalisation:

"One simple, effective point against the Hoax is that there are no autopsy reports to show that even one corpse of the tens of thousands found at the end of the war was of a person killed with poison gas or poison anywhere in German-occupied Europe."

As and when rational discussion becomes feasible on this topic, one would like to see that defended at the Oxford Union! It is a verifiable or testable statement – whereas no sentence containing the H-word is likely to be verifiable. "The H" is a concept so filled with rage and despair, in any debate it's a word best avoided. It is an emotional black hole in the collective psyche, the fake nightmare implanted in the mass mind.

Clear and conclusive arguments exist concerning how and where the Zyklon was used – to kill bugs not Jews, and save lives not take them. An argument on this matter is winnable. There has to come a time when people will begin to listen to such arguments: which is why you are reading this.

At the "Holocaust Exhibition" in London's Imperial War Museum, I saw seven quotes from people who had apparently witnessed carbon-monoxide gassing or making it happen – mainly alluding to Diesel, machinery etc., with none alluding to cyanide. It may be that these quotes were fabricated by the US/UK at Nuremberg. *No photographs* exist of the vans allegedly used for the Diesel gassing. Lethal gassing with Diesel exhaust would have been extremely difficult, as various experts from both sides of this debate have testified. The Imperial War Museum's "Holocaust exhibition" has the usual sacred relics – hair, shoes etc. – plus these quotes, with no references given.

Stäglich's classic book *Auschwitz: A Judge Looks at the Evidence* well described how Nuremberg trial documents tended to lack any discernible primary-source authentication. Had the "wicked Nazis" desired to gas anyone, the straightforward way to do it would have been by carbon monoxide

¹⁰⁵ Sermon on the Mount, Matthew, ch. 7,5.

¹⁰⁶ Faurisson's epic and memorable speech "The Victories of Revisionism" at the 2006 Tehran Revisionist Conference (see note 91) concluded with the words "peace and friendship between peoples can only gain from care being taken to achieve **exactitude** in historical research, research that all must be able to carry out in complete **freedom**."

produced at the huge Monowitz industrial plant to the East of Oswiecim (the Polish name for Auschwitz): *but, they didn't*.

How strange – indeed, humorous – that the non-toxicity of Diesel exhaust was addressed *by Revisionists* only in the 1980s, four decades after the story took shape. Holo-textbooks had already appeared giving this official version of the story, viz. mass murder using Diesel exhaust in the “Aktion Reinhardt” camps: It was too late for them to alter it. Fritz Berg first gave an in-depth commentary in 1983.¹⁰⁷ Five years later, Leuchter’s report was written, three years later followed by Rudolf’s research project. Revisionism as you’re reading it here began in the 1980s, when real science was applied to challenge the ghostly phantasms that have come to possess popular Western culture.

What Did It for You?

On CODOH, Revisionists were once discussing what factors had brought them round to their viewpoint, and one English view went as follows:¹⁰⁸

“It seems like different people are convinced by different things, but here are my ‘Top Three’:

1. ‘Thought Crime’ Laws: The fact that it is illegal to doubt the ‘Holocaust’ in many countries of Europe, and Canada, is conclusive proof that it is a Hoax. I agree with French-Jewish Professor Dr. Roger Domergue Polacco de Menasce in his letter to Steven Spielberg: ‘These laws are, accordingly, the absolute proof of the fake before we study its arithmetical and technical ineptitude.’

2. Producer Gas: The fact that there were about a half million Producer Gas Vehicles all over Germany and other parts of Europe, and the utter simplicity of the design of a Producer Gas Generator renders the use of Diesel exhaust, or Zyklon B as idiotic as trying to start a fire by rubbing two sticks together in a match factory.

3. The Color of ‘Gassed’ Corpses: The fact that not a single ‘eyewitness’ got the color of the ‘gassed’ corpses right, is conclusive proof that they never saw the corpse of a person who died from carbon monoxide, or hydrogen cyanide. The distinctive ‘cherry red’ color of gassing victims would have been noticed and never forgotten by anyone who saw them. A pile of gassed corpses would have looked like a pile of lobsters, and most, if not all, of the eyewitnesses would have mentioned the eery sight!”

¹⁰⁷ Friedrich Berg, “The Diesel Gas Chambers: Myth within a Myth,” *The Journal of Historical Review*, Vol. 5, No. 1 (spring 1984), pp. 15-46; revised and expanded as a chapter in G. Rudolf (ed.), *op. cit.* (note 29), pp. 431-473.

¹⁰⁸ CODOH Forum, “Your top reasons,” entry by “Dresden,” <https://forum.codoh.com/viewtopic.php?t=7275&start=15#p53924>.

We here comment upon the second of these three excellent reasons for scepticism. *If* you believe that Germany had a wish to exterminate a particular ethnic group – for no discernible reason – and *if* you wish to believe they did so by herding crowds into a large room, then this room would *not* have looked at all like a washroom. It could not have had any windows, or they would have been smashed, and would have needed large, outward-opening steel doors, so that corpses lying in front of them couldn't block them. The simplest and most efficient murder weapon would have been the readily-available producer gas, because it has up to one-third carbon monoxide by volume; whereas it would *not* have been feasible at all using Diesel exhaust which has less than one-third of 1% of carbon monoxide. This isn't rocket science. In fact, the logic here is as easy as falling off a log.

4. Towards Dialogue

Of Science and Heresy

Revisionists are hard to find; they tend to keep their heads below the parapet, not reckoning it worthwhile to ruin their career and social esteem by speaking out on this topic. But it may help to enumerate some shared beliefs of these alleged “Deniers”:

1. The only thing at Auschwitz resembling a homicidal gas chamber was mocked up in 1947 by the nascent Auschwitz Museum. A Holocaust Denier is someone who recognizes this fact.
2. Not a single diagnosis of death by cyanide poisoning is on record for any German labour camp. A Holocaust Denier is someone who recognizes this fact.
3. No trace whatever remains of the millions of bodies allegedly gassed in the various German labour and transit camps. A Holocaust Denier is someone who recognizes this fact.
4. None of the war generals after the war who wrote their memoirs made any allusion to homicidal gas chambers. A Holocaust Denier is someone who recognizes this fact.
5. The Red Cross visited Auschwitz during the war, and its published reports made no determination about human gassing as happening there. A Holocaust Denier recognizes this.
6. No authentic documents exist anywhere attesting to “The H”. Only wicked Holocaust Deniers recognize this fact.¹⁰⁹

¹⁰⁹ As of 2006, the seven-thousand-odd pages of Joseph Goebbels's diaries have at last been fully published, very relevant to this topic: see Chapter 14.

7. The Bad Arolsen archives list everyone who lived and died in all the German labour camps. The question naturally arises as to what is the total number recorded in this tremendous archive. Clearly, the managers of this archive are not at liberty to tell of this or they would be jailed for so awful a crime. Holocaust Deniers are aware of this.¹¹⁰

Do we begin to understand what is going on? We surely need an openness to the words of Jesus Christ: *Know the truth, and the truth will set you free.* The power of Truth should not be or remain a solitary experience; it needs to be a group or collective endeavour.

Only Error or Myth needs laws to protect it, Truth can stand on its own feet. The British-American culture has tragically come to need the doctrine of Resident Evil which is always located somewhere else, a place they are about to bomb or have just bombed. I recommend the mythology of William Blake here, where the Shadow (or Spectre) may indeed be fought, but has in the end to be recognized as within ourselves, and we have to be very careful about projecting it onto others. Britain twice declared war on Germany, when in both cases Germany had no wish for war with Britain. Let us see an open forum where truth – not blame – is the goal. Britons have the karma of dropping two million tons of bombs onto central Europe, mainly Germany. If you cannot justify that war without the most dreadful retro-constructed untruth, you should not have fought it in the first place.

“Never forget” is the motto used in Holo-education classes now getting a firm grip on our educational system. But if Native American peoples try to commemorate their “Holocausts,” which involved the extermination of vastly greater numbers than ever Jews died in World War II, they are told, “Just get over it.” Teachers in the US lose their jobs for trying to claim that “Holocaust studies” classes should include the H-experiences of indigenous peoples. And, as regards the deliberate ongoing genocide programme of local Palestinian residents, a law has been passed in Israel forbidding public mention or mourning of the “Al Nakbah,” that is, the ethnic cleansing of slightly under one million Palestinians from their homeland.

Open discourse? I would keep bumping into the founder and chief architect of my college’s Science and Technology Studies Department, Prof Arthur Miller. He would write science books at quite a rate, and had a forthcoming book about the Jung-Pauli correspondence. I would meet him in gyms and squash courts oddly enough, or while strolling across Hampstead Heath. We never had a great deal in common, but would greet each other and have some brief exchange. A year after I had been chucked out, he in the gym says, quite casually and in a somewhat humorous manner, “I

¹¹⁰ More than just its total mortality, we request that its data be made available in a normal manner, broken down by year, by camp, by cause of death and by ethnic group: See Chapter 5.

heard you got into some trouble for denying the Holocaust?” This could be an opportune meeting with a science historian, the only one I’m likely to get, I reckoned, so I started to explain to him about the Zyklon delousing gas chambers and how I had gotten interested in the cyanide wall-sampling. He interrupted me saying: “If you go on any more, I’ll smash you into that wall.” That did stop me. Then he, groping for words to express the depth of his horror, said, “That’s the kind of stuff that *David Irving* used to come out with; maybe you need to speak to him.” This name expresses deep hate for a lot of people and certainly did in this case (Irving wrote one book *Hitler’s War* and another one *Churchill’s War*, which one might have thought was quite a well-balanced approach). Trying one more time I said, “I do occasionally turn up to the Science and Technology Studies meetings (my old department), they still send me invitations.” Replied Arthur, “I’ll try to call the police if you do so again, to stop you attending; we don’t want your views to influence the students.” Then he left, avoiding eye-contact.

I always admired Patrick Curry. I’d known him several decades, and quite envied his ability to get interesting books written and hold down off-beat university lecturing jobs. We both had the same supervisor at UCL. Soon after my eviction from UCL, I received a notice of ethical damnation from him, which he felt obliged to send me, explaining that he would not want to have discussion about the matter, and advising me not to try and speak to him if I met him. He had evidently heard about my interest in Fred Leuchter’s work, and sent me an interview with the *film-producer* Errol Morris who had done the *Mr. Death* film about Leuchter. I was supposed to accept the derisory comments therein contained, indicating where I had gone wrong. Normally, I believe Patrick would have appreciated that I might understand a chemical argument better than he; after all, I was the one with a science degree, but evidently this was different. His letter explained that Auschwitz was the embodiment of pure evil, and this should not be tampered with. Normally, Patrick and I would share liberal-humanist views in which Evil would not be invoked by historians, however, this was clearly different.

My suggestion is to focus on the factual issue here involved, and let people get on with their dreary Universe in which Auschwitz is the embodiment of Evil.

The 1999 film about Leuchter features an interview with the chemist who had done the analysis of his wall-samples back in 1988. He had done this “blind,” *i.e.* with no knowledge of where they had come from, which was correct scientific procedure. During the second Zündel Trial in Toronto in 1988 he testified under oath concerning the method used and what Leuchter had sent him. He said back then that hydrogen cyanide can easily

penetrate into brick and mortar. But then, when he was interviewed again by Morris for his documentary, he suddenly stated that the results were quite meaningless, because the cyanide could only have soaked a few *microns* into the brickwork. Wow, that was quite a whopper.

Mortar and brickwork are highly porous in general and in particular to hydrogen cyanide, obviously so because the delousing chambers were more or less equally blue inside and out; it had soaked right through. But you can watch him on video explaining this, as if he were confusing brick and mortar with massive rock. The latter will only absorb cyanide to a few microns of its surface.¹¹¹

There was one very large sample of mortar Leuchter took from a delousing chamber, and it was analysed as a chunk. Rudolf, on the other hand, separated samples into layers of various depth, and took samples from deeper wall layers. He showed that deeper layers of mortar had high concentrations of cyanide as well, emphasizing how porous the brickwork was.

Normally, a chemical journal would discuss these matters, but of course this cannot happen here. So I tried to explain these things to Patrick, and normally, he would have taken an interest, but the issue was not really a factual one. It was a moral one, about my ethical damnation, my sin of Heresy, my future exclusion from decent company. I had disturbed the moral pole of his universe. That moral pole was of Resident Evil, and it was or had been in Poland eighty years ago.

So, Heresy has come back. Heresy is a condition of falling outside of acceptable discourse. Be careful about the books on your shelf, in case the Inquisition arrives, checking out Thought Crime. Are we moving on a path to ruin, as secret Military Intelligence takes over?

“Rage, rage against the dying of the light

Do not go gently into that good-night.” (Poem by Dylan Thomas)

I have an upbeat message of Hope, Optimism and the Beauty of the Universe for my fellow countrymen, but that will only make sense, if we are prepared to relinquish and leave behind a certain nightmare. Nuremberg was a military tribunal; ergo, truth was no part of it. It was about how to hang a lot of people, how to make up (illegally) retroactive laws, how to extract confessions under torture. Huge amounts of papers were produced, but no one authenticated them, *i.e.* checked their sources. One should *not believe its judgments*. Its condemnation of wars of aggression was no doubt admirable, however, evidently the US/UK who invented this law have

¹¹¹ James Roth, “Cyanide is a surface reaction; it’s probably not going to penetrate more than 10 microns,” in: Errol Morris, *Mr. Death: The Rise and Fall of Fred A. Leuchter, Jr.*, Fourth Floor Productions, May 12, 1999; VHS: Universal Studios, 2001; DVD: Lions Gate Home Entertainment, 2003; youtu.be/YOqhuDGCC04; starting at 1:05:31.

since felt no compunction in violating it. In this 21st Century, a person who pursues historical truth should expect to be dismissed as a conspiracy theorist, which means simply that they are trying to see below the transiently forgettable surface of events.

It seems to me, we need to be rationalists, but that may not be self-evident. In this 21st-century world there is indeed a danger of succumbing to primitive-magical logic. The supreme 9/11 illusion was accomplished, according to which an old man in a cave in Afghanistan had caused it to happen using his laptop. Anyone who accepts such primitive-magical reasoning – and many do – is going to be living in a very strange world. On that day, all of the highest codes of the Pentagon had been somehow penetrated, and it made no effort to defend itself – and a terminally ill Bin Laden did it? Reason itself is undermined, once such a thesis is accepted.

The philosopher should be concerned to maintain a belief in coherent, rational thought. If you want to have several million Jews gassed like the puff of some magic trick with no corroborative evidence except for stories – and Germany is *paying anyone who has a story* – then we are on the road to a corruption of our ability to discern what is true, or that difference between what is real and what is not. What ought to disturb us is the banning, as if by theological decree, of debate forums. You can debate, more or less, any subject whatsoever on the web. But try debating this issue, and you will tend to find it tempered by rage and personal abuse, or with a moderator closing the thread.

Did you approve of the Vatican allowing scientists to date a part of the Turin Shroud by carbon-14? That is a rational approach. It means we agree to try and focus upon physical-scientific arguments. We don't say that some issue is so holy that no "doubt" about the matter is permitted. We accept Bertrand Russell's view that doubt is healthy, and that truth should be able to emerge on its own through open discussion. Why does our society not want that to happen, why does it want to criminalize debate? Euro-legislation might already have happened which bans Europe-wide the debate I am here calling for, under the sinister guise of "hate-crime" laws.

Hate-crime laws should not exist, for crime should be in essence a deed, a deed which causes unacceptable harm to another. Emotions must not be criminalized! Europe needs open debate, by all means with rage and fury – yes, let the rage and fury come out – but if so, then with moderators who will suspend the debate if it descends into insult, and if necessary expel anyone. Insult terminates truth-finding debate.

That is a secular-humanist position, which in earlier, theocratic times was by no means accepted. In pre-"Enlightenment" Europe, there was no greater crime than Heresy. That secular-humanist position developed in the 18th Century, associated with philosophers like Locke and John Stuart

Mill. According to Karl Popper it was one of the reasons why we fought World War II, as expressed by the title of his book, *The Open Society and its Enemies*. Europe is now returning to that earlier position, as expressed indeed by Georges Theil's excellent little French monograph *Heresy in Twenty-First Century France: A Case of Insubordination to the "Holocaust" Dogma*.¹¹² He was jailed for writing it. Or one thinks here of that distinguished Revisionist Robert Faurisson, who was put on trial for having given an Iranian radio station an interview. During that trial, a French-Jewish prosecutor yelled at him in court, calling for the vengeance of "Yahweh, protector of his chosen people," for his daring to doubt etc.!

Polite discussion in our society can revolve around such themes as 9/11 and the Apollo moon voyages, with doubt expressed; however, it simply will not be allowed to move onto how cyanide was used in the German labour camps, and whether it was used to kill bugs or humans. That is because this particular myth *is still working so powerfully*, still doing what it was made to do, whereby the Edge of our Universe of acceptable conversation is held in place by the mantric formula Holocaust Denier = Nazi = Anti-Semite.

The US/UK can make endless films about how wicked the Nazis were, with Germans being compelled by law to accept the orthodox narrative of the events. Once I commented about the swimming pool at Auschwitz being "elegant," and that was just too much; it became the lead story in the *Jewish Chronicle* for their 60th-year-anniversary issue for the birth of Israel. The whole story (with much blog-comment) was treated as if I had somehow found this swimming pool. In fact, "Swimming in Auschwitz" was a film released that year at the Cannes film festival. But soon a remedy was found. The *Evening Standard* announced that I believed that Auschwitz was "like a Butlin's holiday camp." This demented view was attributed to me (I will refrain from going into the specific character-assassins put onto my case), and no further discussion was necessary. I was receiving notices of ethical damnation from old friends, and I guess the swimming pool was part of the case.

If anyone were interested in what life was like in the Auschwitz Camp – strictly not the case in Britain today – my feeling is, it ought to start from its primary chemical/technological function which was to supply labour for armament manufacture and also for the region's huge focus on catalytic synthesis of oil from coal to power the Nazi military machine, and manufacture of "Buna" synthetic rubber. Ever heard of the five blast furnaces which operated at Auschwitz? No? At Monowitz (to the East of Oswiecim,

¹¹² The English edition appeared in 2006. The title of the French original is *Un cas d'insoumission*.

the little Polish village at its hub) over twenty thousand people¹¹³ were employed by I.G. Farben, and it is almost impossible to find anything in the English language on this topic. Check it out on Google Earth and/or Google Maps.

Focus of Debate

Well over a hundred wall samples have been taken from the old Auschwitz buildings, by Leuchter (USA), by Rudolf (German) and by Markiewicz *et al.* (Polish). The brilliant PhD candidate Germar Rudolf, back then employed at the Stuttgart Max Planck Institute for Solid State Research, had been stimulated by certain weaknesses in the Leuchter Report to replicate the experiment. The analysis of the samples taken by him confirmed that the brickwork had been highly permeable to the cyanide which had soaked right through it. A sound, rational approach to the subject becomes possible by integrating the Rudolf and Leuchter data. *Science begins where data is replicated.*

I yet remain in the sorrowful position of being the only person in the UK competent and capable of evaluating the several chemical investigations of residual iron cyanide in the historic German labour-camp walls. But, I'm an optimist; I believe there will come a time when the people of England will come to want to discuss the matter.

We have alluded to the huge differential between cyanide levels in the delousing chamber walls and those from the alleged homicidal gas chambers. The traditional "explanation" for this is more like a joke than a reason: bugs are harder to kill than humans. The answer this deserves is the memorable one given by Fred Leuchter when testifying at the Toronto trial for Ernst Zündel as the US's top expert on cyanide gas execution apparatus:

"I don't know, I never killed beetles."

Let us hope that some further sampling can take place by way of resolving the matter. In the meantime, the chemical evidence is fairly conclusive, indicating that people did not die of cyanide gas in World War II.¹¹⁴ Forensic evidence supports this: no one ever reported a pink, cyanide-gassed corpse in any German labour camp.

We shed a tear for all the busloads of schoolchildren who travel out there but are not allowed to see the gas chambers. Not being told about or

¹¹³ A Letter from Oswald Pohl to Himmler March of 1944 re. total number of inmates at Auschwitz has seven thousand of them working at Monowitz, together with fifteen thousand civilians (Nuremberg Document NO-021, NMT Green Series Vol. 5.). See also Chapter 5.

¹¹⁴ Germany had signed the Geneva Gas Protocol of 1925, prohibiting the use of such in warfare.

allowed to see the swimming pool in the main Auschwitz base camp is bad enough, but not taking them to see the gas chambers is really going too far.

“Revisionists” are berated for coming out with “negative” arguments – that no death was ever diagnosed as due to cyanide in any World War II German labour camp, that no piles of dead have ever been found due to an alleged gassing process, no documents found relating to homicidal gas-sings, nor anything credibly resembling a homicidal gas chamber found from World War II, nor film or photographs, etc. – yes, yes that’s all true, but they are going to get labelled as “deniers.”

Given the massive, unrelenting Holo-industry propaganda, who will believe these “negative” arguments? Do you want to get thrown out of your job, lose your Jewish friends etc.? But the chemical challenge is different: for any alleged homicidal gas chamber found in a German World War II labour camp let us merely measure cyanide in the walls: *if it’s not there, it didn’t happen.*

If you have the nerve to bring up the topic (c’mon, give it a try), a heated debate will begin, and you may possibly need to bring up the J-word – always a risky business – concerning the German policy of the *Endlösung der Judenfrage*: this translates as the “end” or “goal” solution of the Jewish question (and not really as the “final solution”) whereby Nazis attempted to expel Jews from Germany and from other European nations.¹¹⁵ This alluded to the deportation eastwards of European Jews, and did not stipulate a lethal meaning *in any documents examined to date.*¹¹⁶

If your friends want to believe there was a systematic, planned and intentional Nazi policy of exterminating Jews, they will have to reckon it was done by extrasensory perception, insofar as there are no documents amongst the many tons of captured German files found that indicate any such thing.¹¹⁷

¹¹⁵ One-fifth of the Jews living in France were deported; how many have returned once the War was over is unknown: Chapter 14.

¹¹⁶ The “Wannsee Conference” held on 20th January 1942 tends to come up here. Prof. Arthur Butz’s classic revisionist opus described how the reports of that conference provide “unambiguous documentary evidence that no extermination program existed,” Butz, *The Hoax of the 20th Century*, (2015, p. 279). See also “The Wannsee Conference Protocol: Anatomy of a Fabrication” by Johannes P. Ney, *op. cit.* (note 78). That Protocol is online; you can check that it has nothing about killing anyone.

¹¹⁷ In his 2003 edition, Hilberg conceded the absence of documentary evidence: “The process of destruction... did not, however, proceed from a basic plan. ... The destruction process was a step-by-step operation, and the administrator could seldom see more than one step ahead. ... In the final analysis, the destruction of the Jews was not so much a product of laws and commands as it was a matter of spirit, of shared comprehension, of consonance and synchronization.” (R. Hilberg, *The Destruction of the European Jews*, 2003, quoted by Thomas Dalton, *Inconvenient History*, Vol. 2, No. 1 (2010): “Goebbels on the Jews.”) See Chapter 14.

Let's face it: most people won't believe you on this. No documents? *No documents?* You see them judging you; you've gone too far this time. People have padlocked minds on this topic, which has been designed to generate hate, despair and the endless transfer of cash from Germany to Israel.¹¹⁸ For that reason, I urge a limiting of what you will debate. Hold the focus upon the cyanide issue, where the chemical experiments have been done. Let us dare to dream of a time when students at a British university will be allowed to debate this chemical evidence.¹¹⁹

A Holocaust-Day Talk

At the Hungarian Cultural Centre in London on 25 January 2011, Auschwitz survivor Susan Pollack was speaking. She regularly speaks to schools, etc. on this topic, and the accounts of her experience include "the gas chambers."

Her mother was taken to a gas chamber, she briefly told us. I asked her to describe her last memory of seeing her mother, and what did she know about where she was taken? She replied with a poignant account of arriving in trucks and the "separation" at night time, where she remained behind by saying she was only 15. Her mother was carted off, to... They knew it was the gas chambers, she added, in reply to my question, because of the smell – they could smell the burning human corpses. She was living in Birkenau.

There was real horror in her memory, and it is important that we are not seen as seeking to diminish that or not sufficiently respecting it. My point is simply that *homicidal mass cyanide gas chambers have never existed in human history* – nowhere, never. As a nightmare phantasm they hover around the real gas chambers, viz. the delousing chambers – which no one in the UK wants to hear about.

She doesn't tell the school kids about them! The humdrum fact of delousing technology cannot compete with the thrilling horror of that war-time delirium-hallucination.

The truth is quite simple, really. The cremation furnaces were sometimes burning one to two hundred corpses a day, which was the camp mor-

¹¹⁸ From a 1976 interview of Nahum Goldmann – for many years president of the World Jewish Congress: "every train in Israel is German, the ships are German, as well as the electricity, a large part of the industry ... without mentioning the individual pensions paid to the survivors ... In certain years, the amount of money received by Israel from Germany exceeds the total amount of money collected from international Jewry – two or three times as much." Mark Weber, "West Germany's Holocaust Payoff to Israel and World Jewry," *The Journal of Historical Review*, Vol. 8, No. 2 (Summer 1988), pp. 243-250. About two billion a year goes from Germany to Israel these days, compared with around three billion from America.

¹¹⁹ Dr. Terry avers that his history students at Exeter are allowed to do modules studying us revisionists, but alas we can't see their papers.

tality rate while the epidemic was raging. All bodies had to be cremated, because the ground around was too swampy to permit burial. Although properly operated crematories don't emit much of a smell, if any, the Auschwitz crematories were operated by inmates, who may not have operated them perfectly, so that the crematoria may possibly have emitted at times quite a stench. There were also many other sources of odiferous smoke around Auschwitz, as at any site of concentrated industry.

It's also important that no one is lying. The group of inmates she was with believed that this smell was evidence of mass human gassing. Or at least, she *retrospectively came to acquire* that belief.

The traumatic and abrupt separation between mother and child, which occurs in many of the stories: would it have been between those suitable for labour and those not?

A Chat with Franz

Talking with my German pal Franz in the British Library tea-room, I found that a humorous approach went down quite well, avoiding the anguish.

First, I told him about a University of Birmingham survey of Treblinka, by Dr. Caroline Sturdy Colls. The BBC News had been promoting a BBC radio interview with her.¹²⁰ Treblinka is a large grassy field surrounded by trees, and it's alleged that 800,000 Jews were buried there; later, they are said to have been exhumed and incinerated outdoors. The investigators were not allowed to disturb the ground as needed, because (it was alleged) Jewish law forbids disturbing the dead. So instead they were using ground-penetrating radar. That device *cannot actually detect* human remains ("no geophysical methods will reveal conclusively what is below the soil – they do not detect human remains"), but it "sees" any disturbance of the normal layering of underground soil and rocks. One area of large slabs she has detected is "probably the gas chambers:" Uh-huh. ("[T]he survey has located features that appear to be structural, and two of these are likely to be the remains of the gas chambers.")¹²¹ Not a single dead body has been detected! There were just a few rocks underground... I sorted the readers' comments posted to this *Daily Mail* article by "most rated" and counted the first ten; *all* were sceptical of Dr Colls's argument.

There are slight indentations in the grassy field today, alleged to be where the huge burning-pits were located. The BBC radio programme even supplied the image of huge pyres of burning human bodies, with "blood burning like oil"! That hallucinatory image comes straight out of Spiel-

¹²¹ Lee Cain, "British archaeologist destroys Holocaust deniers' argument with mass grave find at Treblinka," *Daily Mail*, 18 January 2012; www.dailymail.co.uk/news/article-2087735/.

berg's *Schindler's List*. Birmingham Science Department is here endorsing the idea that piles of human bodies can be flammable.¹²²

Readers will surely not need reminding that human bodies are 70% water, and that cremations both in furnaces and on funeral pyres therefore require much heat input to boil off that water until the fat and other tissues and bone can be burnt, reducing a corpse to ashes (there are usually some remnants of bones left over; for the alleged open-air burning of bodies at Treblinka see Chapter 12.)

I then mentioned the Dennis Avey book¹²³ of which he hadn't heard – an elderly gent who supposedly remembered he was at Auschwitz – sixty years after the war ended.¹²⁴ His book reached second place in the UK “nonfiction” bestseller list while being shamelessly promoted by the BBC. The six-figure advance sum from his publisher may have helped jog his memory (Franz agreed). UK's Prime Minister Gordon Brown dreamed up his “Hero of the Holocaust” award in order to give it to Avey, who is the only living person to have received this award. Avey's tale involved him swapping places with an Auschwitz inmate, because he wanted to have a spell inside it. Quite whom he swapped with, or which camp he broke into, rather flipped around as he re-told the story: the octogenarian Avey couldn't seem to remember whether he had broken into the Birkenau or Monowitz Camp. Avey did get some cigarettes for an inmate, sent over from England, but is that really enough to get him thus decorated? The *New Statesman* website called for his book to be withdrawn as yet another fictional Holocaust narrative.¹²⁵

Finally, I told Franz about the *Telegraph* article of 2011 where a minister had called for Holo-teaching in UK schools to stop. Uncensored comments had been allowed after the article, and six hundred had appeared – something which had never happened before.¹²⁶ The *Telegraph* is a right-wing newspaper and a pillar of the British establishment. Counting the first hundred blog posts showed a *majority* sceptical of the orthodox holo-myth, with only a small minority of comments endorsing it. That was a sea-change I suggested – no survey had suggested that only a minority of Brit-

¹²² For more on this primary Holofoax image see Appendix II; also Chapter 12 on Treblinka.

¹²³ Dennis Avey, *The Man who broke into Auschwitz*, with Rob Broomby.

¹²⁵ Guy Walters, “The curious case of the ‘break into Auschwitz’,” *New Statesman*, 17 November 2011; www.newstatesman.com/blogs/guy-walters/2011/11/avey-book-holocaust-auschwitz.

¹²⁶ Tom Rowley, “Stop teaching about the holocaust so that children see Germany in a better light, says Lord Baker,” *The Daily Telegraph*, 24 Dec. 2011; www.telegraph.co.uk/education/educationnews/8976283/Stop-teaching-about-the-holocaust-so-that-children-see-Germany-in-a-better-light-says-Lord-Baker.html.

ons believed the official Holo-story. I suggest that this change is irreversible and represents a *turning of the tide*.

We are the turning of the tide.

This conversation worked quite well, because the initial image of a green field surrounded by trees is not threatening. It was followed by the “ontological” dilemma of how a science team visiting Treblinka ascertains that anything special is under the ground. Most Holo-discussions quickly turn into rage, despair etc. – with people leaving the room, friends lost etc. I felt there was a lightness of touch in these topics, whereby one can induce people to think about the topic gently.

Likewise, the paradox of a book where the history of the main character cannot be established: the historical identity of Avey-at-Auschwitz links quite well with the Elie Wiesel story and the alleged tattoo on his arm that nobody has ever seen. Actually, yes, I was telling Franz about Elie Wiesel’s \$20-thousand lecture fees with him turning up in a chauffeured limousine, and his monster hoax book *Night*. But Avey was actually there – while Wiesel may not have been.¹²⁷

Eyewitness Testimony

“I see plenty of evidence that people were deported, imprisoned, confined in ghettos or shot; I see plenty of evidence of the brutalities of war, and that Jews were specifically targeted; I see that many died of disease, maltreatment (by their peers as well as the Germans) and exposure; I see that the Jewish population of Eastern Europe was greatly reduced (though I also see that enough remained to largely rule Poland and Hungary for a decade); I see revenge pogroms by Soviet minority nations. The East European Jews certainly suffered a catastrophe comparable to the ‘Naqba’, (though they had a safe haven that the Palestinians did not). I see similar levels of suffering experienced by others in WW2 largely glossed over, particularly where the perpetrators were the Allies.

What I don’t see is evidence for a policy of extermination, gas chambers, or any reason to accept the Six Million figure on someone’s say-so. Neither do I see strong evidence for a massive conspiracy or hoax, but rather for a mixture of rumour and propaganda, conveniently ‘confirmed’ by the conditions in the camps in 1945. The Allies, for the most part, finished up believing their own propaganda, because it was impossible to admit in the aftermath of war, when a justification for all the horrors was needed, that it was just that: propaganda. Thus was born the myth of the Good War against Evil, which survives to this day.” — Wise words by “Kingfisher” on the CODOH Forum (forum.codoh.com)

¹²⁷ See Appendix II, Tall Stories.

You can't hope to get through a debate without someone saying, what about the eyewitness testimony? They will probably allude to someone on a BBC show who after 60 years has just recalled that he was at Auschwitz, or published a book, etc. That moment of response is crucial. I suggest beginning with "the great Holocaust deniers of History," for instance Winston Churchill with his six volumes on the war – no hint of gas chambers or gassing. Likewise Charles de Gaulle and Dwight D. Eisenhower, plus other war generals who wrote memoirs – and even more to the point the reports published right after the war by the International Red Cross.¹²⁸ They never saw anything or hinted at homicidal gassings. Yes, they commented on the Zyklon delousing chambers; that's all they saw. Then mention Pope Pius XII, who is widely attacked for not having done anything to "stop the Holocaust." But in actual fact, was anyone there who testified to seeing them?¹²⁹

Once Höss's "confession" at Nuremberg had become known in 1946, stories started to appear resembling that; once it was evident that the Jews *got Israel* because of the Holo-story, the fictional floodgates were wide open; once Germany started paying reparations to anyone with a Holo-story, there was no stopping them. For these reasons, "gassing" stories colated from *before* the Höss confession, over the period 1942-1945, *i.e.* during the war, have to be the most important datum. These early stories have a hallucinatory character – as one would expect to emerge from the horror of wartime – but do not resemble what Höss described in March 1946.¹³⁰ The USAAF was dropping leaflets making the allegation.

In the early post-war years, anyone claiming to have a personal memory of the German gas chambers would be liable to have M. Paul Rassinier turn up on their doorstep. Rassinier was a member of the French Resistance during the war. He got caught by the Germans helping Jews to escape out of France, so he ended up spending time in the Buchenwald and Dora labour camps as an inmate. Hence, he had a certain familiarity with such

¹²⁸ *Documents sur l'activité du CICR en faveur des civils détenus dans les camps de concentration en Allemagne 1939-1945* (Geneva, 1946), and *Inter Arma Caritas: The Work of the ICRC during the Second World War* (Geneva, 1947); see "Argument Boils about Numbers of Auschwitz Dead," www.rense.com/general62/auch.htm.

¹²⁹ Well, there is the made-up text *Eyewitness Auschwitz: Three Years in the Gas Chambers* by Filip Müller (1976), ghost-written by the German Helmut Freitag (Appendix II). Primo Levi, according to his *If This Be a Man* (1957), did neither see nor hear of any evidence for homicidal gas chambers during his spell at Auschwitz-Monowitz (see Chapter 13). Psychotherapist Viktor Frankl's great international bestseller *Man's Search for Meaning* describes the few days he spent in Auschwitz *assuming* that sick persons there got gassed, but in that case, what was the hospital for?

¹³⁰ Vgl. C. Mattogno: *Auschwitz: A Three-Quarter Century of Propaganda*, Castle Hill Publishers, Uckfield 2018; *idem*, *The Making of the Auschwitz Myth: Auschwitz in British Intercepts, Polish Underground Reports and Postwar Testimonies (1941-1947)*, Castle Hill Publishers, Uckfield (in preparation).

Illustration 8: Children being liberated from the Buchenwald Camp (near Weimar). They appear as being relaxed, well-fed and trusting of the adults around them. (Source: David Irving picture library.) Buchenwald experiences a bit of a problem with tourists who come expecting to be shown the gas chambers, and have to be told that, sorry, there never were any.¹³¹

matters. After several years travelling about Europe with his tape-recorder and questions, he found that such “witnesses” always seemed to come out with “evasions or palpable lies,” and his published report concluded:

“With regard to the gas chambers, the almost endless procession of false witnesses and of falsified documents, to which I have drawn the reader’s attention during this long study, proves, nevertheless, one thing: never at any moment did the responsible authorities of the Third Reich intend to order – or in fact order – the extermination of the Jews in this or any other manner.”

That bold conclusion kick-started France’s “Revisionist” movement. Paul Rassinier was a dedicated socialist, but that didn’t stop him being denounced as a “Nazi.” The word Nazi here simply refers to a person who

¹³¹ The Buchenwald Camp was located in Germany, and its inmates were mainly ethnic Germans, German communists and German criminals, with only one-fifth Jews in the camp. Dachau and Buchenwald were, however, the subject of US “psy-op” programmes in 1945-46, presenting them as “Nazi Death Factories.” However, those stories did not survive, because the camps were in Germany and people could visit them. Only in Poland behind the veil of the Iron Curtain could the Nazi death-factory stories survive. “Germans want their History back,” *New York Times*, 12 Dec. 1999, from Irving’s website.

does not accept the US/UK beliefs of pure or resident evil. He was trying to find out the truth, therefore he was a Nazi.

A quest for eyewitness testimony may then move to Canada in 1985, where a historic trial took place, that of Ernst Zündel. He had got to hear about Robert Faurisson, who had been investigating the configuration of the alleged Auschwitz “gas chambers.” At his historic 1985 trial in Toronto, “witnesses” found themselves grilled for the first time ever over the existence of the alleged homicidal “gas chambers,” and it was found that no such testimony would stand up.¹³² Those who had written books about “The Holocaust” had the experience of being grilled under oath.¹³³ On the fourth day of this trial, a climax was reached when Zündel’s lawyer Doug Christie put these questions to a top “Holocaust” expert, Dr Raul Hilberg, author of the supposedly-definitive, multi-volume, multi-edition work, *The Destruction of the European Jews*:

“Christie: Can you give me one scientific report that shows the existence of gas chambers anywhere in Nazi-occupied territory?”

Hilberg: I’m at a loss.

Christie: You are [at a loss] because you can’t. I want one report, before, during or after the war that shows that someone was killed by the use of those gases.

Hilberg: You want an autopsy [report] and I know of no autopsy.”

– he could not cite one scientific report!¹³⁴ Likewise he could provide no evidence for a single death as diagnosed due to cyanide poisoning. The essence of the illusion is well encapsulated in the following rear-of-courtroom scene, as recounted by Faurisson:¹³⁵

¹³² Michael Hoffman, *The Great Holocaust Trial*, IHR (1985), 2010, p. 55; two other books about the trials are: Doug Christie, *The Zündel Trial and Free Speech* (2009), and Barbara Kulaszka, “Did Six Million Really Die?” *The False News Trial of Ernst Zündel* (1992, online; NB: The latter book is about the second Zündel trial of 1988). Zündel was tried for disseminating Richard Harwood’s pamphlet *Did Six Million Really Die?* By so doing, he was accused of “knowingly spreading false news.” He was subsequently sentenced to 18 months’ imprisonment, but the verdict was reversed by Canada’s Supreme Court in 1992 by declaring unconstitutional the law under which Zündel had been tried.

¹³³ Thus, Rudolf Vrba, author of *I Cannot Forgive* – who had been interned in Birkenau – admitted that he had never seen anyone gassed, never seen a gas chamber, and that his book was “an artistic picture...not a document for a court.” *Toronto Star*, 24 Jan. 1985, as reported on Irving’s fpp.co.uk site.

¹³⁴ In Faurisson’s words, “In 1985, at the first trial of Ernst Zündel in Toronto, both the number one prosecution witness, Rudolf Vrba, and the number one historian of the exterminist thesis, Raul Hilberg, completely broke down under cross-examination by defense attorney Douglas Christie, with my assistance” – R. Faurisson, “Auschwitz: Facts and Legend” *The Journal of Historical Review*, Vol. 16, No. 4 (July/August 1997), pp. 14-19.

¹³⁵ R. Faurisson “Witnesses to the Gas Chambers of Auschwitz,” in: G. Rudolf (ed.), *op. cit.* (note 29), pp. 129-139.

“Several years ago, it happened that I was aggressively questioned at the rear of a law court by elderly Jews who presented themselves as ‘living witnesses to the gas chambers of Auschwitz’ showing me their tattoos. It was necessary for me only to ask them to look me in the eyes and to describe for me a gas chamber that inevitably they retorted: ‘How could I do this? If I had seen a gas chamber with my own eyes, I would not be here today to speak with you: I myself would have been gassed also.’”

An Austrian woman, Maria van Herwaarden, testified about her camp experiences in a Toronto District Court in March 1988 (the second of the two Zündel Trials), as she had been interned in Auschwitz-Birkenau in 1942 for having sexual relations with a Polish forced labourer. On the train trip to the camp, a Gypsy woman told her and the others that they would all be gassed at Auschwitz. Upon arrival, Maria and the other women were ordered to undress and go into a large concrete room without windows to take a shower. The terrified women were sure that they were about to die. But then, instead of gas, water came out of the shower heads. Auschwitz was no vacation centre, Maria confirmed, and she witnessed the death of many fellow inmates by disease, particularly typhus, and quite a few committed suicide. But she saw no evidence at all of mass killings, gassings or of any extermination programme. A Jewish woman named Marika Frank Abrams arrived at Auschwitz-Birkenau from Hungary in July 1944 and likewise testified after the war that she heard and saw nothing of “gas chambers” during the time she was interned there. She heard the gassing stories only later.¹³⁶

¹³⁶ Sylvia Rothchild (ed.), *Voices from the Holocaust*, 1982, p. 196; Maria van Herwaarden: chapter in Barbara Kulaszka, *op. cit.*, available online.

Part II: SCIENCE OR RELIGION?

5. One Hundred Times Less

In January 1945, the Soviet army arrived at Auschwitz and occupied the camp. They captured and took all of the death records of that huge camp. Then, a few months later, the newspaper *Pravda* announced the staggering total of all wartime deaths in that Auschwitz Camp: four million. The world believed this figure, because the Soviets had got the raw data. It fed straight into the Nuremberg Trials then being set up in order to authenticate the fabled “six million” figure. That Russian figure was engraved in metal at the memorial inside the Birkenau Camp¹³⁷ – where it remained until 1990. New plaques were installed later claiming a death toll of 1.5 million.

The so-called “Death Books” were released in 1989 on orders of Soviet President Gorbachev, consisting of 46 volumes which the Russians had captured in February 1945 in the Gross-Rosen Camp where the Germans had brought them when they left Auschwitz. These books document each death with a death certificate that gives the deceased person’s full name, profession and religion, date and place of birth, pre-Auschwitz residence, parents’ names, time of death and cause of death as determined by a camp physician. With a few gaps, the records cover the time span from August 1941 to December 1943. The year 1944 is missing completely as is the month of January 1945, when Auschwitz was evacuated. The Auschwitz Death Books contain the death certificates of some 69,000 individuals, of whom about 29,000 were listed as Jews.

In 1995, they were published in three hefty volumes in German; nobody seemed to have much to say about them, or even knew where they were. The British Library had a copy, so I went and perused them. Fortunately, there was a chapter in English giving a statistical breakdown, and that soon went up onto our new “whatreallyhappened.info” Revisionist website, with Excel graphs to show the trends. (Thanks to “Horhug” for this excellent work.)

As mentioned, a few volumes in the span analysed are missing, and based on the shape of one of the graphs, some claim that Jewish deaths were not fully recorded from mid-1943 onwards. Indeed, not everybody arriving in the camps did get recorded, tattooed with a number on their arm and so forth. So that total number can be pushed up to maybe forty thousand Jewish deaths – but I would doubt whether it is going to go much higher.

¹³⁷ It was inscribed in 19 different languages on 19 metal plaques, to proclaim that four million people had died in the camp.

Illustration 9: Daily deaths at Auschwitz from 65,053 death certificates.

Illustration 10: Monthly deaths at Auschwitz, Jewish vs. others.

There were *more Catholic deaths* than Jewish deaths recorded in the Death Books of Auschwitz. Maybe Catholics should get into the lucrative trade of composing Auschwitz I-survived-but-it-was-hell books? Most importantly, the Death Books show the massive peak in mortality which occurred in the summer of 1942, as the great typhus epidemic struck. That will be a major focus of our investigation. We will endeavour to analyse the *percent monthly mortality* for Auschwitz and other camps, and to show that this parameter decreased, it did not increase, once the Zyklon deliveries started to arrive in the camps.

Let’s look at some of the graphs. Illustration 9 just gives total deaths, with some gaps where the Death Book volumes are missing. We see the

Illustration 11: The total certified deaths at Auschwitz, grouped by religion. (cf. www.auschwitz.org/en/museum/about-the-available-data/death-records/sterbebucher)

huge peak in August of 1942, then a secondary, lesser peak in January-February 1943 as the typhus epidemic re-struck. There is a total of 65 thousand deaths here recorded.¹³⁸

We break this data down by plotting Jewish deaths separately, on a month-by-month basis (Illustration 10), noting the mysterious way in which the recorded Jewish deaths trail off in April of 1943: does that mean they were somehow not being recorded from then onwards? That is certainly feasible, but no one has produced a Nazi document or order decreeing that Jewish deaths should no longer be recorded from April 1943.

This breakdown informs us that 43% of total recorded mortality at Auschwitz over that period was Jewish (Illustration 11).

Holocaust Believers aver that huge numbers of “unrecorded” people milled around the wartime camps. After all, if the point of the camps was to exterminate people, what would be the point of incriminating oneself by recording their lives and deaths? Thus, the famous exterminist axiom, “All

¹³⁸ The published Death Books have 68,864 death certificates, while the online graph data here used for 65,053 deaths is what IndyMedia Houston published in 2007; see www.whatreallyhappened.info for more detail.

Illustration 12: Percent of monthly average deaths, divided into four groups.

Jews arriving at Auschwitz not registered were gassed upon arrival.”¹³⁹ But this assumes the very point under discussion, viz. that it was an extermination camp. Why would the very carefully counted Arolsen archive totals exist at all, had mass murder been the purpose?

Supposing that this exterminist axiom were valid, that Jews had been *gassed upon arrival*: other arrivals had to be registered, but most Jews went straight to the gas chambers, then their corpses went into the incinerators, and their ashes were thrown into the Vistula, *i.e.* phantom-like, they lived and died in the camps without leaving a trace – what would the data look like? The British Intelligence decrypts have the daily totals of camp inmates broken down into four categories, Poles, Russians, Jews and Germans, the last being political and “incorrigible” criminal prisoners. If Jews were disappearing rapidly into huge gas chambers, then would not this show up somewhere in these daily totals?

Over the thirteen months of the British Intelligence data, from January 1942 to January 1943, total daily arrivals and departures were recorded, here expressed as monthly means. The year starts off with mostly Poles, then as Jews arrived, they average out at forty percent in the camp, as the

¹³⁹ Here is how the British historian Dr Terry expressed this axiom: “The majority of deportees arriving at Auschwitz were gassed on arrival and never were registered in the camp; therefore they did not show up in the prisoner returns.” See his paper “Conflicting signals: British Intelligence and the Final solution” (2002, online).

graph shows. This is much the same proportion as shows up in the death records, suggesting that Jews were not being selectively killed.

Sometimes the primary sources give us the total deaths in a camp, other times the total living inmates who come and go each day. We will return later to the endeavour to interrelate these two to obtain a complete picture.

The Arolsen Archives

An essential primary data source here is the huge Arolsen archive database, which was supposedly being released to various Holocaust museums and databases around the world in 2013.¹⁴⁰ On several occasions, this centre has released total deaths for each of the wartime German labour camps, the last one known to me being in 1993. Arolsen clarifies that their statistics are not complete, because death cases registered with other registrar's offices are not listed again.

Like the Death Books, these Archives specify cause of death for each mortality registered, but give *no* deaths as due to gassing. The exterminist reply to this goes something like: O, you are so naïve. Don't you see *ze evil*

¹⁴⁰ I spent a while at the Wiener Library in London, one of the centres to which this digitised database has been transferred: no total numbers are there accessible, not for persons living in the camps or dying there, not per month or per year, not male or female – nothing, just individual cases.

Der Standesbeamte

(Butterveck)

Illustration 14: The 1984 statement by the Arolsen archive of their total mortality records from 15 German labour-camps.

Nazis would never admit they were gassing everyone; they pretended the deaths were all due to “heart failure” etc.? Let’s just say that we are here concerned to develop the concept of primary source databases. Later on, we can discuss to what extent such written-out causes of death might be reliable.

The Death Books contain the data for almost seventy thousand people, covering the two and a half years from July 1941 to Dec. 1943, a slightly higher total than we are getting from the Arolsen archive, which, as already stated, are incomplete by design; but, it’s in the same ball-park. Over the last six decades, all “Holocaust-survivor” data has been making its way to the Arolsen archive in North Germany. This is the one and only *reliable* database centre in the world for what people call “the Holocaust.” For several years, employees of the Special Registrar’s Office of the Tracing Centre of the ICRC at Arolsen, the name of this institution at the time (*Sonderstandesamt des Suchzentrums des IKRK*, Arolsen), sent on request a list of their current total mortality figures for the German wartime labour camps. Illustration 13 shows such a letter of 1979, where the total dead from thirteen of the camps added up to 271 thousand.¹⁴¹ Another letter known to me of 1984 covers fifteen such Nazi camps, plus “others,” hence totalling 16 in all, adding up to 282 thousand (Illustration 14). We can see how this document compared slight numerical differences between their totals for 1982/83. Gradually, this massive database at Bad Arolsen has been expanding – as one would expect with new data becoming available.

This 1984 list also states that the total of all documented death cases, including those registered with other Registrar’s Offices, amounted to 373 thousand, hence some 91 thousand were registered elsewhere. They have not collected data for what are nowadays called the “Aktion Reinhardt” camps, Treblinka, Sobibor or Belzec, and the Chelmno Camp, which is also said to have been a pure extermination camp, for the simple reason that there are no extant documents from these camps.

Another such letter from 1993 gives “Officially certified deaths in German concentration camps” from the Tracing Centre of the International Committee of the Red Cross, for the same fifteen labour camps.¹⁴² And that’s it! Not since 1993 has anyone got any more “total mortality figures” from them, for they stopped sending out these letters on request. *No 21st-*

¹⁴¹ Rudolf Höss told the Nuremberg tribunal: “At the end of the war, there were still thirteen concentration camps,” adding that there were some “labour camps” attached to armaments factories.

¹⁴² For these totals, see G. Rudolf, “Holocaust Victims: A Statistical Analysis,” *op. cit.* (note 29), here p. 206. Rudolf no longer has the source for this (he told me): the police took all his archives and his computer when they arrested him. Georges Theil, in his *Heresy* (2006), p. 73, has similar figures. I had some anguished comments from Germar when I asked him if he still had his sources. I suggest that corroboration by Theil of such totals in the early 1990s should suffice.

century statement has ever come out of the Arolsen Archives concerning their total figures. Most likely they have received orders not to send out any tallies any more, as the old numbers keep being “misused” by us Revisionists to “deny” the Holocaust. After all: the Arolsen centre can record only such deaths of inmates as were registered. Needless to say, the millions allegedly killed without any documentation cannot be documented...

They have, in contrast, made a statement in 2006 to the effect that they do not have a single death registered as having been due to cyanide gas – evidently it was safe for them to make such a statement.

These three sets of Arolsen data are compared in the Table below, showing how its data sets have grown over the years.

Table 1: Recorded deaths		
Year	Total in all camps	Auschwitz
1979	271,301 (n=13)	52,309
1983	282,077 (n=15)	53,633
1993	296,081 (n=15)	60,056

Where “n” is the number of concentration camps included.

In 2013 that huge database was made available to other centres: Yad Vashem in Jerusalem, the US Holocaust Memorial Museum in Washington, the Institute of National Remembrance in Warsaw, the Luxembourg Documentation and Research Centre on the Resistance, the Belgian and French state archives and the Wiener Library in London. But don’t hold your breath – no one can get any totals out of this huge database. I was allowed access in the Wiener Library, UK. The librarian agreed with me that one could not get any totals – neither total deaths per camp, or per month, or for all camps, nor totals dwelling in each camp: only individual cases may be accessed in these archives.

How strange is that, to claim to have thirty million or whatever documents about the fates of people in the German wartime labour camps – and this number seems to keep increasing – and thus to be the world centre of such information, carefully built up over half a century by the International Red Cross, whom everyone respects – then disguise or limit that database so that no totals, the main thing everyone wants to know about, can be accessed?

This closure of access to a priceless database means, I suggest, that we should make the most of the data made available to the public in letters sent out in earlier decades. Let’s look at some further camps by way of comparison. Here are mortality totals as recorded for the first four camps in alphabetical order. They are given in thousands to one decimal place, *i.e.* the nearest hundred. We here see the same careful additive process, whereby the data has been gradually classified and improved over half a century, as new cases are checked and added – with Germanic thoroughness:

Table 2: Total Recorded Wartime Mortality at the Arolsen archives, in Thousands

	1979	1983	1993	Inmate population
Auschwitz	52.3	53.6	60.1	74.0
Bergen-Belsen	6.5	6.8	6.9	3.3
Buchenwald	20.5	20.7	20.7	17.6
Dachau	17.8	18.4	18.4	17.3

The total wartime recorded mortality, thrice estimated by Arolsen, is here compared to the mean camp populations as given by Oswald Pohl in a camp data analysis of September 1943.¹⁴³ The mortality figures appear as roughly correlated to these total camp populations.

It would help if names of the thirty thousand or so Jews who died at Auschwitz according to that Arolsen database could be itemized and made available. That way anyone wanting to multiply that total by twenty can be politely invited to specify any further names they believe have been omitted from the list. (The Yad Vashem memorial at Jerusalem claims to have five million names of Shoah victims.¹⁴⁴)

A letter from Pohl to Heinrich Himmler in March 1944¹⁴⁵ broke down the total Auschwitz inmates in the following threefold scheme:

1. The Auschwitz Main Camp (*Stammlager*) had 16,000 inmates, all male.
2. The Birkenau Camp a mile away had 15,000 men and 21,000 women, of which 15,000 were too sick to work.
3. A network of 14 camps centred on Auschwitz, including the huge industrial plant of Monowitz, also had 15,000 inmates, all men, 7,000 of whom worked in Monowitz. There were another 15,000 civilians working at the Monowitz plant in addition to the seven thousand inmates.

Thus Pohl has added up 67,000 inmates, of which some thirty percent were women who do not seem to have been involved in the workforce. There were altogether 18,000 hospitalized and disabled. His letter clarifies where the women were, indicates a large-scale hospitalization process which looked after the decrepit and ill who arrived at Birkenau, and defines the massive size of the I.G. Farben industrial plant at Monowitz.

¹⁴³ <http://nuremberg.law.harvard.edu/php/search.php>; select Document search and input 1469 PS.

¹⁴⁴ This list has double and triple-listed names of the same people, by misspellings etc.; erroneous entries with wrong names, and has been derived from an assumption that, if Jews were not present in their home town after the war, they were dead. There are many cases of people searching the list after the war for missing relatives, only to find their own name on it. See the various papers on that in *Inconvenient History*, Vol. 9, No. 1; www.inconvenienthistory.com/9/1.

¹⁴⁵ Report to Himmler by Oswald Pohl concerning security measures at Auschwitz, including affiliated labour camps, Nuremberg document NO-021. Nuremberg Military Tribunal (NMT) “Green Series,” Vol. 5. pp. 384-385. <http://nuremberg.law.harvard.edu/> select Evidence code No., NI 317, select Doc. 4268.

Comparing this with his figures for a year earlier, for August 1943, Pohl then counted 48 thousand men plus 26 thousand women altogether at Auschwitz Camp,¹⁴⁶ a slightly larger total.

Yad Vashem

One would like to perform ordinary, normal math procedures here, by interfacing the two main databases, that is, the Auschwitz “Death Books” and the Arolsen archives. They both have a roughly similar 30,000 Jews-dying-at-Auschwitz count and may in large degree concur, although neither of them is complete. But because many years have passed since the Death Books were released in the early 1990s, Arolsen should have integrated all the Death Books’ data into their own. Hence, if there are any cases in the Death Books not in the Arolsen archive, this would be surprising, but if so, one could ask how it came about that they were not documented?

One could take, say, all entries of the Yad Vashem’s 5-million database whose last name starts with one letter of the alphabet and interface that with these two. Clearly, 95% of its data will not be on either of these, not the least because Auschwitz is only one claimed crime scene of the Holocaust. Selecting a few individuals listed in Yad Vashem’s database as having lived and died at Auschwitz, one could try to ascertain if any documentary evidence exists for them. We’re not asking for anything impossibly difficult here – no one is asking for Bradley Smith’s “proof” of death in a gas chamber! No, we are just looking to see if any evidence can be dug out of a Jewish individual really dying in the war years, as did 55 million others, who was at the Auschwitz Camp, such that they are on the Yad Vashem database but not on that of the Arolsen archive. Don’t hold your breath. And obviously, the data is not available.

The Yad Vashem memorial at Jerusalem is a grand and impressive edifice, the Holo-religion equivalent to St Peter’s in Rome. It collects the data in its large, circular library of five million tragic victims of the Holocaust. No doubt this will in due time swell to the magic six million figure. If you enter its database and put in “Siberia” under “place of death,” you’ll get almost a thousand names, *i.e.* they reckon anyone who went off and died in

Illustration 15: Moshe Peer in Belsen¹⁴⁷

¹⁴⁶ <http://nuremberg.law.harvard.edu/>; select Evidence code No., PS 1469, select Doc. 4067.

¹⁴⁷ Moshe Peer, a “survivor,” claimed in an interview that he survived six gassings at the Bergen-Belsen camp (*The Gazette*, Canada, 5 August 1993), although it is agreed by *all* historians that this camp did not have any homicidal gas chamber to begin with.

Siberia is a Holocaust victim. Or try Moscow: Yad Vashem finds “more than a thousand” H-victims who died in Moscow!

Rudolf Vrba is the author of the preposterous book *I Cannot Forgive* – and his real name (Walter Rosenberg) is in the database! A fitting end, you may say. Or it was, until CODOH buffs started remarking upon the fact,¹⁴⁸ then it soon got deleted. Some names are entered several times, with slight spelling adjustments, and therefore one cannot view the database alphabetically to inspect this. Anyone can input a name by filling in a page about the victim.

Critics pointed out that it seems to include any Jew on a deportation list or who died somewhere before, during or after the war.¹⁴⁹ Rudolf Margoli-
us, an eminent Jew in Czechoslovakia, was executed after a communist show trial in 1952 (the infamous “Slánský Trial”), yet his name is (at the time I am writing this) in the Yad Vashem database as “murdered by the Nazis.”¹⁵⁰ So, to put it politely, this collection does not mean a great deal. Maybe one needs to *divide* the Yad Vashem total *by twenty* to obtain a more reliable figure of Jews who died in the World War II German labour camps. Calm discussion is needed on this topic.¹⁵¹

A more rational approach to the subject would certainly become possible if the Arolsen database were to be available on a CD: the 290,000 or so cases, with brief details about date and place of birth, etc., grouped by such key factors as: the labour camps where they resided, the victims’ faith, their cause of death and year/month of death. On any other topic, one would take for granted that universities would have access to such material for research. Indeed, how strange is it that any “public knowledge” of such a primary database should be out of the question? If only one such master copy of this database exists, let us hope no one is tampering with it.

¹⁴⁸ The Yad Vashem page on Walter Rosenberg (now deleted, but rescued by the CODOH Forum, search for “Holocaust Victim Walter Rosenberg a.k.a. Rudolf Vrba”) has him go to the Sobibor camp then, alas, “perish in the Shoah” – it did not even put him at Auschwitz!

¹⁴⁹ See discussion on CODOH Forum thread “two-thirds of Jews killed in holocaust identified.”

¹⁵⁰ Wiki gives 11 of the 13 persons there tried as Jews, suggesting that there may not have been that many Jews exterminated in the war years.

¹⁵¹ The Yad Vashem database was built up by “simple unverified declarations emanating from unverified sources and processed in such a way that one and the same person can be recorded as having died several times, even, it seems, as many as ten times” – R. Faurisson, “Interview with Professor Robert Faurisson at the Guest House of the Ministry of Foreign Affairs of the Islamic Republic of Iran,” 13 Dec. 2006; www.codoh.com.

Illustration 16: Dachau Camp data presented by US army to the Nuremberg Trial: showing about seven deaths per day until the awful climax in 1945 due to UK/US carpet bombing.

If yearly totals in camp mortality were available, as they should be – that is something the Arolsen managers could readily do, but have chosen not to – they would show a huge peak in mortality in 1945. In that last year, when camp infrastructure and logistics disintegrated, the great killers of famine and epidemics ran amok under the terrible impact of US/UK saturation bombing, just before the German surrender. That peak would in itself tend to undermine the notion of any systematic extermination procedure. Our evidence for this comes from some impressive monthly data for the Dachau Camp as submitted by the US during the Nuremberg Trial (see Illustration 16).¹⁵²

The US Army liberated the Dachau Camp shortly before the war ended, and in this chart, we see the death records which they captured. Monthly deaths are recorded (the left-hand axis increases in units of 500), and yearly death totals are written onto the chart. The latter add up to 25.6 thousand dead, compared to (incomplete) 18.4 thousand for Dachau given by the Red Cross/Arolsen. One only wishes that scholars were allowed to evaluate such matters. So, for most of the war, camp deaths were running at just under two hundred per month – peaking catastrophically at four thousand a month in early 1945.¹⁵³

I asked the archive manager at the Wiener Library, London, whether their Arolsen archive database (now called the ITS, International Tracing Service) could corroborate these mortality totals, obtained by the Americans when they liberated this camp in Germany? It could not, apparently.

Coke in the Furnaces

Revisionists use physical, chemical and documentary evidence. Thus, in the case of counting the number of dead at Auschwitz – a topic where you can be put in jail in eighteen European nations for expressing a “wrong” answer – two physical factors limit this figure: the coke tonnage available for burning, plus the number of furnaces available for cremation.

The ground was swampy, at a confluence of three rivers, so no bodies could be buried. Initially they tried that, but the typhus-infested bodies quickly rotted with catastrophic consequences to the drinking water supply, and they all had to be dug up and burnt. Registered at the camp or not, each body had to go into the individual cremation muffles just the same, and each took one hour per cremation.

¹⁵² G. Rudolf, *Lectures on the Holocaust* (2017), p. 533.

¹⁵³ For comparison, the daily death rate at the Bergen-Belsen camp rose to 250-300 during March 1945. Around one quarter of its inmates died following its British “liberation” in April. It is surmised that this mortality was so high because untreated river water was then given to the seriously weakened inmates, and it was infected: Joseph Bellinger, “The Lethal Liberation of Bergen-Belsen,” *Inconvenient History*, Vol. 2, No. 3, 2010, www.inconvenienthistory.com/2/3/3122.

For a long time, the question of how many cremation furnaces were operating at Auschwitz at any one time, and what their capacity was, was answered in different, contradictory ways, with a huge inflation being given in Holo-believer books, but also some considerable confusion among some revisionists.¹⁵⁴

The issue of the Auschwitz cremation capacity was tackled in a scientific way for the first time in 1993, when Italian historian Carlo Mattogno and Italian engineer Dr Franco Deana wrote a meticulously researched paper on the topic based on a large array of wartime documents and expert literature on cremation.¹⁵⁵ Both authors later expanded their research into this issue considerably. Here is a summary of the most important findings on this very important topic. It was written by the scientist Germar Rudolf, who has peer-reviewed Mattogno's work:

After two decades of research, Mattogno and Deana had their *magnum opus* on the cremation furnaces of Auschwitz finally published in 2011. An English translation in three volumes with a total of 1,200 pages appeared four years later.¹⁵⁶ Among other things, it traces in detail the history and technical development of cremation technology up to the Second World War, and makes detailed thermo-technical calculations on the cremation duration and energy requirement of the three types of cremation devices installed at Auschwitz. These calculations are based on fundamental physical principles and experiments conducted in Europe in the 1920s and 1930s.

While there can be some disagreement about how accurate and reliable the results of the calculations are that Mattogno and Deana perform from scratch, one set of data is beyond dispute even among orthodox historians: One cremation furnace of almost the identical type as was installed in three instances in the crematorium at the Auschwitz Main Camp (also called

¹⁵⁴ For instance, when writing his seminal work *Auschwitz: A Judge Looks at the Evidence* (1986/2015) in the late 1970s, Wilhelm Stäglich had no original German wartime documents about the Auschwitz crematoria at his disposal. The second-hand sources he had access to were contradictory as to the number and capacity of the crematoria, so he wrongly conjectured that there might have been only one crematorium at Auschwitz (his Chapter Three, Section II.4.c). Or, see the video by French Revisionist Vincent Reynouard, *The "Holohoax" Exposed in 30 Minutes* (English subtitles; once at youtu.be/bpjqr-vNq6I), where he shows a page with the specification of a modern cremation furnace capable of incinerating 15 bodies within 18 hours (15:38), but when hypothesizing only a few seconds later that the Birkenau cremation furnaces had a comparable capacity, he assumes a maximum incineration capacity of merely six bodies per day (16:05).

¹⁵⁵ A German translation appeared in 1994 in E. Gauss, *Grundlagen zur Zeitgeschichte* (pp. 281-320), and in an updated English translation in *Dissecting the Holocaust*, (note 29), pp. 367-407).

¹⁵⁶ Carlo Mattogno, Franco Deana, *The Cremation Furnaces of Auschwitz: A Technical and Historical Study*, 2nd ed., Castle Hill Publishers, Uckfield 2022.

Crematorium I) – the coke-fired double-muffle furnace designed by the Topf Company – was also installed at the Gusen Camp in Austria. By a stroke of luck, documentation has been preserved showing how much coke this furnace consumed within what period of time during the cremation of a recorded number of bodies. From this, it can be derived that, when operated efficiently, the average coke consumption of this furnace was about 30 kg per body, and that the minimum time required to cremate a body to the point where remnants would drop out of the muffle through the grate into the ash chamber below was on average some 40 minutes, allowing for the next corpse to be introduced. The remnants of the previous body would keep burning in the ash chamber for another 20 minutes or so while the cremation of the next body lying in the muffle was already commencing.

For a number of reasons, however, the duration of a cremation in the Auschwitz-type furnaces would have been longer than in the Gusen furnace. Among them is the fact that the forced-draft device used at the Auschwitz Main Camp eventually served six muffles, while at Gusen it served only two, hence producing a stronger increase in draft per muffle. In addition, the refractory grates of the Auschwitz-type muffles had much smaller openings than those at Gusen, requiring that a corpse burns down to much smaller remains before they drop through the grate into the ash chamber, thus allowing for a new body to be inserted. Mattogno and Deana hence calculate an average duration of the cremation's main part – the one taking place in the muffle – of some 60 minutes for the Auschwitz-type cremation furnace. As Mattogno points out, that number was confirmed by the responsible Topf engineers during NKVD interrogations conducted in Moscow in 1946, whatever such statements made under duress may be worth.

Inserting the next body into the muffle while the previous one is still burning in the chamber below, by the way, is illegal for civilian crematoria under normal circumstances, as it leads to the mixing of cremation remains of two bodies. Such legal strictures, however, would probably not be observed in times of an emergency such as during an epidemic – or in cases of presumed mass murder.

Based to a large degree on the empirical data from Gusen, Mattogno and Deana have calculated the coke consumption of the other furnace types installed at Auschwitz: the five triple-muffle furnaces each in Crematoria II and III, and the eight-muffle furnace in each of Crematoria IV and V.

Since the triple-muffle furnace was basically a double-muffle furnace with an additional muffle inserted in the middle, which was using the combustion gases exiting the lateral muffles, its coke consumption per muffle was roughly $\frac{2}{3}$ of that of a double-muffle furnace, while cremation times

were somewhat longer, primarily because these crematoria did not have a forced-draft blower attached to their chimney, which, by increasing the chimney's draft, speeds up the burning of the coke, hence the generation of heat and combustion gases.

The eight-muffle furnaces of Crematoria IV and V were basically a cluster of four double-muffle furnaces, with each muffle having an additional muffle attached to its side, which used the first muffle's combustion gases. Its coke consumption per muffle was therefore roughly half that of a double-muffle furnace, while cremation times were similar to that of the triple-muffle furnace, again mainly due to the lack of any forced-draft blower.

The minimum time required for the cremation of an average-type body is only one factor limiting the maximum number of corpses the Auschwitz crematoria could cremate. Other factors have to be considered as well, however, such as:

1. The fuel available. Already in his 1989 book, French researcher Jean-Claude Pressac demonstrated that for the time from February 16, 1942 to October 25, 1943, a complete record of all coke deliveries to the Auschwitz and Birkenau crematoria exists (pp. 224f.). If this coke delivery is put into relation to the number of deceased registered inmates as recorded in the Death Books, there is a good correlation confirming the coke requirements per cremation as given earlier. For instance, Matogno reckoned that over the eight-month period from March to October 1943, sixteen thousand registered inmates had died, while 607 tons of coke and 96 m³ of wood (equal to some 21.5 tons of coke) were delivered to the crematoria. So the coke consumption per corpse would have to be $628,500 \div 16,000 = 39$ kilograms. This includes additional coke required to preheat the furnaces during discontinuous operations, and the fact that emaciated corpses (typhus victims) lack body fat and therefore require more fuel than normal corpses. The number of corpses that could be cremated with the proven fuel deliveries can be somewhat larger *if* you want to believe that less coke per body would have done the job, but not a lot more. However, if we add the claimed number of victims of mass gassings to this, we end up with an average coke consumption of only some 2 to 3 kg coke per body, which is technically impossible.¹⁵⁷ Matogno therefore concluded that these coke deliveries

¹⁵⁷ This issue arose in the Irving v Lipstadt trial of 2000 at the Old Bailey: "It is an iron rule that each cadaver consumes 30-40 kilos of coke" affirmed David Irving, whereas van Pelt believed that corpses could be burned to ashes with only 3.5 kg of coke (van Pelt, *The Case for Auschwitz*, pp. 121f.). One of these figures belongs to the real world, the other does not.

“prove indisputably that only the bodies of the inmates who had died of natural causes could be cremated in the crematoria.

Therefore, no mass murders took place in Auschwitz and Birkenau in the time from March to October 1943!” (Dissecting, p. 404)

2. The time during which the crematoria were operational. As Mattogno/Deana demonstrate, the crematoria at Auschwitz and Birkenau broke down on numerous occasions and had to be repaired repeatedly, which means that for extended periods of time these facilities could not cremate anything at all. In fact, Mattogno and Deana show that the crematoria were operational only during some 60% of the time they existed, which cuts down their theoretical maximum capacity accordingly.
3. The longevity of the refractory lining. If operated under ideal conditions, the high-quality refractory lining of a cremation muffle (1940s standard) could last up to 3,000 operational hours, or some 3,000 cremations when assuming an average duration of an hour per cremation. Replacing the lining of a furnace is a huge effort in both material and labour, for it requires that the furnace be disassembled and reassembled with new lining. In the vast extant documentation of the Auschwitz construction authority, there is not the least trace that any of this ever happened, meaning that no such replacement ever took place. Hence, the 44 muffles installed at Auschwitz could not have cremated more than a maximum of $(44 \times 3,000 =)$ 132,000 bodies.¹⁵⁸

There really should be some debate on this matter in academic History of Technology journals.

We have now looked at four sources: the Bad Arolsen archives, the coke-fuel data, documentation pertaining to repairs of the crematoria, and the “Death Books.” They are *congruent*. Because Holocaust Denier law bars Germans from the careful, exact science required – something they generally do rather well – we currently cannot home in on a more exact figure. But it should in principle be achievable.

Georges Theil, jailed for the French original of his little classic *Heresy in Twenty-First Century France* (2010) – a book well worth reading, which shows a touching respect for traditional German culture – correctly concludes that these figures show “a theoretical maximum of 200,000 authenticated deaths of Jews in all the German camps for the whole National Socialist era” (p. 73). I suggest this is or ought to be the baseline for all debates over mortality figures in the German labour camps. This maximum, if true, represents indeed a great horror. But it needs to be seen in the

¹⁵⁸ I ignore here the eight muffles of Crematoria IV, because that facility failed permanently only a few weeks after completion, hence was used only for very few cremations.

context of fifty million deaths for the entire World War II, and given that not one can be shown to have been caused by cyanide poisoning in a gas chamber.

Germar Rudolf accepted this figure in his analysis: “To date, only those figures provided by the International Committee of the Red Cross can be regarded as certain” (in 1993), while acknowledging that these figures are not complete, as even the incomplete Death Books yield a higher death toll than what Arolsen provides. To this we must add the Auschwitz inmates who died before August 1941, in the entire year of 1944, in January 1945, plus those who died during times where the extant Death Books have gaps. Being on the safe side, Rudolf therefore doubled the 1993 Arolsen total, which may be somewhat excessive:¹⁵⁹

“according to the Death Books approximately 66,000 people died in Auschwitz by late 1943 alone... A realistic estimate of the actual number of victims, therefore, may be twice as high as the total of victims registered by name in the records at Arolsen.”

We should reject such a doubling process, but concur with Rudolf that some increment in the totals – to be ascertained – above that given by the Arolsen figures, may be warranted.

6. The Bletchley Park Decrypts

British Intelligence analysts cracked the “Enigma” code in 1941, which gave them access to top-secret German data concerning matters such as submarine positions. The genius of Alan Turing is associated with this feat, using the “Colossus” computer at Bletchley Park. All the world has heard about its importance as regards Britain winning World War II, yet it was little appreciated, if not totally ignored, that these decrypts also contained a mass of information about the German wartime labour camps. Very little was heard on this matter – maintained as a state secret for fifty years – until it was finally released in the mid-1990s.

Before that, historians had little more to go on than a summary made by the British Intelligence analyst F.H. Hinsley back in 1981, where he stated:¹⁶⁰

“The return from Auschwitz, the largest of the camps with 20,000 prisoners, mentioned illness as the main cause of death, but included references to shootings and hangings. There were no references in the decrypts to gassings.”

¹⁵⁹ Rudolf, “Holocaust victims, a statistical analysis,” in Rudolf, *Dissecting*, 2019, p. 206.

¹⁶⁰ F. Hinsley (ed.), *British Intelligence in World War Two*, HMSO (1981), Vol. II, p.673.

No one at Nuremberg had wanted to use this material.

Once this data was released, an unexpected problem arose: the priceless decrypts – the most authentic information anyone could possibly want about daily camp life under the Nazis – yielded no crumb of evidence that any “Final Solution” had been ongoing! Orthodox experts had to start apologizing for how British Intelligence had somehow “failed to apprehend” the Holocaust.¹⁶¹ Among them is historian Nick Terry, who concluded in 2004:¹⁶²

“It would therefore seem as if British intelligence was largely hoodwinked in the first half of 1942.”

Was it?

Rather feebly, experts were obliged to conjecture – as Holo-historians had been doing through the previous decade – that innocuous-sounding phrases concealed the fiendish meaning and intention. For example, sending Jews “to the East” alluded to mass gassing.¹⁶³ But is that really how historians are meant to behave? Should not their conclusions be *drawn from* the data, rather than imposed upon it? We here explore the view that the initial understanding of these decrypts by British Intelligence was sound.

I came to peruse these top-secret wartime documents in the Public Record Office in the autumn of 2012,¹⁶⁴ thrilled to be turning over the crinkly pages with old, blue typewriter-print and “MOST SECRET... NEVER TO BE REMOVED FROM THE OFFICE” red-inked across the top. Here were confidential wartime documents from the head of MI6 to the Prime Minister Winston Churchill, including decrypts straight from Auschwitz! I apprehended why the Holo-historians had not wanted to know about these priceless wartime texts...

Next to Richard Breitman, to whom I will return later, Exeter history professor Nick Terry seems to be the one historian who has written about these decrypts since their release. While posting on the CODOH site – and one appreciates a professional historian engaging in dialogue with Revi-

¹⁶¹ Holo-historian Sir Martin Gilbert in 1997 explained how in these decrypts British Intelligence had sadly “failed to realize” etc. what was happening (20 May 1997). “Holocaust document released,” BBC archives, online. He there averred that Winston Churchill’s speech on 24 August 1941 saying “We are in the presence of a crime without a name” alluded to the Holocaust. However, as Dr Terry’s essay makes clear (*op. cit.*, p. 360), Churchill was here alluding to the Russian-German conflict.

¹⁶² Nick Terry, “Conflicting Signals: British Intelligence on the ‘Final Solution’, 1941-1942” (online), *Yad Vashem Studies*, Vol. 32 (2004), pp. 351-396, here p. 382.

¹⁶³ Robert J. van Pelt, *Auschwitz: 1270 to the Present* (1996); he averred that “...the words ‘further East’ meant gas chambers” and that “passing through” (as in the numbers that “passed through the camp”) alluded to “the process of extermination,” p. 326. The East signified a “domain of redemption” for the German nation, he explained!

¹⁶⁴ Search for “Public Record Office,” then go to the Discovery catalogue, and insert a file name, e.g. HW 16/65.

sionists, as he is the only one who will do this – he alluded to his article about these decrypts.¹⁶² So I decided to go along to the Public Record Office and check them out. I posted excerpts onto CODOH, as a result of which our new British Revisionist website posted some of the monthly texts, from September 1942 to January 1943. The monthly decrypts covered thirteen months, from January 1942 to January 1943, after which they broke off; the codes could not be cracked any more.

Let's quote the summary report for June (it has camp names in capitals):¹⁶⁵

“V Labour and Industry

The shortage of manpower leads to a considerable employment of prisoners outside as well as inside concentration camps. There are constant enquiries regarding the trade of prisoners and evidence on the part of undertakings and firms of demand for prisoner labour.

On May 1st, LUBLIN can provide: 1200 clerical workers and students, 200 bakers, 150 butchers, 350 agricultural workers and 800 workers of various trades, total 2700. (85/7). On the same date DR. CAESAR is informed that KL RAVENSBRUECK disposes of 3 German speaking women horticulturalists and 2 botanists. (85/12). The transfer of 95 skilled workers and 180 unskilled workers to the GUSTLOFF works is arranged on May 13th at the rate of RM 5,00 per day and per prisoner for skilled workers, and RM 4,00 for unskilled workers. (60/8). KL DACHAU sends 18 @ rate of RM 0,30 per day per prisoner. (70/8) 20 prisoners are required on June 22nd. for laying a field cable from ENNSDORF to MAUTHAUSEN (139/15). In KL FLOSSENBURG, prisoners who are not fit for heavier work will be employed on repair work, and the finishing of children's toys. (80/28). A demand for 30 to 40 prisoners comes from a cement factory (131/18). HIMMLER himself requires by 10 A.M. on May 27th the number of glass blowers available in KLA (86/34); and canvassing of makers of musical instruments is proceeding in JULY (174/1).”

At last it can be told: prisoners not fit for heavier work had to – finish off children's toys!

Beside the monthly totals, comments such as these were written:¹⁶⁶

¹⁶⁵ Quoting from the Public Record Office document HW 16/65; at www.whatreallyhappened.info, our page “Bletchley Park decrypts” only has decrypts starting from September 1942. The terms in parentheses are allusions to the original German decrypts; this quote is from the June 1942 summary; in English. “KLA,” *Konzentrations-Lager Auschwitz* = concentration camp Auschwitz.

¹⁶⁶ Summary Report of 21 August 1942, with references to original German decrypts omitted; www.whatreallyhappened.info/decrypts/hw16_65_zip_os1_21.8.42.html.

“b) KL. Dachau. [...] On 19 May 18 prisoners are to be transferred to Versuchsanstalt fuer Ernaehrung und Verpflegung. [...] On 23 June 20 carpenters are to be sent to DACHAU from MAUTHAUSEN.”

“c) KL. Mauthausen [...] 580 Russians: the fall in numbers is presumably caused by separating off the civilian Russians [...]. On 20th. April they are told that Dr. RUSCHER [recte Rascher] is allowed to use coloured photography which is necessary for his experiments. On 4 May a prisoner is shot in flight.”

“f) KL. Auschwitz. [...] A Pole escapes on 13 May. On 15 May Himmler expresses his interest in their tanning experiments.^[167]”

“On 5 June AUSCHWITZ is told that for political reasons they will not receive 2,000 Jewish workers, but on 17 June Jewish transports from Slovakia are announced; [...] A message of June 9th. says that typhus dominates the camp: 18 out of 106 cases have died before 15 June; 22 out of 77 further cases have died before 22nd. June.”

The summer of 1942 is a turning point in our story, when exterminist historians believe that the terrible mass gassing of Jews began at Auschwitz. The “machinery of mass murder” – to use Jean-Claude Pressac’s dramatic phrase – allegedly got going! As Dr Terry averred:¹⁶⁸

“the machinery of the death camps was in place and the policy of ‘selection’ on the ramps at Auschwitz was instituted from July 17, 1942.”

August was the month when the biggest and worst epidemic hit the camps, a shock reverberating through Auschwitz in particular, as the disease of typhus, caused by a bacillus carried by body lice and long-extinct in Germany, returned to haunt the German labour camps. A Polish resistance movement might well have introduced it to the German military.¹⁶⁹ It seems that civilians entering the camp had brought it, not the inmates deported there.¹⁷⁰ New protocols called “special treatment” (“*Sonderbehandlung*”)¹⁷¹ were swiftly developed and implemented for all camp members,¹⁷² which involved routines of hair shaving, use of showers, with cleansing and delousing of clothing, bedding and living quarters.

¹⁶⁷ Himmler visit to Auschwitz was 17-18th July: C. Mattogno, *Special Treatment in Auschwitz*, 2nd ed., Castle Hill Publishers, Uckfield 2016, pp. 16-25.

¹⁶⁸ N. Terry, *op. cit.*, p. 382.

¹⁶⁹ Irving, *Churchill’s War*, Vol. 2, p. 548, footnote 28 (citing archive sources in US).

¹⁷⁰ G. Rudolf, *The Rudolf Report* (2003), p. 60.

¹⁷¹ See Carlo Mattogno’s book *Special Treatment in Auschwitz*, *ibid.*, for evidence of the meaning of this term.

¹⁷² On July 29, a radio message authorized the camp administration to pick up gas for disinfection: “The permit for travel by truck, from Auschwitz to Dessau, for the collection of gas, which is urgently required for the disinfection of the camp, is hereby granted.” Mattogno, *Special Treatment in Auschwitz*, *op. cit.* (note 167), p. 46.

Two utterly different interpretations of that summer, one exterminist and the other Revisionist, stand before us when reading the following decrypt summary of 27 September 1942:¹⁷³

“For the first time returns are given for deaths of prisoners: the figures for August are: NIEDERHAGEN 21, AUSCHWITZ 6829 (or 6889) men, 1525 women; BUCHENWALD 74; FLOSSENBURG 88. The AUSCHWITZ figure represents about 30% of the total given in the GPCC [German Police Concentration Camp] figures; the cause is likely to be typhus, as typhus was rife in June (see last summary) and a policeman is suspected of typhus in September. Deaths must constitute a large proportion if not all of the ‘departures’ mentioned in the GPCC figures, which total 5325 for 19 days of August. During 19 days of August arrivals total 4989 so that they nearly balance deaths. About half of the prisoners are Jews. AUSCHWITZ is said to be under a ban on 4th September. Deaths in BUCHENWALD represent a tiny proportion of the departures.”

Suddenly, a vast mortality was reported in one camp – viewed by British historian Nick Terry as part of a covert Jew extermination programme.¹⁷⁴ That is not a logical inference, on account of the way camp mortality plummeted after September, once the epidemic was being brought somewhat under control. Typhus plus typhoid fever and dysentery, diarrhoea etc., were raging in the camp, a total nightmare, with inmates as well as civilian employees and SS members banned from leaving, owing to the risk of transmission. As David Irving wrote:¹⁷⁵

“There was evidently a deadly epidemic raging at the camp, since a message of September 4 in reply to a request for a thousand prisoners for building the Danube railway, stated that Auschwitz could not provide them until the ‘ban’ (Lagersperre) on the camp had been lifted.”

The “ban” confirms that the terrible peak in mortality was caused by infectious diseases and not something else.

We conjecture that, if a Polish resistance movement had indeed started the typhus epidemic, the execution of a whole busload of Poles in September could have been payback:¹⁷⁶

“Camp Kommander Rudolf Höss applied for some rubber truncheons, but was advised they were ‘unobtainable in Breslau.’ There is a report of some executions taking place: ‘Executions are reported: a Russian

¹⁷³ www.whatreallyhappened.info/decrypts/hw16_65_zip_os2_27.9.42.html; this September report is enormously important, as giving a link or a comparison with the monthly deaths recorded in the Death Books of Auschwitz (*Die Sterbebücher von Auschwitz*, 2005).

¹⁷⁴ N. Terry *op. cit.*, p. 386.

¹⁷⁵ David Irving, *Churchill's War*, p. 548 (www.fpp.co.uk/books/Churchill/2/Pt3.pdf).

¹⁷⁶ Decrypt HW 16/6, 5 Oct 1942: Irving, *ibid.*, p. 700 (NB: I couldn't find that decrypt).

civilian is shot when attempting to escape from NIEDERHAGEN. FLOSSENB[U]ERG is allowed a lorry and a bus to convey Polish civilians to a woods for execution. A prisoner is hung in HINZERT and nine more are shot."

I quite like the rubber truncheons. These primary source documents show a momentous change in the summer of 1942, with the outbreak of typhus and the initiation of "special treatment" routines. Death rates did then skyrocket, but I suggest that no intentional extermination is happening. Winston Churchill's speech about "We are in the presence of a crime without a name..." on 24 August 1942 no doubt alluded, as Dr Terry has made clear, to what decrypts had been telling him about the brutal Russian campaign – and not, as has been alleged in certain quarters, to "the Holocaust."¹⁷⁷

The October reports review the massive mortality:¹⁷⁸

"The large influx of Russian civilians, Jews and Poles continues and it is reasonable to suppose that deaths from typhus are still high in AUSCHWITZ and probably in other camps such as NIEDERHAGEN and HINZERT. Concentration camp prisoners are being used in large numbers in COLOGNE, and there is evidence of a cutting down of outside commitments to increase the number of prisoners available for war work. A new camp is intended at DEBICA. SACHSENHAUSEN evidently contains Englishmen as it has asked for an English interpreter. Some light on conditions in concentration camps is shown by the instruction that a visiting labour commission is not to be shown either 'special quarters' (Sonderunterbringung) or, if it can be avoided, 'prisoners shot when escaping.'"

It would seem that shame has been experienced by the camp authorities over the dead bodies of prisoners shot while attempting to escape. Note the different categories of Poles, Russians and Jews used for the daily totals, as we'll see. The endeavour to get useful work out of the camp prisoners here appears.

A fall in the inmate population was discussed:

Auschwitz: "The total falls from 22,455 on 1st Sept. to 17,365 on 30th Sept. and to 16,966 on 20th Oct. No figures for deaths have been given this month and therefore it cannot be said what proportion of the daily departures, which amounts to 2,395 on 7th Sept, 1,429 on 8th Sept, and otherwise vary between 550 and 47, are due to death: it is however known that at least 11 SS men have been taken into hospital on suspi-

¹⁷⁷ N. Terry *op. cit.*, p. 360; Jürgen Graf's *The Giant with Feet of Clay* (2001/2015; www.holocausthandbooks.com/index.php?page_id=3) is a rebuttal of Raul Hilberg's three-volume *The Destruction of the European Jews* (2003), which treats the Russian campaign in its 2nd volume.

¹⁷⁸ www.whatreallyhappened.info/decrypts/hw16_65_zip_os3_29.10.42.html

cion of typhus during October. As about 2,000 men in the total are always unaccounted for, it is difficult to be certain in what categories the arrivals and departures belong. But on 7th Sept. the numbers of political prisoners, Jews and Poles have fallen by 1, 2,020 and 284 respectively, a net loss of 2,305; the net loss in the total column is 2,379; therefore it is clear that the majority of the departures are Jews."

That sudden drop of several thousand in inmate population was due, the analyst concluded, not to illness but to departures, *chiefly Jews*. He was scrutinizing the several columns of data. Some ten percent of the total camp inmates are "always unaccounted for" he concluded – which helps to resolve the vitally important issue: with all the comings and goings in the labour camps, about ten percent – two thousand out of some twenty thousand – here *remain unregistered*. In this situation, *there cannot be* tens of thousands of unregistered Jews continually arriving, as Hilberg wants to believe. Instead, *a majority of the departures* are Jewish. That ought to settle quite a bit of the ongoing debate.

The decrypts tell of Jews coming and going between the camps, doing valuable industrial work. Here is a quote from the November 1942 summary:¹⁷⁹

"The use of prisoners for war industries on a large scale is discussed below: [...] the largest transference is the move of Jews to AUSCHWITZ for the synthetic rubber works. Another major movement is the transference of sick prisoners to DACHAU."

The huge industrial Monowitz plant, a couple of miles due east of Auschwitz, is here alluded to as "synthetic rubber works" and as "Bunawerk," "Buna" being the name for the synthetic rubber that was to be produced there.

Various industries are here alluded to, with allusions to Himmler enquiring about whether glass blowers and makers of musical instruments are available, and some ongoing tanning experiments. Normally Himmler is described as visiting Auschwitz over 17-18 July 1942 to "witness a gas-sing" – a claim, to quote Carlo Mattogno, "incessantly repeated and never proven."¹⁸⁰ Terry has imagined Himmler as giving "the green light to a policy of total extermination" in July of 1942.¹⁸¹ One has a choice here between two different realities; like choosing the red pill or blue, one of them is the real world.

From the monthly data, it can be gleaned that Dachau had about 40% Jews in the first half of 1942, and Auschwitz somewhat less. Generally, Auschwitz had more Poles than Jews, with the number of Jews peaking at

¹⁷⁹ www.whatreallyhappened.info/decrypts/hw16_65_zip_os4_27.11.42.html

¹⁸⁰ Carlo Mattogno, *Special Treatment in Auschwitz*, *op. cit.* (note 167), p. 17.

¹⁸¹ N. Terry, *op. cit.*, p. 382.

12,000 in mid-1942. It is evident that the author(s) of these reports had no inkling of an “extermination” process going on in the camps; otherwise the details of people occasionally being shot and how many died of this or that would not make sense.

Here is a quote from the January 1943 summary about Auschwitz:¹⁸²

“The Bunawerk is still employing 2210 men of whom 1100 are on the actual work. Jewish watchmakers are sent to SACHSENHAUSEN where they are urgently needed.

Typhus cases continue to be reported although strenuous measures have been adopted and 36 cases were found among the new batch of prisoners on 22 Jan.”

Jews are alluded to in these decrypts with a respectful tone, being imported into Auschwitz as skilled industrial labour, or urgently needed as watchmakers somewhere else. One can *either* have an ongoing programme of extermination *or* have workers capable of doing skilled work – but not both. This new and detailed info about life in the camps has to drive a final stake through the heart of the exterminist thesis.

British Intelligence Sceptical of Gassing Story

In August 1943, the head of the British Psychological Warfare Executive, Victor Cavendish-Bentinck, sent a secret telegram from the Foreign Office to Washington and Moscow saying, “On further reflection we are not convinced that evidence regarding use of gas chambers is substantial enough to justify inclusion in a public declaration...,” with an “urgent reply” requested. A copy of this message is kept in the Public Record Office, dated 27 August 1943. On the next day, a copy of this telegram was sent to the governments of Canada, Australia, New Zealand and South Africa. That seems like a fairly definite policy statement. A letter by Cavendish-Bentinck complained that “The Poles, and to a far larger extent the Jews, tend to exaggerate German atrocities in order to stir us up,” and explained:¹⁸³

“As regards putting Poles to death in gas chambers, I do not believe that there is any evidence that this has been done. There have been many stories to this effect, and we have played them up in P.W.E. ru-

¹⁸² www.whatreallyhappened.info/decrypts/hw16_65_zip_os6_28.1.43.html

¹⁸³ File PRO FO 371/34551. It has been alleged that Cavendish-Bentinck also wrote: “The whole assertion of German extermination measures against Jews with gas chambers and so on has no foundation in fact and is merely a lie that we have spread against the Germans.” But that statement, supposedly made 28th August, is not now present in that file (FO 371/34551); at least I could not see it there. The evidence for its existence comes from Robert Jan van Pelt in his 2002 opus, *The Case for Auschwitz* concerning the Irving trial (see pp. 126f.). He says that David Irving first started alluding to these two decrypts, and then he, van Pelt, also went to the Public Record Office and checked the documents himself.

mours without believing that they had any foundation. At any rate there is far less evidence than exists for the mass murder of Polish officers by the Russians at Katyn.”

He added:

“I think that we weaken our case against the Germans by publicly giving credence to atrocity stories for which we have no evidence. These mass executions in gas chambers remind me of the story of rendering of human corpses during the last war for the manufacture of fat, which was a grotesque lie...”

As a result of this statement, the telegram was sent off from the Foreign Office to Washington the same day, copied to Moscow, requesting that no allusion be made to “gas chambers” re. German atrocities in Poland.

In other words, as David Irving rightly observed:¹⁸⁴

“As late as August 1943 the head of the PWE [Psychological Warfare Executive] minuted the Cabinet secretly that despite the stories they were putting out, there was not the slightest evidence that such contraptions existed.”

This attitude changed in 1944, when British Intelligence finally came to believe its own atrocity propaganda, as it was recycled back to them through the chaos and fury of war.

More Poles than Jews

Here are some totals of Auschwitz Camp population, given by the decrypts, which I have averaged over three-month intervals:

Table 3: Average numbers at the Auschwitz Camp				
3 months ending	Total	Jews	Poles	Russians
January 1942	9884	191	9186	2095
April	10242	1296	9475	354
July	16369	6241	7676	153
October	16996	7500	6470	—
January 1943	28350	11332	12646	—

We thus see *more Poles than Jews* in the camp: Jews comprised 39% of the inmates on average, Poles 65% and Russians a mere 3%. (The two categories of Poles and Jews are overlapping; maybe this is one reason why the “totals” here given don’t add up.) Many people have conjectured that far larger numbers than these had been arriving but not departing, unmen-

¹⁸⁴ Irving’s Foreword to *The Leuchter Report: The End of the Line? The First Forensic Examination of Auschwitz* (Focal Point Publications, 1989). The issue re-surfaced in the big Irving-Lipstadt trial of 2000 at the Old Bailey, discussed by van Pelt in his *The Case for Auschwitz: Evidence from the Irving Trial* (2002), p. 126, where he tries to claim that the statements by Cavendish-Bentinck do not have the plain meaning which Irving claimed.

Illustration 17: Total numbers at the Auschwitz Camp, over the thirteen months of the British Intelligence decrypts, divided into Poles and Jews.

tioned in any monthly reports. But in that case, what would have been the point of keeping meticulous daily records of people coming and going? Some 53,000 persons were admitted to the Auschwitz Camp in 1942 according to the decrypts. Given that the decrypts normally record data for about only twenty days per month, hence that some data is missing, the actual number may have been at most a third higher than that (although some gaps may be explained by the fact that the camp's administration wasn't active on Sundays). Considering this, a total of some $(53,000 \times 1.5 \approx) 80,000$ persons admitted to the camp in 1942 should be the upper limit. If we keep in mind that mass deportations of Jews to Auschwitz started in 1942, we would expect a major part of these 80,000 arriving inmates to be Jews, maybe up to 60,000. The camp's Monthly Reports often have many Jews leaving the camp, as well as arriving. Of the deaths in the camp that year, *nearly sixty percent* were Jewish,¹⁸⁵ and in such a nightmarish situation one can appreciate how stories got going.

According to Raul Hilberg, up to 175,000 Jews had been deported to Auschwitz by the end of 1942, which agrees roughly with the data published by Danuta Czech in her *Auschwitz Chronicle*.¹⁸⁶ At the start of 1942, there were only a couple of hundred Jews at the camp. Hence, it looks like

¹⁸⁵ Decrypt HW 16/65 August 1942, p. 21.

¹⁸⁶ Danuta Czech, *Auschwitz Chronicle 1939-1945*, Tauris, London 1990.

Illustration 18: Monthly mortality at Auschwitz, total and Jewish, from the Death Books.

Hilberg and Czech have exaggerated by *a factor of three*. How did they do it?

Germar Rudolf has analysed the data Danuta Czech provides for the Jewish transports she lists as arriving at Auschwitz in 1942,¹⁸⁷ which I will summarize here.

Czech's numbers of inmates from each transport arriving at Auschwitz who were *admitted* to the camp are exclusively based on lists clandestinely compiled and smuggled out of the camp in 1944 by inmates working for the Polish underground movement. We do not know whether these lists are correct and complete. According to them, some 60,000 Jews were admitted to the Auschwitz Camp in 1942, which jibes well with the Bletchley Park decrypts. Czech claims, however, that close to 166,000 Jews were actually *deported* to Auschwitz. The difference between these two figures – 106,000 individuals who were never registered at Auschwitz – is said to have been the number of inmates killed in “the gas chambers.”

The problem with this hypothesis is that Czech cannot back it up with anything. The best she can do is point to the fact that the detailed deportation records of the German authorities in France, Belgium and the Netherlands show that, in the second half of 1942, many more Jews were put on trains in these countries than ended up being admitted to the Auschwitz Camp.

The crucial phrase here is “in the second half of 1942.” In the first half of 1942, *all* transports with Jews going to Auschwitz arrived there completely, and *everybody* was duly registered. Hence, any claim of mass gasings of unregistered Jews during that time is simply unfounded.

¹⁸⁷ G. Rudolf, “How Danuta Czech Invented 100,000 Gassing Victims,” *Inconvenient History*, Vol. 11, No. 1 (2019); www.inconvenienthistory.com/11/1/6509.

The situation changed in July of 1942, however. During that month, the typhus epidemic raging at Auschwitz really got out of control (see Illustration 18). Inmates were dying by the hundreds every day, and even the SS staff had casualties, among them the SS garrison physician Dr Schwela. To make matters worse, the only crematorium in operation at that point in time had to be shut down for almost a month because its chimney had to be rebuilt. Hence, corpses were piling up all over the camp. They had to be buried in mass graves, where they threatened to contaminate the drinking-water supply of the entire region. It was a mess, and it was the ghastly true core of all the myths which sprang from it.

In the midst of this catastrophe, on July 17 and 18, 1942, SS chief Heinrich Himmler visited the camp, and shortly after he had left, his subordinate Richard Glücks ordered that the camp be put on total lockdown to prevent the epidemic from spreading into the region.

Still, deportation trains with Jews kept rolling toward Auschwitz. But instead of admitting them into the camp itself, the German authorities took many of them off the trains on various stops along the journey to send them to local industries in need of workers. Czech concedes that a few deportees were taken off the trains before arriving at Auschwitz, but she minimizes the magnitude of it by limiting it to only one train station (Cosel) and by again speculating about the numbers. (She usually claims around 200 inmates taken off.) However, we know from the records of the Dutch Red Cross that the deportation trains stopped at many stations, and that many more inmates were taken off along the route than Czech concedes. Hence, the fate of the deportees who boarded a train in western Europe but were not registered at Auschwitz was not “killed in the gas chambers,” as Czech claims without the shred of a proof. They simply were sent elsewhere to save them from the typhus epidemic.

For all the other deportation trains listed by Czech that arrived in 1942 from Slovakia, Yugoslavia, Belarus, Poland and Germany, we have no records at all as to how many deportees boarded them. We only know for most of them how many inmates were eventually admitted, if we believe the underground figures.

At this point, Czech resorts to a sleight of hand: she simply speculates how many deportees were on these trains, thus inventing from whole cloth thousands of deportees she then lets perish “in the gas chambers.” For instance, for December 6, 1942, she finds an entry in the clandestine list of registration numbers indicating that 406 men coming from the Mława Ghetto in Poland were admitted to the camp. She then claims without any proof that this deportation train arrived with “approximately 2,500” deportees, and then states categorically (Czech, p. 280):

“The remaining 2094 deportees are killed in the gas chambers.”

Even if we were to admit that more people boarded the trains than were registered at Auschwitz, first we do not know how many, and second there is no reason to assume that the procedure these transports were subjected to was any different than that used for the trains coming from Western Europe. Hence, these inmates were probably just sent elsewhere.

Last and worst, Czech lists several transports with altogether 24,000 claimed deportees for which there is *no evidence at all* that they existed in the first place – other than wild claims by self-proclaimed witnesses. First she creates them out of nothing, then she lets them vanish into nothing by sending them to “the gas chambers.” The writing of history, Polish style.

As regards the excess in the number of Jewish deaths, you might want to read Primo Levi’s post-war memoir *If This Be a Man*: he and his Jewish friends were sitting around soon after December 1943 and wondering where most of the camp Jews had gone to. Had they been gassed? The tattoo on his arm is number 174 thousand, and what happened to all those people? Here we are addressing that haunting question.

Two authors who have discussed these decrypts, since they were released in 1997, are Professor Breitman and Dr Nick Terry. In relation to their arguments, we here wield Occam’s Razor, not allowing that which is unverifiable. It leads us to exclude what I’ll call *Terry’s Axiom*, that: “the majority of deportees arriving at Auschwitz were gassed on arrival and never were registered in the camp; therefore, they did not show up in the prisoner returns.”¹⁸⁸ Breitman wrote:¹⁸⁹

“Information about Birkenau and the factory-style process of mass murder was more difficult to locate in the decodes, but it was there.”

In this he erred. No such info (I suggest) can there be found. Did it happen that vast numbers of Jews arrived, were not registered, then were gassed upon arrival? That is the key exterminist axiom – reaffirmed by Nick Terry in 2004:

“The typhus outbreak seems to have been largely within the Auschwitz camp, reaching a staggering 8.5k deaths in August, compared total ‘departures’ that month were 8688 – as shown in the graph – which means that deaths accounted for almost all of the ‘departures’ that month. A ban on entries to Auschwitz was imposed on 4th September: ‘AUSCHWITZ is said to be under a ban on 4th September (223b/10),’ and turning to the sheet for September^[190] we see daily arrivals dwindling to a mere half a dozen, for the next five days.”

Dr Terry’s view concerning the summer of 1942 is refuted by the shape of the graph in Illustration 18.

¹⁸⁸ Terry, p. 388.

¹⁸⁹ Breitman, *Official Secrets* (1998), Chapter 7, “Auschwitz Partially Decoded,” pp. 114f.

¹⁹⁰ www.whatreallyhappened.info/betarev/decrypts/images/proformas/Auschwitz_1_September_1942.JPG

Mortality *decreases* once the Zyklon starts arriving; it does not increase. It perks up again in January-February of the next year with a further typhus outbreak. In August 1943, mortality in the camp has decreased to 3% per month – it has decreased by a *factor of ten* compared to the year before. (We'll look further at 1943 in the next chapter – that goes beyond what the British Intelligence decrypts are about). The “special treatment” protocols *were successful*. Hygiene technology worked *as it was meant to*, and deaths therefore decreased.

We notice from this graph that Jewish deaths for 1942 are a lot more than 40% of the total, *however*, they are a lot less the year after. That could be because – for whatever reason – they were more susceptible to a lice-born disease, then less so a year later. One is free to speculate, but intentional murder should not be invoked without some definite evidence – which is lacking here. For these three years, the graph shows 40% of mortality was Jewish. Some here argue for a German command to selectively stop recording Jewish deaths in mid-1943. But no evidence of any such decree can be shown.¹⁹¹

The Primary Sources

We are here seeking out the primary source data. Two raw data sources, more or less independent, for how people died in the German labour camps are the *Death Books of Auschwitz* and the Arolsen archives (also called the International Tracing Service), a database collected by the International Red Cross over the last eighty years. The latter covers all the German labour camps. These two sources have in common a roughly similar number of Jewish deaths recorded, *around thirty thousand* for the Auschwitz Camp, and also that neither source records *one single death by gassing*.

The British Intel decrypts didn't record the deaths, but only “departures” – which includes deaths – except for the one month of August 1942 when it gave a mere figure, and we've shown how this is fully compatible with the number given by the Death Books for that month. But if anyone still wants to believe in huge numbers of Jews brought into the camps, not being recorded as “arrivals,” and then gassed right away – a quintessential-ly unverifiable concept – then a different kind of argument becomes relevant: of intact coke records (see previous chapter). The records of coke consumed by the cremation furnaces impose a ceiling upon the number of bodies that can have been cremated.

Thus we emerge from Storyland; we leave behind us the Fairy Tale from Hell, which a Culture of Untruth wanted to manipulate. Instead we choose to analyse primary source data. Nowadays, hardly anyone believes

¹⁹¹ My colleague “Horhug” posted all the decrypts and has done the graphs and data-analysis on the site.

the words of politicians, and I respectfully suggest that uncensoring the truth would be the best way to make progress towards a civilisation worth living in. We should request open debate concerning these British Intelligence decrypts.

7. Chemistry at Auschwitz

Many tons of Zyklon were consumed in Auschwitz-Birkenau from the summer of 1942 onwards. Ascertaining where it was used is fairly simple – one chips away at the old walls there, the historic ruins, and measures the cyanide *which is still there*. Wherever it was used, it soaked into the walls and then bonded permanently – with iron oxide (rust) in the brick and mortar. I had some essays published on the subject (see CODOH library¹⁹²) and was consequently thrown out of University College, London, in April of 2008 where I'd been as a postdoc fellow for fifteen years.

This was quite a *Faustian* situation, where I became damned for some knowledge I had acquired. There was something terrible I knew, *ethically damned chemistry*, which my fellow-countrymen could not bear to hear – they instead insisted on formulating it *as if* it were a political issue: I was “far-right” they informed me, leaving me wondering for some years what this was supposed to mean. Finally, I realized that it is a quintessentially meaningless term which no one ever has to define because it doesn't mean anything.

Undeterred, let us now investigate the most deeply forbidden science of the modern world. Did you perhaps think this was about flying saucers, or “free energy”? Well, no, it has to be the hygienic delousing technology used prior to DDT: as used by Germany (and also America) between, say, 1900-1945.

I was in 2008 developing the main cyanide-chemistry thread on the CODOH Forum, which has now enjoyed over a hundred thousand visits and is the most visited page on the topic. More recently I composed a joint article with chemist Germar Rudolf and submitted it to a couple of the Royal Society of Chemistry's journals (“What's the point?” he asked me) – and of course they rejected it, as we knew they would. In fact, they rejected it rather quickly, both within 24 hours. It was eventually published in the *Inconvenient History* online quarterly journal, and this might in retrospect appear as being rather pointless.¹⁹³ No science or history of science journal

¹⁹² My three essays then up were: “The Walls of Auschwitz,” “Leuchter Twenty Years On” and “The Auschwitz Gas Chamber Illusion.”

¹⁹³ Nicholas Kollerstrom, Germar Rudolf, “Differential Exposure of Brickwork to Hydro-

anywhere in the English-speaking world is, or ever has been, allowed to discuss this topic, yet some obscure motive drove me to submit a proper, academic-style article on the subject.

But it does seem important to me that at least two people have agreed upon the numbers, and in that respect co-authorship was worthwhile. The figures quoted in this chapter are taken from that co-authored study.

Leuchter and the Zündel Trial

The modern story began during the famous Canadian trial of Ernst Zündel, tried in 1985 for the crime of publishing in Canada the bestselling (and still well-worth reading) booklet, *Did Six Million Really Die?*¹⁹⁴ Zündel was fortunate to have Robert Faurisson, the maestro of modern Revisionism, working with him. In February 1988, after Zündel had appealed his initial 1985 conviction and was on trial a second time, he and Faurisson met Fred Leuchter, back then arguably America's top or only expert on homicidal cyanide gassing. Zündel gave him thirty thousand Canadian dollars so he would go at short notice with his wife and a supporting team to investigate (illegally) the out-of-bounds "gas chambers" at Auschwitz, Birkenau and Majdanek in Poland. He did so, and equally swiftly prepared his terse but authoritative *Report* on returning home. Easy to read and translated into many languages, it is no exaggeration to say that this explosive little booklet kick-started the modern Revisionist movement. It put the delousing chambers on the map: prior to Fred's *Report*, the human race had merely been disinformed that Zyklon gas = human mass murder.

Leuchter should have been knighted for his service to humanity: Sir Fred. But instead, he had his career terminated, was thrown out of various places, ethically damned, his *Report* denounced, and he ended up driving a school bus – as he informed me. Does he prefer that to being "Mr Death," I sometimes wonder? In a nutshell, his *Report* concluded that there was nothing in any German labour camp which *could possibly have been used* as a homicidal gas chamber, however much anyone might have wanted to do so.

Fred chipped away in the middle of winter at those old walls – surreptitiously, but well-photographed and keeping his own clear notes, so anyone can go back today to see where he sampled from – and these samples were analysed for total iron cyanide when he got home, by Alpha Analytical Laboratories.

gen Cyanide during World War Two, *Inconvenient History: A Quarterly Journal of Free Historical Enquiry*, Vol. 5, No. 1 (2013); www.inconvenienthistory.com/5/1/3206.

¹⁹⁴ Michael A. Hoffman III, *The Great Holocaust Trial, The Landmark Battle for the Right to Doubt the West's Most Sacred Relic*, 25th anniversary edition, Independent History and Research, Coeur d'Alene, Idaho, 2010 (see the review at www.inconvenienthistory.com/3/2/3148).

Fred's *Report* stimulated two further studies. A certain young chemist taking his PhD at a Max Planck Institute in Germany found that the "thorn of doubt" was implanted in his soul by reading that *Report*. In 1991, he too crept over there, together with a couple of colleagues who photographed and recorded where he sampled from. The full report by this brilliant German chemist, Germar Rudolf, did not appear in English until 2003. A greatly expanded and updated 442-page full-color edition of his report appeared in early 2017, titled *The Chemistry of Auschwitz* (a slightly updated edition was issued in 2020). Since June 2017, it is accompanied by a 90-minute online documentary.¹⁹⁵ Persons of scientific inclination may wish to read this expert report, maybe even twice, as it evaluates the scientific issues in a clear and definitive manner.

Also in consequence of the *Leuchter Report*, a Polish chemistry lab was assigned to investigate the matter. Poland is a country where doubting "the Holocaust" is a crime, so the lab would presumably have been closed down had they come out with any conclusion endorsing what Leuchter found. *Science cannot exist where doubt is a crime.*¹⁹⁶ The team Markiewicz *et al.* published in 1994,¹⁹⁷ the year after Rudolf's *Report* had appeared in German¹⁹⁸ – and, one may add, one more report by John Ball in Canada also appeared in 1993.¹⁹⁹ The Polish team claimed that it was only measuring the "soluble component" of the cyanide, around 1% of the total cyanide content in the brickwork at most. This was enigmatic, as the soluble cyanide component is that part which one would *not* expect to contain a memory of what happened there half a century ago. I would describe the logic of the Polish team as Kafkaesque.

¹⁹⁵ G. Rudolf, *The Chemistry of Auschwitz: Buna Rubber, Zyklon B, Prussian Blue and the Gas Chambers*, Castle Hill Publishers, 4th ed., December 2018; with transcript at www.codoh.com/library/document/4730/; also at http://holocausthandbooks.com/index.php?page_id=1014.

¹⁹⁶ Although Poland enacted its Holocaust-denial law only in 1998, denying German atrocities on Polish soil during WWII has always been grounds for persecution and prosecution in Poland, whether they had a specific law against it or not. Ditto for Germany, whose specific Holocaust-denial law was enacted only in 1994, although revisionists had been prosecuted and persecuted there ever since the surrender of the Wehrmacht on May 7, 1945.

Integrating Two Sets of Data

One would like to hear some weekend seminar reviewing such technical issues as the differential absorption of hydrogen cyanide by brick, mortar and plaster, to what extent the gas will permeate right through walls, under what conditions it will form the blue ferrocyanide complex $\text{Fe}^{\text{III}}_4 [\text{Fe}^{\text{II}}(\text{CN})_6]_3$, also known as Iron Blue, or how acidity (pH) caused by carbon dioxide affects this and so on – but that is not going to happen. It would be *Thought Crime* for students to want to know about this matter.

The two investigators Leuchter and Rudolf chipped out more or less the same number of samples from the walls, just over thirty, though some were measured more than once. The limit of reliable measurement of iron cyanide hovers alas only slightly below the normal, background level of cyanide as found in that old brickwork, that being the chief weakness of these investigations. Leuchter and Zündel were perhaps startled to hear from Alpha Analytical Labs that over half of their samples had measured zero cyanide – anything below one part per million (often expressed as micrograms per gram), whereas Rudolf’s German laboratory (The Fresenius Institute) gave measurement results down to a lower level, about 0.2 parts per million. Nearly all of Rudolf’s samples had measurable cyanide. Neither of these labs knew the source of the brickwork they were being asked to analyse, and were horrified when they found out. Indeed, one of the accusations made against Germar Rudolf when the Max Planck Institute fired him was that he had used the official Max Planck Institute letter head in requesting the analysis...

The *measurable cyanide data* they found divided naturally into two groups, delousing chamber walls versus all the other data:

Table 4: Cyanide Levels in Delousing Chambers vs Other Locations (ppm)		
Sampler	Delousing Chambers	Other locations
Leuchter	1,050 (n=1)	1.22 ± 1.94 (n=33)
Rudolf	4,674 ± 4,009 (n=16)	2.61 ± 3.6 (n=16)
Overall mean value:	4,461 ± 3,980 (n=17)	1.68 ± 2.6 (n=49)

One sees a *two-thousandfold differential* here, the most important result to emerge from this data. The delousing chamber samples had *three orders of magnitude* more cyanide present in them than did all the others. Few are the chemical investigations which come out with so clear and unequivocal a result! (As Leuchter’s Alpha Analytical Lab analysis was not able to measure anything below one part per million of cyanide, we have here assigned an estimated value of 0.5 ppm to these unmeasurable samples.) The background level here appearing in brickwork is probably *not* natural but results from occasional delousing Zyklon treatment of rooms, several times a year. This would flush out bugs from cracks in the wall etc., essential for

Illustration 19: The 26-year-old German Rudolf inspects a Birkenau delousing chamber (building no. BW 5a) for sampling. Its wall has an intensive blue hue.

keeping epidemics such as typhus at bay. All rooms in the labour camps were treated in this manner from mid-1942 onwards.

Next, we pool the two data sets together, which is permitted because they both used the *same analytical procedure* – and exclude the samples from the delousing chamber. We then divide the remaining total according to whether they were taken from *alleged homicidal gas chambers*, or not, the latter group being the controls – *i.e.* just samples from rooms such as washrooms, dormitories etc. That division isn’t as simple as it may sound: how to decide if a sample was taken from a “homicidal gas chamber”? We are here arguing that these have never existed in human history, so how can people hope to agree in locating a mere phantom? The answer is that weighty Holo-textbooks have over several decades agreed upon the buildings, or the remains of buildings, where “it” happened. Accordingly, all we have to agree upon is that brickwork is genuinely old from these remains, and sampling can take place. Here is what was found:

Table 5: Mean Cyanide Values of Homicidal Gas Chambers (HGC) and Control Locations, parts per million		
Sampler	Mean HGC value	Mean “Control” Value
Rudolf	3.8 ± 3.7 (n=4)	2.5 ± 3.7 (n=11)
Leuchter	1.6 ± 2.1 (n=22)	1.3 ± 1.2 (n=11)
Combined	1.9 ± 2.4 (n=26)	1.9 ± 2.8 (n=22)

There is *no difference* between these two mean values – strongly suggesting that they have both received the same exposure to hydrogen cyanide

gas (possibly, none at all). Human beings have not in fact died by the thousand writhing in agony as a deadly gas ended their lives, but rather – the rooms were just washrooms and morgues after all, just as the Germans said they were. The Greatest Lie Ever Told bites the dust at this point. *Finito. Terminus est.*

More research is not needed. Case closed.

Iron-bonded cyanide in the walls turns out to be the best memory the human race now has concerning where cyanide gas was and was not used at Auschwitz.

This is the Chemical Key to What Really Happened.

The post-war-reconstructed touristic “gas chamber” that thirty million have filed through has been a focus of much debate. It was built of quite a lot of “original” brick, but with new material added. Originally there were two rooms separated by a wall. The larger of the two rooms – a morgue according to construction blueprints – had a swinging door opening into the furnace room; the smaller room served as a “washroom.” One of its doors opened into the morgue, the other into a hallway connecting the building’s front door to the furnace room. Towards the end of the war, the entire building became an air-raid shelter, and at this point the former morgue, later re-christened as “gas chamber,” acquired its outer door. Comments by Jean-Claude Pressac, for example, who tried to undermine Leuchter’s case by arguing some of the samples he there took were not of old brick, revolved around this issue.

The matter was covered quite thoroughly by a chemist-engineer called Dan Desjardins, who retraced Leuchter’s historic sampling journey. Thanks to him, we are able to have a high degree of confidence on where these samples were taken,²⁰⁰ and which of them belong to the “alleged” homicidal gas chambers. His retracing the steps of Leuchter and Rudolf is important corroboration as regards where the samples came from.

From Mr Desjardins’s careful work, we can also divide Leuchter’s data into samples from exposed locations, worn down by decades of rain and sun, versus those in covered-up locations, *i.e.* with still-intact ceilings. This showed:

Table 6: Comparison of Leuchter’s Data from Sheltered versus Exposed Locations

Sheltered rooms (n=13):	1.77 ± 2.1 ppm
Exposed surfaces (n=20):	1.32 ± 1.6 ppm

²⁰⁰ The “control” samples as numbered in Leuchter’s *Report*, were: Krema 4: 13-19; Krema 5: 21-23, and Krema 1: 28, totalling 11. These samples came from locations which had been a washroom, a chimney room and other rooms not associated by anyone with the use of toxic gases.

Illustration 20: *Germar Rudolf noting the blue hue of a delousing chamber at Auschwitz-Birkenau (building no. BW 5b)*

That so slight a decrease in iron cyanide levels has taken place over four decades is indeed remarkable and accords with what is known about the insolubility and permanence of Iron Blue. Total cyanide has gone down only about thirty percent after half a century of outdoor exposure. That is important by way of warranting the central inference we are here concerned to make, namely that the cyanide levels measured now tell us about what they were back in the 1940s. In the brickwork, it is very permanent.

As regards when exactly the Iron Blue colour is formed, there have been long and complicated web-debates. Let's just say that it's a slow reaction, whereby Mother Nature turned the walls of the little delousing chambers blue once the war was over. I'm not going to reference these debates or comment upon them, because they are hardly relevant, except to say that high or saturated levels of iron cyanide in brickwork will often or usually turn blue. In the analytical procedure, diluted hydrochloric acid will dissolve out all of the cyanide from the brick and mortar, so the form in which it there existed is irrelevant.

In 1989, Jean-Claude Pressac made the allegation²⁰¹ that, what were designed as morgues of these crematoria – for storing corpses before their cremation – had come to be utilized as homicidal gas chambers. This implied that no building had been designed or built in order to be used as a homicidal gas chamber.

²⁰¹ J.-C. Pressac, *Auschwitz: Technique and Operation of the Gas Chambers*, New York 1989: Krema I, p. 151.

Germar Rudolf sampled extensively from the delousing chambers, outside and inside. His mean cyanide levels came out as:

Table 7: Comparison of Rudolf’s Data from Sheltered versus Exposed Locations ²⁰²	
Delousing rooms, inside:	5670 ± 3900 ppm (n=9)
Delousing rooms, outside:	3750 ± 3600 ppm (n=4)

This 35% decrease confirms that weathering over half a century has not greatly removed the large quantities of iron cyanide, apparently bonded right through the wall. That is a valuable conclusion. Leuchter had only managed to take a single sample of delousing chamber wall.²⁰³ Rudolf’s report only had three samples from the “homicidal gas chamber” presumably because Leuchter had taken quite a few.²⁰⁴ Both the Leuchter and Rudolf reports had their weaknesses, and it is only by integrating the two together – which we can do because their methods were identical – that one attains a firm and clear basis for rational debate.

A Chemist in Chains

After reading *The Leuchter Report* in 1989, Germar Rudolf began his investigations in early 1991.²⁰⁵ Then in January 1992, the first 72-page version of his *Report* appeared in Germany – initially for court use only. It was updated and enhanced, then published in July 1993 as a 120-page paperback.²⁰⁶ This historic 1993 German publication –

Das Rudolf Gutachten: Gutachten über die Bildung und Nachweisbarkeit von Cyanidverbindungen in den “Gaskammern” von Auschwitz

was printed by Cromwell Press, London, set up for that purpose since no one else was willing to publish. No British Library seems to have a copy of it, nor have Castle Hill Publishers any copies left.²⁰⁷ It’s not available on Amazon, nor is its name given in *The Rudolf Report* or *Dissecting the Holocaust*, both 2003. But it’s up on the web: (www.vho.org/D/rga1/rga.html).

This early publication terminated Rudolf’s PhD studies in theoretical crystallography, lost him his position at the Max Planck Institute, and

²⁰² G. Rudolf (ed.), *Dissecting, op. cit.* (note 29), Table 3 of “Some Technical and Chemical considerations...” Rudolf’s Chapter, p. 357; more recently: *The Chemistry of Auschwitz* (2020), Table 31, pp. 310-315.

²⁰³ For his difficulties here, see Leuchter, “Inside the Auschwitz Gas chambers.”

²⁰⁴ These came from Krema II morgue.

²⁰⁵ The autobiographical part of *The Rudolf Report* (2003), p. 310; more recent in G. Rudolf, *Hunting Germar Rudolf*, Castle Hill Publishers, Uckfield 2016, p. 32.

²⁰⁶ G. Rudolf, “A Brief History of Forensic Examinations of Auschwitz,” *The Journal of Historical Review*, Vol. 20, No. 2 (March/April 2001), pp. 3-16; www.codoh.com/library/document/2963.

²⁰⁷ That used to be Germar Rudolf’s publishing company, until it was sold to CODOH in 2022.

Illustration 21: Germar Rudolf during a presentation in California in 2000.

brought him into the glare of national publicity, albeit a negative one. It was the seed from which the mighty anthology *Grundlagen* blossomed – with astonishing rapidity, in 1994. His earliest publication was a letter in the German monthly newspaper *Junge Freiheit* in 1990 criticizing “sloppy errors” in *The Leuchter Report*. Leuchter wasn’t that much focused upon chemistry, but one would appreciate hearing Rudolf’s early comments! Around this time (1990), Rudolf tells us “my entire outlook on life became unstable” and “The eternal conflict of good and evil was revived in me.”²⁰⁸ No comment! He experienced the epiphany of his life on 16th August 1991, standing on the remaining roof of Morgue I of Krema II at Birkenau (The Iron Curtain had just dissolved, which made the visit feasible). It there dawned on him that no “holes” in that roof had ever existed. At 26 years of age he had to understand:²⁰⁹

“I had been lied to by all the politicians of the world who to date had failed to assemble even the most minuscule investigation commission.”

Yes indeed...

On March 3rd, 2007, the chemist Germar Rudolf was brought in chains into Mannheim court. Whisper quietly that Germany was the country which more or less invented chemical procedure. Let us have open debate in countries where doubt is not yet a crime. *Science cannot exist where doubt is prohibited*, let’s be clear about that.

²⁰⁸ *The Rudolf Report* (2003), p. 312; *Hunting Germar Rudolf* (2016), p. 31.

²⁰⁹ *Hunting Germar Rudolf* (2016), pp. 33f.

Rudolf had his career terminated and was thrown in jail for publishing this *Report*. At his trial in Mannheim during the winter of 2006/2007, the chemist-in-chains appeared in the courtroom holding a copy of Karl Popper's *Objective Knowledge* and read from it to the Court.²¹⁰ Years later, when he had emerged from jail, he and I then wrote our joint article in 2012.¹⁹³

The philosopher of science Karl Popper argued that any scientific hypothesis had to be in principle falsifiable. In other words, it must be testable in such a way that it is *exposed to the hazard of refutation*. If it doesn't do that, it isn't science! "Germar continued speaking on the subject of science and free scientific inquiry, stressing the philosophy of Karl Popper" – we learned, at Mannheim District Court on December 6th. Prisoner Germar Rudolf was bound hand and foot in chains, having been brought up thus that morning from a windowless catacomb. Prisoner-in-chains Germar Rudolf twice alluded to Karl Popper's book *Objektive Erkenntnis, Objective Knowledge*, which he brought into court with him.

Let's have a couple of quotes from Popper's classic work, *The Open Society and Its Enemies*, appropriate for the day, March 5th, 2007, on which Rudolf's "Thoughtcrime" sentence was handed down:²¹¹

"We must plan for freedom, and not only for security, if for no other reason than that only freedom can make security secure."

"Reason, like science, grows by way of mutual criticism; the only possible way of 'planning' its growth is to develop those institutions that safeguard the freedom of this criticism, that is to say, the freedom of thought."

Clearly, the enemies of the "Open Society," to use Karl Popper's language, will wish to stifle further debate on this matter.

The Early Texts

Never has Chemistry altered History more than with these three reports:

Fred Leuchter, *An Engineering Report...*, Samisdat Publishers Ltd, Toronto, 1988 (36 wall samples analysed by Alpha Analytical Laboratories, in MA);²¹²

²¹⁰ To read these Popper texts see Rudolf's 2012 *Resistance Is Obligatory* (online), chapter B.I.2.

²¹¹ *The Open Society and Its Enemies* (1945), Vol. 2, pp. 182, 214; cf. <https://monoskop.org/log/?p=8124>.

²¹² His 1988-89 Report enjoyed several different titles: *An Engineering Report on the Alleged Execution Gas Chambers at Auschwitz ...*; *Auschwitz: End of the Line...* and *The Leuchter Report: The First Forensic Examination of Auschwitz*. Before going to jail, Germar Rudolf produced a *Critical Edition of The Leuchter Reports*, at www.holocausthandbooks.com/dl/16-tlr.pdf.

Germar Rudolf, *Das Rudolf Gutachten...*, Cromwell Press, London, 1993 (29 wall samples analysed by Fresenius Institute, in Hessen):

John Clive Ball, *The Ball Report*,²¹³ Ball Resource Services Ltd, Delta, BC, Canada, 1993 (6 samples analysed by an unknown laboratory).²¹⁴

No London library has any of these,²¹⁵ and their publishers are all gone: Samisdat Publishers Ltd. (Leuchter), Cromwell Press (Rudolf) and Ball Resource Services Ltd, Delta B.C., as likewise Mr Ball has vanished,²¹⁶ but his full Report is up on Rudolf's website.

The Turquoise Walls of Birkenau

The engineer Friedrich Berg spent a few days strolling round the remains of the Birkenau Camp at Auschwitz in 1988. He was taken by “how there simply was nothing there to cause me to believe it was not superbly designed and built and run to keep people alive and healthy under extremely difficult conditions.” The intense blue of the delousing chamber walls was, he came to realize, identical with the Prussian Blue in his paint-tube! Here is his comment:²¹⁷

“The blue staining of the stucco and bricks in these photos is merely a subdued approximation of the extremely intense blue staining which is actually there. In reality, the blue staining matches the intense colour of Prussian blue pigment which is a well-known, synthetic dye made by reacting hydrocyanic acid with iron oxide. The same chemical process has obviously taken place here between the cyanide gas used in delousing and the iron oxide in red clay bricks. The staining of the stucco on the interior walls follows the outlines of the underlying bricks behind the stucco. Because of the erratic quality of the bricks, some bricks yield far more Prussian blue pigment than others—hence the disparity in the intensities of the staining from brick to brick. What is especially surprising is the fact that the exterior walls show the same staining even after more than forty years of weathering. And, what is even more sur-

²¹³ J.C. Ball had a degree in geology and worked as a mineral exploration geologist.

²¹⁴ The chemical study done in Krakow (see note 197) was published with the unclear title: “A Study of the Cyanide Compound Contents in the Walls of the Gas Chambers in the Former Auschwitz and Birkenau Concentration Camps” It was not anything of the kind: the term “gas chamber” here should properly allude to the “*Gaskammer*” rooms in the design plans, *i.e.* the delousing chambers, no account of which was there published.

²¹⁵ The British Library once had a copy of *The Leuchter Report*, now “lost.” But, there is a copy in the Bodleian at Oxford.

²¹⁶ Samisdat Publishers was run by Ernst Zündel while in Canada. He left Canada in 1999 and died in 2017; Cromwell Press existed only for a few years in the 1990s; incoming mail was handled by Tony Hancock of Hove, East Sussex, who died in 2012; Ball Resource Services was operated by John C. Ball, who had his career as a mineral exploration geologist destroyed due to his revisionist writings; he changed his name, his residence and his occupation in the mid-2000s.

²¹⁷ Quoted on the CODOH Forum, “Cyanide Chemistry at Auschwitz” thread, p. 1.

prising and important is the fact that just a hundred yards away at Kremas 2 and 3, the exact same brick shows absolutely NO trace of blue staining anywhere—even in the cellar room remains where supposedly cyanide was used on a vast scale for mass murder. There is absolutely NO blue staining there anywhere.”

So that’s what $(\text{Fe}_4[\text{Fe}(\text{CN})_6]_3)$ looks like! Chemically, this ferric ferrocyanide is a compound that combines both the ferric and ferrous ions (3- and 2-valent iron). Let’s note Mr Berg’s comment about the way in which the contours of the blue-stained plaster indoors matches the wall’s brick pattern as it is visible from the outside.

I asked Mr Berg if he knew anything about the sites where Leuchter had taken his samples, and he replied:

“On many of the walls at the Leichenkeller and at the delousing stations, one could clearly see scratches in the walls which I suspected were from Leuchter’s sampling of the walls—but, I could not be sure of that. Those scratches are visible in some of my photos of the delousing station walls—in some of the most intensely blue areas which suggests some bias on the part of the scratchers.”

The latter point is used in certain sceptical arguments, which we may come onto. Here is a further comment from Mr Berg about this blue hue (personal communication):

“One of the most famous and special pigments is Prussian Blue which has an extraordinarily intense, unique quality. No other blue pigment can match it. You can go to any art supply store and purchase some Prussian Blue for yourself and you will quickly see why—and then compare it also with any other blue paint or pigment. When I actually saw the blue staining of the delousing station walls, exterior as well as interior, I knew this could only have been from the cyanide molecule that is Prussian blue.”

Here is a chemical comment from Rudolf:²¹⁸

“The fact is that the walls of the delousing buildings are saturated through and through with hydrogen cyanide compounds, of which only a part becomes visible as iron blue, predominantly in damp areas and at the surfaces due to accumulation processes.”

It may be a surface reaction which produces the Iron Blue, whereas cyanide gas eagerly seeps through the brickwork – the mortar of the brickwork is spongy and porous. The blue patterns on the outside of the delousing chamber are similar to those within.

One cannot improve upon David Cole’s no-nonsense report on the same subject:²¹⁹

²¹⁸ *Dissecting the Holocaust* (note 29), p. 359.

“There is heavy blue staining on the walls both inside the delousing chambers, INSIDE the hallways between the delousing chambers, and OUTSIDE the building, on the EXTERIOR WALLS of the delousing facilities. However, the interiors of the Krema 1 gas chamber (Auschwitz Main Camp) and the Krema 2 and 3 gas chambers (Auschwitz-Birkenau), where hundreds of thousands if not millions of people are said to have been gassed, show only minute traces of Zyklon B and no blue staining. Also, the Auschwitz camp barracks and offices, which were fumigated with the Zyklon B from time to time, show similarly minute traces of the gas, and no blue staining.

(1) What explanation can there be for the low levels of traces, and absence of blue staining, in the ‘homicidal gas chambers’?

(2) If one suggests that the Zyklon traces in the homicidal gas chambers have been ‘weathered away,’ how can one explain the traces and staining on the OUTSIDE of the delousing complexes... traces which have NOT been weathered away after fifty years?”

Debate over Leuchter

The scientific method is used if one is not sure about an answer and wishes to be guided by putting questions to Nature. It can *only* be used if one is not sure in advance of the correct answer. The experiment aims to test Nature and find an answer. Yet turning to the Nizkor website (a site which defends the Polish chemical investigation), we find it complaining that Leuchter,²²⁰ by taking his samples, committed *sacrilege*, that he *profaned and violated* the sanctity of this site by his act of “desecration.” Unperturbed, it must be our business to ensure that technical-scientific considerations are applied to this debate and become its fulcrum, refusing to be derailed by such endeavours to ethically-damn persons of politically “incorrect” opinion.

When Fred Leuchter secretly took his wall samples back in 1988, this was a pre-Pressac era, so to speak. Books about “the Holocaust” were all *stories*, horror-tales with fairly unspecified physical locations, as if describing some Hades-type Underworld.²²¹ Amongst the old ruins, what was a “gas chamber”? When Leuchter arrived with hammer and chisel, who was there to tell him? Had any book or expert explained that the delousing

²¹⁹ David Cole’s “Key Questions re Auschwitz,” or “Forty-Six Important Unanswered Questions Regarding the Nazi Gas Chambers” (www.codoh.com/library/document/987/) begin with the chemical issue, making it central, just as I do here, only I give measured concentrations, whereas he just alludes to the blue hue.

²²⁰ www.nizkor.org/faqs/leuchter/

²²¹ See, eg, *Imagining the Holocaust* by Daniel Schwartz (1999), for more of this.

chambers were marked in the well-hidden design plans as “*Gaskammer*,” *i.e.* gas chambers? Hardly!²²²

Leuchter was able to peruse the Auschwitz Camp archives during his historic visit of February 1988.²²³

“I obtained information from the Museum as to what areas were alleged gas chambers in their archives.”

Following the lead of Dr Robert Faurisson, Leuchter was surely one of the first persons since World War II to really *see* these buildings as they had functioned (and not as they are today claimed and commonly believed to have functioned). No doubt, this owed much to the weekend he had spent with Zündel and Faurisson in Toronto before the visit, poring over maps and plans.²²⁴ Upon returning home, he and his draughtsman prepared seven or eight precision-drawn maps in March of 1988, demonstrating the locations of 31 of his samples. He handed over these original diagrams to the judge at the Zündel Trial in April 1988, held in Toronto, together with his measurements, co-ordinates of the sample sites, and his travel log for the journey, and they have never been seen since. For legal reasons, the court refused to allow them to be introduced as an exhibit.²²⁵

Fred Leuchter went to Poland with a team – his wife Carolyn, his draftsman Howard Miller, cinematographer Jürgen Neumann, and Polish language interpreter Tijudar Rudolph. Historian David Irving commented:²²⁶

“I myself would, admittedly, have preferred to see more rigorous methods used in identifying and certifying the samples taken for analysis, but I accept without reservation the difficulties that the examining team faced on location in what is now Poland: chiselling out the samples from the hallowed site under the very noses of the new camp guards. The video tapes made simultaneously by the team – which I have studied – provide compelling visual evidence of the scrupulous methods that they used.”

and Daniel Desjardins concurred.²²⁷

²²⁷ Daniel D. Desjardins, “Kenneth Stern’s Critique of The Leuchter Report: A Critical Analysis,” www.codoh.com/library/document/708/.

“[O]ne can readily ascertain what manner of samples Fred Leuchter extracted from which archaeologic locations by reviewing the on-site, real-time video of the collection process.”

Faurisson, writing his Introduction to that *Report*, made a fairly obvious comment:²²⁸

“The extremely low levels of cyanide found in some crematoria was likely, in my opinion, to have resulted from disinfection of the premises during the war.”

– echoing what Fred Leuchter had written, viz.:²²⁹

“The small quantities [of cyanide] detected would indicate that at some point these buildings were deloused with Zyklon B – as were all the buildings at all these facilities.”

But could he or Leuchter be sure of that? After all, the French pharmacist-cum-Auschwitz expert Jean-Claude Pressac *denied* that any general fumigation of the Krema rooms with Zyklon B had been carried out.²³⁰ Surely, he was wrong. One takes the point that Zyklon B does not act as a disinfectant, it only kills bugs, not bacteria, but, as Paul Grubach observed in his rebuttal of Pressac’s critique,²³¹ the German word “*Desinfektion*” for disinfection was clearly used in regard to delousing (or more general disinfestation).

As regards Zyklon B being used to fumigate rooms during World War II, an official German report explained that, in the autumn-winter months of 1940/41,

“[...] millions and millions of cubic metres of lodging areas had to be rid of bugs by gassing with Zyklon prussic acid, to make secure for our soldiers the peace in winter they deserved.”²³²

A wartime German document cited at Nuremberg stated that Zyklon B was to be used for the fumigation of storerooms, etc.²³³ This was its *second major function* – its primary application being the delousing of clothing and bedding by placing them inside the “*Gaskammer*.”

(Praktische Erfahrungen des Kriegswinters 1940/41 und ihre exakte Nachprüfung),” *Zeitschrift für hygienische Zoologie und Schädlingsbekämpfung* (1941), p. 134. Gerhard Peters is the author of the classic study of prussic acid published in 1933 (*Blausäure zur Schädlingsbekämpfung*, F. Enke Verlag, Stuttgart 1933); he was general director of DEGESCH, the company that distributed Zyklon B.

²³³ Nuremberg Document NI-9098, referred to by Paul Grubach, “The Leuchter Report Vindicated,” *op. cit.* (note 226), p. 463.

We sense the originality of Leuchter's perception from his cross-examination at the Zündel Trial,²³⁴ where he explained to the startled Court the different chambers and how they would have worked, *e.g.*, the ventilation system involved, and the open door between the morgue and crematorium at "Krema I." That's why these maps matter; they document that remarkable act of perception.²³⁵ Let us hope that, in his words, "Time and reason will vindicate the Leuchter Report."²³⁶

How swiftly did events unfold! On 3 February 1988, Robert Faurisson paid his first visit to Fred Leuchter; on 26 February, Leuchter arrived at Auschwitz; on 23 March, Leuchter had returned back home and drew up his maps or design-plans of the "Kremas" showing where he had sampled sites, then on 20 April, Leuchter testified at the Zündel Trial. Later that year the "Samisdat" edition of the Report was published by Zündel, then the next year Irving's "Focal Point" publishing house produced its copy.

As the 20th anniversary of the *Leuchter Report* drew near, I was wondering as to whether the world would take any notice of it? It turned out that I was it, so to speak, as I became ejected from my College amidst loud media damnation and scorn... On Tuesday, 22nd of April, my College UCL put up its notice that I had been thrown out, then I received a letter the next day dated 21st – as an anniversary it was strangely close!

In 1988, the analytical chemist Dr J. Roth, who had analysed Leuchter's samples at Alpha Analytical Laboratories, gave testimony about them at the Zündel Trial – then some years later, he strove to backtrack by alleging that Leuchter's sampling procedure had somehow been invalid. This was because, he explained, any trace of cyanide remaining would be only on the very top surface of the wall:²³⁷

"Cyanide is a surface reaction. It's probably not going to penetrate more than 10 microns. Human hair is 100 microns in diameter. [...] If you're going to go look for it, you're going to look on the surface only. There's no reason to go deep, because it's not going to be there."

What tortured logic! This testimony of Dr Roth was presented as damning evidence at the David Irving libel suit.²³⁸ The prosecution attorney (a Mr Rampton) quoted the above words of Roth, and then added, derisively:

"Despite the absolutely hopeless methodology that Fred Leuchter used to obtain his samples, the fact is that the sample from the Leichenkeller

²³⁸ www.nizkor.org/ftp.cgi/people/i/irving.david/libel.suit/transcripts/day008.28

in crematorium 3 still produced traces of hydrogen cyanide, did it not? [...]

A. [Irving] Dr Roth says that it is less than one tenth the thickness of a human hair that the cyanide will penetrate into the brickwork.

Q. Exactly. If you are going to do the test scientifically, you need carefully to scratch or scrape the surface and put it in a plastic bag, take it back and have it analysed. What Fred Leuchter did was to hack great lumps out of the fabric, did he not? [...]

A. My Lord, we have photographs taken of the outside of some of these buildings, I emphasize the word 'outside,' and the blue stain from the cyanide has gone right through the brickwork, inch after inch after inch. You can see the outside of the building is stained blue with a stain that turns out to be Prussian blue from the cyanide that has come right through the brickwork.

Q. That is the delousing chamber, is it?

A.: The delousing chamber, my Lord, yes and also a gas chamber at Stutthorf [Stutthof] outside Dansig [Danzig...]

Q. You have never publicly acknowledged any of these reports, critiques and so on which cast doubt, sometimes 100 per cent doubt, on your utterances about the gas chambers at Auschwitz.

A. I do not agree. I think that the central chemical conclusions of the Leuchter report, although flawed, have now been substantially confirmed by a whole string of other reports in the meantime, both the one kept secret by the authorities and the earlier 1945 one, and the Gelmar [sic] Rudolf one, and other reports that have been conducted since then. Obviously the numbers do not exactly match, and you would not expect them to, but the broad trend is the same, very large quantities in the fumigation chambers, cyanide residues and not the quantities you would expect in the buildings where allegedly hundreds of thousands of people have been gassed to death with cyanide."

The historian Irving points out how the chemist Roth was in error. Roth's "ten microns" of penetration is pure baloney.²³⁹ The Irving trial endeavoured to highlight the chemical evidence, however no chemist was present, which would have helped to reach a more correct answer (we remind ourselves that Rudolf's *Report* had not yet been published in English). By way of refuting Roth's claim, we quote Rudolf's conclusion that "hydrogen cyanide can rather easily reach deep layers of plaster and mortar."²⁴⁰

²³⁹ Rudolf described Roth's comment as "a particularly sad chapter": G. Rudolf (ed.), *Dissecting the Holocaust*, (note 29), p. 360.

²⁴⁰ *The Rudolf Report* (2003) and *Chemistry of Auschwitz* (2020), each in Chapter 8.4.3.

“The Killing Was Easy”

Convict Rudolf Höss was “given an affidavit which he corrected and ultimately signed” on 5 April 1946. In this he confessed:²⁴¹

“So when I set up the extermination building at Auschwitz, I used Zyklon B, which was a crystallized Prussic acid which we dropped into the death chamber from a small opening. It took from 3 to 15 minutes to kill the people in the death chamber depending upon climatic conditions. We knew when the people were dead because their screaming stopped. We usually waited about one-half hour before we opened the doors and removed the bodies.”

His camp could exterminate 10,000 a day, he averred on 9 April, when psychologist Dr Gilbert visited him in his cell. The two big Kremas, Höss claimed, could take 2,000 at a time.²⁴² Höss explained:²⁴³

“The killing was easy – you didn’t even need guards to drive them into the chambers; they just went in to take showers and, instead of water, we turned on poison gas.”

Höss wrote out notes in response to questions put to him while he was locked up at Nuremberg: two thousand naked people could be persuaded to march into a relatively small chamber, he explained, because the gas chamber “had been prepared to look like a washroom – that is to say, showers and pipes were installed throughout, water drainage channels etc.” Once they were all inside, the doors were closed,

*“and simultaneously the gas was forced in from above through a special aperture. It was Zyklon B gas, cyanide acid in the form of crystals, which vaporized immediately, that is to say it took effect immediately upon coming into contact with oxygen. The people were dazed already on taking their first breath [...].”*²⁴⁴

None of this can have happened; it’s not physically possible. Höss was in jail after being severely tortured for three days and nights, had been the star of the Nuremberg trial with his confession, and he did repeat his story and write it up on various subsequent occasions, re-telling it to the prison psychologist Dr Gilbert, who reckoned it was a truthful account and thus wrote it up in his Diary. It does make a haunting story. As Commandant of the camp, he should know, shouldn’t he? “Throughout all these years, I never

²⁴¹ Nuremberg Document 3868-PS; see C. Mattogno, *Commandant of Auschwitz* (2020), pp. 66, 375.

²⁴² This number shows up in his early “confession,” April 5, 1946, 3868-PS (IMT, Vol. 33, p. 277); in a statement of May 20, 1946, he reduced that to 1,500, see note 249.

²⁴³ G. Gilbert, *Nuremberg Diary* (1947), pp. 249f.; quoted from R.J. van Pelt, *The Case for Auschwitz: Evidence from the Irving Trial*, Indiana U.P., 2002, p. 251.

²⁴⁴ Van Pelt, *ibid.*, p. 252. Gilbert published this text by Höss only in the later German edition of his book: G. Gilbert, *Nürnberger Tagebuch* (1962), pp. 448f.

came across a single case of a person coming out of the gas chambers while still alive,” he added.²⁴⁴

These initial accounts all sound as if Zyklon B were some kind of gas, where – whoosh! – it is let in, and the inmates all start gasping. While awaiting his trial and eventual execution in Poland, former Auschwitz Camp commander Rudolf Höss wrote about the alleged “gas chamber” in the old crematorium at the Main Camp that “some holes had been pierced in the ceiling through which the gas could be discharged.”²⁴⁵ Regarding the large crematoria in Birkenau, Höss claimed that there the gas crystals were poured through vents in the ceiling, falling “down a shaft that led to the floor.” Then:²⁴⁶

“those who were standing nearest to the induction vents were killed at once. [...] After twenty minutes at the latest no movement could be discerned. [...] The victims became unconscious after a few minutes, according to their distance from the intake shaft.”

The different versions Höss claimed for the different types of alleged “gas chambers” at Auschwitz have in common the claimed twenty-minute period needed to kill two thousand people, who had believed they were having a shower – after which the doors were re-opened and corpses were pulled out. None of Höss’s stories had any heater to warm the Zyklon B in order to accelerate the evaporation (it’s not a crystal but a liquid, adsorbed onto a gypsum substrate, and it boils at 25.7° centigrade), nor any fan to dissipate and circulate the deadly gas. From early accounts of just turning on “the poison gas,” his stories evolve into having a column – of which no trace remains – down which the “gas crystals” were poured. Thus, pipes-disguised-as-showers *metamorphosed* into roof hatches and columns in this story.

Zyklon B pellets were designed to be “safe” for human use. That meant slow release, over some two hours at normal room temperature. If Höss’s “special commandos” went in after about half an hour and started removing gold rings etc., as he always recalled, this would be during the peak emission of hydrogen cyanide by Zyklon B. His accounts don’t mention total-fitting protective suits to protect them, *au contraire*, they would hardly bother even to wear gas masks, he recalled.²⁴⁷ These are fairy tales from

²⁴⁵ In an essay titled “Die ‘Endlösung Der Judenfrage’ im KL Auschwitz” which Höss wrote while incarcerated in Krakow after his extradition to Poland on May 25th, 1946; here quoted acc. to Jadwiga Bezwińska, Danuta Czech, *KL Auschwitz Seen by the SS: Höss, Broad, Kremer, Howard Fertig*, New York 1984, p. 114.

²⁴⁶ *Ibid.*, pp. 134f. You can see these imaginary shafts in all-too-realistic animation, in Denierbud’s video *Auschwitz the Surprising Hidden Truth* (www.HolocaustHandbooks.com). Maybe Denierbud should have told viewers that these are purely conjectural, not found in any German buildings or design-plans.

²⁴⁷ Höss interrogated by U.S. investigators in Nuremberg on April 2, 1946 (Mendelsohn 1982, p. 113):

Hell, which come unstuck over the slow rate at which the hydrogen cyanide gas would have percolated through the chamber. (Its spread would happen primarily through thermal and forced convection caused by the victims' body temperatures and movements – diffusion would be slow and negligible in such a scenario.)

Höss confessed to killing 2½ million. “That is something people will talk about for a thousand years,” Hans Frank, former governor-general of Poland, said to Dr Gilbert, prison psychologist. But this gargantuan mass murder was not planned: The holes “knocked... in the ceiling” sound rather leaky for a deadly poison and hardly planned in advance. Would not the careful, methodical Germans have first visited America, where cyanide executions were being practiced, in order to see how to do it? There, 3,200 ppm of hydrogen cyanide is required for death, and they have never used gas pellets as per Zyklon B. Chambers have to be constructed with the *purpose of performing* cyanide executions – otherwise the process is fatal to the executioners; that was the crux of Fred Leuchter's message.

No one at Nuremberg discussed whether the Zyklon B canisters were for delousing of mattresses or gassing Jews. Pressac was the first mainstream historian to do that. Rudolf Höss's testimony never mentioned *the gas chambers of Auschwitz* – i.e., the real gas chambers for fumigation, labelled as “*Gaskammer*” in the design plans (as Pressac pointed out in 1989).

Let's try a calculation. Morgue 1 of Krema II, one of the alleged homicidal gas chambers, had 430 cubic metres of air, if crammed full of people,²⁴⁸ and suppose that 7 kilos of cyanide was released – compatible with what Höss claimed, the only person to ever make statements in this regard.²⁴⁹ That would give a final concentration of 16 grams per cubic metre, and that is about 1.4% by volume – *after all* the hydrogen cyanide had evaporated from the carrier, which can take an hour or more.²⁵⁰ But in or-

“*Q. But was not it quite dangerous work for these inmates to go into these chambers and work among the bodies and among the gas fumes?*”

A. No.

Q. Did they carry gas masks?

A. They had some, but they did not need them, as nothing ever happened.”

²⁴⁸ The room was some 2.4 m high, 7 m wide, 30 m long, hence 504 m³, minus the volume of the victims, hence for 1,500 victims (at 50 kg = 50 litres each on average, if assuming children in the mix) roughly (504 m³ – 1,500 × 0.05 m³) 430 m³.

²⁴⁹ Höss spoke of 5 to 7 one-kg cans, with 7 kg applying to the large crematoria (Kremas II & III), and at cold and wet weather even 2-3 cans more, used to execute 1,500 victims; cf. Rudolf, *The Chemistry of Auschwitz* (2020), p. 249.

²⁵⁰ 7,000 g/430 m³ = 16.3 g/m³; for the conversion of percentage by mass to percentage by volume see Rudolf, *The Chemistry of Auschwitz*, p. 235. Pressac claims 1% by volume was used during the gassings, and claims (without giving a source) that four to six one-kilo cans of Zyklon B were poured into Krema II (Pressac 1989, p. 253). This would correspond to complete vaporizing of the gas, and I don't reckon he should be allowed this! After twenty minutes e.g. only 30-40% of the gas would have been released at normal

der to quickly reach lethal poison-gas concentrations in the entire room – long before all the poison has evaporated from the gypsum pellets – far more Zyklon B would have had to be used. Yet that, in turn, would have brought the poison-gas concentration near the introduction location dangerously close or even beyond the explosive limit of hydrogen cyanide in air (5.6%). So, there is a ceiling on the amount of Zyklon B permitted, to avoid a risk of explosion, and this tends to knock on the head any calculation you may try to do in getting a lethal level of cyanide to all corners of the chamber in the ultra-short timescale recalled by Höss.

Helpful Figures for Hydrogen-Cyanide Concentrations²⁵¹

- 100 ppm – averred at the Irving Trial in London to be a mortal level;²⁵²
- 300 ppm – a mortal level;
- 3,200 ppm – US execution chamber level used;
- 8,000 ppm – delousing chamber (see below)
- 56,000 ppm – explosive threshold (5.6%).

The Impossible “Human Gas Chambers”

As already mentioned, while in Polish custody after the Nuremberg trial, Rudolf Höss expanded on the theme of how the Zyklon B had been inserted into the morgues of the newly erected large Crematoria II and III at Auschwitz-Birkenau, which he claimed were abused as homicidal “gas chambers” [bad style in original text].²⁵³

“The door would now be quickly screwed up [i.e. sealed tight] and the gas immediately discharged by the waiting disinfectors through vents in the ceilings of the gas-chambers, down a shaft that led to the floor.”

This is similar to the testimony of Michał Kula, a former inmate who worked in the camp’s metalworking shop. He had testified in June 1945, hence more than a year before Höss wrote the above quote. From Höss’s various writings it can be gleaned that he was given numerous testimonies to read while in Polish custody, and we surmise that Kula’s tale inspired Höss’s fantasy. At any rate, here is what Kula claimed for these Kremas II and III.²⁵⁴

room temperature (on the evaporation characteristics see Rudolf, *ibid.*, pp. 236-240).

Höss is the primary source of the horror story, and authors should not feel at liberty to embroider it as they wish.

²⁵¹ These are volume ratios, but if you prefer a weight-ratio: 1,000 ppm \approx 1.1 g/m³ (depending on temperature, air pressure and humidity).

²⁵² Van Pelt, *The Case for Auschwitz*, p. 615.

²⁵³ Bezwińska/Czech, *KL Auschwitz Seen by the SS*, p. 134.

²⁵⁴ On two separate occasions, Kula gave two different descriptions of these columns; see G. Rudolf, *Chemistry of Auschwitz* (2020), pp. 149-151; he also testified to having seen the unloading of victims from a truck down a ski jump directly into the gas chamber (*ibid.*, p. 151), as well as green gassed bodies (*ibid.*, p. 229), whereas any cyanide-gassed

Illustration 22a-c: Mock-up drawings of alleged Zyklon-B columns: left: G. Rudolf (*Chemistry of Auschwitz* (2017), p. 150); centre: mock-up by R.J. van Pelt (*ibid.*, p. 152); right: M. van Alstine (online). These images are not based upon any German design plans or apparatus, but solely upon some ‘survivor’ testimonies.

“[...] wire-mesh columns to pour the contents of the Zyklon cans into the gas chambers were manufactured in the metal workshop.”

His version had a wire-mesh container holding the granules, which was raised and lowered inside a double-layered wire-mesh column as required. Some decades later, Filip Müller imaginatively recalled a spiral design, of “hollow pillars made of sheet metal. They were perforated at regular intervals and inside them a spiral ran from top to bottom in order to ensure as even a distribution of the granular crystals as possible.”²⁵⁵

More recently, Dr Richard Green has averred that a wire-mesh bucket was suspended near the top of a column, containing the granules, which could be pulled out by the roof-hole, whenever enough gas had been released.²⁵⁶ In the post-Leuchter era, exterminists want to keep the levels of

bodies would be a pink-red hue. For an exterminist view see: Gutman and Berenbaum, *Anatomy of the Auschwitz Death Camp* (1994), p. 167.

²⁵⁵ Filip Müller, *Eyewitness Auschwitz: Three Years in the Gas Chambers*, NY 1979, pp. 60f.

²⁵⁶ For the removable cyanide tins, Green alludes to: Jamie McCarthy, “Zyklon Introduction

cyanide in the “gas chambers” as low as possible, because of the very low levels which Leuchter found in his wall samples. Green wants to have the SS man perched on the roof to remove the Zyklon granules while still fizzing with cyanide! That sounds like moving the goalposts.

No one has any photos or design-plans of these columns, nor are there any historic holes in the roof where they were once (supposedly) fixed. At his trial, David Irving informed Professor van Pelt, his adversary, concerning the Krema II morgue:²⁵⁷

“There were never any holes in that roof. There are no holes in that roof. There were never four holes through that roof. The concrete evidence is still there. You yourself have stood on that roof and looked for those holes and not found them.”

Presented with this clear proof, van Pelt began wittering about how the retreating Nazis had, he presumed, cemented over the ceiling holes.²⁵⁸

The arguments which Irving attempted to use at his trial were essentially winnable, if only he had had some chemical-scientific experts to support him. Krema II morgue was *thirty metres long*. We are here in a rather untestable, unverifiable realm, but with a lot of frantic people thrashing around maybe the gas would have spread out in something like half an hour. The bare minimum here would be, say, 300 ppm for lethal action. This violates the Höss story – and various others, which have times shorter than half an hour, for everyone to be dead.²⁵⁹

In the meantime, all of the cyanide would have been released, from five to ten kilos used, and that means, yes, there now is a risk of explosion, and a single spark produced by the hobnail boots of the SS guards – entering to remove the corpses – is liable to blow up the place.²⁶⁰ Does this really sound like German technology?

Columns” 2005, www.holocaust-history.org/auschwitz/intro-columns.

²⁵⁷ On Tuesday, 25th January 2000, at the Royal Courts of Justice in The Strand, London: van Pelt, *The Case for Auschwitz*, p. 463.

²⁵⁸ *Ibid.*, pp. 475, 486.

²⁵⁹ E.g., Professor Zimmerman, writing in 2002, reckoned that groups of 1500 people were gassed in “no more than 20 minutes each” (*Holocaust Denial*, p. 364). Clearly, only the claims by SS physicians who allegedly supervised the killings should be taken seriously, as only they could have known: and they averred that it took not more than 5 minutes (see Rudolf, *The Chemistry of Auschwitz* (2020), Chapter 7.3.1.3.2., pp. 252-259).

²⁶⁰ The main door of the morgue-claimed-gas-chamber of Krema I in the Auschwitz Main Camp opened into a cremation room with burning furnaces. The *Leuchter Report* pointed out this impossibility for a “gas chamber.” All US execution gas chambers using cyanide have to be explosion-proof. No wonder Franciszek Piper wanted to have this door sealed shut when “this room that had served as a mortuary was converted into a gas chamber” in 1942 (Gutman/Berenbaum, p. 159) – well he can’t, because it wasn’t. The rather tiny, outside-access door was not added until 1944 when it was converted into an air-raid shelter (*Chemistry of Auschwitz* (2020), pp. 95f.; G. Rudolf (ed.), *Dissecting*, *op. cit.* (note 29), p. 334). The door to the cremation room was the only one in this room, apart from the flimsy wooden washroom door.

Or, suppose we stay within Höss's twenty-minute period and we have – as Richard Green wants us to believe – the SS guards on the roof pulling up their tins of Zyklon B once “enough” has been released, after about twenty minutes. One would then have, I suggest, a proportion of the victims still alive and conscious, while a sizeable fraction would be unconscious and liable to recover. We recall the nutty chemistry promoted at the Irving trial, whereby the judge was advised by Professor van Pelt, “because the gas chambers were operated at a low (but lethal) hydrocyanic acid concentration of 100 ppm, there was no danger of explosion”²⁶¹ – and his authority was an anonymous “expert” (who did not have the decency to give his name) concerning “the 100 ppm operating concentration.” The delousing chambers had an “operating concentration” at which they worked. However, this is a meaningless concept within the alleged homicidal gas-sing scenario, because of the gradient in gas concentration from the granules out to the far corners of the chamber. One would hardly expect a lethal concentration be established throughout the chamber in twenty minutes.

Delousing Technology

Meanwhile, back in the real world, a routine process went on in the camps using the delousing *gas chambers*. New arrivals would strip off their clothes, which would be put into the *Gaskammer*; then they would have a shower and maybe had all their hair shaved off. After a couple of hours, the clothes would come back, bug-free. This technology enjoyed two years of intensive use, from 1942, when the great typhus epidemics struck, until 1944, when DDT started to be used and largely replaced hydrogen cyanide for eliminating the body louse that bore the typhus pathogen. A typical gas chamber would have a floor-space of some five square metres. A disinfection cycle could last from one to several hours, depending on whether it was just clothing to be deloused, or thick mattresses. The manufacturers were proud of their efficient and scientifically-designed functioning, as apparent in this quote from an expert from Degesch, the licensing company.²⁶²

“[...] *this design has the greatest significance on the mass application of hydrocyanic acid fumigation facilities for mass delousing since it is only with such an installation that dependable results can be achieved in unusually short periods.*”

²⁶¹ Van Pelt, *The Case for Auschwitz*, p. 388.

²⁶² Gerhard Peters, “The Highly Effective Gases and Vapors in the Field of Pest Control,” translated from German original (*Die hochwirksamen Gase und Dämpfe in der Schädlingsbekämpfung*, F. Enke Verlag, Stuttgart 1942) in: F.P. Berg, “Zyklon B and the German Delousing Chambers” *op. cit.* (note 100), p. 76.

Illustration 23: *The inside of one of the four Degesch delousing chambers as it can be seen today in Dachau. At the top, the can opener controlled from the outside. The Zyklon pellets slid through the pipe into a wire-mesh basket at the bottom, through which warm air was conducted by the heater/fan unit (below the can opener).*

The design operated at ten grams per cubic metre of hydrogen cyanide for the delousing, equivalent to around 9,000 parts per million. All steps, including opening the tin of Zyklon B, were done remotely from outside the sealed apparatus, so no gas masks were normally required. Preheated circulated air was blown over the granules, spread out in a basket in a layer one centimetre thick, after which most of the cyanide would have evaporated after half an hour.²⁶³

The air needed to be about ten degrees above the boiling point of hydrogen cyanide (25.7°C) for it to vaporize quickly (also to increase bug metabolism). Efficient fans circulated that cyanide gas around the chamber. After an hour or two, this lethal gas mixture was force-vented up a pipe and into the atmosphere. Then the chamber was ventilated with fresh air for a quarter of an hour, after which it was safe to open. The clothing or bedding was hung up outdoors to aerate, then returned to the owners.

²⁶³ Gerhard Peters (1933), *op. cit.* (note 232).

Visitors to Dachau can inspect these chambers.²⁶⁴

“At Dachau today, which everyone can visit, there are four DEGESCH standard delousing chambers in the crematorium building which everyone can see—and which, in at least one case, one can actually walk through. As one does that, one can clearly see all of the internal features such as the heating register and the piping to and from the automatic can opener. On the tops of each of the four ‘disinfection’ chambers one can see the respective blowers and some of the circulation (Kreislauf) piping. Pictures that one can sometimes find from various sources often show some of those features as well. But without the all-important explanation that these chambers used Zyklon B to keep people alive and nothing more.”

Rudolf Höss issued an order on 12 August 1942 that, when a disinfestation chamber was opened to the air, members of the SS not wearing gas masks must keep at least 45 feet away from it for at least five hours.²⁶⁵ So this is, as it were, the real Höss speaking, before torture – one who was proud of his camp. This shows us the process which really happened, safe and efficiently designed, as one would expect from the Germans – in contrast to the hallucinatory nightmare today imagined by the world.

Microwave disinfestation technology was installed in the Auschwitz Camp during the summer of 1944 and proved to be very effective. Rudolf describes this as “the world’s first technological predecessor to the microwave ovens in common use today.”²⁶⁶ It was far more efficient, and only took three minutes per sack of clothing.

²⁶⁴ Letter from Friedrich Berg, quoted with permission.

²⁶⁵ This referred to a chamber *without* the efficient Degesch circulation device. See Pressac (1989), p. 201; G. Rudolf (ed.), *Dissecting, op. cit.* (note 29), p. 76.

²⁶⁶ *The Rudolf Report* (2003), and *Chemistry of Auschwitz* (2020), Section 5.2.3.6

8. Holo-Religion

“The Holocaust became the new Western religion. Unfortunately, it is the most sinister religion known to man. It is a license to kill, to flatten, to nuke, to wipe, to rape, to loot and to ethnically cleanse. It made vengeance and revenge into a Western value. However, far more disconcerting is the fact that it robs humanity of its heritage, it is there to stop us from looking into our past with dignity. Holocaust religion robs humanity of its humanism.” —Gilad Atzmon

More volumes are published about Auschwitz than any other place on Earth. A global, compulsory new religion is seizing a hold in all corners of the Earth, pushing out the tired old religions of yesteryear, in which:

- **Auschwitz** = Golgotha. The sacrifice of the Christ-god at Calvary has been eclipsed by the suffering of the Jewish people at Auschwitz.
- **The Saints** = Holocaust survivors.
- **Belief in Miracles** = belief in the plan to exterminate European Jews despite the complete, total absence of any documentary evidence whatsoever; and belief in a weapon of mass destruction whose *primary characteristic* is its physical impossibility.
- **Original sin** = the guilt of what we did/allowed to happen to God’s Chosen People.
- **Redemption** = accomplished by the ceaseless flow of money from Germany to Israel to compensate “Holocaust survivors,” of which there were almost one million in 2000 – that’s 55 years after the event.²⁶⁷ On the order of 100 billion dollars, it keeps flowing.
- **Heresy** = doubters of the H-story are ethically damned and experience termination of career prospects, exclusion from clubs and polite society etc.
- **Holy Shrines** = Holocaust Memorial sites and museums; every major US city now has such a museum.
- **Sin** = undue interest in the German viewpoint, *e.g.* reading Revisionist literature.
- **St Peter** = Elie Wiesel, the first pope of this new established church, who charged \$20,000 a talk on how the H. is “outside” and “beyond history,” etc.; accused of having been the World’s Greatest Liar who was never even at Auschwitz.²⁶⁸

²⁶⁷ Several estimates of around one million appeared at the turn of the 21st century: see Chapter 10.

²⁶⁸ Nikolaus Grüner, *Stolen Identity*, self-published, Stockholm 2007; www.nazigassings.com/PDFs/StolenIdentity2.pdf; see Appendix II, “Tall Stories.”

In the days of yore, people had visions of glory at the core of their religious belief. There was some kind of bliss or beatitude, *e.g.* for Muslims it was a heaven where lovely virgins served baskets of fruit. Today, however, people have a *vision of ghastly horror* at the core of their religion, their *Weltanschauung*. Thereby people may say to themselves, “I may be feeling depressed, but at least I’m not *there*.” Doubting the Six Million today is akin to doubting, in centuries gone by, the Resurrection of Christ or the Holy Trinity. It is not a way to make friends and influence people.

With tremendous vigour the new Holo-religion asserts itself. Its key features are usable by politicians and ministers to access deep emotions of the masses (understandably referred to as “the sheeple” by many modern “alternative” commentators). It suits modern people who cannot mostly believe in a benevolent deity but who do, however, believe obscurely in some evil power at work in our world. It serves the religious function of providing an absolute or ultimate moral framework – which is otherwise hard to come by.

Let’s note how the six million Jews were murdered *for no reason* – or, they were murdered *because the Nazis were wicked*. The wicked Nazis also took care to blow up the homicidal gas chambers as they were retreating, so no one would find evidence of their diabolical work. The wicked Nazis also took care to throw the ashes into the river after they had burnt the huge piles of corpses – as reliable sources like Stephen Spielberg and Elie Wiesel have documented – so there would be no trace of gassed victims. It has become a self-evident truism: the Holocaust happened because the Nazis were wicked, and in turn the Holocaust is proof of their eternal wickedness. That’s what ultimate evil is like, isn’t it?

As Jesus and Mary ascended into Heaven without leaving any tangible traces for posterity, so likewise the Holohoax has 6 million Jews murdered without a trace left on Earth, while the clouds of smoke vanished heavenward. Both narratives have a Hebrew-Jewish context.

The Christian religion is about a God who passed through human death and then came back. The Holocaustian religion is about six million Jews who tragically died – many of them in gas chambers – then mysteriously came back later to take the cash. Not only were they still there after the war, but they have even multiplied: more “Holocaust survivors” have taken remuneration from Germany than ever there were Jews in countries under Nazi control.

The Christian religion has a triune mystery to it, a God who is three-in-one. The Holocaustian religion has its essentially threefold holy mystery: the Nazi intention to eradicate Jews, the murder of six million of them, and the gas chambers as the main weapon of their extermination.

Meanwhile, back in the real world, Auschwitz was a hardworking labour camp whose inmates trudged out each morning to local arms and munitions factories. The gassing was for their clothing, not for them. Britons – or anyone else for that matter – are deterred from grasping this not-so-subtle distinction.

Because there was no reason for it, the Holo-threat can in principle be invoked in any situation whatsoever – it will appear quite unpredictably: the threat of “another Holocaust” – to justify for example the endless bloodbaths to which states neighbouring upon Israel have been subjected ever since its formation in 1948. I mean, do you want another Holocaust? Germany should of course give more nuclear submarines to Israel, etc. In the Florida primary elections of July 2012, to select a presidential candidate, Newt Gingrich started using the mantra of “a second Holocaust.” A second term of President Obama would lead to a “second Holocaust.” Asked to clarify, he just said:

“Allowing Iran to get nuclear weapons under Ahmadinejad runs the direct risk of a second Holocaust.”

I here quote the German scientist Germar Rudolf:²⁶⁹

“The Holocaust has been transmogrified into an ideology which bears all the elements of a religion,^[270] with its own God (the Jewish people as a collective Messiah), its Devil (Adolf the Unspeakable), its own high priests (orthodox Holocaust historians), its temples (Holocaust museums and memorials), its worldwide holiday as ordained by the U.N. (the ‘Day of Remembrance,’ 27 January), its saints (the alleged victims of the concentration camps), its prophets (the eyewitnesses), its pilgrimages (to the former German concentration camps), its inquisition (the media, and in many countries even courts of law punishing heretics), and its believers (the innocent victims of Holocaust propaganda).

This new religion serves many Jews in general and the Apartheid State of Israel in particular as a sword and shield in their interactions with gentiles and foreign nations. To prevent a new ‘Holocaust,’ Israel is allowed to commit any cruelty, wage any war, violate any international law it likes. They get away with (almost) anything. But this new superstition also serves many other nations as a bogeyman to make their own population accept wars. First they accuse a foreign leader of a Holocaust – committed or planned – then they start the war. Serbia, Iraq, Iran. It works shockingly well.”

²⁶⁹ At www.germarrudolf.com/2012/05/the-holocaust-as-a-religion/, “The Holocaust as a Religion,” 10 May 2012.

²⁷⁰ For the religious atmosphere built up around the Auschwitz Camp, see the video *McCalden’s Birkenau, Part 12*, on YouTube, by the late David McCalden.

We note that a brilliant young chemist who had completed a PhD thesis on crystallography, after undergoing career-termination, trauma, ethical damnation and four years of jail, has the urge to write about a new world religion.²⁷¹ I had a bit of a similar experience, of having almost nobody interested in talking about my history of astronomy research I did at UCL for fifteen years. However, the entire world seemed to respond once I had started trespassing upon Sacred Ground. That sudden response appeared as if I had committed some religious transgression, but it certainly didn't involve discussing my chemical research; at least I wasn't put into jail.

The Holo-religion promotes the never-ending guilt of the goyim for having allowed such a thing to happen to God's Chosen People. That is their "Original sin," and their "Redemption" is achieved by the never-ceasing flow of funds to Israel. To the list given by Rudolf we could add the Holy Relics – as churches used to treasure fragments of the alleged Cross of Jesus, so likewise Holo-temples have bits of Jewish hair, shoes etc. "from Auschwitz."

Religions have miracles, which the Holohoax is never short of; *e.g.*, here is testimony concerning the alleged Treblinka extermination camp, where the primary Hell-image of burning piles of human bodies was first established. At the 1987 "trial" in Jerusalem (*i.e.* propaganda coup to wring yet more pity from the Goyim), one witness Eliahu Rosenberg averred:

"In Treblinka we learned that little children burn better than grown men. All it takes is a match to light them."

This was called the Demjanjuk trial.²⁷² During that trial, J. Wiernik likewise averred:²⁷³

"It turned out that bodies of women burned more easily than those of men."

In the real world, human bodies are not flammable. These made-in-Hell stories successfully activated the Treblinka Holocaust in the "memory" of the world public.

We have a separate chapter for Treblinka, which enjoys not one but two Holo-miracles: there was the gassing of 875,000 Jews by Diesel exhaust, a *non-lethal* gas,²⁷⁴ after which their somehow-flammable corpses were first

²⁷¹ After he emerged from four years in a German jail in July 2009, he left his native land in 2011 and emigrated to America to join his family. Not surprisingly, he has come out with a new book on his persecution: *Resistance Is Obligatory*.

²⁷² For an excellent critique of that 1987 "trial" in Jerusalem, see Arnulf Neumaier, "The Treblinka Holocaust" in G. Rudolf (ed.), *op. cit.* (note 29), pp. 475-508; Rosenberg quote on p. 496.

²⁷³ A. Neumaier, *ibid.*

²⁷⁴ "By virtue of the composition of the exhaust gases, mass gasings with Diesel exhaust fumes cannot have taken place. Had there really been execution chambers or 'gas vans' operating with exhaust gas, the Germans would have used the more efficient internal combustion engines, or the even more efficient wood-gas generators." Scientific enquiry

buried, then excavated and burned on huge, Hellish pyres by their thousands (just watch *Schindler's List*, O scoffing Unbeliever).

Robert Faurisson returned from the Holocaust discussion conference in Iran in 2006, where his first-class lecture "Victories of Revisionism" is regarded as a classic. Upon returning to France, he had to stand trial, accused of "denying the Holocaust," and was found guilty, because he had said on an Iranian TV channel:

"There was never a single execution gas chamber under the Germans."

In the eyes of the French judiciary, the people of France did not need to discuss why he had said such a thing; rather he merely needed to be convicted of violating the sacred axiom. At his trial in Paris, the Assistant Public Prosecutor, Anne de Fontette, read out an invocation to Yahweh, protector of his "chosen people," beseeching Him to protect the said people from the "lying lips" of Faurisson. The crucifix had long been removed from French courtrooms, but on this day, in Paris, vengeance was invoked for Faurisson's sacrilege by the evocation of Yahweh.

Can one imagine anything more demented than convicting a man for having given an invited talk on a historical matter thousands of miles away from Paris, on another continent – plus braying at him about the vengeance of Yahweh *in court*? That must be the maddest thing to have happened in a French court since they used to try animals – pigs and horses – in courts in mediaeval times.

Here is how the late Faurisson – dean of Revisionism, a man of deep erudition, scholar of French, Latin and Greek, a professor of symbolist poetry – experienced this new 20th-century religion:²⁷⁵

"The religion of 'the Holocaust' is a secular one: it belongs to the lay world; it is profane; in actuality, it has at its disposal the secular arm, that is a temporal authority with dreaded power. It has its dogma, its commandments, its decrees, its prophets and its high priests. As one revisionist has observed, it has its circle of saints, male and female, amongst whom, for example, Saint Anne (Frank), Saint Simon (Wiesenthal) and Saint Elie (Wiesel). It has its holy places, its rituals and its pilgrimages. It has its sacred (and macabre) buildings and its relics (in the form of cakes of soap, shoes, toothbrushes, ...). It has its martyrs, its heroes, its miracles and its miraculous survivors (in the millions), its golden legend and its righteous ones. Auschwitz is its Golgotha. For it, God is called Yahweh, protector of his chosen people, who, as said in

thus terminated a fable. That quote came from Walter Lüftl, President of the Federal Austrian Chamber of Engineers, who narrowly avoided a twenty-year prison sentence for it. (See W. Lüftl, "The Case of Walter Lüftl," in G. Rudolf (ed.), *Dissecting*, *op. cit.* (note 29), pp. 61-82, here p. 82.)

²⁷⁵ Robert Faurisson, "The secular religion of 'the Holocaust', a tainted product of consumer society," (Aug. 7, 2008); www.codoh.com.

one of the psalms of David (number 120), recently invoked by a female public prosecutor, Anne de Fontette, during the trial in Paris of a French revisionist, punishes 'lying lips' (by, incidentally, sending them the 'sharp arrows of the mighty, with coals of juniper'). For this religion, Satan is called Hitler, condemned, like Jesus in the Talmud, to boil for eternity in excrement. It knows neither mercy, nor forgiveness, nor clemency but only the duty of vengeance. It amasses fortunes through blackmail and extortion and acquires unheard-of privileges. It dictates its law to the nations. Its heart beats in Jerusalem, at the Yad Vashem monument, in a land taken over from the natives; in the shelter of a 26-foot high wall built to protect a people who are the salt of the earth, the companions of the 'Holocaust' faith rule over the goy with a system that is the purest expression of militarism, racism and colonialism."

We may doubt whether Yahweh, the OT deity, is part of this secular religion, which is more of a Talmudic Jewish-religion-for-the-Goyim: the Talmud is a Holy book that *has no deity*, or no transcendent deity apart from the Jewish people – but let's refrain from going into that.

Is it indeed a secular religion? Here's a bit of satire from the US Catholic Michael Hoffman:

"I believe in one Holocaust®, conceived in Hollywood, born of the New York media: and in Six Million Judaics, who suffered under Adolf Hitler and were gassed, made into lampshades and cremated. In the 21st century they arose again, to haunt the living and the dead. I believe in Elie Wiesel and the geysers of blood,^[276] and Arnold Friedman and the color-coded crematory smoke,^[277] the holy Shoah biz Church, the communist saints, no forgiveness of German sins, the resurrection of lies, and the shelf-life everlasting of the Auschwitz gas chamber stories. Amen." —Michael Hoffman, "The Creed of the Church of the Shoah," revisionistreview.blogspot.com, Feb. 2009

It is a transcendent *mythos* in the sense that it is ultramundane, *i.e.* decent folk would not go about seeking evidence for its veracity but will reverently accept it, as an *ersatz* for genuine metaphysical knowledge (I here venture to presume that such may be attainable).

²⁷⁶ In his 1982 book *Paroles d'Etranger*, Nobel-Prize-winner Elie Wiesel wrote: "I learn from a witness that, for month after month, the ground never stopped trembling; and that, from time to time, geysers of blood spurted from it" – at a place in the Ukraine where Jews had been executed. Clearly the blood of God's Chosen People behaved in a special way. (R. Faurisson, "A Prominent False Witness: Elie Wiesel," leaflet of the Institute for Historical Review; originally issued in French in 1986.) See Appendix II.

²⁷⁷ The former Auschwitz inmate Arnold Friedman claimed during the first Zündel Trial in Toronto that it was always known which kind of transports were being cremated, whether they were Hungarian or Polish or other victims, because the colour of the smoke from the crematoria's chimneys betrayed the origin of the victims.

Maybe satire is the best approach here:²⁷⁸

“And at the Holocaust Memorial Museum, in Washington, thou shalt bow before the best possible testimony to the existence of the magical gas chambers: atop a heap of shoes more or less hard-worn or recycled, in letters writ large canst thou read: ‘We are the last witnesses’: yea, the shoes do speak.”^[279]

If, in that vast museum bereft of any scientific representation of whatsoever Nazi ‘gas chamber,’ thou seest before thee canisters of Zyklon B, with all thy strength shalt thou resist the temptation to believe that the Germans employed them in a normal use (that of a product, based on hydrocyanic acid, invented [...]²⁸⁰) for to kill vermin, especially lice, carriers of typhus); thou shalt have it in thy head that the Germans did use them to kill Jews, yea, for in all things it behoveth to bring judgment only in regard to the Jews consubstantially doomed to extermination.

As coin of the realm – and it is befitting to say so – shalt thou accept the phantasmagorical tales of our professional peddlers, male and female, who make the rounds of the schools, colleges and other places of learning of the goyim.

Thou shalt know that in the evocation of that past, Remembrance is superior to history, the historical novel superior to scientific study, yea, drama and fiction superior to lowly material reality. Have it in thy head: the stomach of a believer in ‘the Holocaust’ is able to digest stones. [...]

Hail the multiplication of Shoatic plaques on buildings, on the front walls of schools, on monuments!

Hail the pilgrimages to Auschwitz with full charter planes and coaches!

Hail the blackmail to which so many institutions like the French national railways and so many countries like Switzerland have succumbed!

Wanting at first to resist, some of them have asked for justifications.

And they have come to grief for it!

Quite rightly the rejoinder hath been made to them that such anti-Semitic reflexes did aggravate their case and that it behoved them forthwith, without any jabbering, to give unto the blackmailers the sums that had been set.

They bowed down.

²⁷⁸ Excerpt taken from Jerzy Ulicki-Rek, “The Ten Commandments of the Holocaust Religion,” <http://forum.codoh.com/viewtopic.php?f=2&t=7134&p=52474>.

²⁷⁹ The shoes story began at the Majdanek Camp, when the Soviet liberators found “literally mountains of shoes.” Decades later it was ascertained that a used-shoe shop had operated there: Rudolf, *Lectures on the Holocaust* (2017), pp. 20f.

²⁸⁰ The original here writes erroneously that Zyklon B was invented “by the learned Jew Haber around 1922”. Zyklon B was invented by Walter Heerdt according to German Patent No. DE 438818 of 20 June 1922; cf. https://en.wikipedia.org/wiki/Zyklon_B.

They did pay cash on the nail.^[281]

And this meaneth that we shall return unto them in future to demand surplus of 'restitution, reparations, indemnities and compensation.'^[282]

And Germans whose parents were yet not even born in 1945 will give, at least until the year 2030, billions to Jews who are yet not even come into the world.

'Jewify or die': that is the watchword which must dictate all lines of conduct.

To so noble an ideal it behoveth them to sacrifice all, then, once they shall have given all, those of their government shall be ordered to give, yea even more."

Amen! And, as the whole of Europe is now submitting to this mental enslavement, here is an East European view, from Poland – Home of the Holocaust:²⁸³

"[...] a powerful central taboo of a new religion born in Auschwitz was created. [...] Holocaust does not belong to the past. It is a sanctified system of dogmas with quasi-religious structure that can be used as a powerful political and ideological or moral instrument to reach not necessar[il]y sublime goals. Holocaust quasi-religion can be involved in political and ideological conflicts or power-play.

It is an effective tool of moral blackmail, indoctrination and propaganda or even a culture war.

The first victim of the Holocaust quasi-religion is Christianity. The Holocaust eclipsed the central event of Christianity, i.e. the Sacrifice of Jesus. For Jews, the Holocaust is an equivalent to the Crucifixion, and Israel is an equivalent to the Redemption. In Shoah the Jewish nation died for God, taking upon itself the burden of His unimaginable guilt for His indifference, absence or powerlessness. Some Christian theologians behave like Holocaust religion converts: although they cannot openly equalize Auschwitz to Golgotha, as it would mean abandoning of Christianity, they made already a first step in this direction. They start from creating special relations between Cross and Holocaust, next equalize them to announce victory of the Holocaust in the end. Gas

²⁸¹ Switzerland coughed up \$1.25 billion in 1997 in response to an unlikely "Nazi gold" story, having paralysed its own ability to defend itself by passing a Doubt-is-a-Crime law two years earlier! "This is nothing less than extortion and blackmail," fumed Switzerland's President Jean-Pascal Delamuraz. Yep! But of course he had to apologise, and of course the Swiss banks had to pay up: it was an offer they couldn't refuse. Hmm, what was that comment by Norman Finkelstein about the H. being "an outright extortion racket"? (*The Holocaust Industry*, p. 83.)

²⁸² See the sources given in footnote 76.

²⁸³ Stanley Sas, 10 February 2009, "Holocaust Quasi-Religion as an Instrument of Culture War"; <http://truthisbeauty.wordpress.com/2009/02/04/the-holocaust-is-now-catholic-dogma/>.

chambers overcame the Cross, Auschwitz overshadowed Golgotha, Jewish sacrifice is bigger than Jesus' one. Polish theologian Dr Michal Czajkowski, a big enthusiast of Christian-Jewish dialog (on his knees), demanded creation of a new Christian theology and doctrine after the Shoah. All those facts show symptoms of surrender of Christianity to the Holocaust religion, or the Judaization of Christianity.

Simultaneously, Christianity is charged for responsibility that the Holocaust happened in Europe.

Traditional Christian theology was reversed: instead of Jews being responsible for killing Jesus, now Christians are charged for murder of Jews in the Holocaust. It is recognized as a negative culmination of Christianity. So, Christianity lost its basis to exist and must be replaced by a new religion. [...]

Works of Holocaust-religion converts are full of overwhelming poisonous and blasphemous nihilism matching the aggressive atheism of communists."

Poland has not taken nearly enough of the blame and guilt for starting World War II,²⁸⁴ however, the idea of it experiencing Holocaust-guilt is absurd. On the contrary, Israel should thank it profusely for having so well kept up the mystique of the Holo-camps as star tourist attractions for so many years.

One more French view: an article in *Le Monde* dealt with the Shoah being built up into a State religion by President Nicolas Sarkozy (4 April 2009). Then, from the pen of the French sociologist Alain Besançon, the following remarks are to be found:²⁸⁵

"On the scale of sacred things, there is nothing today that can challenge the Shoah for first place [...]; having become universal, it maintains the Jewish people's standing as chosen, with the choosing done by the diabolical will of Hitler and not by the benevolent decision of God. It offers them up to the sympathy, in the strongest sense, of the Christian world. – Ensuing from all this are changes in the scale of dignity, in the list of objects that can be touched only with trembling hands, in the hierarchy of values and in the prestige of those who defend them. Thus, ranking first, undeniably, is the Shoah."

Dr Faurisson remarked on this as follows:

"‘The religion of the Shoah’ tolerates other religions, particularly the Roman Catholic religion, only insofar as they accept subordination.

²⁸⁴ Patrick Buchanan, *Churchill, Hitler and the Unnecessary War* (2008), Ch. 9, "Fatal Blunder."

²⁸⁵ Robert Faurisson, "The Religion of the Shoah" *Smith's Report* August 2009, pp. 6-8; see also his "Famous French sociologist Alain Besançon discovers 'the religion of the Shoah'," May 2009; www.codoh.com.

Benedict XVI knows this, as he prostrates and humiliates himself before it. Especially lie-ridden, the ‘Shoah religion’ calls for hatred and crusades. In this respect, repeating the image used by Jean Jaurès regarding capitalism, it can be said of the new religion that it ‘bears war within it just as thick clouds bear a storm.’”

Maybe one in ten of the Jews residing in France were deported during the war – we go into the numbers in Chapter 14, with post-war France seeing far more Jews surge back in than had ever been there before. A quarter of a million Jews were living there when the war ended, a higher proportion than exist in the UK today. Given that France was occupied by the Nazis for four years during the war, that hardly sounds like a policy of extermination: more like, say, getting rid of troublemakers, as many Jews were active in the communist resistance movement there. If and when France rescinds its thoughtcrime law, calm debate on this matter may become possible.

An Arabic View

“But why Holocaustism has replaced Christianity? I suppose it’s because Christianity has been in slow decline for several centuries. By 19th century, neither the thinking nor the ruling classes really believed in God any more – as A. N. Wilson wrote in the book ‘God’s Funeral: The Decline of Faith in Western Civilization’: ‘The reaction against Christianity in post-Christian Europe reached the point that by the post-World War II period, a residual Christian guilt complex met Jewish-Holocaust power in the media’^[286] – and the result was Holocaustism replacing Christianity as the core sacred narrative of the West.’” —Rehmat²⁸⁷

Here is the irrepressible Kevin Barrett (Founder of MUJCA, Muslims Jews and Christians for 911 Truth) and regular columnist of the *Veterans Today* website, writing about “Holocaustism versus Islam”:²⁸⁸

“You can tell which story is sacred and which one isn’t by the reaction you get when you commit sacrilege. No-one in the West is being brought up on charges of denying the crucifixion-resurrection. People can blithely doubt the crucifixion and the resurrection and the virgin birth

²⁸⁶ Philip Weiss, “Do Jews Dominate in American Media? And So What If We Do?,” 17 Feb. 2008, <http://mondoweiss.net/2008/02/do-jews-dominat.html>.

²⁸⁷ Rehmat’s World, 2.11.09, “Holocaust is new Jewish religion”; <http://rehmat1.com/2009/11/02/holocaust-is-new-jewish-religion/>.

²⁸⁸ Kevin Barrett, “Holocaustism vs. Islam,” 30 Oct. 09; <http://truthjihad.blogspot.com/2009/10/holocaustism-vs-islam.html>. It’s hard to resist quoting more from Kevin: “Sometimes it seems like there are only two major religions left: Holocaustism and Islam ... No sane person can deny that Nazism and Zionism are mirror images of each other.”

and the trinity and other tenets of Christianity and still work in great universities of the West. In fact, if they don't doubt these things, they might have a harder time getting hired. Admit at a faculty luncheon that you don't doubt the resurrection or the virgin birth, and you will get some very strange looks.

But admit that you doubt any aspect of the sacred Holocaust narrative – six million Jewish victims, most killed in gas chambers, as part of a pre-conceived effort to eliminate Jewry from the face of the earth – and you will never work in this town again. Thus we are treated to the spectacle of a Catholic bishop being tried by a new Inquisition for a heresy that has nothing to do with Catholicism.

Islam, the world's fastest growing religion, is immune to Holocaustism for two reasons. First, Muslims understand and oppose the Holocaustist atrocities in Palestine. 'By their fruits ye shall know them,' said Jesus, peace upon him... and the fruits of Holocaustist Zionism – millions of people ethnic-cleansed, children shot for sport with impunity, white phosphorus dropped on the world's most densely populated space, and on and on – are as visibly evil to Muslims as they are invisibly evil to the Westerners."

Catholics have received their dose of Holo-guilt via the wonderful actions of the wartime Pope Pius XII.²⁸⁹ His concern for all of the victims of Nazism was universally recognized. However, he did not approve of the creation of a Jewish state in Palestine, so after 1947 he started to be demonized. Why had he not done anything to "stop the Holocaust," this was the accusation? After all, he knew very well what was going on, did he not? Surely, he did. One could ask the same question about the International Red Cross, whose representatives had visited Auschwitz in 1944. (The Red Cross was NOT granted access to German camps during the war, because the other warring nations didn't grant access to their camps either, though there were some exceptions here towards the end of the war.) Why did their bulky volume on the subject make no mention of the Holocaust? Because it didn't happen, of course. It's just a phantom.

As early as 1981, Elie Wiesel proclaimed that Christianity had died at Auschwitz. Pius XII allegedly "helped Hitler to carry out the Holocaust." So Catholics are now heard proclaiming their Holo-guilt! One could go back here to the shattering of the reputation of British historian David Irving, known for his very careful and thorough accessing of primary sources for his work. He published his book about *Hitler's War*, which averred that Hitler had no knowledge of any gassing-extermination pro-

²⁸⁹ David O'Connell, "Pope Pius XII and Bishop Williamson vs. Elie Wiesel and the Holocaust Fundamentalists: Whom Do You Believe?," *National Journal*, 3 Jan. 2009, now at <https://codoh.com/library/document/6400/>. Or read Robert Faurisson's only book, *Pope Pius XII's Revisionism*, Historical Review Press, Uckfield 2006.

gramme. Irving had simply not found any evidence for it.²⁹⁰ Naturally, his publisher Macmillan pulped all their copies of his book (in 1991), and he became a national pariah – no, *the* national pariah. I suggest that Catholics need to acquire a bit of moral backbone on this matter.

De-Tox Program from Holo-Guilt

Breathe deeply and say, “I am not guilty.”

Why were Jews put into concentration camps in 1938, and was this not very morally damnable?

No.

“‘Judea Declares War on Germany!’ Jews of all the World Unite! Boycott of German Goods!’ – that was the headline of the *Daily Express* for 24 March 1933. That was the beginning of a massive economic assault upon the National-Socialist German state, despite which it prospered.²⁹¹ “Hitler will have no war (does not want war), but we will force it on him, not this year, but soon” asserted Emil Ludwig Cohn in *Les Annales*, June 1934; and then, “This declaration called for the war against Germany, which was now determined on, a ‘holy war,’ to be carried out against Germany to its conclusion, to her destruction.” – according to Dr. Franz J. Scheidl, *Geschichte der Verfemung Deutschlands* (Vol. 2). Destruction was the aim:

“For months now the struggle against Germany is waged by each Jewish community, at each conference, in all our syndicates, and by each Jew all over the world. There is reason to believe that our part in this struggle has general value. We will trigger a spiritual and material war of all the world against Germany’s ambitions to become once again a great nation, to recover lost territories and colonies. But our Jewish interests demand the complete destruction of Germany. Collectively and individually, the German nation is a threat to us Jews.” – Vladimir Jabotinsky (head of the Jewish terrorist group Irgun Zvai Leumi) in the journal *Nascha Rjetsch*, January 1934.

“We Jews are going to bring a war on Germany.” – David A. Brown, National Chairman, United Jewish Campaign, 1934.

Five years later, war was again declared: on 5 Sept 1939 (8 Sept, *Jewish Chronicle*), declared by Chaim Weizmann, the Zionist leader:

²⁹⁰ Irving’s website offers a thousand pounds’ reward for anyone who can provide documentary evidence for this. His book *Hitler’s War* states: “the incontrovertible evidence is that Hitler ordered on November 30, 1941, that there was to be “no liquidation” of the Jews ...[but] Hitler had unquestionably decreed that Europe’s Jews were to be “swept back” to the east.” (Introduction).

²⁹¹ See the important lecture given by Benjamin Freedman in 1961 in Washington DC, especially the section entitled “1933: Jews Declare Sacred War (and trade war) on Germany” (<http://jahtruth.net/freedman.htm#1933>)

“The Israeli people around the world declare economic and financial war against Germany... holy war against Hitler’s people.”

Then in 1940:

“Even if we Jews are not bodily with you in the trenches, we are nevertheless morally with you. This is OUR WAR, and you are fighting it for us.” —*Les Nouvelles Litteraires*, 10 February 1940

Which is to say, they are pleased to have sent the goyim out to fight and kill each other, one more time. Not only were international Jewry claiming to be able to start a war, but they actually did so in the reported view of Britain’s Prime Minister.²⁹² The *Toronto Evening Telegram* of 26 Feb. 1940 quoted Rabbi Maurice L. Perlzweig of the World Jewish Congress as telling a Canadian audience that “the World Jewish Congress has been at war with Germany for seven years,” *i.e.* since 1933. If so, why should it be reprehensible for Germany to have put its Jews into special camps? Is this not exactly what America did to its Japanese citizens, after Pearl Harbor?

In response to such economic strangulation and threat of war, Germany decided to do what every nation in Europe has done at one time or another, namely, expel the Jews.²⁹³ This programme began in 1938. Before the ethical damnations are uttered, I merely request that an open discussion be allowed. “International Judaism has demonstrated by the course of the 20th Century that it could start war” according to Tory MP Captain Archibald Ramsay in his book *The Nameless War*, and destroy Germany by “a spiritual and material war.” Sometimes it seems to me that no more important words were uttered in the 20th Century than these. The “complete destruction of Germany” was surely achieved. But, you will say, has it not recovered, does it not flourish?

German culture was terminated by that “Good versus Evil” war, resulting in Germany being decapitated by the Allies and made to accept *and internalize* The Greatest Lie Ever Told: that it had, *for no reason*, gassed or otherwise killed six million Jews. Thus vanished the Germany that had produced all the wonderful poets and philosophers, mystics and musicians, artists and authors – and instead, a new era of political-correctness, book-burning and historians-in-jail began.

We are here well into the realm of forbidden history, which you had better not know, or else keep quiet about it. Will not the Thought Police come and ferret you out? The comic-book concept of Pure Evil legitimizes any

²⁹² As reported by US Secretary of Defense James Forrestal: “Chamberlain declared that Zionism and world Jewry have obliged England to enter the war” Rense, “The Zionist Jewish Role in Causing WW2”, www.rense.com/general45/zzo.htm.

²⁹³ France did this in 1253, England in 1290, France again in 1306, Saxony in 1348, Hungary in 1360, Austria in 1420, Netherlands in 1444, Warsaw in 1483, Spain in 1492, Lithuania in 1495, Poland in 1498, and Bavaria in 1551, Prague in 1557 and Bohemia in 1744. (Source: W. Carr, *Pawns in the Game*, 1958, Ch. 2)

war, and it involves not understanding and not empathizing with the Other. Thus, in our culture “the Nazis” are continually topped-up with the prana²⁹⁴ of evilness, as the source of menace, in order that it can be continually projected against whoever the new Enemy is going to be. And, get this, the anti-war peace activists can be damned as “appeasers” – a complex concept which implies (a) the war is going to happen anyway, so get over it, and (b) you’re not tough enough, and (c) the Roman maxim: if you want peace, prepare for war.

Reading American comics is probably essential for understanding the Manichean light/darkness polarity here invoked. The bad guy is the motivating force of the story, he/it makes everything happen. He does things *because he is evil*, after all, he *is* the bad guy. He/it has to be blown to bits in the last reel. The First World War had been incredibly pointless, and soon no one could remember what its purpose had been.²⁹⁵ Why had all those people fought each other in muddy trenches? So the next war had to be more of a fight against Pure Evil, achieved retrospectively by the Holocaust mythos.

Evil does exist, as I see it, but is within your *own* government, not out there in The Other, who is about to be bombed. Evil is that spirit which fabricates the complicated webs of deception to make people live in fear and validate the next war. Evil appeared at Nuremberg with the diabolical, hellish lies made up by the Allies to justify the hanging of Nazis and to take the moral high ground; lies which have ruined our whole post-war culture. The US-UK Axis of Evil is white, and is fully dedicated to everlasting war, fuelled by continually-generated untruth. No one seems able to stop it. How did we get there, for God’s sake? Well, we are there, and the only peace activists of value are those who endeavour to unweave the *war-ratifying delusions*.

²⁹⁴ *Prana* is the Sanskrit word for “life-force”, “psychic energy.”

²⁹⁵ See my “On the Avoidability of World War One,” *Inconvenient History*, vol. 3, no. 4 (winter 2011).

9. Sacred Myths of the New World Order

“Yeshayahu Leibowitz, the philosopher who was an observant orthodox Jew, told me once: ‘The Jewish Religion died 200 years ago. Now there is nothing that unifies the Jews around the world apart from the Holocaust.’”

—Uri Avnevy²⁹⁶

Two nations of our modern world are now firmly based upon great untruths: their states *would disintegrate* if the truth emerged. Their structures would not be able to endure the light of truth. These nations are: the USA and Israel. Top echelons of the US government participated in the event of 9/11, whereby the US government conspired to kill its own citizens.¹⁸ That bloodshed has been used to give a sacred meaning to the hoax, whereby foreign policy and the very fabric of modern American life is ordained by the “war on terror.”²⁹⁷

That transcendently evil event licensed the Eternal War whereby the hopes and dreams of the human race for a bright new millennium were extinguished. Bad news for Muslims, it came about via a fatal embrace between Zionism and the Neo-cons.²⁹⁸ That love-affair spawned the new 21st-century nightmare, with its complex delusion-logic.²⁹⁹ The crumbling World Trade Towers were the most vivid image ever seen by the human race, a supreme achievement of the necro-technocrats.

Can any Untruth compare to that one? Yes, in fact, it is important to compare this supreme new-millennium event to an earlier one so ruinous for the 20th Century, an even more stupendous Untruth. Twice in the 20th Century did Britain declare war on Germany, and in order to walk away on “moral high ground” after perpetrating the most dreadful war crime in human history – deliberate city incineration, one at a time – it invented at Nuremberg “The Holocaust.” It was primarily a British-American fabrication. Yes, Russia and “the Jews” were also involved, but it was these two nations primarily which ordained at Nuremberg that German survivors on trial had to believe the horror story. Ever since, nothing else about the morali-

²⁹⁶ Quoted in Gilad Atzmon, *The Wandering Who*. Atzmon’s text is online: “Holocaust Religion,” 25 Sept. 2011; <http://evreii.blogspot.com/2011/09/holocaust-religion-yeshayahu-leibowitz.html>. NB: there is no source. Atzmon says it’s on the web, but that is only so as a quote from his book. It has been archived here: archive.is/5W670.

Kollerstrom, Jim Fetzer, “9/11 and Zion: What was Israel’s Role?,” *Veterans Today*, 22 August 2012 (www.veteranstoday.com/2012/08/22/911-and-zion-what-was-israels-role/); Chris Bollyn, “Solving 9-11: The Deception That Changed the World” (2012; www.bollyn.com/public/Review_of_Solving_911.pdf); see also Greg Felton, *The Host & the Parasite: How Israel’s Fifth Column Consumed America*, CreateSpace, 2010.

²⁹⁹ See Christopher Bollyn, “Solving 9/11,” *ibid.*, or this writer’s essay “9/11 and Zion,” *ibid.*

ty of attacking Germany twice in one century ever needs to be discussed: “We had to fight Hitler,” end of argument.

But now a bright new page is being turned, and it’s time to maintain on technical-scientific grounds that Zyklon B for the German gas chambers was used very efficiently to delouse mattresses etc., but there is certainly no evidence that any human being entered such a gas chamber as a victim: no documents, no photos, no physical remains – nothing. Just stories. Very lucrative stories, with the German government shelling out to anyone claiming to be a “Holocaust survivor.”

So the state of Israel is founded in the aftermath of that stupendous Untruth. It becomes a sacred myth, eternally justifying war. It expresses the very definition of Evil. Debate is forbidden. It becomes the one and only subject on which one never hears any evidence, but you know how wrong it would be to doubt. No UK politician could express doubt over the “six million” without having instant career-termination. It’s high time to shatter these myths, otherwise we will become the People of the Lie, living worthless lives, because they are grounded on Untruth.

America and Israel are both dedicated to Eternal War, and both have terrifying, delusive myths upon which they are now founded. They have much in common, and that is bad news for the Human Race. Grubach quotes how, in May of 2003:

“[E]xpressing a cornerstone of American foreign policy, Secretary of State Condoleezza Rice told Israel’s daily Yediot Aharonot that the ‘security of Israel is the key to the security of the world.’”

The planes eternally crash into the Towers, in our minds. But who did it? It wasn’t Bin Laden, that’s for sure.³⁰⁰ The Enemies of Mankind weave these webs of illusion, and both of these deceptive stories serve to lock in place a fictional “enemy.” Al-Qaeda does not really exist, in the same way that the “*Sonderkommandos*” who pulled out the corpses from the gas chambers never existed. Civilized life can develop only if we are prepared to work to dissolve these enemy images and aspire instead to *real history*. We here try to follow the example of Persia/Iran which showed such wonderful courage in denouncing both of them. And we need to listen to women a bit more, concerning how a culture could exist without “the Enemy.”

The New World Order is perpetrating a global fascist empire of darkness, of Untruth and Eternal War, in which everyone lives in fear, in which torture is going on. The most effective thing anyone can now do against it, is to undermine these two supreme Sacred Myths. The “*Endlösung der Judenfrage*” the “end” or “final” solution to the Jewish question always

³⁰⁰ See the Author’s essay: “The Last Days of Bin Laden,” 20 Nov. 2008; <http://www.911forum.org.uk/board/viewtopic.php?p=127627>. For a more in-depth study see David Ray Griffin, *Bin Laden – Dead or Alive?* (2009).

meant deportation eastwards; never did it have a lethal meaning. The Germans didn't do it. The Muslims never did it. Say No to Thoughtcrime!

9/11 as Sacred Myth

"See, in my line of work, you got to keep repeating things over and over and over again for the truth to sink in, to kind of catapult the propaganda."
—George W. Bush, Rochester, New York on May 24, 2005

As to how a Sacred Myth functions in modern society, we here quote a lecture given by the distinguished US philosopher/theologian David Ray Griffin. He shows how it produces a strong, simple polarity between Good versus Evil, handy for politicians to work with:³⁰¹

"Although I am a philosopher of religion and theologian, I have spent most of my time during the past three years on 9/11—studying it, writing about it, and speaking about it. In this lecture, I will try to make clear why I believe this issue worthy of so much time and energy. I will do this in terms of the distinction between myth and reality. I am here using the term 'myth' in two senses. In one sense, a myth is an idea that, while widely believed, is false, failing to correspond with reality.

In a deeper sense, which is employed by students of religion, a myth serves as an orienting and mobilizing story for a people, a story that reminds them who they are and why they do what they do. When a story is called as a myth in this sense—which we can call Myth with a capital M—the focus is not on the story's relation to reality but on its function. This orienting and mobilizing function is possible, moreover, only because Myths with a capital M have religious overtones. Such a Myth is a Sacred Story.

However, although to note that a story functions as a Myth in the religious sense is not necessarily to deny its truth, a story cannot function as a Sacred Myth within a community or nation unless it is believed to be true. In most cases, moreover, the truth of the Myth is taken on faith. It is not a matter of debate. If some people have the bad taste to question the truth of the Sacred Story, the keepers of the faith do not enter into debate with them. Rather, they ignore them or denounce them as blasphemers."

³⁰¹ From a 2006 lecture by David Ray Griffin about his book *9/11: The Myth and the Reality*; www.davidraygriffin.org/about/david-ray-griffin-dvds/911-the-myth-and-the-reality; 30 March 2006.

For comparison I now quote from an essay of that learned scholar Richard Widmann, “The Holocaust: The New Founding Myth of American Society”:³⁰²

“In 1996, Roger Garaudy created a tremendous scandal with his book, The Founding Myths of Modern Israel. This book identified several myths that were critical for the founding of Israel, including what Garaudy called, ‘The Myth of the Six Million.’ Although the word ‘myth’ is often understood in contemporary vernacular to mean something false, that is not the sense of the word that Garaudy intended. The word ‘myth’ is derived from the Greek ‘mythos,’ meaning simply ‘the word based on faith.’ Myth, therefore is not factual or non-factual, but something which must be accepted on faith. A myth generally tells a sacred story concerning the origins of the world or its creatures. Just as Garaudy suggests that the Holocaust myth was critical in the formation of modern Israel, I argue that it has become the founding myth of contemporary culture and politics in the United States. It is, of course, a new myth, and as such has usurped the earlier founding myths of our nation. [...]

In our post-World War II society, the earlier founding myths have been replaced by the Holocaust myth. Although not yet a national holiday in the U.S., Holocaust Remembrance Day has been gaining increasing attention in recent years. It is probably only a matter of time before it is fully recognized with a national holiday. [...]

The American public has found that condemnation of racial and religious discrimination is not enough. Today White culture and European heritage are denounced for being ultimately responsible for the thinking and the ideologies that resulted in the Holocaust. In the heart of our nation’s capital, in Washington DC, the United States Holocaust Memorial Museum was founded. One of the first exhibits that one is confronted by in the museum is a video, which condemns 2,000 years of anti-Semitism, which it alleges, resulted in the Holocaust. [...] Today, schools may display ‘holiday trees’ and hold ‘holiday concerts,’ they may even light Kwanzaa candles^[303] but any mention of Christmas is seen as part of the continuum of 2,000 years of Christian anti-Semitism. [...]

If the Holocaust as we know it was the result of propaganda lies, faulty memories and fanciful exaggerations, then the revision and correction of the historical record is not a matter for academics and historians alone. In fact, Holocaust revisionism may be the only way to save our nation from the Orwellian-nightmare into which it is sinking, and return

³⁰² Smith’s Report No. 145, December 2007; www.codoh.com/library/document/90/.

³⁰³ Kwanzaa is a holiday invented in the 1960s by Afro-Americans in the USA in order to compete with the Christian Christmas.

us to our original founding principles and values. [Hear, hear! –NK] Holocaust revisionism, far from useless or evil, is a key to saving our nation from the corrupt cultural transformation that is currently under-way.”

A Tale of Two Lies – The Holocaust and 9/11

By John Kaminski (excerpts)

“Identification of two principal lies [is] what the world faces if it is to evolve toward a genuine, self-actualizing future. [That is so true – NK] The first is the Holocaust, the claimed deliberate mass murder of six million Jews by Adolf Hitler and the Germans.

The second is 9/11, the destruction of the twin towers in New York City by supposedly neophyte pilot Arab terrorists.

Both are lies, believed by the masses only because of the media blitz that inculcated their fictional credibility in the public mind.

The same effect was achieved with Holocaust propaganda, which began in earnest only after the first Kennedy assassination.

The same media blitz in the late 1960s that first imbued the notion of a Jewish holocaust in Germany 1940-45 — with specific notions of gas-sings, pools of fire and human soap — made acceptance of this falsified version of history the publicly accepted norm, [...]

The claim that six million died in World War II is actually an echo of a story that was first seen in the New York Times in the 1920s claiming six million Jews were at risk of death in Europe.^[304] This was the fever pitch of Jewish immigration from Russia and Eastern Europe that followed pogroms they staged themselves to gain sympathy, a tactic they have always used back to Roman days.

All those emaciated bodies you see in the World War II film clips were actually caused by starvation and typhus after Allied bombings cut off the German supply lines. [...] The Germans didn't gas anyone; they only tried to get their country out of the international Jewish financial crime scheme that was and is choking the life out of the planet.”³⁰⁵

³⁰⁴ That's correct, *but* see earlier citations of the six million figure centred upon Russia which began around or immediately before 1900, Chapter 10.

³⁰⁵ 23 June 2008; www.johnkaminski.info/pages/articles/a_tale_of_two_lies.htm. Here's a US view on this deeply-forbidden topic: “Hitler came to power over a bankrupt and starving country with unemployment at roughly 50%! The Americans had stolen all Germany's gold by the early '20s, [...] Hitler and Hjalmar Schacht issued debt-free currency based on [Abraham] Lincoln's debt-free currency. What they did led to the swift regeneration of the German economy and the world's greatest prosperity of the working class, while the rest of the world stayed mired in the Great Depression being run by the sadistic central bankers. This was the worst possible crime and had to be punished by the most terrible war in human history, including fire-bombings of entire cities and deliberate mass starvations of millions following the war. Our nuclear bombs would have

Israeli Myths

“Jewish history is a phantasmic tale that is there to make the Jews happy and the Goyim behave themselves.”

—Gilad Atzmon

The massive untruth of “The Holocaust” appears as a founding myth of Israel, and is as such beyond rational debate or polite doubt. The story, created by British and American military intelligence over 1942-1945, was axiomatic during the Nuremberg Trials. But what is a sacred Myth? A view was expressed by Paul Grubach, “The Holocaust as Sacred Myth and Ideology”:³⁰⁶

“In a political sense, here is how ‘myth’ is defined: ‘Any false belief that is (a) of symbolic importance in the emotional life of the believer, (b) based in a need to believe rather than in rational conviction, (c) associated with stories that are accepted not as history (or not on historical evidence), but as illustrations or parables, (d) endowed with a ‘sacred’ quality, which it can confer on the social relations, institutions or political arrangements associated with it, so granting them an air of legitimacy.’”

He added:

“Non-Jewish American and British power elites also have a vested interest in promoting the Holocaust ideology. As historian Jeffrey Herf recently revealed in his study, The Jewish Enemy, the Holocaust ideology paints the American and British in a good and ethical light, and thus ‘justifies’ their entire war effort against Germany. As Herf makes clear, one of the important characteristics of mass propaganda is that it appeals to stark contrasts between good and evil. The Holocaust doctrine fills the bill perfectly. He wrote: ‘Reports of the Final Solution [the Nazi attempt to exterminate the Jews during WWII] underscored the stark moral dichotomy between Nazi Germany and its allies, on the one hand, and the United Nations [Americans, British, etc.,] on the other. They reinforced the Allies’ conviction that this was a war between freedom and tyranny, good and evil, civilization and barbarism.’”

Doubt has also been cast upon the story of the “return” to Israel. This work does not need to have a definite view on this topic, but it’s worth comparing this view of Jewish history.

dropped on Germans, but they weren’t ready in time, so they were dropped on Germany’s allies who were trying to surrender” – J.B. Campbell, “Behind the Holocaust: What Was Hitler’s Unforgivable Sin?”; www.jbcampbellextremismonline.com/behind-the-holocaust.html.

³⁰⁶ www.codoh.com/library/document/151/

“In my formative years I blindly accepted everything they told us about our ‘collective’ Jewish past: the Kingdom of David, Massada and the Holocaust: the soap, the lampshade, the death march and the six million.” —Atzmon, *The Wandering Who?*, p. 175

In 1976, Arthur Koestler wrote his book *The Thirteenth Tribe*, about how the now-forgotten vast empire of Khazaria converted *en masse* to Judaism, and he believed that a diaspora of the Khazar-converted Jews took place around the 12th century following the Mongol invasions, going into Eastern Europe.³⁰⁷ His argument was by no means generally accepted, and the 20th Century unfolded with the notion that European Jews had had some sort of “right of return” to Palestine. Then in 2009 the scholarly work by Tel Aviv University historian Prof. Shlomo Sand *Matai ve’ekh humtza ha’am hayehudi?* was translated into English as *The Invention of the Jewish People*.³⁰⁸

This remains a controversial thesis, mainly because of genetic arguments which might indicate connections between Ashkenazi and Sephardic Jews. There had never been an original diaspora, as the Jews were never exiled from the Holy Land, in Sand’s view:³⁰⁹

“This national statement, which was simplified into a useful and popular slogan for the Zionist movement, was entirely the product of an imaginary history grown around the idea of the exile. Although most of the professional historians knew there had never been a forcible uprooting of the Jewish people, they permitted the Christian myth that had been taken up by Jewish tradition to be paraded freely in the public and educated venues of the national memory, making no attempt to rebut it. They even encouraged it indirectly, knowing that only this myth would provide moral legitimacy to the settlement of the ‘exiled nation’ in a country inhabited by others. [...]

It was no accident that modern Jewish nationalism opted for the fictitious ethnic element of the long tradition. It fell upon that concept with glee, manipulated it thoroughly in its ideological laboratories, nurtured it with questionable secular historical data, and made it the foundation of its view of the past. The national memory was implanted on a base of ritual oblivion, hence its amazing success.”

The most likely descendants of the Biblical Hebrew peoples are the present-day inhabitants of Palestine, Sand argued, and most of today’s European Jews have no historical connection to the land called Israel. It is a

³⁰⁷ “The story of the Khazar Empire, as it slowly emerges from the past, begins to look like the most cruel hoax which history has ever perpetrated” – Arthur Koestler.

³⁰⁸ There is also a fine essay by Israel Shamir in his book, *Flowers of Galilee*, advocating an open and pluralistic multiculturalism as the future of Israel (the book’s publisher decided to pulp the book after being threatened by Zionists).

³⁰⁹ Shlomo Sand, *The Invention of the Jewish People* (2009), pp. 188f.

marvellous sea-change that a Hebrew professor can keep his job with such a bestselling book selling in Israel; an omen of hope for the world.

What did Sand mean by “The Invention of the Jewish people”? At a certain stage in the 19th Century, intellectuals of Jewish origin in Germany, influenced by the folk character of German nationalism, took upon themselves the task of inventing a people “retrospectively,” out of a thirst to create a modern Jewish people. To quote Gilad Atzmon:³¹⁰

“It is an established fact that not a single Jewish historical text has been written between the 1st century (Josephus Flavius) and early 19th century (Isaak Markus Jost).”

Jewish historians began to draw the history of Judaism as the history of a nation that had been a kingdom, became a wandering people and ultimately turned around and went back to its birthplace (e.g. historian Heinrich Graetz, 1817-1891).

After being forcibly exiled from their land, allegedly, “the people remained faithful to it throughout their dispersion and never ceased to pray and hope for their return to it and for the restoration in it of their political freedom” – thus states the preamble to the Israeli Declaration of Independence. Sand argues that no such exile from an ancestral homeland ever happened:³¹¹

“The supreme paradigm of exile was needed in order to construct a long-range memory in which an imagined and exiled nation-race was posited as the direct continuation of ‘the people of the Bible’ that preceded it,” Sand explains. Under the influence of other historians who have dealt with the same issue in recent years, he argues that the exile of the Jewish people is originally a Christian myth which depicted that event as divine punishment imposed on the Jews for having rejected the Christian gospel.

‘I started looking in research studies about the exile from the land – a constitutive event in Jewish history, almost like the Holocaust. But to my astonishment I discovered that it has no literature. The reason is that no one exiled the people of the country. The Romans did not exile peoples, and they could not have done so even if they had wanted to.’”

Following on from this shocking re-vision, Sand urges Israeli citizens to develop a commitment to multiculturalism:³¹¹

³¹⁰ G. Atzmon, “Truth, History and Integrity,” 13 March 2010; www.dissidentvoice.org/2010/03/truth-history-and-integrity/.

³¹¹ Ofri Ilany, “Shattering a ‘National Mythology,’” *Ha’aretz*, 21 March 2008; www.haaretz.com/1.5006910; Professor Sand can be viewed at “Changing perspectives on Israel,” Al-Jazeera interview 30 Nov. 2009 at youtu.be/1fIUX5VNkNw & youtu.be/EK_3RdYYR80.

“We must begin to work hard to transform our place into an Israeli republic where ethnic origin, as well as faith, will not be relevant in the eyes of the law. Anyone who is acquainted with the young elites of the Israeli Arab community can see that they will not agree to live in a country that declares it is not theirs. If I were a Palestinian, I would rebel against a state like that, but even as an Israeli I am rebelling against it.”

He has suggested that Israel should “add an hour in memory of the Nakba [literally, the “catastrophe” – the Palestinian term for what happened when Israel was established], between Memorial Day and Independence Day.”

In the aftermath of this book, British Jazz musician Gilad Atzmon wrote his brief, witty exploration of Jewish identity, *The Wandering Who?*, in which he expresses considerable scepticism over Jewish history: that includes the Holocaust stories he was brought up with, in the same way that it includes the myth of the Return, King David, the Captivity in Egypt, et cetera. However irked the Zionist establishment may be by his book, they have not yet managed to get any of his jazz concerts cancelled – rather the contrary, their endeavours in this direction have caused people to flock to hear this rugged and sincere iconoclast. He has the nerve to affirm that Palestinians “are the real Jews,” and further that: “If Jews are not a race and have nothing to do with Semitism, then ‘anti-Semitism’ is, categorically, an empty signifier.” Atzmon accepts the Koestler-Sand thesis, and presents his disbelief in these sacred Jewish myths with irony. Israel needs to become “de-Zionized,” he argues.

Atzmon is a Sephardic Jew. He has British citizenship and describes himself as a Hebrew-speaking Palestinian. His music has Eastern European and Arabic influences. Sephardic Jews have an ancestral connection with Spain and came originally from North Africa. Atzmon is deeply concerned by the way the primary myth always seems to legitimate violence:

“What is the Holocaust religion there to conceal? As long as we fail to ask questions, we will be subjected to Zionist agents and their plots. We will continue killing in the name of Jewish suffering.”

The questions of origin are difficult to answer because of an absence of real history. That historical deficit may help account for the focus upon a 20th-Century narrative *which did not happen*.

Part III:
OPENING THE GATES
OF MEMORY

10. Haunted by Six Million

The Mantra of Six Million

The Hebrew language lacks numbers and has no zero. I suggest that the figure of six million was never encoded into the Talmud or Kabbalah as some have supposed. So, whence came that totemic number? It began in America around 1900 as a fundraising stunt, and then kept pulsing through the Twentieth Century like some Hellish mantra. Here are 106 references between 1850 and 1941. They are overwhelmingly American.

At the dawn of the 20th Century, the “suffering” of six million Jews became an argument in favour of the new Zionist project (which a huge majority of European Jews did not want), namely the emigration of Jews out eastwards, probably to Israel. It helped fundraising, with the number being cited as the total number of Jews in Europe. During World War I, the talk was again and again of six million Jews who were starving, in need of rescue etc.

Author Don Heddesheimer’s book, *The First Holocaust: Jewish Fundraising Campaigns with Holocaust Claims during and after World War One* has thrown light on the slew of previous attempts by Jews to disseminate the atrocity propaganda from before World War I. *The First Holocaust* features a remarkable collection of press clippings and propaganda articles dating back to the *late 19th Century* whereby claims of the suffering and imminent extermination of European Jewry were used for fundraising.³¹² The magic six million number got going around the time of the First Zionist Congress of 1897.

Around 1940, it was announced that *six million Jews* were being exterminated by Adolf Hitler, which then feeds into the Nuremberg trials starting in late 1945, where a concept never dreamt of before appears: of the six million murdered Jews, vast numbers of which had been *gassed*. It’s basically a Cabbalistic incantation, a spell designed to silence you.

At Nuremberg, there was no hint that anyone had counted or attempted to estimate any such number; rather, it came to be affirmed (the US delegation being 75% Jews) that six million Jews *had been exterminated*. The SS agent Wilhelm Höttl was induced to declare, on the condition of his life being spared, that he had heard such a story from Adolf Eichmann in August 1944; but the latter later denied it.³¹³ That statement was dated 5 November

³¹² See also the video documentary by G. Rudolf, “The First Holocaust: The Surprising Origin of the Six-Million Figure,” www.HolocaustHandbooks.com.

³¹³ Germar Rudolf, “Holocaust Victims: A Statistical Analysis,” in: *idem* (ed.), *Dissecting*,

1945. Nothing remotely resembling a counting of the dead ever took place. As the French historian Vincent Reynouard clearly stated:³¹⁴

“At Nuremberg, no statistical study was ever undertaken to attempt to determine the number of missing Jews.”

A German SS officer had his life spared on condition that he came out with the magic number, and so he did. He cited the word of another, who later denied it. That was all! Thereby the mantric number came to infest all of our minds.

And now, 106 Six-Million and Holocaust sources prior to 1942, when, according to the orthodox narrative, the claimed Jewish Holocaust is said to have started.³¹⁵

1. 1891 – *The New York Times*, 26 January 1891: “Russia’s population of five million to **six million Jews** [...] about **six million persecuted and miserable wretches**.”
2. 1891 – Herold Frederic, “An Indictment of Russia,” *The New York Times*, 12 September 1891: “as to the entire number of **Jews in Russia** [...] a total of **6,000,000** is most nearly correct.”
3. 1896 – “Russia and Religious Liberty,” *The New York Times*, 15 March 1891: “the [Russian] **Jews are 5,000,000 or 6,000,000**.”
4. 1900 – Stephen S. Wise, *New York Times*, 11 June 1900: “There are **6,000,000 living, bleeding, suffering arguments in favor of Zionism**.”
5. 1902 – *Encyclopaedia Britannica*, 10th Edition, Vol. 25, 1902, page 482: “While there are in Russia and Rumania **six millions of Jews** who are being **systematically degraded**...”
6. 1903 – *New York Times*, 16 May 1903, “More Details of the Kishineff Massacre”: “We charge the Russian Government with responsibility for the Kishineff massacre. We say it is steeped to the eye in the guilt of this **holocaust** [...] So long as a ‘civilized’ Government brands **five million** people as a perilous pest which must be slowly **annihilated**, so long its baser subjects will think themselves justified in accelerating the process of **extermination** with knives, axes, and hatches.”
7. 1903 – *The Jewish Criterion* (Pittsburgh), 18 September 1903, page 6: “... **six million downtrodden brethren**.”
8. 1905 – *New York Times*, 1 November 1905: “From 1890 to 1902 [Chief Procurator of the Holy Synod Pobledonostzeff] caused **6,000,000 Jewish families to be expelled** from Russia...”
9. 1906 – *New York Times*, 25 March 1906, “Dr. Paul Nathan’s View of Russian Massacre”: “Startling reports on the condition and future of Russia’s

op. cit. (note 29), pp. 175-206, here p. 175.

- 6,000,000 Jews** were made on March 12 in Berlin to the annual meeting of the Central Jewish Relief League of Germany by Dr. Paul Nathan... He left St. Petersburg with the firm conviction that the Russian Government's studied policy for the **'solution' of the Jewish question is systematic and murderous extermination.**"
10. 1908 – *Deseret Evening News*, 17 March 1908: "... **poverty, starvation and disease** are the afflictions which now beset the **six million Jews** in that country and Roumania."
 11. 1908 – *The Jewish Criterion* (Pittsburgh), 7 August 1908: "... when **six million Russian Jews are crying...**"
 12. 1910 – *The Jewish Criterion* (Pittsburgh), 4 February 1910: "**SIX MILLION BABIES SAVED BY STRAUS.**"
 13. 1910 – "Many **Jews Flee from Russia,**" *The New York Times*, 13 March 1910: Russia's "**Jewish population** of roundly **6,000,000**"
 14. 1910 – "Russian Jews in Sad Plight," *The New York Times*, 11 April 1910: "the **systematic, relentless, quiet grinding down of a people of more than 6,000,000 souls,**"
 15. 1911 – *Encyclopaedia Britannica*, 11th Edition, Vol. 2, 1911, page 145: "While there remain in Russia and Rumania over **six millions of Jews** who are being **systematically degraded...**"
 16. 1911 – Max Nordau speaking at the 1911 Zionist Congress. Ben Hecht, *Perfidy*, NY: Julian Messner, 1961, page 254: "But the same righteous Governments, who are so nobly, industriously active to establish the eternal peace, are preparing, by their own confession, **complete annihilation for six million people,**"
 17. 1911 – *Fort Wayne Journal Gazette* (Ind.), 4 June 1911, page 15: "PRINCE, PRIEST AND PEASANT WAGE **WAR AGAINST SIX MILLION JEWS**"
 18. 1911 – Max Nordau, *The Jewish Chronicle* (London), 18 August 1911, page 14: "... the **downfall of six million creatures...** for no war has ever yet **destroyed six million human lives.**"
 19. 1911 – *The Jewish Criterion* (Pittsburgh), 25 August 1911: "... **six million Jews are still groaning** under the most terrible yoke."
 20. 1911 – *New York Times*, 31 October 1911: "The **6,000,000 Jews** of Russia are singled out for systematic **oppression** and for **persecution** due to process of law."
 21. 1911 – "Condition of the Jews in Russia Worst in History," *New York Times*, 10 December 1911: "The Russian Government [...] is making the **6,000,000 Jews** a people economically **exhausted**—a people **without any rights** at all."
 22. 1912 – *American Jewish Year Book* 5672 (23 Sep 1911 – 11 Sep 1912), page 308: "Russia has since 1890 adopted a deliberate plan to expel or **exterminate six millions** of its people for no other reason than that they refuse to become members of the Greek Church, but prefer to remain Jews."
 23. 1912 – Rabbi Stephen S. Wise, *New York Tribune*, 11 September 1912, page 9: "Russia is now asphyxiating the Jews. It does not dare to offend the nations by blood spilling, so it is slowly, but surely **grinding out the lives of 6,000,000 Jews.**"

24. 1913 – *Fort Wayne Journal Gazette* (Ind.), 18 October 1913, page 4: “There are **six million Jews** in Russia and the government is **anxious to annihilate** them by methods that provoke protests from the civilized world.”
25. 1914 – *The Jewish Criterion* (Pittsburgh), 10 July 1914, page 9: “... where **six million Jews are suffering...**”
26. 1914 – *New York Times*, 2 December 1914, page 12: “APPEAL FOR AID FOR JEWS. ... the **plight of more than 6,000,000 Jews...** upon the Jewish people, more than nine millions of whom live in the countries at war and over six million of these in the actual war zone in Poland, Galicia and the whole of the Russian frontier.”
27. 1915 – *New York Times*, 14 January 1915, page 3: “In the world today there are about 13,000,000 Jews, of whom more than **6,000,000** are in the heart of the war zone; **Jews whose lives are at stake** and who today are subjected to every manner of suffering and sorrow...”
28. 1915 – *The Sun* (N.Y.), 6 June 1915, section 5, page 1: “**Six million Jews**, one-half of the Jewish people throughout the world, **are being persecuted, hounded, humiliated, tortured, starved.** ... six million Jews in Russia... are being tortured so mercilessly.”
29. 1915 – *The Jewish Criterion* (Pittsburgh), 25 June 1915: “**The annihilation of the six million Jews** now congregated in the Russian domains goes on in a well-defined and systematic manner.”
30. 1915 – *The Mercury*, 4 December 1915: “... **six millions** of Russian and Polish Jews are to-day the most pitiable **victims of that race hatred** and that race fanaticism which have been the creed of Germany...”
31. 1916 – *The Jews in the Eastern War Zone*, The American Jewish Committee (ed.), 1916, pages 19f., 29, 47, 60, 66: “... where **six million** human beings guilty only of adherence to the Jewish faith are compelled to live out their lives in squalor and misery, **in constant terror of massacre...**”
32. 1916 – *Sausalito News* (Cal.), 22 January 1916, page 1: “... **six million starving Polish Jews** in the war stricken countries of Europe”
33. 1916 – *Oakland Tribune* (Cal.), 26+27 January 1916, page 1 (FRONT PAGE ADVERT 2 DAYS RUNNING): “The President of the United States—**6,000,000 Starving, Homeless, People**—Why should the President, by proclamation to the people of the nation, fix upon January 27th as the day for contributing towards the relief of over six million Jews located in the Far Eastern War Zone?”
34. 1916 – *The Tacoma Times*, 28 February 1916: “... there were **6,000,000 Jews** in Europe absolutely **without food or resources.**”
35. 1916 – *New York Times*, 28 February 1916: “Nearly **six million Jews are ruined** in the greatest moral and material misery; millions of them are refugees, dependent upon the good will of their brethren.”
36. 1916 – *New York Herald*, 5 March 1916, Section III, page 10: “**Six million Jews**, old men, women and little children, are suffering from the **greatest calamity** that has befallen Israel since the Egyptian bondage.”
37. 1916 – *Fort Wayne Journal Gazette* (Ind.), 12 March 1916, page 34: “... **six million Jews** reported **starving** in the warring countries.”

38. 1917 – *Corsicana Daily Sun*, 16 February 1917, page 2: “**Six million Jews** are living in lands where they are **oppressed, exploited, crushed and robbed** of every inalienable human right.”
39. 1918 – *Fort Wayne News and Sentinel* (Ind.), 22 June 1918, page 1: “In the war zone of Europe there are **six million Jews** who have been the war’s **worst sufferers**, ...”
40. 1918 – *The Bakersfield Californian*, 30 July 1918, page 4: “... the **six million starving Jews** in Poland, Galicia and other stricken Eastern provinces...”
41. 1918 – *New York Times*, 18 October 1918, page 12: “Six million Souls Will Need Help to Resume Normal Life When War Is Ended. ... Committee of American Jews Lays Plans for the Greatest Humanitarian Task in History. ... **6,000,000 Jews Need Help.**”
42. 1919 – *The Bourbon News*, 1 April 1919, page 4: “... **six million Jews** in Poland, Lithuania, Galicia, Palestine, Turkey and Siberia who are **dying of starvation**, ...”
43. 1919 – *The Corsicana Daily Sun*, 3 April 1919, page 5: “**SIX MILLION ARE STARVING** ... It is estimated that there are **six million Jewish** women, children and aged men **actually starving to death.**”
44. 1919 – *The Galveston Daily News*, 4 April 1919, page 3: “**Six million Jews** in Poland, Lithuania, Galicia, Palestine, Turkey and Siberia are **dying of starvation**. ... These six million despairing souls are totally dependent on American generosity for the bare necessities of life.”
45. 1919 – *The Watchman and Southron*, 5 April 1919: “**Six million Jews** in Poland, Lithuania, Galicia, Palestine, Turkey and Siberia are **dying of starvation**. ... These six million despairing souls are totally dependent on American generosity for the bare necessities of life.”
46. 1919 – *The Galveston Daily News*, 6 April 1919, page 8: “The American Jewish Relief Committee is endeavoring to save from starvation **six million Jews** who are the helpless **victims of the German terror.**”
47. 1919 – *San Antonio Express*, 9 April 1919, page 12: “At no other time in the history of the Jewish people has the need been so great as now. **Six million** of our brothers and sisters are **dying of starvation**. The entire race is **threatened with extinction.**”
48. 1919 – *The Wellington Leader* (Tex.), 11 April 1919, page 1: “We wish to call the attention of our people to the great drive that is on to raise funds for the relief of the **six million Jews** who are **starving** in the war ridden districts of the east.”
49. 1919 – *The Daily Courier* (Pa.), 4 August 1919, section 2, page 1: “**APPEALS TO AMERICA TO ACT QUICKLY IF LIVES OF SOME SIX MILLION JEWS ARE TO BE SAVED... The lives of some six million people are at stake.**”
50. 1919 – *The Fulton Patriot*, 3 September 1919, page 4: “**WORLD JEWRY AT GREATEST CRISIS.** Leaders in America Striving to Save Race in Europe From **Destruction.** ... All told, many million Christians and more than **6,000,000 Jews** in countries other than the United States are being directly aided by American Jewish relief funds.”
51. 1919 – *New York Times*, 8 September 1919, page 6: “127,000 Jews Have Been Killed and **6,000,000 Are in Peril.** ... **6,000,000 souls** in Ukrainia and in Po-

land have received notice through action and by word that they **are going to be completely exterminated** – this fact stands before the whole world as the paramount issue of the present day.”

52. 1919 – *The Fort Wayne News and Sentinel*, 17 September 1919, Section 2, page 1: “... **six million Jews are dying of starvation** and where vast numbers of them—innocent victims of the ravages of war—wander homeless, and in rags.”
53. 1919 – *Trenton Evening Times* (Trenton, N.J.), 28 September 1919, page 4: “**Six Million Jews Reported Destitute** in Eastern Europe.”
54. 1919 – *Rushville Daily Republican*, 29 September 1919, page 4: “The thought that as I walk the streets of this prosperous and happy town there are **6,000,000 people** in other lands **without food**, shelter or raiment is disturbing. ... When I read, as I have read all my life, of the persecution and **slaughter of the Jews** I am not proud of my own race or my religion. ... **Six million people perishing!**”
55. 1919 – *Janesville Daily Gazette* (Wis.), 4 October 1919, page 4: “... the Feast Day of Rosh Hashonah. It was not a feast day for some **six million starving Jews** of Europe...”
56. 1919 – *The Pittsburgh Gazette Times* – 5 October 1919, Section 6, page 16: “Still they live—these **6,000,000 helpless, starving**, homeless people ... JEWISH WAR RELIEF COMMITTEE”
57. 1919 – *The Fort Wayne Journal-Gazette* (Ind.), 6 October 1919, page 3: “With **six million** of their population in **absolute want**, they are unable alone to render sufficient aid... six million Jews...”
58. 1919 – *Indiana Weekly Messenger*, 9 October 1919, page 1 & 4: “‘The responsibility of maintaining life in these **six million sufferers** rests upon every man and woman in the United States... Helping the Jews in their extremity is not helping the Bolsheviks,’ the speaker emphatically declared.”
59. 1919 – *Schenectady Gazette*, 16 October 1919, page 15: “Today **6,000,000 Jews Are Facing the Darkest Days** Ever Known in the Long History of the Race.”
60. 1919 – *Titusville Herald*, 18 October 1919, page 4: “... Jewish Relief Fund... Contribute Today, the Last Day and Help Save From Death **Six Millions of Starving People.**”
61. 1919 – *San Francisco Chronicle*, 19 October 1919, page 18: “**6,000,000 JEWS IN BREAD LINE, STRAUS WRITES.** More Than Third of Entire Race in World **Reduced to Despair** in Europe.”
62. 1919 – *Cape Vincent Eagle*, 23 October 1919: “... there are **six million people** in other lands **without food**, shelter or raiment is disturbing. ... When read, as I have read all my life, of the persecution and **slaughter of the Jews...**”
63. 1919 – Martin H. Glynn, “The Crucifixion of Jews Must Stop!” *The American Hebrew*, 31 October 1919, page 582: “From across the sea **six million** men and women call to us for help ... In this catastrophe, when **six million human beings** are being **whirled toward the grave...** **Six million men and women are dying** from lack of the necessities of life ... Six million men and women are dying...”

64. 1919 – *Beatrice Daily Sun* (Neb.), 8 November 1919, page 2: “...**SIX MILLION STARVING SOULS. Six million Jews** in Poland, Lithuania, Galicia, Palestine, Turkey and Siberia are **dying of starvation...**”
65. 1919 – *Lebanon Daily News* (Pa.), 11 November 1919, page 2: “... **Six million Jews** in eastern Europe **face death** during the coming winter, ...”
66. 1919 – *The Toledo News-Bee*, 27 December 1919: “**Six Million Human Beings Are Suffering the Tortures of Disease, Hunger and Death**”
67. 1920 – *Manti Messenger* (Utah), 19 March 1920: “Just now some **six million of Jews**, eight hundred thousand of them just children, are **in imminent danger of starvation** in eastern Europe.”
68. 1920 – *New York Times*, 3 May 1920, page 11: “Your help is needed to **save the lives of six million people** in Eastern and Central Europe.”
69. 1920 – *New York Times*, 5 May 1920, page 19: “**Six million starving**, fever-stricken sufferers in war-torn Europe appeal to us.”
70. 1920 – *New York Times*, 7 May 1920: “... Jewish war sufferers in Central and Eastern Europe where **six millions face horrifying conditions of famine, disease and death.**”
71. 1920 – *Brooklyn Daily Eagle*, 29 August 1920: “**Six million Jews** had been made homeless, **starving, naked and plague ridden** by five years of foreign and domestic wars that swept Poland.”
72. 1921 – *New York Times*, 20 July 1921, page 2: “**BEGS AMERICA SAVE 6,000,000 IN RUSSIA. Russia’s 6,000,000 Jews are facing extermination by massacre.**”
73. 1922 – *Lowell Sun* (Mass.), 22 March 1922, page 14: “...over **six million wandering Jews** walking, crawling in their misery, **feeding on the bark of trees** and on herbs that grow by the wayside.”
74. 1926 – *Encyclopaedia Britannica*, 13th Edition, Vol. 1, 1926, page 145: “While there remain in Russia and Rumania over **six millions of Jews** who are being **systematically degraded...**”
75. 1926 – *Canadian Jewish Review*, 9 April 1926, page 4: “... the **extreme need of 6,000,000 Jews** in Russia and Poland, ...”
76. 1931 – *The Montreal Gazette*, 28 December 1931, page 25: “**SIX MILLION JEWS FACE STARVATION**”
77. 1933 – *New York Times*, 1 June 1933, page 6: “Dr. Margoshes said he had received a letter from the poet at Zurich a few days ago, stating that she had ‘run away from the **holocaust...**’”
78. 1933 – *The Jewish Western Bulletin*, 21 September 1933: “At this period of human persecution and of human destruction, when life, especially **Jewish life has ceased to be of any value in** the cruel land of **bloody Germany**, when the lives of hundreds of thousands are tortured and hang in the balance – during this **holocaust...**”
79. 1936 – Chaim Weizmann, *Reden und Aufsätze 1901-1936*, Jüd. Bucherverlag Erwin Löwe, Berlin 1937, page 272-274: “It is no exaggeration to say that **six million Jews are sentenced to be imprisoned** in this part of the world, where they are unwanted, and for whom the countries are divided into those, where they are unwanted, and those, where they are not admitted. ... It is ultimately the fate of six million people!”

80. 1936 – *New York Times*, 31 May 1936, page 14: “AMERICANS APPEAL FOR JEWISH REFUGE.” The petition,... favoring a larger Jewish immigration into Palestine, stressed the intolerable sufferings of the **millions of Jews in “the European holocaust. ... to save these unfortunate millions from total annihilation...”**
81. 1936 – *The Jewish Western Bulletin*, 2 June 1936, page 3: “Great Britain has it within her power to **throw open the gates of Palestine** and let in the victimized and persecuted Jews **escaping from the European holocaust.**”
82. 1936 – Chaim Weizmann, speech before the Peel Commission on Palestine, King David Hotel in Jerusalem, November 25, 1936: “... today **six million ...** are doomed to be pent up in places where they are not wanted, ... These **six million people** to whom I have referred are condemned to **live from hand to mouth.**”
83. 1936 – Chaim Weizmann, *The Jewish Western Bulletin*, 11 December 1936, page 3: “... where **six million Jews** are in a position which is **neither life nor death.**”
84. 1937 – *Fitchburg Sentinel*, 17 February 1937, page 1 & 11: “Stating that “**6,000,000 Jews** in central Europe have **neither life nor death** because of **extreme persecution,**” ...”
85. 1938 – *New York Times*, 9 January 1938, page 12: “**PERSECUTED JEWS SEEN ON INCREASE. 6,000,000 VICTIMS NOTED**”
86. 1938 – *Sunday Times-Advertiser* (Trenton, N.J.), 20 March 1938: “The simple fact is that the **fate of six million Jews** in Poland, Roumania, Germany and Austria **hangs in the balance.**”
87. 1938 – *The Jewish Criterion* (Pittsburgh), 1 April 1938, page 15: “I shall not comment upon the first except to remind you that **six million Jews** in Europe are **struggling between life and death.**”
88. 1938 – *The Guardian*, 4 April 1938, page 11: “**Six million Jews** at this moment are **trapped like rats...**”
89. 1938 – *Turtle Mountain Star*, Rolla, North Dakota, 6 October 1938: “Five or **six million Jews, uprooted** by dictatorship and **tossed about** by economic storms, may have to **depend upon** the development of **the Holy Land...**”
90. 1939 – *The Daily Sentinel* (Rome, N.Y.), 31 January 1939, page 11: “Does Mr. X really believe that if Hitler gains control of Spain with the help of Franco, that life in Spain will be any different than it is today in Germany, Austria and Czechoslovakia where **6,000,000 Jews have been murdered, ...**”
91. 1939 – *The Jewish Criterion*, 17 February 1939, page 20: “**The fate of six million people is in the balance.**”
92. 1939 – *The Jewish Criterion*, 21 April 1939, page 15: “... the distress and **suffering of 6,000,000 Jews** in Europe.”
93. 1939 – *The Jewish Criterion*, 28 April 1939, page 3: “... **6,000,000 fellow Jews** who are **in distress** today.”
94. 1939 – *The Niagara Falls Gazette*, 1 May 1939, page 15: “...Rabbi Fischhoff declared that the **6,000,000 Jews** or Christians of Jewish extraction **are in real of imminent danger** due to the spread of totalitarianism in the world.”
95. 1939 – *The Jewish Criterion*, 12 May 1939, page 7: “The year of 1939 is the year of the most **critical struggle of 6,000,000 European Jews.**”

96. 1939 – *Contemporary Jewish Record*, Vol. 2, No. 5, September-October 1939, page 3 (Published by the American Jewish Committee): "... the coming war would be the **annihilation of the six million Jews** in East and Central Europe."
97. 1939 – *The Sentinel* (Chicago, IL), 12 October 1939.: "... the coming war would be the **annihilation of the six million Jews** in East and Central Europe."
98. 1939 – *The Jewish Criterion*, 13 October 1939, page 2: "... the coming war would be the **annihilation of the six million Jews** in East and Central Europe."
99. 1939 – *The Southern Israelite*, 28 November 1939: "... the coming war would be the **annihilation of the six million Jews** in East and Central Europe."
100. 1940 – *Mason City Globe Gazette* (Iowa), 20 January 1940, page 16: "Mr. Tannenbaum stressed that **Palestine** offered the **only solution to the six million Jews** who are **homeless, starving** and **sick** in central and eastern Europe today."
101. 1940 – *The Southern Israelite*, 3 May 1940: "Almost **six million Jews** find themselves **on the brink of starvation and extermination.**"
102. 1940 – Robert W. Schiff, *Ohio Jewish Chronicle*, 17 May 1940, page 1: "**Over six million Jews** in Central and Eastern Europe are faced with great **danger of annihilation** as the result of the sweep of war and oppression."
103. 1940 – *New York Times*, 25 June 1940, page 4: "**Six million Jews** in Europe are **doomed to destruction**, if the victory of Nazis should be final. ... European Jews face the **danger of physical annihilation.**"
104. 1940 – *Joplin News Herald* (Missouri), 25 June 1940, page 3: "**Six million Jews** in Europe are **doomed to destruction.**"
105. 1940 – *The Palm Beach Post*, 25 June 1940: "Dr. Nahum Goldmann [...] said today that if the Nazis should achieve final victory '**6,000,000 Jews** in Europe are **doomed to destruction.**'"
106. 1941 – *New York Times*, 2 October 1941: "... as to avoid the likelihood of **another holocaust.**"

Douglas Reed was one of Britain's best-known wartime journalists, his books being bestsellers in many lands throughout the 1940s. He travelled through the European capital cities during the war and spoke to various influential people. Then in his 1951 book *Far and Wide* he wrote (p. 173):

"During the Second World War, I noticed that the figures of Jewish losses, in places where war made verification impossible, were being irresponsibly inflated, and said so in a book. The process continued until the war's end when the figure of six millions was produced. [...] A transparently worthless estimate was not only being used for mass-delusion through newspapers, but even given official status. [...] No proof can be given that six million Jews 'perished'; proof can be adduced that so many could not have perished."

Ivor Benson wrote about Douglas Reed's fate as follows:³¹⁶

³¹⁶ Ivor Benson, Preface to Reed's *The Controversy of Zion*.

“After 1951, Reed found himself banished from the bookstands, all publishers’ doors closed to him, and those books already published were liable to be withdrawn from library shelves and ‘lost,’ never to be replaced.”

Six million is an important number, as being our best estimate of the total number of persons, mainly Jews, who have to date applied to the German government for compensation on grounds of their being a “Holocaust survivor” (see Prelude). Some would put this figure lower, at five and a half million; while around four million have actually received that pay-out.

11. The Turning of the Tide

“The world needs more reason and less dogma from both sides of the Holocaust debate, it appears.” —Jim Fetzer

For any mainstream Holo-articles, I suggest that the breakdown of blog comments is the most vital point. Indeed, the mere fact that uncensored blog comments are now being allowed is highly significant. We are living at a moment of great transition, so that in a few years the notion of large cyanide lethal gas chambers will exist only in the museum of yesterday’s superstitions. It remains socially unacceptable to say this, however, which is why web-posts are so crucial, because any *nom de plume* may there be used. Here are half a dozen news items summarized, plus one blog article, giving in each case a breakdown or score of the web-comments. The following scores were made in February 2013 (see CODOH Forum thread “Turning of the Tide”).

1. Bishop Fined for Holo-Denial, April 2010

Daily Mail, 17 April 2010: Bishop Williamson of the Catholic Society of Saint Pius X (SSPX, which rejects the changes instituted by the Second Vatican Council of 1965) was thrown out of Argentina for making some candid remarks about the Holocaust. He had agreed to be interviewed by a Swedish TV company, and at the end an entrapment question was thrown in, which he answered in his usual honest manner. German courts keep finding him guilty – the most recent was in April 2014 – but as he is never there, this entire procedure merely served to prop up the traditional Holocaust narrative. The Church in Rome excommunicated him, and the Swiss section of SSPX he was a member of threw him out as well.³¹⁷

³¹⁷ See N. Kollerstrom, “Bishop Williamson Vindicated, then Ousted,” *Inconvenient Histo-*

I spent a while trawling through blogs where the good bishop was castigated as mad, sad, dangerous, far-right etc., but nowhere could I see anyone actually wishing to debate the content of what he had said. It had indeed been gratifying to hear a bishop discussing the *Leuchter Report* in public. Let us recall the diamond-clear words of truth the Bishop came out with:

“It is my understanding that, according to the best scientific estimates, 200,000 to 300,000 Jews perished in National Socialist concentration camps but none of them in homicidal gas chambers.”

That is a good numerical estimate, which could be a basis for achieving of a worldwide consensus on this matter. It is unduly high, or so I have argued in Chapter 5, if we’re talking about the customary thirteen to fifteen labour camps (earlier I had mistakenly endorsed such a too-high figure in my 2007 essay “The Auschwitz Gas Chamber Illusion,” which caused me to be ejected from my College).³¹⁸

The Bishop continued:

“I believe that the historical evidence is hugely against 6 million Jews having been deliberately gassed in gas chambers as a deliberate policy by Adolf Hitler. I believe there were no gas chambers.”

This is a disastrous position, whereby one becomes a “denier.” Yes, there were gas chambers, the cyanide gas chambers! It is (I suggest) *so* important to be affirmative on this matter. But, for an unprepared comment – after he had given a detailed theological exegesis of which no notice was taken – it has to be impressive.

Delicate negotiations had been going on for some years about re-admitting the “schismatic” (*i.e.* traditionalist) SSPX sect back into the bosom of the Catholic Church and de-excommunicating its bishops. This re-admission into the church was effected on 21 January 2009. On that very day, the Williamson interview that had been recorded many weeks earlier was aired. This release was therefore carefully timed to sabotage the reconciliation between the Vatican and the SSPX.

In February 2009, a group of “World Jewish leaders” advised the Pope that “Denying the Shoah was not an opinion but a crime.” Various world leaders weighed in, likewise exhorting the Pope, but still the good Bishop refused to recant: “If I find this proof, then I will correct myself” he replied, while apologizing for any distress his remarks had caused. How rare a thing is a man with backbone on this topic! Britain’s *Daily Telegraph* reporter commented on the “wicked madness” of the Bishop – adding, “I do

ry, Vol. 5, No. 1 (spring 2013).

³¹⁸ NB, this number does *not* include Jewish losses in the many ghettos and resulting from the brutal warfare in Russia, mainly due to the activities of the *Einsatzgruppen*. See on this Mattogno’s book, *The Einsatzgruppen*.

not wish to belong to the same Church as Williamson,” thus emphasizing that belief in the Shoah is today far more important than any mere point of Christian doctrine.

“Harsh and cruel is the religion of the Shoah” commented Bradley Smith concerning the fate of a colleague of Bishop Williamson who had the temerity to speak out in support. On 29 January 2009, Don Floriano Abrahamowicz, a Dominican Catholic priest, representing northeast Italy for the SSPX, dared to speak some words in support of the Bishop: “I know that there were disinfection chambers in the German camps during the war” he declared, adding that he *did not know* whether these were also used for killing people. Lying through its teeth, the Vatican accused him of “denying the fact of the Shoah” – where “the Shoah” signifies the collective suffering of the Jewish people during the war. The fraternity expelled him, *i.e.* he could no longer exercise his ministry, then the next thing he knew, he was locked out of his own church, which was also his house: all for claiming that he “did not know” something about what had happened sixty years ago and a thousand miles away. He would only be allowed back to the church on condition that he “repents.”³¹⁹

In his 2010 book *Light of the World*, the former Pope Benedict XVI said he would not have lifted the ban on Williamson if he had known of his “far-right views”: the Bishop’s statements about who did and did not die during World War Two showed he was “far right” – that is the bit that always puzzles me. In my experience of talking to various people who have been damned as “far-right,” it always seems to mean that they do not believe in the Holocaust mythos. It can have other meanings too, such as favouring the survival of one’s indigenous culture or objecting to undue immigration, but disbelieving in the H-story may lie at the core of this strange modern concept. When did you last hear of anyone being damned for being far-left?

The *Daily Mail*’s report, “British Bishop Convicted of Denying Holocaust by German Court” had ninety comments added underneath it. I found them *unanimous* in objecting to the concept of a law forbidding a belief. Most agreed that the Bishop’s position was mistaken, yet objected to his being tried for it.

2. Dennis Avey “Remembers” He Was at Auschwitz, November 2011

“The Curious Case of the ‘break into Auschwitz’” by Guy Walters, a *New Statesman* review of Dennis Avey’s book *The Man who Broke into Auschwitz* (for comments on this see Chapter 4, pp. 78f.).

³¹⁹ Guillaume Fabien, “In the Wake of the ‘Williamson Affair’” The case of don Floriano Abrahamowicz,” *Smith’s Report*, No. 164, August 2009.

Of the 87 blog comments, I counted a few dozen which expressed an opinion, and they were about 3:1 against believing Avey's story.

3. Call to Stop Teaching the Holocaust in UK Schools, December 2011

"Stop teaching about the Holocaust..." *Daily Telegraph*. Former UK education minister Lord Baker calls for Holo-education not to be taught in schools, on the grounds that it causes anti-German feelings (see p. 78). More than *five hundred* comments appear – could this be the first time uncensored blog comments on this topic have been permitted? *The Telegraph* newspaper is a pillar of the British establishment. I sorted the comments by "best rating," then I counted the first hundred: 41 were "Revisionist," *i.e.* rejecting the accepted narrative, 35 were pro-H, and 23 were undecided or unclear. Is this the first time the British have been able to freely express their opinion on the matter? It has to be the first time ever that a clear majority have come out against the accepted Holo-narrative.

4. Birmingham Science Department "Verifies" Mass Graves at Treblinka, January 2012

Daily Mail, 18 January 2012:¹²¹

"British archaeologist destroys Holocaust deniers' argument with mass grave find at Treblinka."

A Birmingham University science department archaeologist visited Treblinka, Dr Caroline Sturdy Colls, having there obtained her PhD on this topic. The BBC news hyped her study as proving that 800,000 Jews were buried there. Her team was not allowed to disturb the ground – claiming that Jewish law forbids desecrating, etc. – and the ground-penetrating radar she was using cannot actually detect human remains! ("[N]o geophysical methods will reveal conclusively what is below the soil – they do not detect human remains.") Yet, there was no doubt, etc. No, of course not. Also, she did detect some brick-type structure under the ground, "probably the gas chambers" she explained. Sure. But how can she be sure?

Were the British people convinced by this hocus-pocus? There were 59 comments "moderated in advance" (*i.e.* they didn't print all of them). Clicking "best rated" I counted seven sceptical of the whole story and only one believing it – in early 2013. People were very sceptical. (See the Chapter on Treblinka). When I rechecked in June 2014, however, all nine published comments were Believers, and not a single sceptical one was left.

5. *Isis* History of Science Journal Calls for Encyclopaedia to Be “Pulped” – Because of Revisionist Contributor, February 2012

America’s most prestigious history-of-science journal is called *Isis*. It reviewed a two-volume twelve-hundred page *Biographical Encyclopaedia of Astronomers*, a huge endeavour featuring the lives of astronomers over twenty-four centuries. Over a hundred contributors wrote articles. The New York branch of the prestigious German science-publishing firm Springer had published it. *Isis* concluded that it needed to be *pulped*. It found a problem with the ethically-damned status of one of its contributors, viz., myself.³²⁰ I had three biographical essays published in it, one about Isaac Newton. The US professor emeritus Jim Fetzer, who had himself published a couple of dozen books about logic and the philosophy of science – and was the Founder of Scholars for 911 Truth – complained about this review to the US History of Science Society; after all, it’s their journal. In January 2012, its council deliberated and replied that it was quite OK, *i.e.* it could see nothing wrong with a Jewish professor in an *Isis* review calling for a large encyclopaedia to be pulped, and assaulting the character of one of its contributors, merely because the latter was a Revisionist.³²¹

Jim Fetzer posted an article about this on the big-hitting site *Veterans Today* with the title: “The War on Truth: Research on the Holocaust can End your Career.”³²² More or less all of the 12 quite interesting blog comments were supportive (not counting Fetzer’s and my own). That is quite a change! You may find this to be one of the more edifying open public Holocaust-discussions.

6. US Congressional Nominee: Holocaust “Blackest Lie” in History, March 2012

1 March 2012: Arthur Jones, running as Republican candidate in Illinois, courageously described “The Holocaust” as “the blackest lie in history” (*Iranian Press TV*):

“‘It’s the blackest lie in history. Millions of dollars are being made by Jews telling this tale of woe and misfortune in books, movies, plays and TV,’ he said. ‘The more survivors, the more lies that are told,’ the 64-year-old candidate said.”

While admiring his *chutzpah*, it did not help him to get elected: he only secured 10% of the vote. For the article on the banned-in-Europe Iranian

³²⁰ Noel M. Swerdlow, *Isis*, vol. 101, no. 1 (2010), pp. 197f.

³²¹ The US History of Science Society may be disappointed to hear that the 2nd edition of this *Biographical Encyclopaedia* will still feature my contributions.

³²² www.veteranstoday.com/2012/02/04/the-war-on-truth-research-on-the-holocaust-can-end-your-career/

Press TV web site, I counted these comments: 42 Holo-sceptics, 9 believers (March 1st, 2012). He also described President Obama as an “illegal alien.” The residents of Illinois need to understand that having a politician capable of speaking words of truth is something more precious than gold or diamonds, and they should make the most of him while he’s around.

Arthur Jones ran again for Congress in late 2018. This time his revisionist stance got him even more negative media attention, and he ultimately won 26.5% of the vote!³²³ Similarly, the Holocaust and 9/11 revisionist John Fitzgerald ran for Congress in California’s 11th Congressional District in 2018, securing 25.9% of the vote in spite of a media blitz against him.³²⁴

7. Interview with Anne Frank’s Sister, May 2012

In a *New Statesman* thread to the article “Interview: Eva Schloss, Anne Frank’s stepsister” by Jemima Khan and Eva Schloss (23 May 2012), the balance of comments were: 12 Holo-sceptics, 10 believers, 3 unsure. On this *New Statesman*’s heart-wrenching remember-Anne-Frank column I submitted this comment:

“What’s interesting about Anne Frank’s Diary is that it only mentions the gas chambers in the year 1942 as something she has heard about on the BBC news. That was the year the BBC first started broadcasting the story of big human lethal cyanide gas chambers. Her Father was in the hospital at Auschwitz and he recovered – didn’t he?”

My post didn’t go up. Perhaps sensing the danger, all posts were deleted right after I submitted that.³²⁵

8. David Cole Is Outed – And Has Not Changed His Mind

The online David Cole video *Auschwitz* (1991) remains still, after all these years, the great classic on the subject. For how the Dark Side got to David Cole and secured an ultra-groveling recantation from him in January 1997, and how he vanished for so long (only reappearing in 2013), see the CODOH series on “The David Cole Affair.”³²⁶ He received a death threat

³²³ See https://ballotpedia.org/Arthur_Jones; see an interview with Jones at <youtu.be/nkm6bLE0Bmk>.

³²⁴ See [https://ballotpedia.org/John_Fitzgerald_\(California\)](https://ballotpedia.org/John_Fitzgerald_(California)); <http://johnfitzgeraldforcongress.com/>; <youtu.be/EYr-UFsaqpc>.

³²⁵ One can also count web comments made below YouTube videos. Larger numbers are here involved. Anthony Lawson’s powerful *Holocaust, Hate-Speech and Were the Germans So Stupid?* had over a thousand comments, and counting the first few gave 2:1 in favour of a sceptical or revisionist view. Then I took the top video that came up from putting “Holocaust” into Google, called *The Holocaust in Colour* (supposedly some colour film), and it had received fifteen thousand comments! Counting the first few gave a similarly sceptical 2:1 ratio. This is a very clear message.

³²⁶ www.codoh.com/library/series/3699/

and was on several occasions beaten up by the Jewish Defence League in Los Angeles; then finally they put a bounty on his head of \$25,000, so he decided to disappear, or rather change his identity. With real Jewish chutzpah he re-invented his life as an organizer of parties for West-Coast Republicans, with the name David Stein. It was a great success until his ex-girlfriend outed him (on 20 April 2013, of all days). Do not deny yourself the pleasure of reading Kevin Barrett's account on *Veterans Today*!³²⁷

Under his new name, Cole produced a string of *mainstream Holocaust documentaries* that have been commended by – President Clinton, U.N. Secretary-General Kofi Annan, the Board of Governors of the United Nations' System Staff College, the Center for Global Education, the government of Hungary, the royal family of Jordan, and U.S. Representative Marcy Kaptur, and he's had his films screened at a United-Nations-sponsored symposium on human rights and the Holocaust. Phew! After he had been outed, he explained what he really believes – and those “documentaries” which he had made for a living do *not* express his belief. As a consequence of having made these, without believing them, it's hard to think who is more competent to have a view on this subject than he. His being of Jewish extraction is here pretty relevant.

Not many of his friends were still talking to him after he was outed, and of course the usual “Nazi, Nazi” taunts started up. Once more, as in 1991, it is a pleasure to hear his crystal-clear logic and firm grasp of the central issues. I'm not endorsing all he had to say (for example, at the April 2014 *Institute for Historical Review* meeting, the transcript of which is online³²⁸). Americans should listen to this intriguing interview.

Let us hope that David Cole's views and well-defined position can become a centre and focus leading to a consensus and a balanced view on this topic. After all he's been through, he deserves to be listened to. Americans need to appreciate that they have in their midst two real experts who can debate and answer politely any questions they may have on the subject, ideal for university debates on the subject: David Cole and Germar Rudolf.

Summarizing, from 2011 there is evidence of a silent groundswell, perhaps a majority, of persons no longer accepting the official narrative. This has to be the Turning of the Tide. It no longer lies within the Establishment's power to bolster its crumbling myths.

For a Culture of Peace to exist, these grand, war-ratifying myths have to disintegrate. No war fought was of Good against Evil. William Blake alluded to “Those who would suppress Mental, and prolong Corporeal,

³²⁷ www.veteranstoday.com/2013/05/04/cole-stein/

³²⁸ Search for: “ANC Report podcast David Cole.” His 2014 talk was called, “Breaking Silence: My Secret Life, and Why I'm Still a Holocaust Revisionist.”

strife” – it is mental strife to which we are summoned. The shadows of terrible Untruth lie behind in our history.

12. Treblinka – Death Camp or Railway Station?

“... and give to airy nothing *A local habitation and a name.*”
—Theseus, *A Midsummer Night’s Dream*, Shakespeare

“Yes, Treblinka is in fact the most fitting landmark for the
‘Holocaust,’ a mirage of a multi-million genocide in gas
chambers, of which not the slightest documentary or material
trace exists...” —Jürgen Graf³²⁹

Ms Sturdy Colls Visits Treblinka

On 18 January 2012, a *Daily Mail* headline proclaimed, “British archaeologist destroys Holocaust deniers’ argument with mass grave find at Treblinka.”¹²¹ According to this, a British scientist claims to have found mass graves using “ground penetrating radar.” It is averred that “deniers” are “proved” wrong again! “Ground-penetrating radar” was to be used because Jewish burial sites supposedly cannot be disturbed:

“A British forensic archaeologist has unearthed fresh evidence to prove the existence of mass graves at the Nazi death camp Treblinka – scuppering the claims of Holocaust deniers who say it was merely a transit camp.

Some 800,000 Jews were killed at the site, in north east Poland, during the Second World War but a lack of physical evidence in the area has been exploited by Holocaust deniers.

Forensic archaeologist Caroline Sturdy Colls has now undertaken the first co-ordinated scientific attempt to locate the graves.”

At this transit camp, some twenty to thirty German staff plus admin ran the camp together with a hundred Ukrainian security guards. And yet, in a nine-month period, it is alleged that a population equivalent to the city of San Francisco was exterminated by Diesel exhaust gas. In an open space of some five acres, the remains of nearly one million people are being searched for using modern equipment. After being buried, they were allegedly dug up, cremated on open pyres, the bones ground by milling, then the remains reburied. We are here reaching the extreme limits of absurdity.

³²⁹ Jürgen Graf, Carlo Mattogno, *Treblinka, Extermination Camp or Transit Camp?*, 3rd ed., Castle Hill Publishers, Uckfield, 2020, p. 299.

The BBC programme did at least admit the Revisionist view on the topic: “Holocaust deniers say that it was a transit camp.” That’s right, Revisionists view Treblinka as having been basically a railway station encampment, and as presumably having some “gas chambers” for delousing, even though no one has yet found their remains.³³⁰ There was a change in the railway gauge, the Russian railways were and still are wider than the European system: the “Aktion Reinhardt” camps such as Treblinka were mainly in Eastern Poland near this border. The main railroad line into Russia was located three kilometres from Treblinka.

A BBC News item about Ms Sturdy Colls’s research explained that:³³¹

– The ground cannot be disturbed:

“No excavation was carried out and the ground was not disturbed, which would be a violation of Jewish law and tradition, banning the exhumation of the dead.”

– The technology used cannot detect dead bodies:

“[...] no geophysical methods will reveal conclusively what is below the soil – they do not detect human remains.”

– From which it followed:

“Any doubts about the existence of mass graves at the Treblinka death camp in Poland are being laid to rest by the first survey of the site using tools that see below the ground.”

The conclusion here reinforces the initial premise of not disturbing the ground – Ms Sturdy Colls is to be congratulated for getting her PhD with such dazzling logic.

Not a Single Body Found

The BBC programme casually alluded to “Huge open burning pits of flesh” – the original Holohoax image!³³² This was the “fiery sacrifice” concept

³³⁰ Thomas Kues, “UK Forensic Archaeologist Sets out to Refute Treblinka ‘Deniers’,” *Inconvenient History Blog*, www.revblog.codoh.com/2010/11/uk-forensic-archeologist-sets-out-to-refute-treblinka-deniers/; see also his more thorough paper “Comments on Treblinka Statements by Caroline Sturdy Colls,” *Inconvenient History Blog*, 27 Jan. 2012; www.codoh.com/library/document/3952/. The ground-breaking (pun intended) work of Dr Sturdy Colls has not been published in any peer-reviewed journal. Her PhD is strangely unregistered by the University of Birmingham as publicly available.

³³¹ BBC “Revealing the Hidden Graves of the Holocaust,” 22 Jan. 2012; www.bbc.com/news/magazine-16657363; Sturdy Colls’s research was also featured in a documentary aired in late March and early April 2014 by Britain’s Channel 5 with the title *Treblinka: Inside Hitler’s Secret Death Camp* and by the U.S. Smithsonian Channel under the title *Treblinka: Hitler’s Killing Machine*. Eric Hunt has skillfully debunked the exterminist claims of this documentary with his own documentary *The Treblinka Archaeology Hoax*, once at youtu.be/5S2wXceG0SM.

³³² See Appendix II for Elie Wiesel’s book *Night* (which first appeared in French in 1958, then in English in 1960), the book that has sold twelve million, for a gripping account of the piles of flammable human corpses, especially babies.

Illustration 24: Rocks at Treblinka

which enabled the take-over of the mighty Holo-word: “blood burning as if it were fuel” – and was this coming from the University of Birmingham! We do not gather that Ms Sturdy Colls has found evidence for so much as one single buried body. Pinch me somebody, is the science department of a British university serving up the Spielberg *Schindler’s List* phantasm of huge piles of burning corpses? They were buried, then dug up and then burnt. Why did they need to be dug up? Oh yes, the wicked Nazis had to destroy all of the evidence before they left.

A real science programme would have started off telling us what ground radar could see, what its wavelength was, how far down it could go, etc. We are talking about a large open field surrounded by woodland, with some undulations. There are 17,000 stones sticking out of the ground, with names put onto them; these are fairly recent. The programme failed to mention this small detail.³³³

Birmingham Science Department had first to get permission from a ‘Chief Rabbi’ for their survey of the area – even though, God forbid, they were not even going to dig anywhere. That might give them the awful shock of (gasp) not finding any bodies.

No Gas Chambers Found

In his already-mentioned article about the work of Ms Sturdy Colls, Thomas Kues pertinently asked:³³⁰ “Ms. Sturdy Colls should also ask herself how it is possible that no one has managed to locate the remains of 800,000 people allegedly buried within the area of a mere few hectares?” and urged Caroline Colls to peruse Carlo Mattogno and Jürgen Graf’s study *Treblinka: Extermination Camp or Transit Camp?*, especially the chapter about the total failure of previous excavation efforts to find any trace of mass graves or a “gas chamber.”³³⁴

³³³ Siehe Richard Kregge, “Treblinka Ground Radar Examination Finds No Trace of Mass Graves,” *The Barnes Review Blog*, 12 Feb. 2012; (now at www.codoh.com/library/document/6411/). This rather brief report was all that has ever appeared. It seems that Richard Kregge, having a family back home, decided that this was not a matter he could easily write up. It remains puzzling and tragic that what was apparently the one thorough study should have been performed but not written up. The best account of Kregge’s investigation – still rather too short – is his YouTube video: *Treblinka Was No Extermination Camp – Just Transit Station*; once at youtu.be/U9c6jX2uxPo.

³³⁴ A November 1945 Polish excavation had dug in an area of the Treblinka camp where

A Non-Lethal Gas

“No-one knew exactly how German science had managed to accomplish the mass murder of millions of people without leaving a trace.”

— Israel Cymlich, Oscar Strawczynski,
Escaping Hell in Treblinka, 2007, p. 39

Early eyewitnesses claimed that the means of extermination at Treblinka had been steam: the Nuremberg Military Tribunal heard from the Polish Government that Jews had been steamed like lobsters to their deaths.³³⁵ That phase of the narrative didn't last for very long, and soon the cause of death settled down to being Diesel exhaust. Only several decades later, a revisionist research paper pointed out that it is almost impossible to kill people with Diesel-exhaust gasses. So the story transmogrified from normal history into that which, as Elie Wiesel put it, “lies outside history.”³³⁶ Maybe that is why Ms Sturdy Colls's report does not harp too much upon the cause of death. Treblinka is the site of not one but two awesome Holo-miracles: the miraculous gassing of 800,000 Jews using a non-lethal gas, and then the miraculous burning of 800,000 Jewish corpses on huge outdoor pyres, thereby igniting the Holo-caust (total-fiery) mythos with its inextinguishably hellish meaning. Dr Caroline Sturdy Colls and her Birmingham science team were indeed treading on hallowed ground, with so many hundreds of thousands of Jews (not) buried there.

It is vaguely alleged that Diesels from Soviet tanks were used. They produce much less than 1% of carbon monoxide in the Diesel exhaust, and probably only around 0.1%. That is the allegedly lethal component of the Diesel exhaust. However dire Diesel gas may smell, *it can hardly be lethal*. This unalterable fact was pointed out by Fritz Berg in 1983 at a Revisionist

mass graves had been alleged by a witness, and found none, and then dug in an area where “gas chambers” were alleged, and found no remains: see Mattogno/Graf, *Treblinka* (2020), pp. 77-90. This book is online, www.holocausthandbooks.com/index.php?author_id=5, along with 32 others of Mattogno's works which have been translated into English. This is an important scholarly *oeuvre*. Mattogno can read Polish, German and Italian, which gives him a vital middle-European perspective.

³³⁵ Testimony submitted by the Polish Government to the Tribunal in December 1945, in IMT Vol. 32, Doc. 3311-PS, pp. 153-158. The Polish Government testimony described the building and operation of these steam chambers in some detail, eg: “three chambers and a boiler room. The steam generated in the boilers is led by means of pipes to the chambers” (*ibid.*, p. 156); see also Carlos Porter, *Made in Russia: The Holocaust* (1994). NB: there is a video of this name by Mr Porter online.

³³⁶ The original story, of two to three million Jews boiled to death in steam chambers at Treblinka in one year 1942/3, transformed in 1945/46 into 0.8 million gassed by Diesel exhaust; see Mattogno/Graf, *Treblinka*, (2020), esp. Chapter II and Section 5 of Chapter III.

conference¹⁰⁷ – a “milestone of revisionism” – his science was sound, and the Treblinka story had been told often enough that it could not easily be altered.³³⁷

Miraculously enough, the wicked Nazis also removed completely from the site “all buildings, all concrete foundations, all fresh water and wastewater pipes, all the rubbish, all glass fragments, all barbed wire fences, all narrow-gauge rails, all air-raid shelters, and all roads, and they left the area *as if the camp had never existed*.” This conclusion emerged from a 1999 archaeological survey by Australian Richard Krege. The Krege study found that “Almost all of the ground consists of undisturbed soil, sand and rocks.” They reckoned that, although their ground-penetrating radar could detect objects to a depth of about 6 metres, they did not find “Individual or mass graves, fragments of skeletons, human ashes, wood ashes, ground irregularities, construction compounds or remnants, remains of trees or stumps, cavities, golden teeth.”³³⁸

Clearly, Treblinka needs to become a site of Holo-pilgrimage, as a place where such wondrous miracles have occurred.

Magic Jewish Blood

The widely credited eyewitness Chil Rajchman (formerly Yehiel Reichmann) described how the funeral pyres at Treblinka were ignited:³³⁹

³³⁷ The three-hour documentary *One Third of the Holocaust*, online by Denierbud (www.HolocaustHandbooks.com), focuses on Treblinka, and is highly recommended.

³³⁸ A Report in the *Canberra Times* 24 Febr. 2000 (quoted on the CODOH Forum) described Krege as “a qualified electronics engineer,” saying:

“Richard Krege, 30, of Canberra, said data collected during a week at Treblinka using ground penetrating radar, found no soil disturbance consistent with 870,000 Jews having been buried there. ‘Historians say that the bodies were exhumed and cremated towards the end of the Treblinka camp’s use in 1943. But we found no indication that any mass graves ever existed,’ he said. ‘Personally, I don’t think there was a [death-]camp there at all.’ Mr Krege, who will address a public meeting in Adelaide tonight at the start of an eight-day tour, said he had gone to Poland in October last year to ‘find the truth’.”

Nothing more has ever been heard from him. This report suggests a young man somewhat naive (maybe like me before I was thrown out of my University) who had not quite understood the shattering implications of looking into this kind of thing. I suggest this local newspaper account tends to validate Krege’s work, despite others (quite understandably) doubting this. I heard from Fredrick Töben of the Adelaide Institute that Krege just wanted to keep his head down on the topic for family reasons.

³³⁹ Thomas Kues, (in “Chil Rajchman’s Treblinka Memoirs,” *Inconvenient History*, Vol. 2, No. 1, 2010) argued that: “Rajchman thus has indirectly confirmed the revisionist hypothesis of Treblinka II being a transit camp, from which the vast majority of the Jewish deportees were sent on to the occupied territories in the East.” In 2009 Rajchman’s “memoirs” were published in French as *Je suis le dernier juif* (I am the last Jew) by the Paris publisher Les Arènes, then in German as *Ich bin der letzte Jude. Treblinka 1942/43*, both from the Yiddish original.

“At one time we put up a roast beside a large grave, into which more than 250,000 corpses had been thrown. The roast was loaded as usual and lit in the evening. There was a strong wind, and the fire burned so intensely that it spread to the large opened grave. The blood from a quarter of a million human beings went up in flame and burned until the evening of the following day. All of the leading camp staff came to take a look at this wonder. They marveled at this fantastic fire. The blood rose to the surface of the ground and ignited like fuel.”

Released from its mortal captivity, the blood of God’s Chosen People ascends Heavenward as pure fire! This is a core Holo-image, of burning-fire cremation. Clearly the blood of God’s Chosen People behaves differently from the ordinary fluid, and we recall that in Jewish religion the soul resides in the blood.

Ah, so that’s how 250,000 corpses burn! But don’t worry, it’s only a dream. You’ll wake up in a minute. I’m here to make sure that happens. I’m here applying the counter-spell. Soon the whole dreadful nightmare will become past memory, an occult spell from whose thrall you have been released.

At the Auschwitz Camp with its large long-term camp population, cremation furnaces were needed because of the swampy ground, the high water-table, which made burials unfeasible for the typhoid-racked bodies. No such rationale was possible at Treblinka, so no crematoria were built; for this reason, gigantic open-air funeral pyres had to be conjured up to account for the complete absence of any gassed victims. At Auschwitz, the nightmare-hallucination of homicidal gas chambers hovered around the actual gas chambers, the little delousing chambers: like some spirit in a Victorian séance trying to draw ectoplasm from an unconscious medium, so likewise did the great nightmare draw its substance from the actual physically present gas chambers. Treblinka likewise probably had (maybe steam-operated) delousing chambers, because it was a transit camp, whose transitees had to be disinfested before being deported further away. This procedure would have helped the manifestly non-existent phantasmal gas chambers to acquire their semblance of being.

Comment upon the Cartoon

The historic confession document written in German was signed by convict Rudolf Höss on 14 March 1946. An English affidavit was signed by him on 5 April at Nuremberg.³⁴⁰ Then during the Nuremberg IMT on 15 April, Höss declared – in his speech before a hushed courtroom – that he had vis-

³⁴⁰ Classified as “NO-1201” and “PS-3868.” Cf. Robert Faurisson, “How the British Obtained the Confessions of Rudolf Höss,” *The Journal of Historical Review*, Vol. 7, No. 4 (Winter 1986), pp. 389-403.

ited Treblinka in June of 1941, where 80,000 Jews had been “liquidated” in the previous six months!³⁴¹ This implies that Höss travelled to Treblinka in the summer of 1941 and saw Jews from the Warsaw Ghetto being liquidated. He explained that the Treblinka Camp aimed to “liquefy all Jews from the Warsaw Ghetto.” The trouble is, this is all a year and a half too early. His confession contained other equally impossible statements, most notably that two thousand Jews in an alleged Auschwitz gas chamber would always be dead within 3-15 minutes after the Zyklon granules had been sprinkled in.

Treblinka began receiving trainloads of Jewish deportees on 22 July 1942, having the function of delousing deportees travelling East from the Warsaw Ghetto.³⁴² There is not a lot of point in going into detail about a confession extracted under torture, but interested readers may peruse “On Rudolf Höss’ Alleged Visit to Treblinka” by Thomas Kues online.³⁴³ Höss’s “confession” of April 9th, 1946, has him *seeing* how people were gassed at Treblinka in 1941 using the exhaust gas from old tanks or trucks. The three so-called “Aktion Reinhardt” camps Treblinka, Sobibor and Belzec all functioned as transit camps, starting from March of 1942.³⁴⁴ (They may have been named after State Secretary Fritz Reinhardt of the Reich Finance Ministry, whose statements about them evince no lethal intent.³⁴⁵)

The French pharmacist J.-C. Pressac correctly theorized, back in 1995:³⁴⁶

“Instead of starting with the assumption of a facility for killing people, the hypothesis will have to be accepted that from the end of 1941 until mid-1942, three delousing facilities were established in Belzec, Sobibór, and Treblinka. The fact that places were chosen for this at a border, which had become obsolete, can be explained if one recalls the concepts of prophylactic hygiene and the battle against typhus by means of kill-

³⁴¹ Carlos Porter’s *Not Guilty at Nuremberg* at www.cwporter.com has a link to the full International Military Tribunal text; select volume 11 for Höss.

³⁴² The “Aktion Reinhardt” camps were located on the far-Eastern border of the *Generalgouvernement*, meaning the part of wartime Poland that was occupied but not annexed by Germany. This location indicates that they served to process refugees travelling eastwards into then-German-occupied Russia; admittedly, there may be no known records of where they went.

³⁴³ *Smith’s Report*, August 2009, pp. 3-6; www.codoh.com/library/document/568/.

³⁴⁴ There may be a shortage of documents as regards where they ended up on their eastward sojourn out of Poland, a fact much harped upon by exterminist historians: but see the three-part article “Evidence for the Presence of ‘Gassed’ Jews in the Occupied Eastern Territories” by Thomas Kues (*Inconvenient History*, Vol. 2, Nos. 2 & 4 (2010); Vol. 3, No. 4 (2011)).

³⁴⁵ For a well-informed discussion see “Aktion Reinhardt” (1986) on R. Faurisson’s blog (www.codoh.com), also Jürgen Graf, “David Irving and the ‘Aktion Reinhardt’ Camps” (*Inconvenient History*, vol. 1, no. 2, (2009)) The name was spelt “Reinhart” in a British Intelligence decrypt of 1943.

³⁴⁶ See Mattogno/Graf, *Treblinka* (2020), S. 289.

ing the insects carrying it, the lice, and if one considers that the Germans had typhus more or less under control in their zone of occupation, but not in the conquered Soviet territories. Thus, the program for the deportation of the Jews to the east, as decided upon at the Wannsee Conference of January 20, 1942, was adhered to by processing the deportees through these three hygiene facilities.”

That is as good an account as any, of what is meant by “Aktion Reinhardt.” It concerned that Eastern border of Poland adjacent to Russia, where the railway gauge changes, at what Pressac described as the “obsolete” border of Poland. A lot of lice-infested people were being shipped over from the “Warsaw

Ghetto,” hence a transit camp with bathing facilities, disinfection, and delousing was essential. It seems that the delousing facilities at Treblinka used steam rather than Zyklon. At Nuremberg it was alleged in 1945 that mass murder at Treblinka had been committed using steam chambers. That tends to endorse the idea of steam-delousing technology there in place, which propaganda then transmogrified into some steamy mass-murder.

Illustration 25: A fictitious debate over Treblinka. Of course, in reality Leonardo DiCaprio would never talk to a Holocaust revisionist...

13. Auschwitz *In Memoriam*

Some History³⁴⁷

Auschwitz, an old industrial town in the upper Silesian plateau, developed into a major wartime production centre. The chemical industry quickly became far more important than the older zinc rolling mills and grinding works. The most significant aspect was the plant slated to produce artificial rubber and petroleum from coal. On 16 February 1942, all concentration camps were incorporated into the war economy and munitions industry, and accordingly they came under the organizational authority of the SS Main Office for Economic Administration and its chief, General Oswald Pohl.

The various camps were classified according to their importance to the war economy. Birkenau, a part of the Auschwitz complex, served as the camp for those inmates who were declared unsuited for work. Consequently, the camp had the highest death rate. On 26 July 1942, a devastating typhus epidemic broke out in Birkenau. As many as 20,000 died within three months.

That is why an especially large number of crematoria for burning the bodies was built in Birkenau. Reports of the high death rate there moved Himmler to issue an order on 28 December 1942, “to reduce the number of deaths in the concentration camps at all costs.”

During the war, Jewish emigration was no longer possible, and the expression “total solution” or “final solution” was coined to refer to the policy whereby all Jews were to be segregated from the German and other European populations, removed from central Europe, evacuated to the East, and relocated in new ghettos. This plan was outlined by Reinhardt Heydrich, chief of the Reich Security Main Office, on 24 June 1940.

Violently incompatible stories swirl about the little town of Oswiecim/Auschwitz (population 12,000) – more than about any other place on earth. What is true? Are we allowed to think about it? With one million tourists a year, it’s a story that does matter.

The British Establishment tightly controls a duality of what is allowed to be said and thought about this camp: while virtuous citizens are to believe it was an extermination centre, death camp and the ultimate focus of Pure Evil, a few depraved Holocaust Deniers are said to claim it was a holiday camp – and *that is all*.

The United Nations has requested that Holocaust Memorial Day be commemorated on 27 January – the day the Auschwitz Camp was “liberated” by the Soviets in 1945. We here focus on concrete details of how the

³⁴⁷ Hellmut Diwald, German professor of history: *Geschichte der Deutschen* (History of the Germans), first edition (1978), pages 164f.

wartime labour camp functioned.³⁴⁸ I have been more intensively damned and reviled from what is in effect the contents of this chapter than anything else.

Shocked blogs would cite, as proof of my unhinged condition, my belief that a *swimming pool* actually existed at Auschwitz. People seemed to love alluding to it, perhaps because no thought was required, which could be replaced by a kind of demented cackling: “He says there’s a swimming pool at Auschwitz... sunbathing by a swimming pool!” As a science historian I like physical-material remains as evidence. There should be the publication in English of a proper book about what the camp was like, starting out maybe from the region’s blast furnaces, rubber manufacture and industrial conversion of coal into oil.

On Google Earth, just half a mile north-west of the main base camp, one sees the remains of an arms-manufacturing camp where inmates went to work each day, while a couple of miles due east of the main base camp one sees the remains of the huge industrial Monowitz area, strangely unlabelled. If you change over to Google Maps and insert “Auschwitz” again, then going due east takes one to the same area but with roads drawn in, and showing the huge industrial plant this time labelled Buna-Monowitz.

What follows below has drawn upon some video interviews with “survivors” from Steven Spielberg’s Film and Video Archive.³⁴⁹

Map of the Base-Camp

Illustration 26 shows a useful map of the main or base camp, also sometimes called “Auschwitz I” which the tourists go to visit. Let’s focus on some of its components. This chapter parallels a section in Germar Rudolf’s *Lectures on the Holocaust*, which has more thorough references than are here included (especially German ones) that you may wish to consult for comparison.³⁵⁰ We’ll go in sequence through some of the buildings here labelled.

³⁴⁸ It can be difficult to visualise the different camps, Birkenau, Auschwitz, etc. “Uncensored History” assembled some excellent YouTube videos to a list called “The Ball Report” on the subject, using the drawings created by John C. Ball in his brochure of the same title. It includes fifteen videos. These drawings have been included in the more recent editions of *Air-Photo Evidence* (2020), pp. 48f., 54, 56-59, 113; this book also discusses results of chemical analysis of cyanide in wall samples taken by Ball at Auschwitz.

³⁴⁹ The Steven Spielberg Film and Video Archive is hosted online by the US Holocaust Memorial Museum at www.ushmm.org/online/film; some pertinent excerpts can be found in the clip *Holohoax Survivors Who Tell the Truth* (once at youtu.be/xm8UmMuRSSw), which is part of the documentary *Last Days of the Big Lie*. (NB: this video exists in many copies with a total of some 300,000 views.)

³⁵⁰ Rudolf, *Lectures on the Holocaust* (2017) is online; see there Section 4.6.2. from pp. 475 to 480; for my collection of these references, see my “Auschwitz in Memoriam” thread on the CODOH Forum.

Illustration 26: Map of Auschwitz I, made by John C. Ball

barracks provided “dietetic cooking” for some of the sick, with special soups and bread.

One prisoner is reported as having had a bladder operation and about to have further prostate surgery. Another suffered a work-related accident, and feared she would therefore be gassed, because of all the stories she had heard, but was surprised instead to find herself nursed back to health.³⁵² One hears little about such stories of prisoners operated on to keep them alive.

Elie Wiesel describes how he was operated on in the surgical unit, in his *Night* essay; Anne Frank’s father, Otto Frank, was put into the hospital at Auschwitz and recovered. Thus the two most famous narratives of the Holocaust both entail successful hospital treatment at Auschwitz.³⁵³

Was there really an in-camp court and jail functioning (opposite the gynaecological facility)? We’d like to hear more about the marriages conducted at Auschwitz, the pregnancies there, and the 3,000 live births recorded at the maternity hospital,³⁵⁴ and how the child day-care centre worked.

³⁵² Rudolf, *Lectures on the Holocaust* (2017), p. 481 (testimony of Aleksander Gorecki) and pp. 483f. (Ms Rajzla Sadowska).

³⁵³ Although Otto Frank’s hospital treatment is of course not part of the diary claimed to have been written by his daughter while the family was hiding in Amsterdam. I’m not suggesting either of these works is authentic.

³⁵⁴ Vincent Reynouard video, *The Truth about Auschwitz*, at 3:45 min., a source is given for the 3,000 live births: *Anthologie d’Auschwitz* (1969), Vol. 2, Part 2, p. 159

Brothel, Art Museum and Library

(Number 10 in Illustration 26.) In the summer of 1943, the camp brothel was established just inside the main gate, on Himmler's orders, to reward privileged prisoners, with medical check-ups before each visit, and to prevent older inmates from sexually abusing adolescents.

The camp library had some forty-five thousand volumes for inmates to choose from, plus a range of periodicals. Images of paintings made in the art class seem alas no longer to be web-available.

Orchestra

(Number 11 in Ill. 26.) There were six camp orchestras at Auschwitz/Birkenau alone, one of which contained no less than 100-120 musicians. The *Jerusalem Post* recorded one inmate's memory: In 1943, the later Professor Daniel K. was only 10 years old when he participated in the children's choir – as the *Jerusalem Post* recorded:³⁵⁵

“The Chorale (from Beethoven's Ninth Symphony) was... performed by a Jewish children's choir at Auschwitz-Birkenau in 1943... I was a member of that choir... I remember my first engagement with culture, with history, and with music – in the camp.”

In March 1944, the Auschwitz inmate Daniel K. became severely ill with diphtheria and was transferred to the camp's hospital barracks. His mother had asked to be transferred to stay with him in the hospital. After the war he recalled:

“One of the youth leaders of our group... asked to establish an education centre for children. He was given permission, and in a short time the education centre became a spiritual and social centre for the family camp. It was the soul of the camp. Musical and theatrical performances, including a children's opera, were held at the centre. There were discussions of various ideologies – Zionism, Socialism, Czech nationalism... There was a conductor named Imré... (who) organized the children's choir. Rehearsals were held in a huge washroom barracks where the acoustics were good...”

Kitchen and Bakery

(Number 12 in Ill. 26.) A camp diet kitchen, one of the largest service buildings in Auschwitz, had state-of-the-art cooking facilities. It had 12 chimneys and can be visited today.

³⁵⁵ *Jerusalem Post*, domestic edition, 25 Jan 1995, p. 7; Rudolf, *Lectures on the Holocaust* (2017), pp. 475-477.

Post Office

(Number 13 in Ill. 26.) Letters to and from the outside world were collected twice weekly. One postcard sent from Auschwitz dated 18 February 1942 by Johann Klausa expressed the hope that his family is in good health and that they will write to him – he was eventually released from the camp, on 27 November 1943. Considering that Klausa arrived in the camp on 25 June 1940, he sounds rather cheerful! Another source recalled that twice a month they could write home, once with a postcard (Source: Steven Spielberg Film and Video Archive).

Sleeping Barracks

(Number 14 in Ill. 26.) The women's sections of the camps had female guards. There was a well-equipped kindergarten for the children.³⁵⁶

Theatre for Music and Drama

(Number 15 in Ill. 26.) On weekends, at the camp cinema, mainly cultural and non-political films were shown. One ex-occupant recalled how:

“There was a library with newspapers. A violin quartet came to play in the barracks. They even ‘made a movie’ in the camp. Some evenings they brought in German movies... Theatrical performances, including a children’s opera, were held at the centre, plus a camp theatre, where a rather saucy review was held on Saturdays. Today a convent of Carmelite nuns dwells there. The last pictures taken inside showed pianos and costumes and a stage where the inmates used to put on productions.”^[357] One survivor recalls having been an orchestra musician: ‘A grand piano was brought into Block 1, and downstairs from it there was the Theatre. The inmates made a stage curtain. They staged plays which were ‘very peaceful,’ and some composed music.’ (Source: Steven Spielberg Film and Video Archive)

Marc Klein, the French Professor of medicine at the University of Strasbourg, published two recollections of his incarceration at the Auschwitz Camp. He first submitted them “to the reading and scrutiny of Robert Weil,” a science professor who had been interned in the same camps, for verification. His account told how,³⁵⁸

³⁵⁶ Source: Vincent Reynouard’s video *The “Holohoax” Exposed in 30 Minutes* citing Hermann Langbein, *Hommes et femmes à Auschwitz*. (The German original is Langbein’s *Menschen in Auschwitz*, Europaverlag, Vienna 1987.)

³⁵⁷ For a memory of the weekend theatre performances and the grand piano they used, see the YouTube video: *Holohoax Survivors Who Tell Truth* (excerpts from Spielberg’s collection).

³⁵⁸ Faculté des lettres de l’Université de Strasbourg (ed.), *De l’Université aux camps de concentration: Témoignages strasbourgeois*, 2nd ed., Belles-Lettres, Paris 1954 (1st ed. 1947), p. 453.

“At a cinema, news movies of the Nazis were presented as well as sentimental movies. There was a rather popular cabaret doing frequent presentations, which were often even visited by SS-staff. Finally, there was a remarkable orchestra, which was manned with Polish musicians during the first time, which later were replaced by a group of first-class musicians of all nationalities, the majority of them being Jewish.”

Swimming Pool

(Number 17 in Ill. 26.) Jean-Claude Pressac’s magnum opus *Auschwitz* is filled with plans and diagrams,³⁵⁹ yet strangely omits mention of the swimming pool in the Auschwitz Main Camp. Built by the inmates, it had a diving board and starters’ blocks for races. Inmates would sunbathe beside it on Saturday and Sunday afternoons while watching the water polo matches.³⁶⁰ First-hand published testimony comes from Marc Klein, who in 1947 recalled his time there (used in the 1985 trial of Ernst Zündel in Toronto):³⁶¹

“During Sun- and holydays, when most commandos had the day off, working hours were different. The roll call took place at noon; during the evening one relaxed or dedicated his time to a selection of athletic or cultural activities. Soccer, baseball and water ball games (in the outdoor pool that had been built by inmates within the camp) attracted the spectator masses. It should be noted that only the fit and well-nourished inmates, who were spared from hard labour, could get engaged in such games that attracted the vivid applause of the masses of the other inmates.”

During the second trial against Ernst Zündel, the (Swedish) witness Ditlieb Felderer testified about his research at Auschwitz and his interview with the head of the Auschwitz Museum’s historical department, Franciszek Piper:³⁶²

³⁵⁹ Jean-Claude Pressac, *Auschwitz: Technique and Operation of the Gas Chambers* (1989), online at www.historiography-project.com/books/pressac-auschwitz/.

³⁶⁰ David Irving’s 1991 edition of *The Leuchter Report* first published an image of this pool.

³⁶¹ See note 358. Similar in M. Klein, *Observations et réflexions sur les camps de concentration Nazis*, booklet of 32 pages printed in Caen, 1948, p. 10; its text is a reproduction of the author’s article published in *Etudes germaniques*, No. 3 (1948), pp. 244-275. See also R. Esrail, registration no. 173295, “Une piscine à Auschwitz,” in *Après Auschwitz* (Bulletin de l’Amicale des Déportés d’Auschwitz), No. 264, October 1997, p. 10; and in summary: Robert Faurisson, “The Auschwitz Swimming Pool,” 20 July 2001 (www.codoh.com).

³⁶² There was a French documentary in 2001, entitled *Alfred Nakache, the Swimmer of Auschwitz*. He played water polo in that pool. Barbara Kulaszka (ed.), “Did Six Million Really Die?” *Report of the Evidence in the Canadian “False News” Trial of Ernst Zündel*, Samisdat Publishers, Toronto 1992, pp. 356f.; www.ihr.org/books/kulaszka/13felderer.html.

“Slides depicted the two starting blocks, the mount for the springboard and the showers. Piper told Felderer that the pool had been used to rehabilitate inmate patients and as recreation. [...] Some literature of Holocaust survivors referred to this swimming pool and how it was used for water polo.”

Illustration 28: Healthy-looking Children at Birkenau being “liberated” by the Red army: still from a Soviet film.

To find the swimming pool on Google Earth, input Auschwitz (Oswiecim), then go South-South West to the main base camp. Centre it and zoom in, then at the back you’ll see a dark unmarked rectangle, long and thin – that’s it! It’s not labelled and hasn’t got much detail. Is anyone really dumb enough to believe that this pool with spring board and starting blocks was merely a water reservoir for use by firemen? Yes: see Laurence Rees, *Auschwitz, a New History*, 2005.

Camp Admin and Money

(Number 19 in Ill. 26.) Inmates were paid for their labour and services while interned at Auschwitz Concentration Camp, and special money was printed for their use.³⁶³ Through extra work, inmates could obtain such coupons, redeemable for things like cake or ice cream in the camp’s canteen. In Auschwitz and other German camps, prisoners were:³⁶⁴

“...compensated for their hard work and allowed to purchase luxuries to which even the German public did not have ready access. [...] This scrip [the special money] was not negotiable outside of the camp for which it was issued. This decreased the chance of a successful escape

³⁶³ In the June 1942 British Intel decrypt summary quoted in Chapter 6 camp inmate wages are alluded to, “... the rate of RM 5,00 per day and per prisoner for skilled workers, and RM 4,00 for unskilled workers.” But this was probably what the companies employing the inmates had to pay to the SS, who “subcontracted” their inmates to civilian firms.

³⁶⁴ Jennifer White, “Concentration Camp Money,” *The Barnes Review*, Vol. 7, No. 1, January 2001, pp. 7f.; see also: Hans-Ludwig Grabowski, *Das Geld des Terrors: Geld und Geldersatz in deutschen Konzentrationslagern und Ghettos 1933 bis 1945*, Battenberg Gietl Verlag, Regenstauf 2008.

and made it impossible for the general public to purchase some of the rare luxuries available in the camps. [...] Inmates were not paid for the work but were given 'coupons' now and then to buy things in the 'Kantine.' [...] As the war progressed badly and the number of workers declined, the KZ worker potential became important. Offers of 'premiums' and other advantages were made to the inmates, tobacco was offered and even visits to bordellos. [...] In order that these scrips could not be used outside the camps, special money was printed. One ex-occupant recalled how camp money could be used for e.g. writing home, twice a month; the 'Jewish community from Vienna' sent everyone some money, with which they could buy postage stamps, sometimes cigarettes at the canteen, and sometimes it sold weak beer. Later they would pay in coupons given out by the camp, redeemable in the canteen." (Source: Steven Spielberg Film and Video Archive).

Physical Abuse Prohibited

Legal advice was available to the inmates in relation to any non-natural deaths. The SS men were not allowed to hit prisoners – and commander Höss had a standing order that any inmate could approach him personally to register a complaint. Carlo Mattogno's books *Special Treatment in Auschwitz* and even more so *Healthcare in Auschwitz* touch on labour and living conditions at Auschwitz. I asked him about how well its inmates were treated in the Auschwitz camp complex, and he replied:

"There are several documents which prove that the SS policy towards inmates was the preservation of their labour capacity; the SS couldn't maltreat inmates, and whoever infringed this rule would be punished. The SS also instituted productivity recompenses for Jewish inmates."

He added:

"All the camp rules prevented them from maltreating inmates. For example, the 'Verpflichtung' (declaration of commitment) that the SS guards were obliged to sign imposed:

'I know that the Führer only can decide on life and death of a state enemy. I cannot damage physically or bring to death a state opponent (inmates). Any killing of an inmate in a KL requires the written authorization of the Reichsführer-SS.'"

(Thanks to Mr Mattogno for permission to quote.)

Illustration 29 shows the base-camp – "*Stammlager*" – with the far larger Birkenau Camp a mile to its north-west, and due east the huge "Buna" industrial centre at Monowitz. Birkenau was more an internment camp for gypsies, women and children, the chronically ill and those incapable of la-

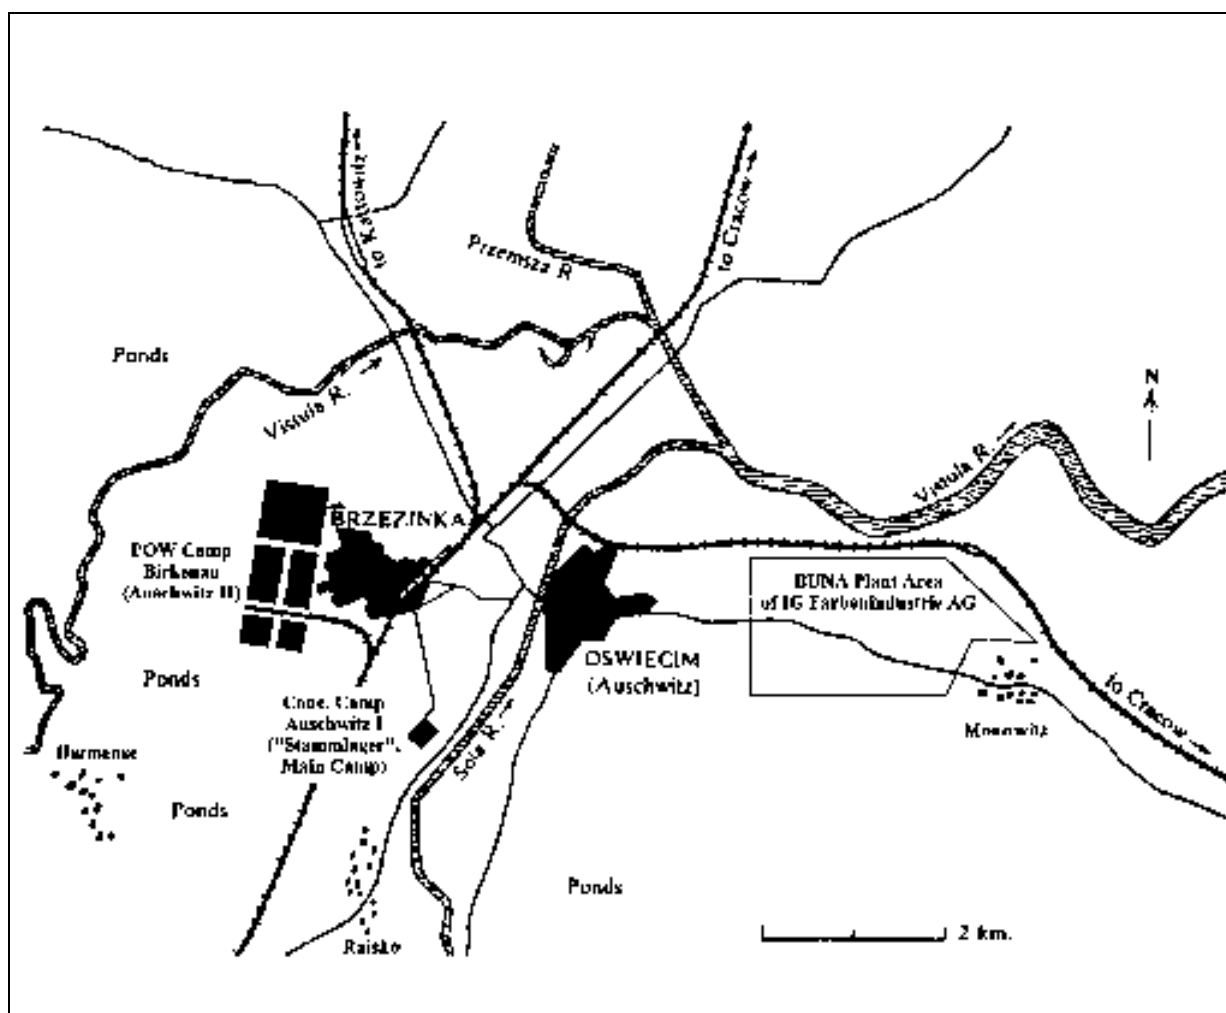

Illustration 29: Map of main Auschwitz Camps.

bour.³⁶⁵ The polar opposite functions of the two centres, one to the East (Monowitz) and the other to the West (Birkenau) of the little town of Oswiecim, may account for a lot of the confusion over what was happening at this big wartime industrial centre. We see branches of the Vistula and Sola rivers flowing around, which kept the ground swampy around this camp.

The Buna-Monowitz Plant

This huge industrial plant was established by I.G. Farben. Its function has to be the “secret of Auschwitz,” because the mass media, when dealing with Auschwitz, will rarely tell you!³⁶⁶ Clever German chemists were transforming coal into oil, a catalytic hydrogenation process at the core of the huge Monowitz industrial plant. There was plenty of coal in Upper Silesia, and Germany’s war machine used engines that ran on synthetic pet-

³⁶⁵ W. Stäglich, *Auschwitz, op. cit.* (note 77), p. 14.

³⁶⁶ Holo-historian Sir Martin Gilbert did briefly allude to “the synthetic oil vital to the German war effort” as having been made at the Buna plant: *Holocaust Journey*, Columbia University Press, New York 1999, p. 143. Raul Hilberg, on the other hand, in his magnum opus *The Destruction of the European Jews*, deals in some detail with the I.G. Farben operations at Auschwitz.

rol. In these days of impending oil crisis, it might be important to apprehend what went on there. Another major industrial purpose of the camp was synthetic rubber manufacture, called “buna rubber.” Then there was a huge munitions factory at Buna Monowitz owned by Krupp, for which

Illustration 30: *The Monowitz industrial plant.*

there were *five blast furnaces* and five collieries in the neighbourhood. This industrial site was chosen for its proximity to coalfields and the rivers Sola and Vistula. The degree to which it functioned effectively tells us about the level of camp morale.

Synthetic “buna” rubber is made from carbon, lime and sulphur, but also required some natural India rubber to give cohesion. This came from “Kok Sagis,” a close relative of the dandelion plant, which had white latex in its roots, and the Germans were cleverly able to use that. Fields of it were grown near Auschwitz, and tyres were made from it, vital for Germany’s war effort. An account of the synthetic rubber production was given by Thies Christophersen, outlined below starting at p. 207. Christophersen, a farmer who had become unfit for military service due to injuries incurred, had been sent by the Kaiser Wilhelm Society (the predecessor of today’s Max Planck Society) to an experimental plant-breeding facility located near Raisko, an Auschwitz satellite camp, which had a branch there growing Kok Sagis rubber plants.

It has been estimated that work in the Auschwitz camps spanned some forty different industries. The true reason for the existence of the Auschwitz Camp is revealed in some little-shown pictures of the industrial complex which surrounded the camp – most of it within full view of the interior of the camp itself. At the Monowitz industrial complex, heavy industries covered such things as medical supplies, armaments and clothing. At the tailor’s workshop at Auschwitz I, prisoners would make up clothing for use by the German army.

Football

At Monowitz, soccer games were well-organized in 1944; one can see pictures of them cheered by civilian fans. SS teams played soccer with in-

Illustration 31: *British football team at Auschwitz*

mates. There was even a British POW soccer team at Auschwitz. (Source: Steven Spielberg Film and Video Archive)

Also, Auschwitz-Birkenau had its own soccer field, with weekly games between the SS staff and camp inmates. The field was right next to buildings which allegedly housed homicidal gas chambers; they would have been in full view. David Cole has well described how the football field was adjacent to the site of alleged homicidal gassing (*i.e.* the Crematoria II & III, according to the design plans and air photos). It is hard to see how this fiendish process could have been carried on in secret, as normally alleged:³⁶⁷

“Why was the area between Kremas 2 and 3, the area where thousands of people were marched daily to their deaths, left completely unfenced? [...] Doesn’t the Auschwitz State Museum claim that the inmates would often ‘riot’ as they were being marched toward Kremas 2 and 3? Why were Kremas 2 and 3 not hidden in any way from the view of the inmates? [...] Why then were Kremas 2 and 3 put in plain sight of all sectors of the Birkenau camp, with no camouflage of any kind?”

By 1944, when Germany was losing the war, the inmates had more freedom, and the SS did play soccer with inmates, as in Polish team vs. German teams.

Microwave Delousing

In the ongoing struggle against typhus, and to diminish camp mortality, the delousing chambers operating with cyanide gas were eventually replaced by microwave delousing devices: this state-of-the-art technology was being

³⁶⁷ David Cole, “Forty-Six Important Unanswered Questions Regarding the Nazi Gas Chambers” (www.codoh.com/library/document/987/).

Illustration 32: Healthy-looking children at Auschwitz on 27 January 1945, after Red Army liberation.³⁶⁹

deployed at Auschwitz-Birkenau, developed by the Siemens Company, described by Germar Rudolf as “the world’s first technological predecessor to the microwave ovens in common use today.”³⁶⁸ As the largest labour complex in the Reich it received this special treatment. Owing to Allied bombing, its implementation was delayed and did not become operational until the summer of 1944. It was highly effective, rendering clothing sterile and vermin-free in minutes.

An Old Lady Remembers

A certain Bernhard B. of Queensland, Australia, was born in the town of Königshütte, a few kilometres from Auschwitz, in March 1945. His mother, who is not Jewish, had spent a few days in the Auschwitz Camp in December 1944.³⁷⁰ In 1977, he went to visit her in New South Wales, Australia, and:³⁷¹

“With her memory still clear and sharp, I did my best at documenting her wartime stories. I asked her if there was anything she saw which might suggest millions of people had died there [at Auschwitz] in gas

³⁶⁸ *The Rudolf Report* (2003), p. 73; *Chemistry of Auschwitz* (2020), p. 84.

³⁶⁹ Images from Vincent Reynouard’s video *The “Holohoax” Exposed in 30 Minutes*.

³⁷⁰ Some have argued, by way of accounting for her experience, that according to the mainstream narrative “the Holocaust” was largely over by late 1944 anyway.

³⁷¹ From the David Irving website, see <https://forum.codoh.com/viewtopic.php?t=4409>.

Illustration 33: A view from inside the Birkenau Camp, where, as Irving commented, it shows veteran prisoners in striped uniforms helping to muster new arrivals along the platform. Note the open main gate, no guns, and a basket of food (Source: Irving, a “newly-found Auschwitz album”).

chambers. At this, she says something incomprehensible in Russian or Ukrainian and spits on the floor; her facial expression now serious, she looks me in the eye and says:

‘Look, I was there; twenty-five of us were there; women talk. In our group there was a Doctor, there was a Chemist, the Nuns were Teachers, I was a Teacher, and let me tell you: if there had been anything suspicious there, we would have known. If there had been millions killed, the entire communities around this region would have known and would have talked about it to us. Remember, rumours were everywhere, there was no TV and by then no newspaper; wherever we went, locals would ask us about where the Russians were or if the fighting was coming closer.

The fact is, none of us saw anything, heard anything or even suspected anything unusual about Auschwitz. The suggestion that the tired but extremely well-mannered OLD gentlemen of the SS, who treated us so decently, murdered millions of people in gas chambers is an outrageous, monstrous lie.’

And that, so help me, was what she said ten years ago to me.”

Thies Christophersen Remembers

An account by Thies Christophersen titled *The Auschwitz Lie* gives us a wonderfully human perspective of what life was like in the industrial area of the Auschwitz Camp. It provoked uproar when it was published in 1973. It describes the contrast between the scientific work at Monowitz for rubber production and the seedy Birkenau Camp on opposite sides of the village of Auschwitz. “I have stated the truth, so help me God” his essay concluded – and not many people did that.³⁷² Here are some excerpts from his brochure:³⁷³

“The hoeing detachment from Birkenau was a merry bunch. They sang their Polish folksongs while working, and the gypsies danced to the melodies. In the beginning I was quite upset and worried about the undernourished appearance of some of the inmates. Then I learned that they had arrived in rather poor physical shape, and it took some extra time before they had padded themselves with some extra poundage.”

Later, he wrote an article for a revisionist journal, stating more or less the same thing, unimpressed by the social persecution he had suffered in the meantime.³⁷⁴

When Christophersen walked into the camp in early 1944, it “consisted of barracks that were ugly but massively built,” and he was surprised to see so many inmates walking around unguarded. It “was under guard only at night.” A horse-drawn carriage was available to drive round the “extensive lands that were under cultivation.” Mr Christophersen stayed at Raisko, 3 km south of the Main Camp (see map), where “the botany buildings with their greenhouses and the laboratories for our research work were located.” A few hundred Jewish and Polish women got on with this plant research: “I had the impression that the inmates performed their research tasks gladly and with enthusiasm.” (The Italian chemist Primo Levi also stayed there during his spell in the camp.) The roots of plants were there examined as to their India rubber content, and reproduced through seedlings.

“Sabotage could easily have been committed, but we never learned of even a single instance. It must be mentioned, however, that the inmates did not trust each other. There was that ancient feeling of hate between

³⁷² A Preface by Attorney Manfred Roeder stated: “I know enough eyewitnesses now who were in Auschwitz after the war who confirm all of the observations made by Mr Christophersen [...] but these witnesses fear reprisals by the Poles and certain Jewish organisations.” www.whale.to/b/christophersen_h.html.

³⁷⁴ T. Christophersen, “Reflections on Auschwitz and West German Justice,” *The Journal of Historical Review*, Vol. 6, No. 1 (spring 1986), pp. 117-121; compare Christophersen’s testimony given at the 1988 Zündel Trial in Toronto (online): B. Kulaszka, “*Did Six Million Really Die?*” (1992), p. 378.

Illustration 34: January 1945, two women prisoners “liberated” at Auschwitz by the Red Army.

Jews and Poles. Compared to this hate, so-called National Socialist hatred of the Jews was quite harmless.”³⁷⁵

He remarked on some fine-looking ladies:

“Surprising to me was the elegance of the inmates’ wearing apparel. Their outer garments did, of course, consist of uniforms, but all other apparel, including shoes, was of the finest quality, nor was there any lack in beauty care, and make-up was all part of the female dress. [...] Every Saturday our women were sent to the Main Camp for an exchange of laundry, and they brought back alluring bits of booty [...]”

His wife came to visit him:

“We were able to have our relatives visit us at any time.”

She saw the work on the India rubber fields. The camp at Birkenau was very different:

“This camp I did not like. It was overcrowded, and the people there did not make a good impression on me. Everything looked neglected and grubby.”

³⁷⁵ For an overall view of the SS industries, see Joseph Billig, *Les camps de concentration dans l’économie du Reich hitlérien*, Presses Universitaires de France, Paris. Further details of the synthetic rubber production may be found in Bernd C. Wagner, *IG Auschwitz. Zwangsarbeit und Vernichtung von Häftlingen des Lagers Monowitz 1941-1945*, Saur Verlag, Munich 2000; Franciszek Piper, *Arbeitseinsatz der Häftlinge aus dem KL Auschwitz*, Verlag Staatliches Museum in Oswiecim, 1995. Carlo Mattogno kindly gave these references, and added: “The highest force of the Monowitz camp was about 25,500 inmates in 1944.”

He had been commissioned to pick out workers to tend the Kok-Sagis plants (for rubber production):

“The fact was, however, that in Auschwitz there were more people than there were jobs.”

Christophersen also mentioned leisure activities the inmates engaged in:

“Once a week a film was shown. Camp supervisors and inmates jointly saw, amongst others, ‘Muenchhausen’ and the ‘golden city.’ [...] Church services were held in community halls. I attended several myself and found them to be quite solemn, especially those of the Russian orthodox community, to which our Russian civil workers also belonged. A theatre group had been organized by the inmates, and one evening they invited us to a performance of ‘Faust.’ Professional actors could not have put on a better show.

On mass-extinction claims, Christophersen made these succinct observations:

“During all the time I was in Auschwitz, I never in the least observed anything that even indicated mass killings in gas chambers. Also, the story of a smell of burned flesh that allegedly hovered over the camp at times was an infamous lie. In the vicinity of the Main Camp there was a smithy where horses’ hooves were shod. The burning of the horses’ hooves when fitting them with shoes naturally caused an unpleasant smell.”

“There were no secrets at Auschwitz. A commission of the Red Cross visited in September 1944, being mainly concerned to inspect Birkenau. We also had a great many inspections at Raisko, but here people who came were largely interested in plant cultivation.”

Together with inmates subordinated to him, he constructed a harvesting machine for Kok-Sagis plants, and he encouraged inmates to help him build radio sets:

“The inmates also found material there with which they could build small radios. [...] I myself learned to build radios at Auschwitz. My teachers were the inmates, and they supplied me with everything I needed for a small receiving set.”

He was present when:

“About every two weeks the SS officers met for a casino night. On these occasions, department leaders spoke about their particular field of work. I heard many interesting lectures there, and I do not recall anything that might have been offensive.”

He found “not plausible” the notion of experiments conducted on living human beings, about which he heard after the war, and according to his experiences, mistreating inmates was strictly forbidden:

“On one occasion, I saw an SS guard kick a woman. I confronted him about this. He claimed that the woman had called him a Nazi pig, but the fact was that he had first insulted her. I reported this case, and the SS guard was sent to ‘Strafbataillon’ in Danzig. From this day on, my favour with the inmates rose significantly, especially with those in Detachment 11. They often came to me with requests or complaints, and I did whatever I could for them, because to me they were not enemies. Often, I did favours for them that were against regulations. Their greatest joy was for me to take them for a walk down to the Sola River where on those hot summer days of 1944 I allowed them to go bathing.”

Concerning the famous big chimneys of Auschwitz:

“After the war, I saw a TV film about Auschwitz that showed a building with huge smokestacks. I am very sorry, but when I left the camp at Auschwitz in December 1944, I did not see this building. I cannot imagine that these smoke stacks were built in the cold winter of 1944/45, but I suspect that these structures were erected after the war.”

There is no doubt that the Auschwitz-Birkenau Camp did have four crematoria during most of 1944, and they were indeed demolished in late 1944. Two of these facilities had one chimney each, the others two, hence six in total. Although they were conspicuous with a height of some 15 metres,³⁷⁶ this hardly qualifies as huge, nor did they dominate the Birkenau Camp’s skyline. However, by the time Christophersen arrived at Auschwitz, the chimney of the old crematorium in the Main Camp had indeed been demolished, because the building served as an air-raid shelter for the SS during the final year of the war. The only crematorium chimney in existence today – next to the old crematorium building in the Main Camp – was in fact erected after the war by the Polish museum authorities.

By way of contrast, Marc Klein recalled in 1948 his time at Raisko. His account of Auschwitz has SS guards as horrible, Orc-like figures of menace (if I may use the Tolkien mythology). Like Christophersen, he stayed at the laboratories of Raisko. No industrial synthetic rubber production takes place in his account, nor any selection of plant roots for India rubber content – however, it might be briefly acknowledged in the far distance:

“The smoking chimneys of the Buna factories, visible in a distance of some kilometres, reminded us of the – compared with ours – much harder jobs being a heavy burden to the thousands of comrades at the neighbour camp Monowitz.”

It is hard to reconcile these two different accounts.

³⁷⁶ On the crematoria buildings at Auschwitz see Pressac 1989, who documents their chimney’s height on p. 329.

Primo Levi, the great Italian novelist, described in his 1947 opus *Se questo è un uomo* (*If This Be a Man*) his stay in Auschwitz. He moaned about absolutely everything, as if in some purgatory, despite which we gather that he was fed, clothed and had some quite interesting industrial-chemical work, and that he saw no one gassed, shot or beaten up (because otherwise he would have related that). The man who became a famous industrial chemist, author of the classic book *The Periodic Table*, worked in the synthetic rubber production labs, yet he writes not a word about what the industry was at Monowitz, not even about how the artificial rubber was made.

After hearing rumours, Levi asked the haunting question: “Is it true what one hears of selections, of gas, of crematoria?” (p. 54) This question grew in his mind, because he had heard a *story* that persons in the “Infirmary” (hospital) who were in decline, who were not going to recover, would be sent to the “gas chambers” (p. 46). A companion advises him concerning the tattoo number on his arm: 174,517 – which Levi had chiselled onto his tombstone. That number was too high, he said, given the number of persons in the camp, and thus indicated an extermination programme! Levi acquired his number in January 1944. The British Intelligence decrypts ended one year earlier, and they recorded around seventy thousand persons arriving at the Auschwitz Camp over one year.³⁷⁷ That number of arrivals was steeply increasing month by month, so I don’t really see a problem in Levi getting that number. It serves to remind us, how huge was the throughput of the prisoner workforce at Auschwitz.

Was Primo Levi disturbed, deep down, by some awful untruth he had told to the world? How else should we interpret these words which he published in the year 1987, towards the end of his life? They are expresses as a touching message to his son, in his last book titled *Lilith*:

“From all that you have just read, you will be able to deduce that to lie is a sin for others and for us a virtue. [...] With the lie that is patiently learned and piously exercised, if God assists us, we will succeed in dominating this country and perhaps the world; it can only be done because we have been able to lie better and longer than our opponents. I will not live to see it, but you will see it: it will be a new golden age, [...] while it will suffice for us to govern the state and administer public affairs, to lavish on the world the pious lies that we will have understood in the meantime how to bring to perfection.” (p. 162)

The book consists of stories about people he met at Auschwitz. Levi died rather suddenly a few months after this French edition appeared, by “suicide.”

³⁷⁷ For that figure see from www.whatreallyhappened.info: Excel spreadsheets give monthly totals of arrivals at Auschwitz over twelve months.

Comparing the two accounts of Mr Levi and Mr Christophersen, both stayed at the same place, Raisko, at the same time, but otherwise it's hard to believe they are living in the same world. One account is fairly cheerful, the other a vision of purgatory. One author was a prisoner, tattooed with a number on his arm, who became Italy's most celebrated writer, while the other was an overseer of prisoners, ethically-damned, ostracized and prosecuted for his account.

If there is one book about Auschwitz one can enjoy reading, it surely is the great bestseller *Man's Quest for Meaning* by the psychiatrist Viktor Frankl. His account makes Auschwitz seem a kind of anvil of the soul – whoever can survive that, can cope with anything else in life's path! He spent a few days there in 1944, though his account makes it seem far longer, maybe to help out his story; and then, as a Jewish doctor, he is sent on a train with other sick inmates to Bavaria, initially to the Kaufering Camp near Dachau, where he was put to work, but later he was transferred to a camp for sick inmates, where he nursed typhus victims to assist their recovery.

How the Catastrophe Came: Höss's View

Rudolf Höss, speaking at Nuremberg on 15 April 1946 as a witness for the defendant Kaltenbrunner, explained how US/UK bombing destroyed all he had tried to establish as the Auschwitz Camp commandant:³⁷⁸

“Until the outbreak of war in 1939, the situation in the camps regarding feeding, accommodation, and treatment of detainees, was the same as in any other prison or penitentiary in the Reich. The detainees were treated strictly, yes, but methodical beatings or ill-treatment were out of the question. The Reichsführer gave frequent warnings that every SS man who laid violent hands on a detainee would be punished; and quite often, SS men who did ill-treat detainees were punished. Feeding and accommodation at that time were in every respect put on the same basis as that of other prisoners under legal administration. The accommodation in the camps during those years was still normal because the mass influxes at the outbreak of and during the war had as yet not taken place. When the war started and when mass deliveries of political detainees arrived, and, later on, when detainees, who were members of resistance movements, arrived from the occupied territories, the construction of buildings and the extensions of the camps could no longer keep up with the number of detainees who arrived. During the first years of the war

³⁷⁸ IMT Nuremberg, Vol. 11, pp. 403-405; quoted in Carlos Porter, *Not Guilty at Nuremberg*, pp. 20f. As Porter points out, Höss's speech here “contradicted his affidavits and himself as much as possible,” as if this were Höss briefly recalling his real view, where he is far from admitting a policy of intentional extermination.

this problem could still be overcome by improvising measures; but later, due to the exigencies of the war, this was no longer possible, since there were practically no building materials any longer at our disposal. [...] This led to a situation where detainees in the camps no longer had sufficient powers of resistance against the ensuing plagues and epidemics. [...] the aim wasn't to have as many dead as possible or to destroy as many detainees as possible. The Reichsführer was constantly concerned with the problems of engaging all forces possible in the armament industry. [...] These so-called ill-treatments and torturing in concentration camps, stories of which were spread everywhere amongst the people, and particularly by detainees who were liberated by the occupying armies, were not, as assumed, inflicted methodically, but by individual leaders, sub-leaders, and men who laid violent hands on them. [...] If in any way such a matter was brought to my notice, the perpetrator was, of course, immediately relieved of his post or transferred somewhere else. [...]

The catastrophic situation at the end of the war was due to the fact that, as a result of the destruction of railways and of the continuous bombings of the industrial works, it was no longer possible to properly care for these masses, for example, at Auschwitz, with its 140,000 detainees. Improvised measures, truck columns, and everything else tried by the commandants to improve the situation, were of little or no avail. The number of sick became immense. There were next to no medical supplies; plagues raged everywhere. Detainees who were capable of work were used continuously by order of the Reichsführer, even half-sick people had to be used wherever possible in industry. As a result, every bit of space in the concentration camps which could possibly be used for lodging was filled with sick and dying detainees."

That is quite a humane statement, very different from the I-was-a-mass-murderer affidavits he was forced to sign.³⁷⁹ It may remind us of a speech Höss gave to the SS on 22 May 1943, during which he explained the stages through which the Auschwitz Camp had developed:³⁸⁰

"In addition to that, the solution of the Jewish question was added recently, which required creating the means to accommodate 60,000 prisoners at first, which increases to 100,000 within a short time. The inmates of the camp are predominantly intended for the growing large-scale industries in the vicinity."

³⁷⁹ As regards what he signed, Porter commented (*ibid.*): "At Nuremberg, there was never the slightest pretence that Höss wrote this document. If that had been the case, it would not state, 'I understand English as it is written above,' but rather, 'I have written this statement myself.'"

³⁸⁰ Carlo Mattogno found this reference; see his excellent *Special Treatment in Auschwitz*, *op. cit.* (note 167), p. 53.

Here the “solution to the Jewish question” meant not gassing them but rather constructing large barracks to accommodate them and training them for arms industry work.

14. The Purpose of the Camps

The Alleged Will to Exterminate

We infer will and intention in a past historical event by what was said or written, and by what was done. With luck, the former will provide a *reason* for the latter. Decent citizens of the modern world are required to believe in a will to exterminate, somewhat like that of the Daleks in *Dr Who*, that motivated the Nazis *for no reason* other than their “anti-Semitism”. The act, having no apparent justification, becomes proof of their wickedness. Let’s quote here from the official Yad Vashem website:

“[The Nazis] were at their most efficient from April to November 1942 – 250 days in which they murdered some two and a half million Jews. They never showed any restraint, they slowed down only when they began to run out of Jews to kill, and they only stopped when the Allies defeated them.

There was no escape. The murderers were not content with destroying the communities; they also traced each hidden Jew and hunted down each fugitive. The crime of being a Jew was so great, that every single one had to be put to death – the men, the women, the children; the committed, the disinterested, the apostates; the healthy and creative, the sickly and the lazy – all were meant to suffer and die, with no reprieve, no hope, no possible amnesty, nor chance for alleviation. Most of the Jews of Europe were dead by 1945. A civilization that had flourished for almost 2,000 years was no more. [...] The survivors – one from a town, two from a host – dazed, emaciated, bereaved beyond measure, gathered the remnants of their vitality and the remaining sparks of their humanity, and rebuilt.”

That, in fact, did not happen. Let’s compare that alleged extermination with some evidence of what actually happened, in terms of Jews who were *still there* after World War II, for example:

- France, occupied for most of the war by the Nazis, had a quarter of a million Jews left when it was over.³⁸¹ That is proportionally speaking

³⁸¹ Walter Sanning, *The Dissolution of Eastern European Jewry*, 1983, p. 172; 2015, p. 168. Compare Faurisson: “As far as France is concerned, we know that, of a Jewish population of about 350,000, around 75,700 Jews, foreigners for the most part, were deported, but we’re not told how many survived.” For how “large and lively” the French Jewish

more than exist in the UK today.³⁸² About one in four of Jews in France was deported, *but* of those only about one quarter had French citizenship.³⁸³ This more resembles a policy of getting rid of troublemakers than that of ethnic cleansing. Then a large post-war surge of Jews coming back into France took place. Soon there were a lot more than before the war: around 1970 there were, Sanning estimated, probably 485,000 Jews in France,³⁸⁴ and where had they all come from? Had almost all French Jews undergone some trauma of being exterminated, as Yad Vashem insinuates, would they really have wanted to come back so quickly and in such large numbers?

- After the war, both Poland and Hungary had a large proportion of its ruling class still Jewish. Professor Kevin MacDonald, in his book *Culture of Critique*, points out that not only were they still there, but they ruled Poland for the next several years.³⁸⁵

“As in the case of post-World War II Hungary [...] Poland became polarized between a predominantly Jewish ruling and administrative class supported by the rest of the Jewish population and by Soviet military power, arrayed against the great majority of the native gentile population.”

Not only did Polish Jews hold power after the war, but they held enough power that they were able to swiftly set up and organise a number of sadistic torture camps for the unfortunate surrendered German soldiers and for German civilians.³⁸⁶ Those were the *real* death camps, *i.e.* their aim was a Tarantino-type slow death with torture.

- The Jewish community in Berlin, estimated at around seven thousand, attended their synagogue right through the war,³⁸⁷ somewhat as Berlin’s Hospital of the Jewish Community tended to Jews throughout the

community was right after the war, he recommended the yearbook *L’Annuaire du judaïsme* of 1952. Interview with Faurisson in Tehran 13 Dec. 2006, www.codoh.com/library/document/105/.

³⁸² The UK has about a third of 1% Jews, while post-war France had double that, out of some 40 million citizens.

³⁸³ *Le Chagrin et la pitié*, a documentary banned in France when first made, found that $\frac{3}{4}$ of the Jews in France had not been deported and that only $\frac{1}{4}$ of those deported were French, most of which had been naturalized only recently. The policy appears to have been to deport refugees from Poland and other European countries (Advice from: “Kingfisher”). There is a total figure of 75,721 Jewish deportees from France, of which 60% were foreigners (see Serge Klarsfeld, *Le Mémorial de la Déportation des Juifs de France*, Paris 1978).

³⁸⁴ There were around 700,000 Jews in France around 1970, Sanning estimated, but many had come from Africa, such that only the above number were European (1983, p. 144/2015, pp. 168f.).

³⁸⁵ 1998, p. 65; see the CODOH Forum thread, “Jews of Poland, where’d they go?”

³⁸⁶ John Sack, *An Eye for an Eye* (2000).

³⁸⁷ See Robert Faurisson, “The Victories of Revisionism (continued),” 11 Sept. 2011: “at the height of the war, homes and hospitals for Jews.”

War.³⁸⁸ They appear to have had a considerably greater fear of Allied bombing than they did of the Nazis. In Vienna, for comparison, in 1944 a Council of Elders of Jews was functioning, and it had responsibility for Jewish hospitals, for a children's home and day school, a community kitchen, a bathhouse, a poor people's home (for the elderly), a clothes and furniture depot, a relief (or welfare) division, a library, and cemetery administration and grounds, with these different centres being spread throughout the city.³⁸⁹

– Within the German military, about 150,000 Jews or half-Jews served.³⁹⁰ Such data endorses what Professor Arthur Butz wrote in his classic *The Hoax of the Twentieth Century* (1976, p. 10; 2015, p. 28):

“The simplest valid reason for being skeptical about the extermination claim is also the simplest conceivable reason: at the end of the war they were still there.”

Prof. Faurisson commented in his 2006 lecture “Victories of Revisionism” on how a huge number of post-war European Jews “survived”:

“1) The first of these facts is that, for the entire duration of the war, millions of European Jews lived, plain for all to see, amidst the rest of the population, a good part of them being employed in factories by the Germans who were cruelly short of manpower, and those millions of Jews were therefore not killed. Better still: the Germans stubbornly offered to hand over to the Allies, up to the last months of the conflict, as many Jews as they might want on the express condition that they must not subsequently send them to Palestine; this proviso was made out of respect for ‘the noble and valiant Arab people’ of that region, already violently beset by Jewish colonists.”

The several million Jews in Europe still alive after the war have called themselves “Holocaust survivors.”

When Steven Spielberg decided to launch his vast project of gathering together fifty thousand survivors’ “testimonies,” he sent his interviewers to about fifty countries of the world,³⁹¹ that being something like the number of countries to which those Jews scattered after the war. That is a reason why attempts to ascertain a “total number” for World War II Jewish deaths

tend to be rather futile. Many emigrated to Palestine, which became the State of Israel.

I suggest that the author of the above Yad Vashem text fulfils criteria of hate crime as it exists today in European and American legislation. One may not approve of the hate-crime concept, however, it is now enshrined in law. I suggest that this text clearly violates it – by arousing hate against a particular group, viz. Germans. Citizens have a duty to report a crime, so I hereby report this ongoing transgression.

I suggest that the huge but largely fictional “database” at Yad Vashem in Jerusalem, and the much smaller but reliable Arolsen archive in north Germany alike, contain no shred of evidence that any centrally organized killing of Jews *en masse* – because they were Jews – ever took place. That’s because no such centrally organized plan ever functioned.

Germans did not ever will the extermination of Jews. One appreciates that many people want to believe the contrary with terrific fervour, having read plenty of books and newspaper articles and having been saturated with films, etc. But we are here talking about primary source material, which is not the same. Youngsters in America and England get the story rammed down their throats in history and religion classes.³⁹² This is not so much teaching history, it is more trauma-based mind-control. It is trauma for an impressionable young mind to be given the story, and to naturally trust the teacher, while somewhere out there, there exists evidence that refutes, indeed disproves, the entire ghastly “death camp” narrative.

The grand Yad Vashem Museum is built next to Deir Yassin, the Palestinian village whose inhabitants were wiped out in 1948: as if the Museum’s outrageously inflated numbers could excuse or somehow forgive such an act; they cannot. The genocide of the Palestinians was and is a centrally organized ethnic cleansing and killing process; it was and is The Holocaust.

No Written Record

The absence of documentary evidence for the alleged extermination programme has inspired allegations of extrasensory perception. Did it all happen by extrasensory perception? Was there a collective mind-reading amongst the German high command to murder six million Jews, many of them in gas chambers, for no reason? Raul Hilberg, author of the three-volume opus *The Destruction of the European Jews*, has more or less conceded that. The first single-volume edition of his book of 1961 stated that it had been done on instructions from Hitler, but he was obliged to backtrack, having to concede that there were *no documents*, nor records of any such

³⁹² And citizenship classes (in the UK) and drama classes; there is a case for saying four different areas of the school curriculum are now doing it!

plan or intention. In 1983, he was forced to aver that the “final solution” had worked *without any documents* or recorded messages:³⁹³

“But what began in 1941 was a process of destruction [of the Jews] not planned in advance, not organized centrally by any agency. There was no blueprint and there was no budget for destructive measures. They were taken step by step, one step at a time. Thus came not so much a plan being carried out, but an incredible meeting of minds, a consensus mind-reading by a far-flung [German] bureaucracy.”

What utter rubbish! Then, two years later, he confirmed this thesis at the Toronto trial of Ernst Zündel under oath: *there were no documents*. Faurisson sarcastically commented that, in his own experience, the last thing one could expect from a bureaucracy was a meeting of minds and telepathy. The Swiss Revisionist Jürgen Graf has given a learned dissection of Hilberg’s three-volume opus in his book *The Giant with Feet of Clay*. He wrote:³⁹⁴

“It would be difficult to find any clearer display anywhere than these few sentences of the total bankruptcy of the orthodox historiography of the Holocaust.”

In the year 2023, these words of Mr Graf, originally written in 1999 but still valid today, surely offer a firm and clear basis for future debate:³⁹⁵

“That no one has ever found a written order for the physical extermination of the Jews originating with Adolf Hitler or any other leading NS politician is agreed upon by historians of all orientations.”

Using Occam’s Razor, we affirm that the plan cannot be found *because it never existed*. It’s quite simple, really. It is time for this phantasmal historiography to be replaced by what can be shown to have happened.

If no will to exterminate Jews in World War II Poland can be discerned in the historical record, then what did happen? To answer that, we have to turn away from the phantasm-hallucinations brewed up at Nuremberg and focus instead upon the historical evidence.

Let’s look at four central aspects of the National-Socialists’ wartime policy toward the Jews:

³⁹³ George De Wan, “The Holocaust in Perspective,” *Newsday*, Long Island, New York, 23. Feb. 1983, p. II/3.

³⁹⁴ Jürgen Graf, *The Giant with Feet of Clay* (2015), p. 34. For a much-more thorough and devastating critique of Hilberg’s book see Mattogno’s *Bungled: “The Destruction of the European Jews”: Raul Hilberg’s Failure to Prove National-Socialist “Killing Centers.” His Misrepresented Sources and Flawed Methods* (2021).

³⁹⁵ Graf, *ibid.*, p. 19.

I. The “Final Solution” Finally Solved

Since 1933, National Socialists strove to pressure the Jews under its rule to emigrate. This policy was maintained even during the first two years of the war. That the Nazis had neither a plan, nor, in fact, even an intention to kill Jews until mid-1941 is widely accepted by many mainstream historians.³⁹⁶

The outbreak of the war changed the situation initially only because Germany had so many more Jews under its reign, for the territories they controlled had expanded vastly in 1939 and 1940. Trying to make all the Jews in Poland, France, the Netherlands, Belgium, Luxemburg, Denmark and Norway emigrate was unfeasible, hence plans of forced resettlements were considered. One of them involved shipping Europe’s Jews to Madagascar,³⁹⁷ *but* that never materialized, because Great Britain and the U.S. kept ruling the waves and would never have allowed such a plan to be implemented.

Here are some key documents on this issue:

24 June 1940: SS General Reinhardt Heydrich, head of Germany’s Department for Homeland Security (which they called *Reichssicherheits-hauptamt* = Main Office for National Security), wrote to Foreign Secretary Ribbentrop about the “*Endlösung der Judenfrage*”:³⁹⁸

“Since taking on this task [i.e. removing the Jews from Germany] by my office on 1 January 1939, more than 200,000 Jews have emigrated from Reich territory so far. The overall problem – there are already about 3 1/4 million Jews in the territories under German control today – can no longer be solved by emigration.

A territorial final solution therefore becomes necessary.”

³⁹⁶ For a concise summary of those policies of “ethnic pressure” see Ingrid Weckert’s book *Jewish Emigration from the Third Reich* (2nd ed. of 2016).

³⁹⁷ Madagascar was then a paradise: a relatively untouched, mineral-rich, barely populated, large and secluded island off the coast of East Africa – instead of a barren, desert nation without rivers or fertile soil and with Jews having no legal right to be there like Palestine. French Prime Minister Pierre Laval agreed to turn the island of Madagascar, which at that time was a French colony, into a new Jewish homeland where Central Europe’s Jews might be settled, and governed by a joint German-French board with representation granted to any government cooperating. That was Hitler’s “Final Solution” (Ralph Grandinetti, *Final Solution: Germany’s Madagascar Resettlement Plan*, The Barnes Review, Washington, DC, 2012; see also the mainstream books by Brechtken 1998 and Jansen 1997, of which unfortunately no English translations exist). Many preferred this option to Palestine. On 17 June 1942, Hitler remarked: “One could found a state of Israel in Madagascar” (in a conversation with Mussolini, as remembered by his interpreter: Paul Schmidt, *Hitler’s Interpreter*, Heinemann, London 1951, p. 178), suggesting that the National-Socialist “final solution” export program was then still viewed as feasible

³⁹⁸ Document T-173 of the Eichmann Trial at Jerusalem.

There are a lot of quotes to this effect by top Nazis, and maybe we should take a bit more notice of them. For example, here's a letter of Göring to Heydrich:³⁹⁹

31 July 1941: *"As supplement to the task that was entrusted to you in the decree dated 24 January 1939, namely to solve the Jewish question by emigration and evacuation in a way which is the most favourable in connection with the conditions prevailing at the time, I herewith commission you to carry out all preparations with regard to organizational, technical and material issues for a comprehensive solution to the Jewish question in the German area of influence in Europe."*

Heydrich convened the Wannsee Conference in order to implement that request.

21 August 1942: Martin Luther, Chief of the German Section of the Foreign Office, wrote in a file memo:⁴⁰⁰

"The fundamental principle of German Jewish policy after taking power consisted in furthering Jewish emigration by all possible means. [...] The current war gives Germany the opportunity and also the obligation to solve the Jewish question in Europe. [...] Due to the [...] Führer's decree mentioned, the evacuation of the Jews from Germany was initiated. It suggested itself to also include in this the Jewish citizens of those countries which implemented Jewish measures as well. [...] The number of Jews deported to the east as a result of this did not suffice to cover the need for manpower."

The huge and fully-recovered diaries of Joseph Goebbels, Hitler's propaganda chief, make this export programme crystal-clear, e.g.:

12 October 1938: *"Helldorf gives me a report on the status of the Jewish action in Berlin. It proceeds systematically. And the Jews now gradually withdraw."*

5 December 1939: The Führer *"shares my view on the Jewish and Polish questions. The Jewish danger must be banished (gebannt) by us."*

26 July 1940: *"The big plan for the evacuation (Evakuierung) of the Jews from Berlin was approved. Additionally, all the Jews of Europe are supposed to be deported (deportiert) to Madagascar after the war."*

2 September 1940: *"I fly to Kattowitz [Katowice, Poland, near Auschwitz...] Bracht reports to me on the various concerns of the Province. The Poles are resigned to their fate, and the Jews have been pushed out (abgeschoben)."*

³⁹⁹ IMT Document 710-PS; IMT, Vol. 25, pp. 266f.

⁴⁰⁰ NMT Document NG-2586 (J).

18 March 1941: “Vienna will soon be entirely Jew-free. And now it is Berlin’s turn. I am already discussing the question with the Führer and Dr. Frank. He puts the Jews to work, and they are indeed obedient. Later they will have to get out of Europe altogether (aus...heraus).”

22 March 1941: “The Jews themselves cannot be evacuated (evakuiert) from Berlin because 30,000 are working in the armaments industry. Who, earlier, would have thought this possible?” (See Rigg’s book in Fn 390).”

19 August 1941: “Additionally, the Führer tells me that, as soon as the first transport opportunity becomes available, the Berlin Jews should be pushed off (abzuschieben) to the East. There they will have to make do under a harsh climate.”

22 November 1941: “Evacuation (Evakuierung) of the Jews will be undertaken city by city.”

Twenty-nine bulky volumes of this diary, each of five hundred pages, were finally published in 2006. That is a tremendous landmark. Goebbels was at the centre of the German Nazi party. Thomas Dalton scrutinized them and concluded:

“As Irving observed, ‘Nowhere do the diary’s 75,000 pages refer to an explicit order by Hitler for the murder of the Jews.’ On the contrary: we find repeated and consistent reference only to expulsion and deportation.”

Dalton finally read right through the diary and published his article in 2010, so in a sense this is the landmark year for a correct evaluation of this centrally important document.⁴⁰¹ *Let’s hope that this settles the matter.*

Actually we’d better have one more quote from Goebbels, because a lot of people have falsely averred that the one-day “Wannsee Conference” resolved upon the gruesome programme as if it had been some dreadful turning-point, and that was in January 1942:

5 February 1942: “The Jewish Question is again giving us a headache; this time, however, not because we have gone too far, but because we have not gone far enough. Among larger sections of the German people the idea is gaining headway that the Jewish Question cannot be regarded as solved until all Jews have left the Reich.”

We’ve now cited twelve statements by top-ranking Nazis about the meaning of the “final solution.” Will that do? I should perhaps apologize for the rather boring conclusion to be drawn, which is that the phrase meant exactly what the Nazis claimed that it meant. It did not have a concealed and more exotic meaning, drenched in horror.

⁴⁰¹ Thomas Dalton, “Goebbels on the Jews,” two parts, *Inconvenient History*, Vol. 2, No. 1 & 2 (2010); www.inconvenienthistory.com/2/1/1918 & [/3109](http://www.inconvenienthistory.com/2/1/1918).

II. Reducing Mortality

Since early 1942, a large portion of Jews residing in the German area of influence were sent to concentration camps, where they had to do forced labour. But due to at times dismal living conditions, *too many people were dying* in this process, which evidently reduced the efficiency of the camp's labour output, so a command went forth for a *drastic reduction* in mortality:

16 December 1942: *"Efforts absolutely must be taken to reduce the death rate in the concentration camps by improving the nutrition and, whenever possible and necessary, the working conditions. The camp commandants are to be held personally responsible for this."* —SS Chief Himmler⁴⁰²

28 December 1942: *"The senior camp medical doctors will use all the means at their disposal to ensure that mortality rates in the several camps decrease substantially. [...] The camp medical doctors should supervise the nutrition of the prisoners more closely than before and submit proposals for improvements in conformance with the administrative measures of the camp commandants. [...] The Reichsführer SS has ordered that mortality absolutely must be reduced."* —SS Gruppenführer/Lieutenant General Richard Glücks⁴⁰³

20 January 1943: *"As I have already pointed out, every means must be used to lower the death rates in the camps. Full utilization and tasty preparation of the rations at hand, as well as the increased reception of parcels make this perfectly possible. I hold the camp commandant and the chief of the camp administration personally responsible for exhausting of every possibility of maintaining the physical strength of the prisoners [...]."* —again Richard Glücks⁴⁰⁴

Here we see that there was a supreme directive in late 1942/early 1943 to *reduce* camp mortality.

In the view of the Swiss Revisionist author Jürgen Graf, this policy was successful over the next year, because mortality in the camps did in fact decrease. I call upon all persons in "Holocaust study" courses around the world to apprehend that orders for the genocide-extermination programme cannot be found because they never existed; whereas it is now time (with the publication of Graf's very clear book on the subject) to take notice of the orders and policies that did really exist in this catastrophic period of history.

⁴⁰⁴ NMT document NO-1523.

III. Constructive Labour

An industrial imperative came to the fore in the year 1943, as the mixed occupancy of the camps, some in very poor health, were assigned semi-skilled industrial labour:

October 26, 1943: "In the framework of German armaments production, thanks to the improvement efforts that have been undertaken in the past 2 years, the concentration camps have become of decisive importance in the war. From nothing we have built armaments works that are second to none. We now have to redouble our efforts to make sure that the production levels so far achieved are not only maintained, but further improved.

After the plants and factories have been erected for the most part, this will be possible only by maintaining and even improving the labour capacity of the prisoners.

In earlier years, given the re-educational policy of the time, it did not matter much whether or not a prisoner could perform useful work. Now, however, the labour capacity of the prisoners is important, and all measures of the commandants, director of the liaison service and medical doctors should be extended to maintaining the health and efficiency of the prisoners.

Not from phony sympathy, but because we need them with their arms and their legs, because they must contribute to a great victory for the German people, we must take the well-being of the prisoners to heart."—Notice by Oswald Pohl, sent to the commandants of 19 concentration camps.⁴⁰⁵

The camp "amenities" examined in Chapter 13 had one single purpose: mollifying the distraught crowd of deportees sufficiently so that they would agree to work in arms-manufacturing centres, especially those around Auschwitz.

IV. Death Camps

Lastly came the time of horror and ruin, as described in the International Red Cross's Report,⁴⁰⁶ owing to what it called the "barbarous aerial warfare of the Allies" whereby typhus and famine took over.⁴⁰⁷ Two and a half million tons of US/UK bombs destroyed infrastructure, and hope. The camps *became* death camps. We get a glimpse of the unfolding catastrophe from the Red Cross's Report:

⁴⁰⁵ Archives of the Stutthof Museum, I-IB-8, p. 53.

⁴⁰⁶ Three-volume Report of the International Committee of the Red Cross on its Activities during the Second World War, Geneva, 1948.

⁴⁰⁷ A graph of mortality in the Dachau Camp (Chapter 5) shows that the first four months of 1945 had a greater mortality than all the previous war years taken together.

“In the chaotic condition of Germany after the invasion during the final months of the war, the camps received no food supplies at all, and starvation claimed an increasing number of victims. Itself alarmed by this situation, the German Government at last informed the ICRC on February 1st, 1945. Relief could henceforth be distributed by the ICRC, and one delegate was authorized to stay in each camp.” (Vol. III, p. 83)

Thus, the German authorities were at pains to relieve the dire situation as far as they were able. The Red Cross are quite explicit in stating that food supplies ceased at this time due to the Allied bombing of German transportation, and *in the interests of interned Jews* they had protested on March 15th, 1944, against “the barbarous aerial warfare of the Allies” (*Inter Arma Caritas*, p. 78). By 2 October 1944, the ICRC warned the German Foreign Office of the impending collapse of the German transportation system, declaring that starvation conditions for people throughout Germany were becoming inevitable. In dealing with the Red Cross’s comprehensive, three-volume *Report*, it is important to stress that the delegates of the International Red Cross found no evidence whatever at the camps in Axis-occupied Europe of a deliberate policy to exterminate the Jews. In all its 1,600 pages, the Report never hints at any homicidal gas chambers.⁴⁰⁸

In May 1997, with the release of classified British Intelligence decrypts at the National Archives, Holo-historian Sir Martin Gilbert apologized for the “failure” of British Intelligence to make public what it “knew” about the Holocaust then happening.⁴⁰⁹ In October of the same year, the International Red Cross finally apologized for its “moral failure” of failing to report the Holocaust in its wartime documents. This was at a Yad Vashem ceremony in Jerusalem. Finally, in March of 1998, the Vatican formally apologized – in a long-awaited document – for not having taken more action to stop the extermination of six million Jews. Let me see, who else has not yet grovelled with apology?

There is an ironic twist here, in that the Vatican’s grovelling apology came only a couple of years after the declassifying of the British Intel decrypts indicating that more Catholics than Jews had died at Auschwitz.

⁴⁰⁸ The report does mention “death camps” and “extermination” on several occasions, but these are ambiguous and very general remarks, made in passing. The three volumes clearly show that the International Red Cross never made an effort to investigate in detail any claims about death or extermination camps, and we should conclude that these 1948 statements are mere tributes to the extermination rhetoric prevalent ever since Nuremberg (1945/46), which would probably have been mandatory for them. Cf. A.R. Butz, *The Hoax of the Twentieth Century* (2003), pp. 179f. (2015: pp. 194f.).

Epilogue

“The fact that virtually no tangible physical traces remain of the Reinhardt camps has made them into ideal playgrounds for the delusion and phantasmagoria of Holocaust pseudo-historiography” —Thomas Kues⁴¹⁰

Dramatic-sounding books about Treblinka keep being published: *Quenched Steel: The Story of an Escape from Treblinka* by Edi Weinstein (2002), *Escaping Hell in Treblinka* (2008) and *I Am the last Jew: Treblinka* by Chil Rajchman (2012) – the last appearing simultaneously in eleven languages! These gripping titles conjure up tough, vivid images. Against them, the mere “negationism” of the Revisionists may seem like a perpetually losing argument. Revisionists are liable to come up with things like, “If eight hundred thousand bodies were burned at Treblinka, can we please be shown *any trace* in the surrounding forest of trees cut down to do this? There should be at least one hundred thousand.” Or, at Auschwitz they are liable to say things like, “If one million bodies were burned here, cremated into ashes, so that no trace remains, would you really want to do that using *individual* muffle-furnaces, which take at least one hour per corpse to burn?” Experts debate whether two bodies could possibly have been incinerated together (answer: if they were very skinny, then maybe), but either way, the prospect of incinerating that number by that method remains pure, absolute lunacy. Revisionists are prone to invoke Occam’s Razor: because no trace of any gassed bodies has ever been detected, instead of having a bizarre explanation of how they were all burned, which tends to violate known laws of physics, would it not be simpler to assume that the gassed bodies never existed in the first place?

So, I thought long and hard about what else could be as exciting as those action-packed Treblinka stories, and my answer is, the Clash. Yes, what is here going on is a Clash between Science, which represents the

⁴¹⁰ T. Kues, “Researching ‘Aktion Reinhardt’ – Some Notes and Reflections,” *Smith’s Report*, no. 165, September 2009, pp. 3-6. here p. 4;
www.codoh.com/media/files/documents/newsite/sr/online/sr_165.pdf.

human capacity of rational thought, and Religion, whereby a high priesthood decrees what the people have to believe and threaten and “excommunicate” those who will not bow down.⁴¹¹ This titanic Clash has to be a core meaning of the 21st Century, because if it isn’t, then there is not much by way of a happy future for anyone.

All your life you’ve been told about the Six Million, but never heard how anyone counted that number (they didn’t – see Chapter 10), and you merely sensed that it would be dangerous if you didn’t believe it. In November 1945, at Nuremberg, before anyone could possibly have counted that number even to the nearest million, the story was established.

There were three startling achievements of the Nuremberg Military Tribunal. The first was the instigation and the imposition of an act of collective amnesia, whereby the normal use of Zyklon B as an insecticide throughout all the labour camps became forgotten and dismissed. Who now remembers it? Secondly, the victorious Allies dreamt up new laws out of nothing and retrospectively tried and hanged the defeated Nazis for violating them⁴¹² – even though these laws may have applied at least as much to the UK (and France and Poland) for starting World War II as they did to Germany,⁴¹³ and even though the US and UK have shown little enough

⁴¹¹ Bar rare exceptions, I tend to agree with CODOH Forum user “Occam’s Razor,” who commented: “[...] my experience is that holocaust believers as a rule have no grasp of natural sciences at all. I have yet to come across a holocaust believer who knows anything about chemistry, biology, medicine or physics. They are lawyers, historians, language teachers, or are into some other liberal arts stuff, but never from the natural sciences. And they are the ones who have taken over the relevant Wikipedia pages on the holocaust and bully everyone into believing that the ‘deniers’ have been debunked.” (CODOH Forum, 26 Oct. 2012; forum.codoh.com/viewtopic.php?f=2&t=7320&p=54347).

⁴¹² “Western international law excluded the possibility that the leaders of an enemy state could be tried and hanged as a part of the exploitation of victory.” Francis Yockey, *Imperium*, (1948), p. 600. Yockey was a US lawyer who was hired by the U.S. government as a post-trial review attorney at Nuremberg where he was to collect incriminating evidence against the Germans, but he was fired when he started to write about the biased procedures of the Allied post-war tribunals: “Fantasy became fact, lie became truth, suspicion turned into proof, persecution mania transformed itself into blood lust.”

⁴¹³ A War of Aggression as defined at Nuremberg commenced on 11th May 1940, the day after Churchill became Prime Minister, when UK bombers started to bomb the Ruhr heartland of Germany, incinerating cities (P. Buchanan, *Churchill, Hitler and the Unnecessary War* (2008), p. 393). Germany had been banned from developing anti-aircraft strategies and equipment under the 1919 Versailles Treaty, and no other European nation had such heavy-bombing planes. Hitler had given orders that no British town was to be bombed; London was completely embargoed. On 25 August 1940, Churchill ordered that Berlin be bombed, so eighty-odd bombers flew out to bomb Germany’s capital city. Finally in September the German retaliation began. The British people do not believe that Churchill’s war-initiation strategy went on for months, incinerating German cities, *before* a response happened. See my CODOH article “How Britain Pioneered City Bombing,” 1 Jan 2009, www.codoh.com/library/document/694/; plus Wikipedia’s “The Bombing of Berlin in WW2” en.wikipedia.org/w/index.php?title=Bombing_of_Berlin_in_World_War_II&oldid=614875216.

propensity to adhere to them in the decades which followed. Thirdly, the recurrent theme thrumming through the Twentieth Century of six million Jews – which appears from about 1900 onwards as a kind of collective noun for European Jewry – the *six million Jews of Europe* suffering, being threatened, in danger etc. – that canonical number was decreed to *have been* exterminated. From about 1940, the newspaper headlines start to proclaim that six million Jews are being exterminated by Hitler, or are in danger of being exterminated, then finally by Nuremberg it is in the past tense; they have been exterminated.

People seem to want a value for the total number of Jews who died in World War II, and we've seen how that is fairly impossible to ascertain. Whereas we might reasonably hope to establish both the number of those who died in the German labour camps and those who died from cyanide gas. Those dying in the camps were between two and three hundred thousand. That is the best that we can do: the number specified by Bishop Williamson. The latter number we place at zero.

Several sources lead us to that final answer. First, the distinguished US pathologist Charles Larson, sent over by the US army in 1945 to inspect the piled-up corpses in the German labour camps, at Dachau, Belsen etc., clearly stated that he did not encounter any case of death by poisoning (remember that back then gassings were claimed for almost all German camps, Dachau included.).⁴¹⁴ Next, and this argument is much more substantial, chemical analyses of samples taken from the alleged homicidal gas chambers for residual wall-cyanide have failed to show any significant elevation above normal background level; and finally, a letter from the Arolsen archive manager declared that not a single record in their possession tells of a death by cyanide.⁹⁶ It didn't happen. It never happened.

This book has attempted to outline a clash between rational science and what appears as a new Holocaustian religion, where belief is compulsory. It may indeed be far from evident that the former is going to win – but, it's not over until the fat lady sings. Here another argument exposing the fragility of the mainstream narrative: The Treblinka transit camp would have had some Diesel engines to generate electricity, presumably the origin of the stories about Diesel exhaust gassing. According to Rudolf Höss's "con-

⁴¹⁴ As part of a US War Crimes Investigation Team, "Dr. Larson performed autopsies at Dachau and some twenty other German camps, examining on some days more than 100 corpses. After this grim work at Dachau, he was questioned for three days by US Army prosecutors;" he concluded: "Never was a case of poison gas uncovered" (see newspaper clip in Illustration 2, p. 47); Theodore J. O'Keefe, "The Liberation of the Camps," *The Journal of Historical Review*, Vol. 15, No. 4 (July/Aug. 1995), pp. 18-23). But NB: his biographer John D. McCallum, *Crime Doctor: A Biography of Dr. Charles P. Larson* (1978), possibly by way of covering Larson's future reputation, had a "relatively few of the inmates" at the Dachau camp gassed, these being "psychotic" cases. If you want to believe this, you will want to change the above figure of "zero" to "a small number."

fession,” the Treblinka death camp was up and running already in 1941, before Auschwitz is said to have been converted to a death camp, although Treblinka actually started operating only in July 1942. The British and US army ran on gasoline, *i.e.* petrol, whose exhaust fumes *were* lethal. Diesel fuel was a Germanic concept; after all, it had been invented by a German, Rudolf Diesel.

So, this fiendish death camp ran on Diesel oil, and it was not until around 1980 that the key feature of Diesel engines – they burn almost *all* the carbon in the fuel to carbon *dioxide*, so that there is hardly any left over to form carbon *monoxide* – really dawned, but by then it was too late for the Believers to move the goalposts, *i.e.* they could not change their alleged deadly gas to something else that would actually kill people. The passage of several decades had rather fixed their canonical story! Yes, Diesel fumes do smell dreadful, and maybe Those Who Create Delusion reckoned that this was enough to weave their spell of enchantment. Well, it’s over now, past its sell-by date.

Some tattered remains of the broken enchantment do yet blow in the wind, for example Birmingham University Science Department applying a ground-penetrating radar that was able to detect disturbances of the underlying soil, but not what might have caused them, *e.g.* any bodies or cremation remains under the ground; plus all those jagged stones at Treblinka with solemn inscriptions, *placed there only in the 1960s*.

A spell has been laid upon academe. Whenever you ask about why no evidence can be found, the “evil Nazis” who thereby acquire superhuman powers are accredited. Why are there no historic remains of the homicidal gas chambers of the Reinhardt camps? The wicked Nazis of course destroyed all the evidence before their retreat. Why do none of the death records say death by gassing? O God, you’re so naïve, don’t you understand how they used code words for what they were doing, like “special treatment”?⁴¹⁵ Or, why are there no photographs? And so on.

How did Nuremberg dream up six million gassed without having so much as one single gassed body to inspect? Yes, it must have taken a powerful spell-weaver to achieve that level of enchantment. But now I’m afraid it’s all over. The show has to end. You see, I’m applying the counter-spell. Yes, I know, you enjoyed all that horror. But like a space pilot desirous of

⁴¹⁵ Carlo Mattogno, *Special Treatment in Auschwitz* (2010/2016).

steering clear of a Black Hole, we need to avoid these weirdly negative thought structures, designed to convey that which has no substance, and instead employ normal historiography whereby normal evidence is first assembled and then a conclusion is drawn from it through uncensored debate.

It's time for Germany to let its historians and thought criminals out of jail. Let Germany be allowed to write its own history. Let it write out its own constitution. What other war ended with the defeated nation compelled by law to accept the victor's war myths, for ever after? It's been truly said, the Holocaust mythos bears war within it, as a storm cloud carries lightning. Let a pacific culture grow in the heart of Europe. But that would mean awakening to real history. Who is in control of the past? Does somebody own it? Will they put you in jail if you disagree?

We are the spell breakers. Our hearts are stout enough to withstand the hurled accusations: Nazi! Anti-Semite! Holocaust Denier! Yes, we can be put in jail, but then we come out again. We have only one weapon:

*"No Blazon'd banner do I unfurl
One charge alone I give to Youth
Against the scepter'd certainties of Age
Proclaim the sacred heresy of Truth."*

(Joseph Mary Plunkett, Irish Poet, in 1916 executed by the British for his participation in the Irish Easter Rising against the British occupation of Ireland in 1916.)

Appendices

Appendix I: The Enigma of the “Höfle Telegram”

When David Irving’s trial was over in 2000, he entered into a discussion with a Mr Stephen Tyas, which briefly alluded to this terse “telegram.” It soon became the only part of the British Intel decrypts at Kew from the German camps (Chapter 6) of which any notice was taken, because an exterminist twist could be imposed upon it.

In a 2001 article (which he co-authored with a German historian), Tyas published his view of the “Höfle telegram” he had discovered, hidden away after fifty years of secrecy. He gave it a blood-drenched meaning, mantrically repeating the words “extermination,” “murder,” “death,” as if wishing to ignore the innocuous contents and simple meaning of its message.⁴¹⁶ Wikipedia today describes it more realistically:

“The telegram gave train arrivals in the prior fortnight, as well as cumulative arrivals until 31 December 1942, for the extermination camps during the most deadly phase of the ‘Final Solution’.”

David Irving has averred that this telegram has a “keystone importance in the architecture of the entire revisionist debate,” being “a pivotal document in the history of where the real Holocaust operations were taking place.” He greatly loses the plot at this point, I suggest. We search in vain for any exposition from him as to how he reached this conclusion. I suggest he was in recoil against having lost his libel trial (and thereby losing his home in order to pay the court costs), which had unfairly damned him as a “falsifier of history.”

Both the Höfle Telegram and the Korherr Report, which I will discuss shortly, used the language of movement: arrival and increases, deportation

⁴¹⁶ P. Witte, S. Tyas, “A New Document on the Deportation and Murder of Jews during ‘Einsatz Reinhardt’ 1942,” *Holocaust and Genocide Studies*, Vol. 15, No. 3 (2001), pp. 468-486.

and evacuation. One requires a “dictionary from Hell” to transcribe that into the language of mass murder.

Before this message appeared, various books had no trouble explaining what *Aktion Reinhardt* was: it *always* involved reference to the three camps, viz. Sobibor, Treblinka and Belzec, and concerned the deportation of Jews eastwards. These are not concentration camps in that they did not have a resident population; they were transit camps.

The basis for interpreting its terse message has to be the Korherr Report, as both use the same date of the end of 1942 for their statistics, and both have the exact same big total of 1,274,166 Jews who had been moved eastward by that date. Hermann J. Höfle was a member of the staff of the SS and Police Leader Lublin, who was in charge of Jewish resettlement.

The “Korherr Report” was a statistical review of how Jews were moving around Europe, compiled by the Third Reich statistician Richard Korherr. Its figures covered the year 1942 and finished on 31st December of that year. The fifth section of his Report is about the transit camps, so-called “Aktion Reinhardt,” while the seventh section is about the labour/concentration camps. (It can be viewed online at www.ns-archiv.de/verfolgung/korherr/) The latter were residential, the former were not, or only for extremely brief periods. The Reich statisticians counted the number of persons (under the main headings of Russians, Poles and Jews) dwelling in the latter camps, whereas they did not for the former; that would not have made sense. Let’s quote it:

“Section 5: ‘THE EVACUATION OF THE JEWS... All evacuations on the territory of the Reich and including the eastern territories... from October 1939 or later until 31.12.1942 resulted in the following numbers: [...]

4. Transportation of Jews from the eastern provinces to the Russian East: 1,449,692

*The following numbers were passed
through the camps in the General Government: 1,274,166 Jews
through the camps in the Warthegau: 145,301 Jews”*

Korherr gave no breakdown for that number of Jews “passed through the camps in the General Government,” as Höfle did. Turning to the British Intelligence decrypts for the month of January, #12943, under “Miscellaneous” we read:

“[...] Re.: Fortnightly report operation REINHART. [...] Increase to 31.12.42: L 12761, B 0, S 515, T 10335, altogether 23611. As of... 31.12.42: L 24735, B 434508, S 101370, T 71355[5]: altogether 1274166.

SS and Pol.führer LUBLIN, HOEFLE, Sturmbannführer.”

“SS und Pol.führer LUBLIN” alludes to Höfle in Lublin.

Table 8: Höfle’s Arithmetic		
Destinations	Recorded arrivals for the 2 weeks until 31 December 1942	Sum total as of 31 December 1942
L (Lublin, <i>i.e.</i> Majdanek)	12,761	24,733
B (Belżec)	0	434,508
S (Sobibor)	515	101,370
T (Treblinka)	10,335	713,555
Total	23,611	1,274,166

The camp at Belzec operated from March to December 1942; Sobibor from May 1942 to July 1943; Treblinka from July 1942 to August 1943.

According to the British Intelligence decrypts, the Lublin/Majdanek Camp had around ten thousand inmates at the end of 1942, of which 80-90% were Jews. However, it had only a hundred or so arrivals for the fortnight in question, not twelve thousand. So, I’m rather hesitant about inferring anything much from the Höfle telegram.

Irving observed that the Höfle document “bristles with anomalies, misspellings and bad math.” An extra digit has to be inserted for the Treblinka total to make the column add up. The British decrypt of it has been glued into the volume out of page sequence. The English translation is found at HS 8/9 for January 1943, while the German original is at HW16/65.

Carlo Mattogno’s book on Belzec accepts this Höfle telegram estimate of the number of arrivals at Belzec by the end of 1942 as 434,508.⁴¹⁷ He concludes that Belzec “was a transit camp, of the same type as Sobibor and Treblinka.”

The four letters of Höfle’s telegram supposedly allude to three “Aktion Reinhardt” camps (Sobibor, Belzec and Treblinka) plus one labour camp, Majdanek (Lublin). They will add up, if one adds an extra order of magnitude to the Treblinka total; which means accepting something like five thousand arrivals per day to this rather small camp over a six-month period. Let’s here recall that there were a mere twenty to thirty German guards running the camp, plus a hundred Ukrainians, who were not overly friendly towards Germans.

The larger a number one wants to have arriving at Treblinka, with so small a staff looking after them, the harder it is to conceive that the Nazis plus Ukrainian helpers were doing anything unpleasant to them. Even just frisking the deported Jews for jewellery etc. becomes hard to imagine.

The Revisionist view is merely that, on that eastern border of what was then Poland, the railway gauge changed, and the “Aktion Reinhardt”

⁴¹⁷ C. Mattogno, *Belzec*, Theses & Dissertations Press, Chicago 2004, Ch.5 part 3, “Belzec as part of the German policy of deporting Jews to the East.”

camps were around that boundary. While changing trains, they came to Treblinka to be cleaned up and deloused; that's all.

Korherr's Report obtained its identical large total *without* including the Majdanek labour camp (at Lublin, here alluded to as "L"); rather, this was counted in Korherr's Section 7 concerning German concentration or labour camps, where he has twenty-six thousand arrivals ("internments") coming to Majdanek; whereas Höfle's telegram gives twenty-four thousand as arriving at Majdanek. So there is a bit of a logistical problem about what the Höfle telegram was adding up, which doesn't look quite the same as what Korherr was adding up, to get the same 1.2 million figure.

As evidence for an exterminist meaning to the Höfle telegram, Irving cited:

"In July 1942 Höfle made all his men engaged in Reinhardt sign a confidentiality document under pain of death, about precisely what it was they were doing. I have it here."

Translating that document (with kind permission from Mr Irving):

"Commitment Slip

- 1. I know, and have today been cautioned, that I will be punished with the death penalty if I misappropriate Jewish property of any kind.*
- 2. I must maintain absolute secrecy about all the required measures to be carried out during the evacuation of Jews, even with my comrades.*
- 3. I undertake to apply myself with all my ability and strength to the rapid and smooth implementation of these measures. Signed:"*

That is a statement about properly looking after Jews while they were being "evacuated" and refraining from gossip. It has no fiendish meaning.

It is time to face the simple fact that the "*Endlösung der Judenfrage*," i.e. the end solution to the Jewish question (the English term "final solution" carries an implication of "termination" which the German term lacks), was designed to be what the German documents said it was: an expulsion or evacuation programme. This programme may have gotten out of hand, but that is a different topic.

Appendix II: Tall Stories

Elie Wiesel was awarded the Nobel Peace Prize in 1986. Due to this and through his dozens of books, he has somewhat assumed a “Messiah of the Holocaust” mantle. Translated into 30 languages, his 1958 book *La Nuit* – English: *Night* – has sold no less than ten million copies. Yes, ten million! Like the Denis Avey book we discussed earlier, this one, too, is based on blatant lies. Wiesel claimed to have had the “Auschwitz number” A7713 tattooed on his left arm, although this number had been assigned to a certain Lazar Wiesel who was fifteen years older than Elie.

In 2009, a fellow Hungarian Jew Nikolaus Grüner, after twenty years of investigating the topic, issued this press release:

“Elie Wiesel A-7713 has never existed, and the man claiming himself to be ‘Elie Wiesel’ with the concentration camp number A-7713, knowing full well that this number belonged to someone else, is an imposter of the worst kind. For this statement, I, Nikolaus Grüner A-11104, have certified and written knowledge of.”

Grüner is courageously ignoring the death threats he keeps receiving. He has published his book *Stolen Identity A7713*.⁴¹⁸ Photographs seem to indicate that Elie Wiesel appears to have no tattoo on either arm. Grüner knew the Auschwitz inmate whose identity has here been stolen.

Registration cards and official documents from the Auschwitz Museum archives show that Lazar Wiesel, born September 4, 1913, received the number and tattoo A-7713; as likewise his brother, Abraham, born Oct. 10, 1900, was given the adjacent number A-7712. That latter number is the one which Elie Wiesel claims belonged to his father Shlomo, who was with him. No such registration records exist for Elie and/or father: *they are not there*. This is another stolen identity story. Maybe the word “lie” in this fellow’s name is no accident. Until his death in 2016, he was the world’s greatest liar.

On Holocaust Remembrance Day in 2010, in the Italian chamber of Deputies, the President of the Chamber introduced Elie Wiesel as “the most authoritative living witness of the horrors of the Shoah amongst the survivors of the Nazi concentration camps.” In April of 2012, Wiesel intro-

⁴¹⁸ It’s online at: Nikolaus Grüner, “Stolen Identity,” www.nazigassings.com/PDFs/StolenIdentity2.pdf: “This shameless profiteer turned the graves of Auschwitz-Birkenau into an industry and himself into an ‘impostor’ of the worst kind,” etc.

duced President Obama at the US Holocaust Memorial Museum and rebuked him for not yet having initiated war against Iran. Can Wiesel even instruct the US President about who to bomb?⁴¹⁹

In 2012, the US Holocaust Memorial Museum named its highest award:

“In honor of Wiesel’s extraordinary vision and moral stature, which not only created the Museum but inspired a worldwide movement of Holocaust remembrance and education, the award henceforth will be named the United States Holocaust Memorial Museum Elie Wiesel Award.”

The US Holocaust Memorial Council is the governing body of that Museum, enjoying 55 presidential appointees and ten Congressional representatives.⁴²⁰ A thousand-dollar reward had been offered by Kentucky man Robert Ransdell in May 2012 for anyone who can show Nobel-Peace-Prize-winning Elie Wiesel has that tattoo. There is an identity-paradox for this Messiah of the Holohoax, the fraudulent and lying Wiesel.

Having been written originally in Yiddish prior to 1955, *Night*, in which Wiesel describes his alleged time at Auschwitz, does not feature any gas chambers!⁴²¹ Instead of Zyklon, it has huge Moloch-type pits of burning babies:

“Not far from us, flames, huge flames, were rising from a ditch. Something was being burned there. A truck drew close and unloaded its hold: small children. Babies! Yes, I did see this, with my own eyes... children thrown into the flames.”

The wicked Nazis were unloading *truckloads* of little babies into the huge burning pits. Not surprisingly, “A little farther on was another and larger ditch for adults.” In a hallucinatory manner, cohorts marched towards the fiery pit. He himself keeps being part of a contingent marching towards the inferno, then miraculously he survives while his friends get immolated.

These Holo-hallucinations terminated rather abruptly when Fred Leuchter arrived in 1988: his Report dryly noted that no pits could have been dug without filling up with water, and certainly nothing would have burned in them.⁴²² The high water-table was due to the confluence of three rivers. Thus was fiery fantasy replaced by cold, scientific fact. America’s only gas chamber expert did write with a certain authority.

⁴¹⁹ In a December 2009 speech in Budapest, Wiesel urged Hungary to make Holocaust denial illegal. It did so the next year! For a critical, revisionist biography of Wiesel see Warren B. Routledge, *Elie Wiesel, Saint of the Holocaust*, 3rd ed., Castle Hill Publishers, Uckfield, 2020.

⁴²⁰ See “Elie Wiesel cons the world” by Carolyn Yeager, www.eliewieseltattoo.com.

⁴²¹ In the German translation *Die Nacht zu begraben*, *Elischa*, the gas chambers missing in the French edition suddenly show up miraculously: Each instance where the original states “crématoire”, the translator replaced it with the term “Gaskammer” (gas chamber).

⁴²² *The Leuchter Report*, Toronto 1988; see also the two detailed studies on the groundwater level at Auschwitz in the Appendix of Mattogno’s *Auschwitz: Open-Air Incinerations* (2016).

After miraculously surviving the non-existing fiery pits, Wiesel meets, of course, the fiendish Dr Mengele:

“Dr. Mengele was holding a list: our numbers. [...] I had but one thought: not to have my number taken down and not to show my left arm.”

Ever since people have tried to scrutinize his left arm, vaguely expecting to find his tattoo number – but... *it's not there*.

If we follow Wiesel, ten thousand persons were sent to their deaths each day in the Buchenwald Camp.⁴²³ Not a shred of it is true.

Even Mother Earth was shocked by this, for Wiesel wrote this in the context of the claimed mass murders at Babi Yar in Kiev:⁴²⁴

“Later, I learn from a witness that, for month after month, the ground never stopped trembling; and that, from time to time, geysers of blood spurted from it.”

The blood of God's Chosen People was demanding release...

Many have enjoyed such learn-how-to-hate books about the fiendish SS. *Eyewitness Auschwitz* by Filip Müller (1979) was found by *The New Republic* to be “jammed with infernal information too terrible to be taken all at once.” In the foreword, Yehuda Bauer remarks that Müller was “the sole survivor of the whole span of the murder operations of the Auschwitz-Birkenau killing center” (p. xii). Uh-huh. Müller's tale might indeed have been “a tale of unprecedented, incomparable horror,” as the *Jewish Press Features* observed, but was it true? He described “the burning pits in which the Jews were consumed”⁴²⁵ at Auschwitz. Dug two metres deep, these hellish pits would burn up to 2,500 dead bodies in a few hours! “White-hot flames” leapt up.⁴²⁶ The red hue of these macabre funeral pyres could be seen from far away, added another dubious witness Pery Broad.⁴²⁷

Well over a thousand persons were somehow made to march into the gas chamber, Müller recalled. Yes, they were stark naked, men and women – and no, there are no photographs. His book is subtitled *Three years in the Gas Chambers*, and he claimed to have worked assisting the SS in their fiendish task. His book has the classic line:

“And then they walked into the gas chamber. Zyclon B crystals extinguished their lives [...]” (p. 71)

⁴²³ Stefan Kanfer, “Author, Teacher, Witness”, *Time*, 18. März 1985.

⁴²⁴ Elie Wiesel, *Paroles d'Etranger*, 1982, p. 86.

⁴²⁵ Filip Müller, *Eyewitness Auschwitz: Three Years in the Gas Chambers*, New York 1979, foreword quote by Terrence Des Pres in *The New Republic*.

⁴²⁶ *Ibid.*, pp. 130 (“2 metres deep”), 136 (“2,500 dead bodies”, “white-hot flames”).

⁴²⁷ E. Kogon et al. (eds.), *Nazi Mass Murder: A Documentary History of Use of Poison Gas*, Yale University Press (1993), p. 170.

The alleged gas chamber of Krema I in the Auschwitz Main Camp, where Müller initially claimed to have worked,⁴²⁸ lacked an external door through which such a macabre procession could have strolled. The door separating the morgue-turned-gas-chamber from the furnace room actually had a swinging door, which would have been impossible to lock against a panicking crowd and seal against noxious gases escaping! No way could this morgue have been adapted to serve as a gas chamber.⁴²⁹ This point was rather simple. For that matter (not wishing to quibble) there were no Zyklon B “crystals”: they were gypsum pellets into which the liquid hydrogen cyanide was absorbed, and someone claiming to have been operating the system for three years might possibly have noticed this.

Müller found one day that he had no stomach for assisting the SS anymore and decided to end his life. He himself stepped into the gas chamber together with all the crowd of victims. But then a group of beautiful girls “in the full bloom of youth,” stark naked, surrounded him and said, “We must die, but you still have a chance to save your life!” And they threw him out of the still-open door!⁴³⁰ O, what memories! No wonder Germany has forked over billions of Deutschmarks to Holocaust survivors.

Sado-masochistic readers will thrill to Müller’s account of the heartless SS guard with gun cocked making a mother undress herself and her little daughter before shooting them both. They will also enjoy his account of how, after shooting victims, *the fiendish SS chucked fresh human muscle into a bucket*:

“The muscles of those who had been shot were still working and contracting, making the bucket jump about.” (p. 47)

Surely we are in Dr Mengele’s office!

Müller’s book described how the gassing worked quickly, how Mengele (of course) ascertained through a peephole in the door that everyone was dead, how the fans were then turned on, and how after only “a few minutes” of ventilation the doors were opened so the inmate commandos (*Sonderkommandos*) could pull out the corpses (p. 116).

A prize-winning best-seller, Müller’s book is required reading in many Holocaust study courses. When writing his book, however, Filip Müller had the help of a German ghost writer, Helmut Freitag, who plagiarized the story from the equally-faked *Auschwitz: A Doctor’s Eyewitness Account*,

⁴²⁸ In his books as well as in his deposition during the trial against the Auschwitz guards; see C. Mattogno, *The Real Case for Auschwitz*, pp. 527f.

⁴²⁹ The purpose of the morgue was to lay out and prepare the bodies prior to being incinerated in the cremation furnaces (which cremated one body at a time): typhus-infested bodies could not be buried because of the high water-table, as their decomposition would have polluted the drinking water supplies.

⁴³⁰ Müller, *ibid*, pp. 113f.

attributed to Miklos Nyiszli.⁴³¹ Raul Hilberg's supposedly authoritative three-volume *The Destruction of the European Jews* repeatedly quotes from it.

The Müller book made no real contact with the physical architecture at Auschwitz; it was just a fairy tale from Hell, pandering to a collective need to fantasize about infernal realms. A sea change later took place with the collapse of the Soviet Union, when it became possible for visitors to legally visit the site. The "official" works by Pressac represent an attempt to reconcile belief in the Holocaust with detailed geography of the actual dynamited ruins. In 1989 he published his magnum opus about the *Technique and Operation of the Gas Chambers* at Auschwitz. Construction drawings reproduced in it show that, what we were told were homicidal "gas chambers," were actually "*Leichenkeller*" (corpses cellars = morgues), while the only rooms actually labelled as "*Gaskammern*" – "gas chambers" – were Zyklon-B disinfestation rooms.

By way of contrast with these fantastic holohoax tales, we have encountered three different authentic eyewitness accounts of the Auschwitz camps in the course of this treatise. There was, firstly, the report by delegates of the International Red Cross who had visited the Auschwitz Main Camp in September 1944. Their report was included in the International Red Cross's three-volume report on its activities during WWII, published in Geneva in 1948. As we remember, the delegates knew nothing about gassings or other mass murder events.

Secondly there was the book by the judge Wilhelm Stäglich, his powerful *Der Auschwitz Mythos* which described how he used to visit the camps around Auschwitz (English: *Auschwitz: A Judge Looks at the Evidence*). Then in Chapter 13 we described in some detail Thies Christophersen's recollections of living at Raisko, a mile south of Auschwitz during the war (in *Die Auschwitzlüge, The Auschwitz Lie*, 1973).⁴³²

⁴³¹ On Nyiszli's lies see C. Mattogno, *An Auschwitz Doctor's Eyewitness Account: The Tall Tales of Dr. Mengele's Assistant Analyzed*, Castle Hill Publishers, Uckfield, 2020; on Müller's plagiarism see *idem*, *Sonderkommando Auschwitz I: Nine Eyewitness Testimonies Analyzed*, Castle Hill Publishers, Uckfield, 2021, Part 1.

⁴³² Then there were two accounts by prisoners to which we have alluded, more briefly: Primo Levi's *If This Be a Man* (1959) and that of Marc Klein, where we cited his swimming pool comments: *De l'Université aux camps de concentration*, Paris 1947.

Appendix III: They Called It Justice

Carlos Whitlock Porter manages a dry humour, that of the theatre of the absurd, in his *Made in Russia: The Holocaust* (fully online as both PDF and in a 12-part video). He described how the Nuremberg Court averred that the Nazis had:

1. steamed people to death like lobsters in 10 steam chambers at Treblinka;
2. zapped them to death with mass electrical shocks;
3. blasted them into the twilight zone with atomic bombs;
4. beaten people to death, then carried out autopsies to see why they died;
5. forced people to climb trees, then cut the trees down;
6. killed 840,000 Russian PoWs at Sachsenhausen and burned the bodies in 4 portable furnaces;
7. bashed people's brains in with a pedal-driven brain-bashing machine while listening to the radio;
8. tortured and executed people in time to music at the Yanov Camp in Russia, then shot every member of the orchestra;
9. ground the bones of millions of people in portable bone-grinding machines;
10. ground the bones of 200 bodies [$\frac{3}{4}$ ton] at one time as described in photographs and documents which have disappeared
11. studied bone grinding in special 10-day crash-course seminars;
12. slapped people with special spanking machines;
13. made lampshades from human skin;
14. cut people's heads off and then shrunk them;
15. painted pornographic pictures on canvasses made of human skin;
16. bound books in human skin;
17. made saddles, riding breeches, gloves, house slippers, and ladies handbags out of human skin;
18. driven Jews to cannibalism in all those freight cars.

Etc., etc. Can you believe it? This could be just the video for inviting your friends around one evening. He is also author of *Not Guilty at Nuremberg*.

Appendix IV: Your Rights

“Laws against expressing doubts about the Holocaust, in my view, are simply absurd. If you believe in the Holocaust, as I do, then it should be apparent that serious research will lead to its vindication and, if it does not, we are all entitled to know. Truth is paramount.” —Jim Fetzer⁴³³

1948: Universal Declaration of Human Rights, Article 19:

“Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.”

1953: European Convention for the Protection of Human Rights, Article 10:

“Everyone has the right to freedom of expression. This right shall include freedom to hold opinions and to receive and impart information and ideas without interference by public authority and regardless of frontiers. This article shall not prevent States from requiring the licensing of broadcasting, television or cinema enterprises.”

Restrictions on this apply *“for the prevention of disorder or crime, for the protection of health or morals, for the protection of the reputation or rights of others...”*

There is a content-based restriction to this protection of rights, and that deals with the “dissemination of ideas promoting racism and the Nazi ideology, and inciting to hatred and racial discrimination.” This is said to reflect the “paradox of tolerance: an absolute tolerance may lead to the tolerance of the ideas promoting intolerance, and the latter could then destroy the tolerance.”

Our concern here has been with what the Nazis did, historically: which does *not* constitute an endorsement of their actions. Indeed, research into what they did, which is the normal business of the historian, must surely help in enforcing a law prohibiting the “promoting” of “Nazi ideology,” so that it can be applied more effectively.

⁴³³ <http://jamesfetzer.blogspot.com/2011/06/isis-trips-stumbles-and-falls.html>

1976: European Court of Human Rights

Ideas that offend, shock, or disturb the State or part of the population are deemed to have the full protection under freedom of speech. It considers that any limitation of this freedom must correspond to an “imperative social need,” affirming this in the landmark case of *Handyside*:⁴³⁴

“Freedom of expression constitutes one of the essential foundations of [a democratic] society, one of the basic conditions for its progress and for the development of every man. Subject to paragraph 2 of Article 10... it is applicable not only to ‘information’ or ‘ideas’ that are favourably received or regarded as inoffensive or as a matter of indifference, but also those that offend, shock or disturb the State or any sector of the population. Such are the demands of that pluralism, tolerance and broadmindedness without which there is no ‘democratic society.’”

This “Handyside paradigm” means that a democracy is required to protect the right to express minority opinions. But such a right to freedom of expression is not absolute, as indicated by Section 2 of Article 10 of the European Convention, cited above.⁴³⁵

It should be the business of courts to sentence crime and promote justice, not attempt to throttle historical investigation by enforcing belief in US/UK atrocity propaganda left over from World War II, in which only a minority of the world (Chapter 12) still believes due to its vanishing credibility. The concept of crime involves in essence the inflicting of unacceptable harm on another, and should *not* cover a possible effect of fear induced in an ethnic or racial group, whether intentionally or not.

Revisionists are liable to find themselves accused of promoting anti-Semitism or hate-crime: it therefore becomes important to affirm that it is the currently-accepted view which is promoting race-hatred – against Germans – whereas a Revisionist view endeavours to describe European history without the hate and blame, but rather with mutual responsibility. It is the demonized enemy-images that create the hate.

2008: EU Legislation

In 2008, the European Union adopted a motion “Combating Racism and Xenophobia,” which obliged all EU member states to criminalize certain forms of so-called “hate speech.” “Hate speech” is a notoriously fluffy concept whose definition is always going to depend on who is in power. Its Article 1 defines criminal law applicable to member states:⁴³⁶

⁴³⁴ *Handyside vs. UK*, 1976.

⁴³⁵ L. Hennebel & T. Hochmann, *Genocide Denials and the Law*, Oxford University Press 2011.

⁴³⁶ “Council Framework Decision 2008/913/JHA of 28 November 2008 on combating certain forms and expressions of racism and xenophobia by means of criminal law”; <https://eur-lex.europa.eu/legal-content/en/ALL/?uri=CELEX%3A32008F0913>.

“Each Member State shall take the measures necessary to ensure that the following intentional conduct is punishable:

(a) publicly inciting to violence or hatred directed against a group of persons or a member of such a group defined by reference to race, colour, religion, descent or national or ethnic origin;

(b) the commission of an act referred to in point (a) by public dissemination or distribution of tracts, pictures or other material;

*(c) publicly condoning, denying or grossly trivializing crimes of genocide, crimes against humanity and war crimes as defined in Articles 6, 7 and 8 of the Statute of the International Criminal Court, directed against a group of persons or a member of such a group defined by reference to race, colour, religion, descent or national or ethnic origin **when the conduct is carried out in a manner likely to incite to violence or hatred against such a group or a member of such a group;**”*

Here, it is not the belief as such which can put anyone in jail, but beliefs which are liable to incite violence etc. The legal trigger is the act of incitement, not the “denial” as such. And nothing in this text alludes to World War II: the Rome Statute of the ICC here alluded to sets up quite general definitions, *e.g.* of genocide. The denying or trivializing of “crimes of genocide” is said to be punishable, *but* this law does not say what these crimes are; and moreover, it is only punishable *if* it is likely to cause something publicly visible, *i.e.* incites violence. The mere expressing of an opinion is *not* here defined as crime.

Anyone accused of inciting “hate speech” should insist that a qualified psychologist is present to testify that the emotion in question, namely hate, has been aroused, and say in whom, where and when it was aroused, as a consequence of the said speech: the court should not just accept the word of the prosecution concerning the alleged emotion.

A Revisionist accused under this legislation may wish to bring a copy of Shlomo Sand’s book *The Invention of the Jewish People* into the courtroom: that Jewish history professor shows in this book that European Jews are not an ethnic, national or racial group: Ashkenazi Jews may share some racial-genetic characteristics, but these are not however shared by the Sephardic Jews; Jews are an international and cosmopolitan social elite, of whom a small proportion are religious. The categories of this Act are not applicable to them.

Article (c) is actually incoherent and does not make sense: for example, if a historian investigates the alleged genocide of Armenians by Turks in 1915-16 (the “denial” of which has been made a crime in France, as of 2012): that investigation cannot be “directed against” a group of persons of a race, colour, nation etc. – that does not make sense. A historian’s conclusion may spark anger, but that is no reason to criminalize it.

2011: UN Human Rights Committee

*“Laws that penalize the expression of opinions about historical facts are incompatible with the obligations that the Covenant imposes on States parties in relation to the respect for freedom of opinion and expression. The Covenant does not permit general prohibition of expressions of an erroneous opinion or an incorrect interpretation of past events. Restrictions on the right of freedom of opinion should never be imposed and, with regard to freedom of expression, they should not go beyond what is permitted in paragraph 3 or required under article 20.”*⁴³⁷

There is a helpful discussion of this important new edict by Fredrick Töben.⁴³⁸ The first sentence of the above quote has a footnote alluding to the Faurisson case: “So called ‘memory-laws,’ see communication No. 550/93, Faurisson vs. France.” Here, the UN Human Rights Committee is affirming that “laws that penalize the expression of opinions about historical facts,” like France’s Gayssot Act used to outlaw Revisionism, “are incompatible with the obligations that the Covenant imposes on States parties in relation to the respect for freedom of opinion and expression.”

Turning to the previous paragraph of the 2011 UN document, it places a limit upon the application of blasphemy laws – “Prohibitions of displays of lack of respect for a religion or other belief system.” Over the decades of its sorry existence, European legislation against Holocaust Revisionism has only ever protected the allegedly hurt feelings of one specific ethnic or religious group, viz. Jews. This paragraph makes clear that:

“It would be impermissible for any such laws to discriminate in favour of or against one or certain religions or belief systems, or their adherents over another, or religious believers over non-believers.”

French lawyers need to discuss how this impacts upon enforcements of the Gayssot Act, which in practice has always protected only one specific belief system.

Just Law

In essence, crime should be a deed, not an intention or feeling. The policeman catches the villain who has committed a crime: the criminal has *done* something wrong. But, once the category of “Thoughtcrime” is introduced, then respect for the law will soon be replaced by a fear of it.

If Jews have collectively a self-perception of their ancestors being put into gas chambers, and if they “feel” that they do not like people pointing

⁴³⁷ UN, *Report of the Human Rights Committee CCPR Centre 2011*: para 49 of section “International Covenant on Civil and Political Rights,” p. 257.

⁴³⁸ Dr. Fredrick Töben, “Human Rights, the Holocaust-Shoah and Historical Truth,” *The Barnes Review Blog*, 15 April 2012, here starting at Section “9. Human Rights, the United Nations, and Free Expression” (www.codoh.com/library/document/6460/).

out that this perception is untrue, then that is regrettable – but, it has no business being a crime. Citizens need to demand that the laws of their nation are just and fair.

Explaining why the right of freedom of speech as expressed in the *International Covenant on Civil and Political Rights* (1966) was not applicable to Faurisson, after he appealed to them, the UN's Human Rights Committee alluded to a right of "the Jewish community to live free from fear." Was any psychologist present to testify that Faurisson's writings had induced fear in anyone? Faurisson was almost beaten to death by a Jewish gang in 1989. Is anyone concerned that he has a right to live free from that fear? If the term "hate speech" is going to be used against Revisionists in return for their work in ascertaining what happened in World War II, then a court needs to summon a psychologist to testify that such an emotion has in fact been generated. Citizens should campaign against bad law which convicts on the basis of an alleged emotion that might have been aroused.

The great Dutch philosopher Spinoza wrote books about just law. Holland is a nation that has traditionally cared passionately about individual liberties, has no explicit Holocaust Denial ban in its law, and has only about half the fraction of its population in jail as compared to that in the UK. Let's have a quote from Spinoza that needs to be engraved on the walls of police stations:

"Those laws which prohibit one from doing that which causes no harm to one's neighbour, are fit only for ridicule."

This is a secular humanist viewpoint, differing from that of earlier centuries, when voicing defiance or heresy upon sacred matters could land one in jail; an era which, unless we are careful, may now be coming back.

Dutch prosecutions do, however, take place on grounds of racial discrimination: it being there prohibited to "deliberately offend a group of people because of their race, their religion or beliefs." Accused in this manner, one should tell the Court that emotionally balanced people would be glad, not offended, at being told that their relatives had not died in gas chambers.

Bad Law

Of a 2011 Oxford University Press textbook on the subject,⁴³⁵ Michael Hoffman has rightly argued in his book review:

"Genocide Denials and the Law is intended to serve as an inquisitor's manual, providing the definitive legal rationale for jailing modern-day heretics in the dungeons of Europe by first dehumanizing them as 'deniers.' [...] a manual for inquisitors cloaked as an Oxford law study. It offers a rationale for punishing gas chamber heretics with long imprisonment, as a just and imperative penalty for daring to reject idolatry

and collective false witness. This is a disgraceful work.” (“On the Contrary,” 20 June 2011)

Genocide Denials and the Law has a chapter titled “Defending Truth.” It is about how the people who are trying to *find* the truth need to be jailed.⁴³⁹ Its author Kenneth Lasson, Professor of Law at the University of Baltimore, a Jew, has basically written a chapter about how the goyim have to believe what they are told and how they need to be jailed if they don’t.

The American authors of this text need to be asked why they have omitted to mention the millions of Native Americans whose lives were erased by the White Man, the greatest genocide in recorded human history. It’s one that *did really happen*, so they would presumably argue that nobody is trying to “deny” it. Native Americans are America’s real “Holocaust survivors.”

Two people have been jailed in the UK for “denying the Holocaust,” after distributing a comic called “Tales of the Holohoax.” It seems to have been the pushy way they distributed this sensitive material rather than the content itself which landed them in jail. They posted it to the local synagogue in Leeds. This comic (with some rather fine text by Michael Hoffman) is in the great tradition of British satire, from William Hogarth to *Private Eye*.

They were jailed under the Public Order Act, with the Crown Prosecution Service saying they had gone too far, they had crossed the line, etc. Muslims might want to test the water by re-publishing this and selling it. After all, the Mohammed cartoons were allowed, so was Rushdie’s *Satanic Verses*, which scoffed at Islam.

We now examine two national H-D laws, French and German.

1990: The French Gayssot Act

On the subject of the liberty of the press, France’s Gayssot Act of 1990 made it an offence “to contest the category of crimes against humanity as defined in the London Charter of 1945.”⁴⁴⁰ It applied to the press, *i.e.* newspapers, specifying how they will be punished if they contest:

“l’existence d’un ou plusieurs crimes contre l’humanité tels qu’ils sont définis par l’article 6 du statut du tribunal militaire international annexé à l’accord de Londres du 8 août 1945.”

⁴³⁹ Previously published as “Defending Truth: Legal and Psychological Aspects of Holocaust Denial”, *Current Psychology*, Vol. 26, Nos. 3-4, December 2007, pp. 223-266; https://papers.ssrn.com/sol3/papers.cfm?abstract_id=1154012; see also K. Lasson, “Holocaust Denial and the First Amendment: The Quest for Truth in a Free Society,” *George Mason Law Review*, Vol. 6, No. 1, 1997, pp. 35-86; https://papers.ssrn.com/sol3/papers.cfm?abstract_id=1161183

⁴⁴⁰ http://en.wikipedia.org/wiki/Crimes_against_humanity

“the existence of one or more crimes against humanity as they are defined by Article 6 of the Statute of the International Military Tribunal attached to the London Agreement of 8 August 1945.”

Can this be used to convict Revisionists, accused of “denying the Holocaust”? Nothing in it alludes to ordinary citizens; it is simply an Act “sur la liberté de la presse.” Yet twenty or so French Revisionists have been prosecuted by means of it.

The London Charter of the International Military Tribunal here alluded to (of 8th August 1945) simply laid down the laws and procedures by which the Nuremberg trials were to be conducted. (NB: This was in between the bombings of Hiroshima and Nagasaki!) That Charter established three new categories of crime that were going to be applied retrospectively against the defeated Nazis: crimes against peace, war crimes, and crimes against humanity. The judgement of Nuremberg was handed down in 1946, but this Gayssot Act relates *solely* to the category of crime to be used there – not to any later judgements, as is commonly supposed.

The Rome Statute of the International Criminal Court of 2002 re-stated these three new categories of crime as laid down in 1945. I suggest any French Revisionist on trial should bring a copy of this into the Court and read out these categories, affirming that he/she is in no way disputing or contesting them. Article 6 of the Charter states, for instance:

“For the purpose of this Statute, ‘genocide’ means any of the following acts committed with intent to destroy, in whole or in part, a national, ethnical, racial or religious group, as such:

(a) Killing members of the group;

(b) Causing serious bodily or mental harm to members of the group,”

etc. One should welcome the category of Crimes against Humanity – and hope that Bush and Blair will in due time be prosecuted on that basis. Revisionists are in no way called to doubt or “contest” these categories, through whatever process of historical enquiry they are led.

Robert Faurisson was deprived of his professorship of French literature at the University of Lyon in 1991 under this law, and he appealed to the UN Human Rights Committee, on the basis of the International Covenant on Civil and Political Rights. His appeal (*Robert Faurisson vs. France*, 1996) was denied – on the basis that Faurisson’s statements were “of a nature as to raise or strengthen anti-Semitic feelings.”

Prosecutions brought under that Gayssot Act in the three decades it has been working have all been against one specific ethnic/racial group, viz. white French males, with charges brought by one ethnic/racial group, viz. Jews; which in itself sounds rather discriminatory.

1872: The German “Public Incitement” Law (with revisions in 1876, 1960, 1969, 1975, 1994, 2002, 2005, 2011, 2015, 2021)

This 19th-century curb on free speech gives us a first impression of a long tradition of censorship in Germany. The tradition of outlawing publicly expressed opinions that the authorities consider a “public incitement” of the populace goes back to Fredrick the Great, whose mass-immigration politics inviting persecuted religious minorities from all over Europe to settle in Prussia were not appreciated by all of his subjects. Later, the focus of censorship laws shifted to banning incitement to class hatred, targeting mainly socialist, communist and anti-monarchist sentiments. Then in 1960, following a wave of vandalism of Jewish cemeteries that later turned out to have been false-flag operations orchestrated by Moscow, there was public outcry against an alleged new wave of anti-Semitism in Germany. The German parliament reacted by exchanging the concept of “class hatred” with that of “race hatred,” which was subsequently expanded to encompass all kinds of minority groups. Only in 1994 was Paragraph 3 added to this law which expressly outlaws Holocaust revisionism, although revisionists had already been prosecuted under older versions of the law. Germany’s “thought-crime” law presently reads as follows:

“(1) Whoever, in a manner that is capable of disturbing the public peace:

1. incites hatred, calls for violent or arbitrary measures against a national, racial, religious or other group defined by its ethnic origin, against segments of the population or against an individual based on its belonging to one of the aforementioned groups or to a segment of the population; or

2. assaults the human dignity of others by insulting, maliciously maligning, or defaming one of the aforementioned groups, segments of the population or an individual based on its belonging to one of the aforementioned groups or to a segment of the population,
shall be punished [...]

(3) Whoever publicly or in a meeting approves of, denies against better knowledge or downplays an act committed under the rule of National Socialism of the type indicated in Section 6 subsection (1) of the Code of Crimes against International Law [=Acts of Genocide], in a manner capable of disturbing the public peace shall be punished [...]

(4) Whoever, publicly or in a meeting, approves of, glorifies or justifies the violent and arbitrary National Socialist rule, and by so doing disturbs the public peace in a manner that assaults the human dignity of the victims, shall be punished [...].”

Strangely, this law is primarily emotional, concerning various people’s alleged feelings, rather than facts. There are several kinds of untruths which

a prosecution under this Act imposes upon the accused, untruths concerning *motive* and *identity*. I therefore suggest the accused needs to feel their own innocence, feel whatever heart-purity they can summon upon walking into the Court, and maybe say to themselves the words of Jimi Hendrix: “I am who I am, thank God.” German courts have no jury, and so the judge will be the final authority for whatever calumny the court casts upon the Revisionist.

The worst course of action for the Revisionist is to attempt to defend the truth of whatever they have said: propounding such historical-factual issues is likely to be viewed by the Court as compounding the offence – and providing grounds for further charges!

Against the accusation of inciting hatred against segments of the population “in a manner that is capable of disturbing the public peace,” witnesses have been summoned to testify that the views expressed have not disturbed nor are they capable of disturbing the public peace, but in vain – these have not been allowed, or have been disregarded. It should however be no business of the accused to summon such witnesses because citizens should be presumed innocent until proven guilty, not the other way around – the onus should lie upon the prosecution to demonstrate the impossibly vague notion of the deed having been “capable of disturbing the public peace.” Every one of us knows what disturbs the “public peace” – guns, loud noises, unruly crowds, people with megaphones etc. Nobody can disturb the public peace by writing a book. In vain an author may dream or hope of disturbing the public peace by writing a book, but it’s not going to happen!

The mere testimony of the prosecution cannot here suffice as regards what might possibly disturb the public peace.

Whoever “assaults the human dignity of others by insulting, maliciously maligning, or defaming segments of the population” is here liable to imprisonment. It is the normal business of comedians to do this; indeed, it could be hard to ply that trade, if this crime-category is insisted upon. A crime should involve *unacceptable* harm or loss and not just a *feeling* that someone has been insulted.

The third section (“Whoever publicly or in a meeting approves of, denies against better knowledge or downplays an act committed under the rule of National Socialism...”) is hardly relevant, because Revisionists are not known for proclaiming their views at public meetings. Publishing a book is a public act and so could here be alluded to. The last book to appear “in a manner capable of disturbing the public peace” was arguably Karl Marx’s *Communist Manifesto* of 1848.

The accused may tell the Court that persons disturbing the public peace generally do not read books, that pamphlets and flyers rather than books

have disturbed the public peace, and that, if they wish to prosecute on such grounds, the onus lies on them to explain why the millions of books published since Marx's *Communist Manifesto* have failed to cause any such disturbance. The whole idea of this clause is inherently absurd as applied to Revisionists. The accused should tell the Court that, were a factually correct book seen to "disrupt the peace" (if one can imagine such a thing), it's not the book that's the problem, but rather the people who are disrupting the peace. A book can be "guilty" of disrupting the peace only if it expressly calls for the disruption of peace! The German judiciary is in effect concluding that a statement like "There were no Nazi gas chambers" equates to "Start a pogrom against the Jews!" Modern truth-seeker historians are quite mild people who are far from having any wish to "disturb the peace."⁴⁴¹

The slur or untruth is here cast against the Revisionist, that their motive in ascertaining historical truth is political, namely that they are covert neo-Nazis. The Court is here lying through its teeth and knows it. The accused should use polite and respectful language, *e.g.* state that, in the past, German courts have deceitfully sought to ban enquiry into World War II historical truth by pretending that it was motivated by pro-Hitler loyalty or anti-Jewish feeling, and he trusts that the present court will not likewise err. If the aim is to criminalize anyone who "approves of, denies against better knowledge or downplays an act committed under the rule of National Socialism," then clearly historical investigation must be permitted into what those acts were. Otherwise, how can the Court know whom to punish?

⁴⁴¹ The absurdities of this German law don't end there, though. There are at least four more of them:

- a. There is no definition anywhere in German law for "public peace."
- b. There is no definition anywhere in German law for what is and is not capable of disturbing "public peace."
- c. German dictionaries define the word used in this law – "*leugnen*" – as "to deny against better knowledge," as I have translated it here; it implies that revisionists *know* their views are wrong, but spread them anyway; in theory, the court is forced by law to prove that a revisionist defendant denied something *he knew* and was convinced at the time of his "crime" to be untrue, hence his denial a lie. But that is not what happens. That a defendant denied the "official truth" against better knowledge is in fact given as a self-evident fact following the logic of "since everyone knows the truth about the Holocaust, so must the defendant," which is absurd. In Copernicus's time, "everyone knew" that the sun revolved around the Earth. That did neither prove that Copernicus was wrong nor that he lied when he spread his heliocentric worldview.
- d. Determining whether a defendant "downplays" something is possible only if the true historical nature/size of an event is legally well-defined; but nothing in German law defines any historical event; it all depends on the current mainstream consensus. Dissident voices don't count and are simply outlawed by the simple fact that they disagree with the orthodox view. Whether anyone downplays anything is thus an arbitrary finding by a court that is neither entitled nor competent to rule what is or is not historically true.

Judges are not trained to be historians, as historians are not trained as judges.

Implicit in this encounter is the judge's presumption that his career depends upon his accepting the good-versus-evil victor's narrative laid down at Nuremberg, so that anyone who tries to re-tell the German history must therefore be a wicked Nazi. The Revisionist in the dock has to affirm that he or she is the historian, is the only historian present in the Court, and is therefore competent to advise the Court about "an act committed under the rule of National Socialism" in relation to genocide, as this *Volksverhetzung* law specifies.⁴⁴² An act not committed under said rule cannot be of relevance to the Court, can it?

The fourth section is more of the same: "whoever, publicly or in a meeting, approves of, glorifies or justifies the violent and arbitrary National-Socialist rule, and by so doing disturbs the public peace in a manner that assaults the human dignity of the victims" – again this cannot logically be applicable, because, as we have seen, a book published can hardly disturb the peace, and other private statements by Revisionists likewise will not do so. Witnesses need to be called by the prosecution to demonstrate that any such approval or "glorification" has publicly taken place.

The definition of Revisionism by Faurisson should be given to the Court, whereby it is *not* a political programme but "a quest for historical exactitude." The accused needs to believe he or she is *harmless*. Only that can negate the various afactual categories tied up in this nefarious law. The Court should be told how only a quest for historical truth in World War II can properly share out blame and responsibility and thereby *dissolve* the hate images. It is not or should not be the business of the historian to endorse a Manichaeic dualism, a cosmic good-versus-evil struggle, found within the historical process – as is implied by this Act.

The first section of this Act will work better under a mirror-reversal, whereby it is promoters of the Holocaust mythology who are continually inciting "hatred against segments of the population" and who are assaulting "the human dignity of others," in a manner prohibited under this Act, whereby a "segment of the population" is made to suffer continually for something that should be relegated to the past. (The "segment" here comprises the remaining but diminishing older generation who fought in the War.) The public peace is very much disturbed by the inquisitors who check through personal libraries for books to be banned and burnt, and who monitor e-mails.

It is probably best to avoid using the J-word, but if it is insisted upon, one could point out that there were various social groups in the German la-

⁴⁴² <http://en.wikipedia.org/wiki/Volksverhetzung>

bour camps: gypsies, Poles and Russians as well as Jews, and that the story of what happened does not belong exclusively to any one of them.

A paradox remains in German law, which, if Revisionists were permitted jury trials, could be worth harping upon: that this thoughtcrime law exists in open violation of the current German constitution, which prohibits laws banning only certain opinions about specific topics. The victorious Allies imposed upon Germany the concept that, because of the exceptional crimes of the National-Socialist regime, exceptional measures were required to suppress views doubting the veracity of these crimes or their exceptional nature. Hence, in order to prevent that Germany once again burns books and jails dissidents, as it has done in its Nazi past, the German authorities feel today obligated to burn books and jail dissidents. *Plus ça change...*⁴⁴³

⁴⁴³ The more things change... [the more they stay the same]; editor's remark.

Select Bibliography

Essential Books

An advantage of studying this topic is the small number of essential texts. While there may be quite a few journal articles to peruse, we here cite *only seven* basic, need-to-read books that have exerted an enormous influence, all online:

- Richard Harwood (aka Verrall), *Did Six Million Really Die?* 1974 (also available in an updated and corrected newer edition).
- Arthur Butz, *The Hoax of the Twentieth Century: The Case against the Presumed Extermination of European Jewry*, 1976, expanded edition 2015. Butz somehow held on to his job as professor of electrical engineering at Northwestern University.
- Wilhelm Stäglich, *Auschwitz: A Judge Looks at the Evidence*, 1986; expanded edition 2015. Stäglich's book was seized and destroyed in Germany and he was stripped of his doctorate.
- Fred Leuchter, *An Engineering Report on the Alleged Execution Gas Chambers at Auschwitz, Birkenau and Majdanek, Poland*, 1988 (reprinted, together with Leuchter's other three research papers, plus critical comments: F. Leuchter, R. Faurisson, G. Rudolf, *The Leuchter Reports: Critical Edition*, 2005/2012/2015/2017).
- Jürgen Graf, *The Giant with Feet of Clay*, 2001/2015/2022.
- Ernst Gauss (Germar Rudolf), *Dissecting the Holocaust*, 2000/2003/2019. Banned and burnt in Germany in 1995; then an arrest warrant was put out for Rudolf. (An updated edition is in preparation.)
- Germar Rudolf, *The Rudolf Report*, 2003/2011; new as *The Chemistry of Auschwitz*, 2017/2020 – the classic science report on the subject (also banned and burnt in Germany).

That's it! Also worth reading: Georges Theil's short *Heresy in Twenty-first Century France, a Case of Insubordination to the "Holocaust" Dogma*, 2006 (jailed for writing it); Thomas Dalton, *Debating the Holocaust*, 2009/2015/2017/2020, has been well-reviewed as airing both sides of the story; John McCallum's *Crime Doctor, a Biography of Dr Charles Larson*, 1978, told how an eminent US pathologist inspected the camps. Plus Rudolf's *Lectures on the Holocaust*, 2005/2010/2017.

Plus, there are fifty online books in PDF format at www.HolocaustHandbooks.com, which give rather more detail than the general reader is likely to require, as well as the Mattogno books listed below.

For example, suppose a student had to compose an essay on how the gas chambers of Majdanek in Poland worked, a fairly esoteric topic. Academia has become infested by hallucino-parrots who will avoid seeking for primary source data and instead just repeat *the stories*. But, let us suppose that a centre existed somewhere on Planet Earth where students were allowed to think and write in a normal, source-critical manner on the topic. In that case, they might want to begin with the book *Concentration Camp Majdanek* by Carlo Mattogno and Jürgen Graf, also accessible online, which gives a plentiful supply of quotes, letters, source-documents and diagrams; the 2016 reprint of the 2012 edition can be downloaded at www.holocausthandbooks.com/index.php?page_id=5. Quoting from the book's back cover text:

"Based on exhaustive research of the primary sources and a thorough exploration of the physical remainders of the former concentration camp, Concentration Camp Majdanek strikes a death blow to the lie of homicidal gassings at Majdanek. [...] The authors' investigations lead to unambiguous and unsparing conclusions about the real history and the actual functioning of the camp."

This may sound a bit dull, but the point is that, bit by bit, step by step, a nightmare is being exorcized, and only after this has happened can Europe begin to discuss its real history. The current, third edition of the book includes an important article (on pp. 275-281), also contained in *Inconvenient History*, 2011, vol. 3, no. 3: J. Graf, "The Keepers of the Holy Grail and Their Lies: Thomasz Kranz and the 'Mass Killings by Means of Toxic Gases in the Majdanek Concentration Camp.'"

For any academic course on the topic (if we may imagine such), Joel Hayward's 1993 master thesis on the history of Revisionism (Canterbury University, New Zealand) would be fairly essential. Certainly, it is so far the best history of Holocaust Revisionism, and it is scrupulously fair. Despite receiving top grades for this thesis, Hayward was subsequently victimized to an extent that he now refuses anyone the right to publish his thesis, even complaining if online copies are posted (which they usually are).⁴⁴⁴

⁴⁴⁴ See F. Töben, "Bing goes Hayward's Ghost," *The Revisionist*, Vol. 1, No. 2 (2003), pp. 197-202. Even writing about the Hayward case can be dangerous, as Dr. Thomas Fudge found out the hard way: his paper "The Fate of Joel Hayward in New Zealand Hands," which appeared in the May 2003 issue of *History Now*, a journal of Canterbury University (Christchurch, New Zealand), caused him much chagrin. The day after its publication, the journal was recalled and destroyed by the University authorities; ever since Dr. Fudge has had trouble finding any employment. See Keri Welham, "Holocaust Stir

As regards primary-source data on the wartime camps, I suggest that the British Intelligence decrypts (see Chapter 6) be supplemented by the three-volume report by the International Red Cross on its visits to German wartime prison camps. They give detailed wartime information from before the predominant appearance of the Holocaust story.

Mattogno Books

A remarkable series of 40 revisionist books has been published by Carlo Mattogno, translated from the Italian to English and German, all available as hardcopies (at <https://armreg.co.uk/>) and most of them as free PDF downloads (at www.HolocaustHandbooks.com, starting with no. 6 of the list below). Mr Mattogno speaks several European languages but not English. Some of these books, here rendered in bold face, are easy to read and offer a good introduction into the revisionist case. The majority of his books, however, is unlikely to be popular, on account of their cool logic, technical detail and full access to German and Polish sources, but they are essential research tools:

1. ***Auschwitz: A Three-Quarter Century of Propaganda. Origins, Development and Decline of the “Gas Chamber” Propaganda Lie***
2. with Jürgen Graf, Thomas Kues, *The “Extermination Camps” of “Aktion Reinhardt”: An Analysis and Refutation of Factitious “Evidence,” Deceptions and Flawed Argumentation of the “Holocaust Controversies” Bloggers* (2 vols.,)
3. ***Bungled: “Debunking Holocaust Denial Theories.” How James and Lance Morcan Botched Their Attempt to Affirm the Historicity of the Nazi Genocide***
4. ***Bungled: “Denying History”. How Michael Shermer and Alex Grobman Botched Their Attempt to Refute Those Who Say the Holocaust Never Happened.***
5. *Bungled: Robert Jan van Pelt’s Mental Diarrhea about the Cremation Furnaces of Auschwitz-Birkenau* (in preparation)
6. *Bungled: “The Destruction of the European Jews”. Raul Hilberg’s Failure to Prove National-Socialist “Killing Centers.” His Misrepresented Sources and Flawed Methods”* (Holocaust Handbooks, Vol. 3)
7. with Jürgen Graf, *Concentration Camp Stutthof: Its Function in National Socialist Jewish Policy* (Holocaust Handbooks, Vol. 4)
8. with Jürgen Graf, *Concentration Camp Majdanek: A Historical and Technical Study* (Holocaust Handbooks, Vol. 5)

Haunts Fudge,” *The Press* (Australia), 23 April 2005 (see www.codoh.com/library/document/2700/). The most complete documentation of Hayward’s case can be found on his own website: www.joelhayward.com.

9. with Jürgen Graf, *Treblinka: Extermination Camp or Transit Camp?* (Holocaust Handbooks, Vol. 8)
10. *Belzec: in Propaganda, Testimonies, Archeological Research, and History* (Holocaust Handbooks, Vol. 9)
11. *Special Treatment in Auschwitz: Origin and Meaning of a Term* (Holocaust Handbooks, Vol. 10)
12. *Debunking the Bunkers of Auschwitz: Black Propaganda versus History* (Holocaust Handbooks, Vol. 11)
13. *The Central Construction Office of the Waffen-SS and Police Auschwitz: Organization, Responsibilities, Activities* (Holocaust Handbooks, Vol. 13)
14. *Auschwitz: Open-Air Incinerations* (Holocaust Handbooks, Vol. 17)
15. with Germar Rudolf, *Auschwitz Lies: Legends, Lies, and Prejudices on the Holocaust* (Holocaust Handbooks, Vol. 18)
16. with Jürgen Graf, Thomas Kues, *Sobibór: Holocaust Propaganda and Reality* (Holocaust Handbooks, Vol. 19)
17. *Auschwitz: The First Gassing: Rumor and Reality* (Holocaust Handbooks, Vol. 20)
18. *Auschwitz: Crematorium I, and the Alleged Homicidal Gassings* (Holocaust Handbooks, Vol. 21)
19. *The Real Case for Auschwitz: Robert van Pelt's Evidence from the Irving Trial Critically Reviewed* (Holocaust Handbooks, Vol. 22)
20. *Chelmno: A German Camp in History and Propaganda* (Holocaust Handbooks, Vol. 23)
21. with Franco Deana, *The Cremation Furnaces of Auschwitz: A Technical and Historical Study* (3 vols., Holocaust Handbooks, Vol. 24)
22. ***Inside the Gas Chambers: The Extermination of Mainstream Holocaust Historiography* (Holocaust Handbooks, Vol. 25)**
23. *The "Operation Reinhardt" Camps Treblinka, Sobibór, Belzec: Black Propaganda, Archeological Research, Expected Material Evidence* (Holocaust Handbooks, Vol. 28)
24. *Healthcare in Auschwitz: Medical Care and Special Treatment of Registered Inmates* (Holocaust Handbooks, Vol. 33)
25. *Commandant of Auschwitz: Rudolf Höss, His Torture and His Forced Confessions* (Holocaust Handbooks, Vol. 35)
26. *An Auschwitz Doctor's Eyewitness Account: The Tall Tales of Dr. Mengele's Assistant Analyzed* (Holocaust Handbooks, Vol. 37)
27. *Curated Lies: The Auschwitz Museum's Misrepresentations, Distortions and Deceptions* (Holocaust Handbooks, Vol. 38)
28. *The Einsatzgruppen in the Occupied Eastern Territories: Genesis, Missions and Actions* (2 vols., Holocaust Handbooks, Vol. 39)

29. *Deliveries of Coke, Wood and Zyklon B to Auschwitz: Neither Proof nor Trace for the Holocaust* (Holocaust Handbooks, Vol. 40)
30. *The Making of the Auschwitz Myth: Auschwitz in British Intercepts, Polish Underground Reports and Postwar Testimonies (1941-1947)* (Holocaust Handbooks, Vol. 41)
31. *Rudolf Reder versus Kurt Gerstein: Two False Testimonies on the Belżec Camp Analyzed* (Holocaust Handbooks, Vol. 43)
32. *Sonderkommando Auschwitz I: Nine Eyewitness Testimonies Analyzed* (Holocaust Handbooks, Vol. 44)
33. *Sonderkommando Auschwitz II: The False Testimonies by Henryk Tauber and Szlama Dragon* (Holocaust Handbooks, Vol. 45)
34. *Sonderkommando Auschwitz III: They Wept Crocodile Tears. A Critical Analysis of Late Witness Testimonies* (Holocaust Handbooks, Vol. 46)
35. *Mis-Chronicling Auschwitz. Danuta Czech's Flawed Methods, Lies and Deceptions in Her "Auschwitz Chronicle"* (Holocaust Handbooks, Vol. 47)
36. *The Real Auschwitz Chronicle: The History of the Auschwitz Camps Told by Authentic Wartime Documents* (2 vols.; Holocaust Handbooks, Vol. 48)
37. *The Dachau Gas Chamber: Documents, Testimonies, Material Evidence* (Holocaust Handbooks, Vol. 49)
38. *with Friedrich Jansson, The Neuengamme and Sachsenhausen Gas Chambers: With a Focus on British Investigations for the Tesch Trial* (Holocaust Handbooks, Vol. 50)
39. *Politics of Slave Labor: The Fate of the Jews Deported from Hungary and the Lodz Ghetto in 1944* (Holocaust Handbooks, Vol. 51)
40. *Auschwitz Engineers in Moscow: The Soviet Postwar Interrogations of the Auschwitz Cremation-Furnace Engineers. The Statements of Kurt Prüfer, Karl Schultze, Fritz Sander and Gustav Braun on "Gas Chambers" and Cremation Furnaces at Auschwitz* (Holocaust Handbooks, Vol. 52)

Almost all of them are online. This level of technical detail is exactly what is most needed. Carlo Mattogno should receive the honorary title *Slayer of Illusion*.

Revisionist Journals Online

- *The Journal of Historical Review* quarterly 1980-2002 (completely online at www.codoh.com/library/categories/1206/; established under the aegis of Willis Carto)
- *The Barnes Review* monthly since 1994 (once published by Willis Carto)

- *The Revisionist* quarterly from 1999-2005 (CODOH and Castle Hill Publishers, at www.codoh.com/library/categories/1178/)
 - *Smith's Report* (CODOH; at www.codoh.com/library/categories/1333/) monthly 1990-2016
 - *Inconvenient History. A Quarterly Journal for Free Historical Inquiry*, from 2009 (www.inconvenienthistory.com), published by CODOH.
- This is the essential Revisionist journal these days, which has been producing up-to-date, cutting-edge material since 2009. I did a detailed archive of their online articles here:
- www.whatreallyhappened.info/journals.html

Nuremberg Online

To search the Nuremberg “military tribunal” 22-volume proceedings plus 20 document volumes, input “Avalon Project” site:yale.edu and add what you require, e.g. “Treblinka.” Then on the page use “Ctrl F” (on Windows) to find the word you want.

About the Author

Nicholas Kollerstrom, Ph.D., holds degrees from Cambridge and London. For 11 years he was a member of staff of the Department of Science and Technology Studies at University College London. A distinguished historian of science, he contributed three entries, including on Sir Isaac Newton, to the Biographical *Encyclopedia of Astronomers* (2nd ed., 2014). He participated in the conference, “*Academic Freedom: Are there limits to inquiry?*” held at the University of Illinois, Urbana-Champaign.

An academician with a social conscience, Nick co-organized the Belgrano Inquiry in 1986, publishing *The Unnecessary War* (1988) as its proceedings, and co-edited *The Case Against War* (Spokesman, 2004). He is also the author of *Terror on the Tube* on the London 7/7 Subway bombings (4th edition, 2014), and spoke at the Vancouver 9/11 Hearings held there in 2012. He has furthermore edited, authored and co-authored, *i.a.*: *Lead on the Brain* (1982), *Astrochemistry* (1984), *The Eureka Effect* (1994), *Newton’s Forgotten Lunar Theory* (2000), *Galileo’s Astrology* (2004), *Venus, the Path of Beauty* (2009), *The Life and Death of Paul McCartney 1942–1966* (2015), *How Britain Initiated both World Wars* (2016), *False Flags over Europe* (2018); his recent *Who Did 9/11?* (2019) is his second book to be banned by Amazon, this being the first.

Author's Preface to the Second Edition

The first edition of this book, published in 2009, underwent three initial printings, each with slight textual and layout modifications. The final version, marked 'Third printing,' has sufficed for the past six years. But recent developments in the news, in world events and in the historiography of the Holocaust have necessitated a revised second edition of this book.

The general organization and chapter structure remain unchanged. The most-significant revisions are as follows: Chapter 4 on the death matrix is now based on the 6-million overall death toll, rather than Raul Hilberg's estimate of 5.1 million. Correspondingly, working (orthodox) figures for five of the six death camps have also been significantly increased; Auschwitz remains largely unchanged. Also, the sections on the ghettos and on the *Einsatzgruppen* have been significantly expanded in order to give appropriate space to these two important aspects. Chapter 5 on Chełmno now includes reference to three important works on that camp that were not available for the first edition. The account of the excavations on the grounds of the former "Operation Reinhardt" camps in Chapter 8 has been updated based on recent developments at those sites. Chapter 9 on Majdanek has been significantly modified to reflect the recent writings of current director of the camp museum Tomasz Kranz. In Chapter 11, the 'revisionist Holocaust' death-toll estimate has been increased from 516,000 to 570,000, though this reflects no fundamental shift in outlook. Many of the statistics and factual data in Chapter 12 have been updated. And the epilogue has been significantly expanded.

Importantly, however, the general conclusion is unchanged: the traditional Holocaust story is deeply flawed, and its advocates continue to resort to lies, deception and heavy-handed oppression to stifle open discussion. Only an impartial and unbiased investigation can get to the root of the present debate. Here, as before, the reader is invited to be his own judge.

Thomas Dalton
1 May 2015

Introduction

This is a book about the Holocaust and about two competing views of that event. On the one hand we have the traditional, orthodox view: the six million Jewish casualties, the gas chambers, the cremation furnaces and mass graves. We know about the death camps. We are told about incriminating documents, photographs and hard evidence. Countless books and films reiterate the conventional view. Historians can call on thousands of surviving witnesses to give us eyewitness accounts. Traditionalists have the weight of ordained history on their side.

On the other hand, there is a small, renegade band of writers and researchers who refuse to accept large parts of this story. They explicitly challenge the conventional view of history. Researchers who do such work are generally known as *revisionists*. They seek to revise the orthodox account of some past event. Holocaust revisionists, however, are a special breed. They challenge not simply historians, but an entire infrastructure dedicated to maintaining and promoting the standard view. They present counter-evidence; they expose inconsistencies; they ask tough questions. And they are beginning to outline a new and different narrative.

Thus has emerged something of a debate—a debate of historic significance. This is no peripheral clash between two arcane schools of thought regarding some minutia of World War II. It is about history, of course, but it also speaks to fundamental issues of our time: freedom of speech and press, the operation of mass media, manipulation of public opinion, political and economic power structures and the coercive abilities of the State. It is an astonishingly rancorous and controversial debate with far-reaching implications.

Most of the public is only dimly aware of this debate, if at all. Nearly everyone knows that “six million Jews were killed by the Nazis,” and that gas chambers were used in the killing. But few have any idea about the origins of this story, its rationale and its justification. Fewer still know of the serious questions that have been raised against the traditional view; if they have heard of them, it is in the context of “a few right-wing neo-Nazi anti-Semites” who are trying to attack the Jews by questioning the Holocaust.

And no more than a handful of individuals truly understand the depth of the revisionist attack on the mainstream view.

The fact that so few are aware of what may be called the “Great Holocaust Debate” is perhaps unsurprising. Much has been invested in the conventional story. Textbooks and encyclopedias have been written about it. Historians have staked their personal reputations on it. Politicians have passed laws defending it. And wealthy and powerful interest groups have good reasons to sustain it. In short, very few of those in positions of influence want to acknowledge any kind of legitimate debate. There is no incentive to publicize it, and strong pressure to avoid it. Those in the public eye know that, should they broach this subject, they will suffer the consequences. Advertisers will drop out. Financial backers will disappear. They may be sued. They will lose access and perhaps their jobs. They will be shunned. They will be vilified. And it will all be legal.

Despite this overwhelming influence of orthodoxy, the many problems of the Holocaust story refuse to be suppressed. Time and time again, in small and often unexpected ways, cracks in the traditional view appear. A surprising admission, a foolish statement, a slip of the tongue, a blatant absurdity; and those ‘troubling questions’ arise once again. Today, more people than ever suspect that all is not well with the standard view of the Holocaust—hence the need for a book such as this.

* * *

The Great Debate is marked by a striking partisanship. The traditional story is defended primarily by survivors, Jewish writers and researchers, and those who suffered at the hands of Nazi Germany—in other words, by people with a self-interest in sustaining the dominant view of a genocidal Nazi regime and an innocent and victimized Jewish people. Of the thousands of books on the subject, the vast majority are by Jewish authors. The revisionist perspective, by contrast, is promoted by a very small number of people: primarily Germans, people of German descent, and those inclined to be pro-German or anti-Jewish—again, not an unbiased group.¹ Charges of “lies,” “conspiracy” and “hoax” are frequently launched by both sides. This leaves the average person in a quandary: he is faced with partisan advocates on both sides, and rarely, if ever, gets a complete and balanced picture.

My goal is to remedy this shortcoming. I intend to present an objective, impartial look at this debate. I will discuss the latest and strongest arguments on both sides, examine the replies and offer an unbiased assessment. This is a challenging task, to say the least, but I believe that I am reasonably well

¹ Of course there are other revisionists not among these groups. Prominent revisionist German Rudolf has argued that, proportionately, the French are the most-represented group among revisionists.

suited for it. Unlike the vast majority of writers on the Holocaust, I am not Jewish—either by religion or ethnicity; nor are any members of my family. I am not of German descent. No one in my immediate family suffered or died in World War II. I am neither Muslim nor Christian, so I have no religious bias. My background is as a scholar and academic, having taught humanities at a prominent American university for several years. I have a long-standing interest in World War II and in the present conflict in the Middle East.

To anticipate my overall conclusions, let me make my stance clear at the outset. After considering all the evidence, I find that the revisionists have a very strong case. Their argumentation is solid, their sources are well-substantiated, and their research is of a high caliber. It is not ironclad, however, and where problems arise, I attempt to call them out. But overall, the bulk of their arguments point to one general conclusion: that the traditional Holocaust story is significantly flawed. Orthodox historians have largely failed to respond to the many challenges that the revisionists raise. Instead, they seem to prefer to cover up, slander or avoid engaging with revisionism. This fact alone strongly suggests that the orthodoxy has nothing to say in reply.

In what follows, I attempt to be a fair judge of both sides in this Great Debate. Every judge must make determinations. I do the same. But the fact that I find in favor of the revisionists—at least for now—does not invalidate my objectivity. I came to this debate a true skeptic, and it is only by weight of evidence and argumentation that I am persuaded of the strength of the revisionist view. Conceivably this could change in the future. I remain open to new evidence and new arguments. I have done my best, here, to fairly weigh both sides. In the end, whether I have succeeded in offering an objective analysis of this debate, will be for the reader to decide.

This book is targeted at the general, educated reader, but it holds to a high standard of scholarship. In examining the writings of the two opposing sides, I have taken nothing for granted. To the greatest extent possible, I have verified all quotations, checked all calculations, and noted errors—though I must say that laudably high levels of scholarship are to be found on both sides. Throughout this book I have attempted to use commonly available sources, should the reader wish to confirm any statements or quotations I offer here.² I have concentrated on English-language sources; this has its drawbacks, but fortunately most of the important sources are available in English, and so the

² Wherever possible, quotations include in-text citations. For example, (Hilberg 2003: 29) refers to page 29 of Hilberg's 2003 publication (*The Destruction of the European Jews*), which can be found in the bibliography at the back. Such citations both let the reader know the time frame of the quotation and avoid an excessive multiplication of footnotes. The end objective, after all, is to clearly cite reliable and verifiable sources, and I think I have achieved this goal. And, unlike most books on the subject (of either side), I have included a full and complete index and bibliography.

problem is not too great. Where relevant, I have cited essential non-English writings as well.

I have also shown a preference for hard-copy publications—books and journal articles—over Internet publications. Web-based material is always questionable. It can change from one day to another, and disappear the next. Such sources are typically less-well-researched, and often rely on other, equally unreliable Web-based sources for their arguments. On the other hand, there are certain obvious advantages. Much controversial material can be published *only* on the Web, and this point must be noted. Also, it is very convenient, for example, that several complete revisionist texts are available free online. (This very fact should mitigate the notion of a profit motive of the revisionists.) And the rise of online video services such as YouTube, Vimeo and Hulu allow access to audio-visual material that can have a greater impact than printed works. Thus, as appropriate, I have included relevant Web-page information.

Finally, I use terminology indicating the provisional nature of claims about the Holocaust. My use of “alleged,” “so-called,” scare quotes, and similar devices is simply meant to indicate that I am withholding assent until the case is fully examined. I tend to be skeptical of most things told to me by those in positions of power and influence, and this subject is no different. I recommend that the reader do the same.

As for my occasional quips, jabs and weak attempts at humor, I can only say that this is not intended as insult or dismissal. I aim to take a sometimes plodding and tedious debate and make it interesting and readable; it is a topic of profound importance, after all. But when one makes outrageous claims or puts forth obvious nonsense, *and then expects to be taken seriously...* then a sarcastic jab may be entirely appropriate.

* * *

Some might question the relevance of this whole topic. They might point out that the event under discussion happened over 70 years ago, that most who experienced it are dead, and that the enmities of the war are long gone. America and the European nations are friends and at peace (with each other, at least!). Japan is an important trading partner and poses no military threat. So why bother with the Holocaust? What’s the big deal? “Yes, the Jews suffered,” some may say. “So just leave them alone. Let them have their ol’ Holocaust.”

I think it does matter, and not only to those who have a vested interest. For several reasons: First, there is the straightforward question of history. Regardless of what one may think, the Holocaust was an event of major historical significance. As with any such historical event, it is essential to get

the facts straight and to develop consistent and coherent views about what happened. To understand what did, or did not, happen is vital for understanding the world of the mid-20th century, and by extension, the world of today.

Second, we are not allowed to forget about it, even if we wanted to. Coverage of the Holocaust is standard fare in every school curriculum. Children the world over read *The Diary of Anne Frank*, *Night*, *Number the Stars*, *Waiting for Anya*, and *Butterfly*. Students are taught about the gas chambers and the six million, about the innumerable Nazi atrocities.³ We see Holocaust miniseries on television, *Schindler's List* and documentaries like *Night and Fog*. We celebrate "Holocaust Education Week," and we acknowledge January 27 each year as the "International Day of Commemoration" of Holocaust victims, as declared by the UN in 2005.⁴ School children collect 6 million pencils, or 6 million paperclips, or 6 million pennies.⁵ We visit Holocaust museums. We take college courses from endowed chairs in Holocaust studies. This is not by accident. It is a deliberate plan to make sure we "never forget." And if we can never forget, then we should at least get the story straight.

Third, there is the drama of the debate itself. It is unlike anything else—the name-calling, the suppression of ideas, the jailing of dissenters, the burning of books. It is a debate that can scarcely be mentioned in polite company. It is, in a very real sense, one of the last taboos in Western civilization. But

³ For example, in February 2008, French President Nicolas Sarkozy proposed strengthening an existing mandate to teach the Holocaust; his idea was that "every fifth-grader will have to learn the life story of one of the 11,000 [Jewish] French children killed by the Nazis in the Holocaust (*New York Times*, Feb 16)." The proposal was rejected by the Education Ministry five months later, but even so, one wonders what could have impelled Sarkozy to propose such a thing; perhaps his own Jewish ancestry had something to do with it (a grandfather was Jewish).

Not to be outdone, the British then proposed that "every secondary school [in the UK] is to get a Holocaust specialist to ensure that the subject is taught comprehensively and sensitively" (*Times Online*, 7 Nov 2008). Ten percent of these specialists will receive a master's degree in "Holocaust education." "The scheme is part of a wider Holocaust education project funded by the Government" and a national charity. The project will also "send two sixth-formers [ages 16 and 17] from every school to Auschwitz" each year.

In late 2010, it was reported that Australia will include the Holocaust, for the first time ever, in their national education curriculum (*JTA*, Dec 19).

⁴ In 2011, the United Nations agency UNESCO signed an agreement with Israel "to promote Holocaust education and combat its denial" (*JTA*, Mar 8). This, after passing a 2007 General Assembly resolution that "condemns without any reservation any denial of the Holocaust" (A/Res/61/255).

⁵ On 20 September 2004, the Associated Press reported on a middle school in Tennessee where, back in 1998, "students hoped to collect 6 million paper clips—one to remember each person killed in the Holocaust." Thanks to global publicity, they ultimately collected some 30 million clips. In that same year, *Paper Clips*, an "award-winning" Miramax documentary, was released. Regarding the pencils, a Texas junior high school issued a press release on 15 May 2007: "Six million pencils for Holocaust project." In May 2011, High Tech High School in Chula Vista, California, began a project to collect 6 million pennies. Not to be outdone, in September of that year, a Canadian high school undertook to collect "13 million pennies, one for each person who died in the Nazi genocides, including six million Jews" (*Toronto Globe and Mail*, Sep 4).

as we know, taboos never last. They are the product of a given era, of specific social and political forces. When those forces shift, as they inevitably do, the taboo is lifted. Now is perhaps such a time.

Fourth, we have the underlying issue of free speech. I take a radical position in support of free speech. Speech is an (almost) absolute right. There is virtually no topic that should be out of bounds. Barring only such obscure cases as an immediate threat to human life, no words or ideas should be beyond discussion. I support vigorous and open debate on every conceivable topic, the Holocaust included. Suppressing speech only drives thought and expression underground; it can only lead to unethical and reprehensible manipulation of the public's ability to think for itself, and perhaps even violent response to the suppression. Those in power always have reason to fear free speech—all the more reason to defend it.

Fifth is the monetary angle. Billions of dollars have been given as restitution to Israel, to individual survivors and to Jewish organizations. These are tax dollars, provided by the workers of the affected nations—primarily Germany and Switzerland, to date. Restitution claims have not ended, and will likely not end in the foreseeable future. As recently as 2008, the Belgian government agreed to pay \$170 million to survivors, their families and the “Jewish community.” This is rather astonishing, given that Belgium was a *victim* of the war, not an aggressor. (The official reason: Belgium “failed to resist hard enough” against Nazi deportation of Jews.) Germany, though, suffers a seemingly unending parade of reparation deals. In late 2014, they were compelled to establish a new \$250 million fund “for child survivors”; this fund is intended “to recognize psychological and medical trauma caused during their deprived childhoods.” Compensation money, arising directly from the conventional Holocaust story, in turn flows back to sustain it. Restitution money buys political clout, where—in the US at least—it ends up as campaign contributions and issue ads. It encourages lawmakers to legislate in support of Israel and against revisionism—and they do.

Sixth, the State of Israel itself was a direct result of the Holocaust. In November 1947, two and a half years after the end of the war in Europe, the UN General Assembly approved Resolution 181, calling for independent Arab and Jewish states in Palestine. Jewish leaders immediately began formation of a political infrastructure, and declared the establishment of the State of Israel in May 1948. There were precursor events, of course. The Zionist push for a Jewish homeland began in the late 1800s, and the Balfour Declaration of 1917 promised “a national home for the Jewish people.” The process was thus in motion several decades before the end of World War II, but the Holocaust was the last straw. This is widely acknowledged today. In 2009, Israeli Ambassador to the US, Michael Oren, declared the Holocaust

to be Israel's "raison d'être."⁶ A 2012 survey found that fully 98% of Israelis consider it fairly or very important that a "guiding principle" for Israel is "to remember the Holocaust."⁷ Hence, if the Holocaust is called into question, so is the legitimacy of the Jewish state.

Seventh, the mere existence of Israel has far-reaching consequences. Its creation sparked the ethnic cleansing of Palestinian Arabs, which led to several wars and ultimately to the present Israeli occupation of the West Bank and other Palestinian lands. This occupation in turn is a crucial factor in the global "war on terror," which is in reality a war on Islam. The influential group of people who promote and defend the Holocaust are by and large the same people who push for war against Muslims worldwide. The same ideology—militant right-wing Zionism—is a major factor in both. In the United States, this same Jewish lobby also coerces the government to send roughly \$6 billion per year to Israel in the form of military and economic aid.

Eighth: If we can be misled—or fooled, or deceived, or lied to—about the Holocaust, what other events might we be misled about? The same social forces that could give rise to and sustain a deficient Holocaust story could produce countless other stories that might be exaggerated, embellished, distorted or falsified.

Finally, the Great Debate tells us something important about the power structure of Western nations. Revisionists challenge not only orthodoxy; they challenge the power of the State. The leading advocates of the conventional view are in positions of great influence. They are wealthy. They have many supporters and virtually unlimited resources. They are able to turn the power of the State, and public opinion, against revisionism, and they do. The revisionists, few in number and poor in means, have only ideas. But as the Masked Man once said, *ideas are bulletproof*. They have a power of their own, unmatched by money, military or government. Ideas can penetrate to the heart of truth. This is the promise of revisionism. Whether it succeeds, time will tell.

* * *

To repeat, I attempt here to take an impartial look at this clash of views. My role here is not that of a revisionist. I am a bystander in this debate, observing and commenting on a collision of ideas. This book is not a book of revisionism. It is a book *about* revisionism, and about two competing views of the truth. It assesses the ability of each side to marshal evidence, and to create a clear and consistent picture of the past.

The revisionist view of events is so far from what has been portrayed that we may have a hard time comprehending its possibility. A colleague once

⁶ *New Republic* (6 Oct 2009).

⁷ *Ha'aretz* (30 Jan 2012).

told me that he would be no more shocked to find no Eiffel Tower in Paris than he would to learn that the revisionists were right. Yet we can scarcely avoid asking ourselves this question: *Is it really possible that the traditional Holocaust story is wrong?* And not merely a little wrong, but significantly and fundamentally flawed? This is for each reader to decide. My objective is not to impose an overall conclusion, but rather to illuminate and articulate the main points, and to comment on their validity. I expect the reader to take nothing I say for granted. He is invited to check my sources, verify my quotations, and check my math. Ultimately, the reader must decide.

In such a complex issue as this one, it is wise to avoid making hasty judgments. My own journey was rather long. The present work was, in a sense, 30 years in the making. For roughly the first 10 years of my adulthood, I fully accepted the orthodox view. After all, the consensus was nearly universal, and I had no good reason to question it. During the next 10 years, doubts began to creep in. I started hearing stories that sounded odd, little points of conflict or contradiction, and strange gaps in the conventional storyline. Later, I decided to begin a serious inquiry into the topic. I tracked down dozens of books on both sides, and spent many long hours in careful research. The results of my investigation are presented below.

I sense a turning point in the debate. It seems to be moving out of the shadows and into the realm of serious and legitimate discourse. Revisionists have strong arguments in their favor, and, despite book burnings and jail terms, they are not going away. Traditionalists seem of late to have lost their momentum. Perhaps they have no more counterarguments. Perhaps they have tired of defending the conflicting stories of survivors and witnesses. Perhaps they have reached the limit of their ability to fashion a comprehensible picture of those tragic events of more than 70 years ago. The debate will surely reach a new resolution, and I suspect that the result will be something different than what we presume today.

PART I

SITUATING THE HOLOCAUST DEBATE

Chapter 1: The Great Debate

There can be no denying the Holocaust of the mid-twentieth century: it was called World War II. Roughly 50 to 60 million people died worldwide—about 70 percent of whom were civilians.⁸ They died from a variety of causes including guns, bombs, fire, disease, exposure, starvation, and chemical toxins. Within this greater Holocaust there existed many lesser holocausts: the tragic demise of millions of Soviet POWs in the hands of German authorities; the Allied fire-bombings of Dresden, Hamburg, and Cologne; the killing of hundreds of thousands of German soldiers and civilians by the victorious Allies after the formal end of the war; the US nuclear attacks on Hiroshima and Nagasaki, which incinerated 170,000 women, children, and elderly; and the Jewish Holocaust of Nazi Germany. It is this last Holocaust which has been the topic of heated debate over the years. It is this Holocaust that I address in this book.

Of the millions who died in the war, about 10 percent, or six million, are claimed to have been Jews killed by the Nazi regime, both in Germany and in its occupied territories. This Jewish Holocaust—*the* Holocaust, many would say—has been the subject of intense study for more than 70 years now, ever since the postwar Nuremberg trials of 1945 and 1946. Thousands of books and articles have been written on it; numerous films describe it; countless news stories have covered it. According to some, it is the “most well-documented event in history.”⁹

In order to properly examine the Holocaust, we first need to know what exactly it was. The basic outline of the conventional story has been mapped out for several decades now, and there is today a rough consensus. Here is one “widely accepted definition”:

⁸ According to standard sources, about 17 million soldiers died on all sides: 7.5 million for the Soviet Union, 3.5 million for Germany, 1.3 million for Japan, and some 4.7 million for all other countries combined. Civilian deaths are hard to determine, but the estimated losses in just the Soviet Union (19 million) and China (10 million) were huge. If we add 6 million Jews and roughly 3–5 million civilians in all other countries, we arrive at a total close to 55 million.

⁹ For example, Rabbi Abraham Cooper said this: “No crime in the annals of history has been as well documented as Nazi Germany’s Final Solution, the state-sponsored genocide that systematically murdered 6 million European Jews” (*Huffington Post*, 17 May 2012). According to the US Holocaust Memorial Museum (USHMM) website, “The Holocaust is one of the most well-documented events in history” (article: “Holocaust Denial and Distortion”, 2019).

When historians talk about the “Holocaust,” what they mean on the most general level is that about six million Jews were killed in an intentional and systematic fashion by the Nazis using a number of different means, including gas chambers. (Shermer and Grobman 2000: xv)

Here is another definition, from an official source—Michael Berenbaum, former director of the US Holocaust Memorial Museum in Washington, D.C.:

[The Holocaust was] the systematic state-sponsored murder of 6 million Jews by the Nazis and their collaborators during World War 2. (1993: 1)

These definitions imply that three key components are essential to the orthodox view: (1) the killing of roughly six million Jews; (2) homicidal gas chambers; and (3) intentionality on the part of the Nazi leadership. Should we lack any one of these three, according to this view, we have a tragedy, perhaps—but something less than ‘the Holocaust.’

The conventional story begins with the persecution of German Jews in the 1930s. It accelerates with the round-up of Jews under German control in early 1940. It becomes mass murder with the shootings in the Soviet Union in mid-1941. It ends with gas chambers, mass graves, and burned corpses—either in open pits or crematoria. This heinous act, it is claimed, was a singular pinnacle of human evil. “Adolf Hitler [was the] incarnation of absolute evil,” according to the late, famed survivor Elie Wiesel; indeed, he says, Nazi crimes against the Jews “have attained a quasi-ontological dimension.”¹⁰ For Bartov (2015: 11), the Holocaust is a “black hole of violence and depravity.” The Auschwitz crematoria are “the most perverse, insidious, indeed utterly demonic circumstances in the entire Nazi genocidal apparatus”; they reside “in the lowest chambers of hell,” and represent “the very essence of Nazism’s bottomless evil” (*ibid*: 241).

There remain, however, many open issues and many unanswered questions. Revisionists make challenging and troubling claims, ones that threaten to overturn major aspects of the Holocaust story:

- Key witnesses to the Holocaust have either falsified or greatly exaggerated important aspects of their stories.
- The figure of ‘six million’ has little basis in fact. This number, which theoretically could only have been known after the war, actually traces back decades before.
- Major death camps, like Bełżec, Sobibór, Chełmno, and Treblinka, have largely vanished—as have the remains of most of their alleged victims. Such a thing is not possible.
- Both of the alleged means of gassing victims—cyanide gas (under the brand name Zyklon B) and carbon monoxide from diesel exhaust—are impractical, unworkable, and simply ridiculous.

¹⁰ *Time* magazine (13 Apr 1998).

- No ‘Holocaust order’ from Hitler has been found; nor was there any budget or any plan. How, then, could the Nazis have pulled off their perfect crime?
- Wartime air photos do not substantiate the traditional account of events.
- Why are there, even today, so many survivors?

It seems that no two writers on the Holocaust have the same opinion on these matters.

As I outlined in the Introduction, the disputants in the Great Debate fall into two clearly defined groups: *traditionalists* and *revisionists*. Were this any other matter of historical dispute, the two camps would typically engage in cordial, lively and fact-based argumentation. They might attend joint conferences, praise each other’s ingenuity, share lunch, and even grant a deferential respect to one another. But not with the Holocaust. Here, none of the usual rules apply. A kind of argumentative chaos reigns. *Ad hominem* attacks fly. Absurd charges are issued. As Specter (2009: 4) sees it, “Holocaust deniers... are intensely destructive—even homicidal.” Reputations are impugned, and basic intelligence is challenged.¹¹ Strategic confusion and targeted obfuscation are the norms.

For starters, consider the names of the two groups. Holocaust revisionists are often called ‘Holocaust deniers’ by mainstream writers. This appellation is both derogatory and technically almost meaningless. What does it mean to ‘deny’ the Holocaust? How much of the conventional view does one have to reject in order to be a ‘denier’? Take the three pillars of the Holocaust story. What does it mean to “deny” the six-million figure? Is ‘five million’ denial? Unlikely, given that orthodox icon Raul Hilberg consistently argued for roughly that figure. Four million? No—early traditionalist Gerald Reitlinger claimed in 1953 that the death toll could be as low as 4.19 million. To my knowledge, no one has ever called him a Holocaust denier. One million? Five hundred thousand? We can see the problem here.

What about intentionality? Does this refer to Hitler alone? Or must it include the likes of Himmler, Goebbels, Eichmann and Göring? And how are we to judge intention? Spoken and written words can be misleading; discerning one’s intention has long been a notorious philosophical problem. Clearly there is no ready answer to these many questions. It seems that being a ‘denier’ is rather like being an ‘anti-Semite’—essentially in the eye of the beholder.

Revisionists in turn often refer to their opponents as ‘exterminationists’—as in, those who believe that the Nazis were on a quest to eliminate

¹¹ The *ad hominem* attack is, of course, a common and elementary logical fallacy. Traditionalists hold the clear lead in the name-calling sweepstakes, though certain of the revisionist activists are well known for this tactic. As might be expected, name-calling—on either side—is a fairly sure sign of a deficiency of arguments.

the Jewish people from the face of the Earth. Traditionalists reject not only this label, but any label at all; any group designation implies that they are simply one school of thought, to be held on equal footing with the revisionists. The notion of a competition between schools of thought is anathema to them. In their eyes, there is only one basic truth about the Holocaust, and they are its guardians.

Some traditionalists have demonstrated amazing levels of arrogance. A good example is Pierre Vidal-Naquet (1992: xxiv):

It should be understood once and for all that I am not answering the accusers, and that in no way am I entering into a dialogue with them. ... [T]he contribution of the “revisionists” to our knowledge may be compared to the correction, in a long text, of a few typographical errors. That does not justify a dialogue... [O]ne should not enter into debate *with* the “revisionists”. ... I have nothing to reply to them and will not do so. Such is the price to be paid for intellectual coherence.

Deborah Lipstadt mimics this stubbornness: “I categorically decline” to debate them, she says (1993: xiii). Such a reluctance to engage in debate suggests, of course, a fear of losing. The leading revisionists rarely pass up an opportunity to debate; the leading traditionalists, to the best of my knowledge, have never accepted one.¹² In this sense, most traditionalists are themselves ‘deniers’; they deny that there is anything to debate at all.

More seriously, we now have a situation where the power of the State has been brought to bear against revisionism. In 1982 two influential Jewish groups, the Institute of Jewish Affairs and the World Jewish Congress, created a plan to combat the growth of revisionist publications. They issued a report, “Making the Denial of the Holocaust a Crime in Law,” calling for widespread legislation against revisionism. Israel passed such a law in 1986, and France and other countries followed in the 1990s. Today there are 19 countries that have enacted or expanded laws against Holocaust denial,¹³ ostensibly to combat racist hate crimes against Jews or other minorities. Penalties ranging from severe fines to imprisonment can now be levied against those who openly challenge the conventional Holocaust story. The presumption is that revisionist writings or speeches will inflame violent extremists,

¹² With perhaps two minor exceptions: Traditionalist Michael Shermer appeared on the *Phil Donahue* television talk show in 1994, along with revisionists Bradley Smith and David Cole. And in 1995, Shermer debated revisionist Mark Weber. Videos of both events are available online.

¹³ The current list includes Austria, Belgium, the Czech Republic, France, Germany, Israel, Liechtenstein, Lithuania, Luxembourg, the Netherlands, Poland, Portugal, Romania, Slovakia, and Switzerland. The latest additions to this honor roll include Hungary (2010) and Greece (2014). Italy’s and the UK’s 2016 laws consider Holocaust revisionism an offense only if committed in conjunction with explicitly disparaging the victims. It may strike one as odd that modern industrial nations like these, which claim to uphold the right of free speech and inquiry, could resort to the banning of certain books and ideas—especially today, more than 70 years after the event. And odd it is; I elaborate on this in Chapter 12.

or will ‘corrupt the youth’ (Germany), or will somehow bring unacceptable pain to Jewish people or others sympathetic to their suffering. I am unaware of any cases in which revisionist writings have been shown to be a contributing factor to anti-Semitic violence—but perhaps this is beside the point.

In recent years, several prominent revisionists have been arrested for challenging the traditional Holocaust account. Ernst Zündel, a flamboyant publisher and promoter of right-wing literature in Canada, was arrested in February 2003 in Tennessee for violating United States immigration statutes. He was quickly deported to Canada and held in prison for two years as a “national security threat.” In March 2005, Zündel was deported once again, this time to his native Germany—where he was instantly arrested and charged with distributing hate literature, and with maintaining a US-based revisionist Web site. In February 2007 he was sentenced to five years in prison, the maximum allowable under current German law. He was freed in March 2010, having served five years. He died in Germany in 2017.

Germar Rudolf, a onetime doctoral candidate in chemistry in Germany, published the influential revisionist works *Vorlesungen über Zeitgeschichte* (“Lectures on Contemporary History,” 1993) and *Grundlagen zur Zeitgeschichte* (“Foundations of Contemporary History,” 1994). In a throwback to the Middle Ages, copies of his books that were within the reach of the German authorities were not only confiscated, they were burned. Tried in 1994/95, he was sentenced to fourteen months in prison. Rudolf eventually fled to the US but was arrested on immigration charges in late 2005 and deported back to Germany. In March 2007, the German legal system sentenced Rudolf to an additional prison term of two and a half years for his publishing activities abroad. He was released in July 2009.

Noted British writer and historian David Irving came slowly and hesitantly to revisionism, over a period of several years.¹⁴ He had been sympathetic to the German side at least since his 1977 book *Hitler’s War*, but did not start to seriously question the Holocaust until the mid-1980s. It was not so much his writings as his speeches and interviews that got Irving into trouble. In 1993, Lipstadt labeled him a denier and neo-Nazi sympathizer in her book *Denying the Holocaust*. Irving sued for libel, losing in 2000. He was then arrested in Austria in November 2005 for an act of ‘denial’ committed sixteen years earlier, back in 1989. A Viennese court sentenced him to three years in prison in February 2006, though he was granted early release in November of that year.

¹⁴ It is debatable whether or not Irving truly counts as a Holocaust revisionist; his position continually shifts on this issue. Traditionalists almost uniformly portray him as such, but he himself apparently denies it, and other revisionists are reluctant to include him among their number (see Scott 2016; Graf 2009). For the purposes of this book, however, I will classify him as a “soft” revisionist.

Between 2003 and 2019, Austrian Engineer Wolfgang Fröhlich, a specialist in disinfection and pest control, spent a total of 13 years in Austrian prisons for his various peaceful but at times provocative books and letters contesting the traditionalist Holocaust narrative. This is the most-extreme case of modern-day persecution of peaceful historical dissidents ever recorded (Hernández 2015).

More recently, we have cases such as that of German-Australian revisionist Dr. Fredrick Töben, who served three months in jail for a denial-related offense in August 2009. And in February 2015, French revisionist Vincent Reynouard was sentenced (again) to prison, this time for two years. His crime: posting on-line videos challenging the conventional Holocaust story. The local French court actually saw fit to double the sentence that was sought by the prosecution. ‘Deniers’ are evidently a dangerous lot; no leniency shall be shown.

Such attacks, in addition to significantly raising the stakes of the debate, have a stifling effect upon free speech and academic freedom generally. Many groups and individuals have strongly opposed such heavy-handed acts of state censorship, despite disagreeing with the revisionists. Notable intellectuals such as Noam Chomsky—himself no revisionist—have spoken out on their behalf. One must wonder: How serious a threat can these people be? Why are they able to draw the attention of national legislators around the world? Whom do they threaten? And perhaps most important—Are they on to something? Do they in fact have a case to make that the Holocaust story is fundamentally deficient? The State does not attack those who argue for a flat Earth, nor warn against some imminent alien invasion. Those who are irrational, or cannot make a coherent case, pose no threat, and thus are left alone. Apparently the ‘deniers’ are not in this category. This fact alone should make the average person wonder—Could they be right?

The Core of Revisionism

Unlike the traditionalist view, revisionism resists a general characterization. The alternate depiction of events that revisionism promises is only dimly outlined at present, and opinions are too disparate and too variable to form a truly cohesive view. Nonetheless, there are certain points of broad agreement among a majority of serious revisionists; these constitute a kind of core of revisionism today. Among the general points of agreement are the following:

- Hitler did indeed dislike the Jews, and strongly desired to rid Germany of them. This desire was shared by most of the top Nazi leadership. Their antipathy had three sources: (1) Jewish domination of major sectors of

German finance and industry;¹⁵ (2) the Jewish role in the treasonous November Revolution at the end of World War I;¹⁶ and (3) the prominent Jewish role in Soviet Bolshevism, which was seen by most Germans as a mortal threat.¹⁷

- To achieve their goal, the Nazis implemented various means, including evacuations, deportations, and forced resettlement. Their main objective was to remove the Jews, not kill them. Hence their primary goal was one of *ethnic cleansing*, not *genocide*. This is why no one has ever found a Hitler order to exterminate the Jews.
- Of course, many Jews would likely die in the process, but this was an unavoidable consequence.
- The Germans actively sought places to send the Jews. One option under consideration was to forcibly acquire the island of Madagascar from France, and to ship them there.¹⁸
- By mid-1941, due to speedy victories in the Soviet Union, large areas of territory came under German control, and hence a new option emerged—the Jews would be shipped to the East.
- After late 1942, things were turning bad for the Germans. Shipments to the East were no longer viable, and furthermore all available manpower was needed to support the war effort. Thus deportations became subordinated to forced labor—hence the heavy reliance on Auschwitz, which was first and foremost a labor camp.
- A major problem with deporting and interning large numbers of Jews was disease, especially typhus. Therefore, a major effort was needed to kill the disease-bearing lice that clung to bodies and clothing. All Nazi camps were thus equipped to delouse and disinfest thousands of people.

¹⁵ Traditionalist researcher Sarah Gordon (1984: 8-15) gives a good account of this dominance: “The reader may be surprised to learn that Jews were never a large percentage of the total German population; at no time did they exceed 1.09 percent of the population during the years 1871 to 1933... [In spite of this, the Jews] were overrepresented in business, commerce, and public and private service... Within the fields of business and commerce, Jews... represented 25 percent of all individuals employed in retail business and handled 25 percent of total sales... ; they owned 41 percent of iron and scrap iron firms and 57 percent of other metal businesses.... Jews were [also] prominent in private banking under both Jewish and non-Jewish ownership or control. They were especially visible in private banking in Berlin, which in 1923 had 150 private (versus state) Jewish banks, as opposed to only 11 private non-Jewish banks...”

This trend held true as well in the academic and cultural spheres: “Jews were overrepresented among university professors and students between 1870 and 1933.... [A]lmost 19 percent of the instructors in Germany were of Jewish origin.... Jews were also highly active in the theater, the arts, film, and journalism. For example, in 1931, 50 percent of the 234 theater directors in Germany were Jewish, and in Berlin the number was 80 percent...”

¹⁶ See Dalton (2019: 76-81).

¹⁷ See Dalton (2019: 54-59).

¹⁸ For a good account of this episode, see Mattogno and Graf (2005: 179-193).

- The primary means for killing lice was in ‘gas chambers,’ in which clothing, bedding, and personal items were exposed to hot air, steam, or cyanide gas. The gas chambers described by witnesses really did exist—but each one was built and operated as a disinfesting chamber, not as a homicidal gas chamber.
- The larger part of witness testimonies—both from former (Jewish) inmates and from captured Germans—consists of rumor, hearsay, exaggeration, or outright falsehood. This does not mean that entire testimonies are invalid, but only that specific claims must be verified by scientific methods before we should accept them. In particular, claims about huge casualty figures, mass burials and burnings, and murder with diesel exhaust are largely discredited.
- The total number of Jewish deaths at the hands of the Nazis—the ‘six million’ number—is highly exaggerated. The actual death toll was perhaps 10 percent of this figure: on the order of 500,000.

Individual revisionists place emphasis on different aspects of the above account, but all would likely agree with all these points.

Four Myths

An inquiry into the Great Debate of Holocaust revisionism cannot even begin until a few prominent myths are dismissed. Four are of particular importance:

Myth #1: *Revisionists believe that the Holocaust ‘never happened.’*

This is a common caricature of the revisionist position. It implies a belief that there were no widespread deaths of Jews, that they suffered no persecution, that there were no gas chambers of any kind, and perhaps even that no Jews actually died at the hands of the Nazis. Those traditionalists who make this claim are being disingenuous at best. They seem to want the reader to believe that revisionism is so far out of touch with reality, and so extreme in its views, that it can be safely disregarded.

No serious revisionist doubts that extensive deaths of Jews occurred, numbering in the hundreds of thousands, at least. No serious revisionist doubts that a catastrophe ‘happened’ to the Jews—whether they call it a ‘holocaust’ or not is incidental. Revisionists *do* dispute that the number of deaths was anything like five or six million. All accept that gas chambers existed in most or all of the German concentration camps; but they dispute the *purpose* of those chambers. And revisionists dispute that any German camps were ever built or operated as ‘extermination camps.’

In one sense, the very statement of this myth is loaded. As I explained earlier, the event called ‘the Holocaust’ requires intentionality, homicidal gas chambers, and some 6 million Jewish deaths. If any of these three points is found to be significantly in error, then technically, ‘the Holocaust’ did not happen. But this, of course, is not what orthodox historians mean when they make this charge. In fact, they never actually explain *what* they mean when they invoke this myth. Hence any such statement, by either side, to the effect that the Holocaust ‘never happened’ is pure propaganda.¹⁹

Myth #2: Photographs of corpses prove the Holocaust happened.

We all have seen the gruesome pictures of bodies stacked up outside some crematorium (Dachau), or unceremoniously dumped into pits (Bergen-Belsen). These are offered as proof of ‘Nazi barbarity,’ and of the slaughter of the Jews. Yet many things about such photos are misleading. For one, we do not know, or at least are not told, whose bodies those are. They could be Jews... or Polish internees, or Soviet POWs, or German inmates. In fact little effort seems to have been made to actually identify, or autopsy, any of those bodies.

Second, those famous photos came from the camps liberated by the British and Americans—primarily Bergen-Belsen, Nordhausen and Dachau. The problem is that these were not extermination camps. From the ‘real’ extermination camps, we have no corpse photos at all.²⁰ This fact alone should give us reason to consider whether aspects of the traditional story might be suspect.

Third, there were rampant outbreaks of typhus and other diseases that claimed thousands of lives in all the camps; yet the photos are used to imply that these were gassing victims. And fourth, the photos show at most several hundred corpses. This is so far from ‘six million’ that the vaunted photographs are almost meaningless as ‘proof’ of the Holocaust.

¹⁹ The continued invocation of this myth borders on the absurd. As a case in point, consider the 2005 BBC series “Auschwitz: The Nazis and the Final Solution.” After five hours of air-time—and no discussion of revisionist challenges—they insert, at the very end, a statement by former SS officer Oskar Gröning. As an elderly man, Gröning now sees it as his task “to oppose Holocaust deniers who claim that Auschwitz never happened.” He adds, “I have seen the crematoria. I have seen the burning pits. And I want you to believe me that these atrocities happened. I was there.” Of course, no revisionist in his right mind denies the existence of crematoria, pits, or the Auschwitz Camp. Hence Gröning’s statement is meaningless—added for mere dramatic effect.

²⁰ With one possible exception: two disputed (dubious) photos of Auschwitz showing a couple dozen corpses, possibly being burned. See Chapter 10.

Myth #3: *The Holocaust was a 'hoax.'*

This idea rests in large part on the writings of Arthur Butz, above all his widely read book *The Hoax of the Twentieth Century* (1976/2015). Butz continues to hold to this notion today, as did a handful of other revisionists, such as Robert Faurisson and Fritz Berg.

I explore this whole idea in more detail in Chapter 12, but briefly, what is a hoax? The term derives from the pseudo-Latin phrase *hax pax max* used by Renaissance-era conjurers and magicians to impress their audience. This same phrase is the source of the more benign magical incantation 'hocus pocus.' A 'hocus pocus' refers to a fabrication intended to entertain and amuse, whereas a hoax came to mean a fabrication intended to *deceive*, in a malicious sense. Both refer to contrived circumstances, carefully arranged to achieve a desired effect.

Now, it certainly is possible that the Holocaust story—especially the mass murder in gas chambers, and the 'six million'—was a kind of deliberate fabrication to achieve a desired effect of deception. But to my knowledge, no revisionist has offered any specific evidence to support this contention. Without solid evidence of deliberate falsification of at least large parts of the Holocaust story, we are unjustified in calling it a hoax. Individual lies, exaggerations, even gross exaggerations, do not qualify as hoaxes. Therefore, in my opinion, the Holocaust was not a hoax.²¹

However, this obviously does not mean that the story is true! It may still be rife with falsehoods, lies, and assorted absurdities. But there are many other ways in which untrue depictions of events can come to be widely believed, some of which are relatively innocent. Lacking hard evidence, we should grant the benefit of the doubt. Revisionism should attack the story, not the motive.

Traditionalists in turn leap on this hoax label and use it to their advantage.²² They take it to mean a kind of global conspiracy, a large-scale collective effort to deceive the general public. They say, "Those deniers actually believe that the Jews could pull off this monumental fraud! They actually think that thousands of historians, writers, journalists, government leaders—everyone, in fact, who supports the standard view—are in on the scam, all conspiring to assist the powerful Jews. How stupid can they be?" And there is some weight to this. You cannot claim massive fraud without a solid basis for it. If someone lies, call it a lie. If someone utters a blatant absurdity, call it absurd. Revisionists risk looking foolish, and only hurt their cause, by arguing for a hoax.

That said, there is a kernel of truth in this myth. It may be fair to say that certain parties took undeniably tragic events and made the most of them.

²¹ Crowell (2011: 9, 23), for one revisionist, concurs.

²² For a good recent example, see Perry and Schweitzer (2002: 208-211).

They assumed the worst possible outcome, the worst possible death tolls, and turned the worst rumors into ‘truths.’ It may have been something like a fish tale, in which one catches a trout but claims it was a shark. Now, a fish tale is not a hoax—presuming that one *actually went fishing*, and *actually caught something*. It is untruthful, deceitful, and perhaps even malicious, but not a hoax. The undeniably tragic deaths of many thousands, whose remains were utterly obliterated, can easily become ‘millions.’ A falsehood, an exaggeration, a fish tale—but not a hoax.

Unfortunately the situation goes from bad to worse. An exaggeration gets repeated over and over. It becomes the basis for trials, billions of dollars in reparations, imprisonments, even death sentences. Then it must be defended at all costs. We can well imagine how such a situation could come about, step by step, over the course of 70 years.

Myth #4: Revisionists are right-wing neo-Nazi anti-Semites.

Again, a classic ploy: impugn your opponent so that the reader will be inclined to dismiss him. Unfortunately this occurs repeatedly in almost every traditionalist book that even touches on revisionism. Other, related charges usually follow. Zimmerman (2000: 119), for example, writes, “Everyone who has studied this [revisionist] movement realizes that the ultimate goal of denial is the rehabilitation of Adolf Hitler and the Third Reich.” Quite a claim! One wonders how Zimmerman knows such things, and what his evidence might be.

Are revisionists right-wing? Since being right-wing is no crime, their critics presumably mean *far* right, which, they imply, is an evil thing. Of course this is only evil from the perspective of the left, but more to the point, it implies that traditionalists are not themselves right-wing—often far from the truth! Hard-core traditionalists, by whom I mean the militant Zionists, are among the most right-wing activists around—as are the evangelical Christians, who typically are strong supporters of Israel and the standard Holocaust story. Portraying all revisionists as right-wing is clearly a case of the pot calling the kettle black.

When revisionist writings touch on political issues, they are most often neutral with respect to the political spectrum. More important, this point is irrelevant to the arguments at hand. Whether a given revisionist is right, left, or center has no bearing on his arguments or his critique. Rudolf (2004) has noted that “revisionism is neither left nor right.” Anyone from any point on the spectrum may see the need to challenge the traditional view. Two of the more-prominent early revisionists, Paul Rassinier and Roger Garaudy, were staunch leftists. Recently, left-leaning political activists have begun to raise

questions about the Holocaust. If the traditionalists don't like what the revisionists are saying, then they must counter their arguments, not slander someone's character.

Are revisionists neo-Nazis? None of the major writers openly admits to being a National Socialist, and few seem to care much about burnishing Hitler's image. And, as with the right-wing accusation, even if a revisionist were openly National Socialist, or an open admirer of Hitler, it would be irrelevant to the arguments presented.

Are the revisionists anti-Semites? An anti-Semite is, technically, one who 'displays hostility or discrimination against Jews as a religious or ethnic group.' Thus it is either a form of racism or religious discrimination, against Jews *as a whole*. Yet, again, one finds no such attacks in any serious revisionist work. The academic revisionists are, on the whole, passably respectful of Jews. If they target an ideology, it is frequently Zionism. Not all Zionists are Jews, and not all Jews are Zionists; thus, an anti-Zionist stance is neither racial nor religious discrimination. In fact, it is Zionism that is more inclined toward racism, in its oppressive and discriminatory attitude toward Palestinians and Muslims in general. And it may even turn out that the traditionalists do more to foster anti-Semitism, if it happens that they are found to be promoting—and legally enforcing—an unjustifiable myth of Jewish suffering. One can only imagine the repercussions, if a large section of the public should come to believe that they have been lied to about the "greatest crime in history."

Today, 'anti-Semitism' has become a largely meaningless epithet, deployed either to slander one's opponents—or to shut them up. It is used simply because one does not like what the other says, and has nothing more intelligent to offer.²³

²³ A more-recent definition was endorsed in an official US government report, *Contemporary Global Anti-Semitism* (US Department of State, 2008). "Anti-Semitism is a certain perception of Jews, which may be expressed as hatred toward Jews. Rhetorical and physical manifestations of anti-Semitism are directed toward Jewish or non-Jewish individuals and/or their property, toward Jewish community institutions and religious facilities." Specific forms of anti-Semitism include:

- "Denying the fact, scope, mechanisms (e.g., gas chambers) or intentionality of the genocide of the Jewish people at the hands of National Socialist Germany and its supporters and accomplices during World War II (the Holocaust)."
- "Accusing the Jews as a people, or Israel as a state, of inventing or exaggerating the Holocaust."

But again, one wonders what is meant by such words as 'denying' or 'exaggerating.' Such terms are so broad as to potentially include almost any criticism, questioning or inquiry into the event. Hence my point that 'anti-Semitism' is so ill-defined as to be almost meaningless. Or worse: to be whatever those in power want it to be.

Who's Who in the Debate

I will close this first chapter with a quick look at the main players on each side of the debate. Consider first the orthodox historians. Here we have an immediate problem. There are literally thousands of books on the Holocaust, and hundreds of new ones appear each year. The sheer number of authors is astounding. Everyone, it seems, is in on the game. Publishers who are reticent to publish on other worthy topics readily snap up proposals for new Holocaust books. Apparently it is a good career move to write, and to publish, on the Holocaust.

In order to bring some structure to the chaos of names, I will focus on the leading figures past and present, and on those few who have elected to engage with revisionism. Let me begin with those now deceased, and then move on to the currently active writers.

Among the more important past authors are:

- Gerald Reitlinger (died 1978). His book *The Final Solution*, first published in 1953, was one of the earliest detailed studies. It covered all aspects of the Holocaust, from the Jewish perspective. But there was one small problem: Reitlinger counted far fewer than six million deaths. His estimated range—from 4.2 to 4.58 million—is the lowest of any major author. Today such figures would border on heresy, but in 1953 there was no such tension. Even in the later revisions to his book, he did not significantly alter his numbers. Perhaps unsurprisingly, Reitlinger is not often cited by traditionalists today.
- Lucy Dawidowicz (died 1990). Her major works included *The War against the Jews* (1975, 1986), and *The Holocaust and the Historians* (1981). She estimated a total of 5.9 million Jewish fatalities.
- Jean-Claude Pressac (died 2003). A pharmacist by training, and one of the few non-Jews to challenge revisionism. Pressac's work *Auschwitz: Technique and Operation of the Gas Chambers* (1989) was a direct response to the writings of Faurisson. A very detailed study of the design and operation of the Auschwitz crematoria and gas chambers, this work raised as many questions as it answered. It is far from the “definitive refutation” of revisionism that was sought.²⁴
- Pierre Vidal-Naquet (died 2006). Author of *Assassins of Memory* (1992—French original in 1987), an early attempt to refute revisionism. Almost useless for assessing the validity of revisionist arguments, since he addressed nothing in specifics. An arrogant and polemical response to revisionism.²⁵

²⁴ See the revisionist critiques in Rudolf (2016), Mattogno (2019), Rudolf (2019e).

²⁵ As a response see Faurisson (1982).

- Raul Hilberg (died 2007). Until his death, Hilberg was considered the preeminent expert on the Holocaust. His primary work, *The Destruction of the European Jews*, first appeared in 1961. In 1985, the book was expanded to a three-volume set. A third edition came out in 2003, weighing in at nearly 1,400 pages. Like Reitlinger, Hilberg is notable for his low overall death toll; he consistently calculated 5.1 million victims, which has become the lower limit of the ‘acceptable’ range—though even this is rarely mentioned.²⁶
- Yisrael Gutman (died 2013). His small brochure *Denying the Holocaust* (1985) was one of the first traditionalist writings to tackle the revisionist arguments, although it has not had much of a lasting effect on the debate.

Among current researchers, we have:

- Yitzhak Arad. His 1987 book *Belzec, Sobibor, Treblinka* remains the standard source for those camps—a rather amazing fact, given that it is over 30 years old. Arad was a research director at the Israeli Holocaust center, Yad Vashem.
- Shelly Shapiro. She compiled an anthology of essays against revisionism, *Truth Prevails: Demolishing Holocaust Denial* (1990).
- Kenneth Stern. He wrote *Holocaust Denial* (1993), which is only a cursory response to the arguments.
- Deborah Lipstadt. Her *Denying the Holocaust* (1993) is perhaps the best-known anti-revisionist work. Unfortunately, very little of this book addresses the actual arguments—as the reader is invited to confirm. Lipstadt and her book became widely known after historian David Irving sued her for libel. She is a professor of Jewish theology at Emory University in Atlanta.²⁷
- Michael Shermer and Alex Grobman. Co-writers of *Denying History* (2000)—after Lipstadt, the next most popular anti-revisionist source.²⁸
- John Zimmerman. His book *Holocaust Denial* (2000) was the first to seriously address, in detail, revisionist arguments. It is a technical, academic work, and plays a prominent role in the debate. Zimmerman is a professor of accounting at the University of Nevada, Las Vegas.²⁹
- Robert van Pelt. His hefty 2002 book *The Case for Auschwitz* arose from his expert testimony for Lipstadt at the Irving trial. He is a professor of the history of architecture at Waterloo University, Canada, and actively lectures on the Holocaust.³⁰

²⁶ See the revisionist critique in Graf (2015).

²⁷ See the revisionist critique in Rudolf (2017b).

²⁸ See the revisionist critique in Mattogno (2017c).

²⁹ See the revisionist critique in Rudolf/Mattogno (2017: 89-197).

³⁰ See the revisionist critique in Mattogno (2019).

- Ian Kershaw. British historian, now retired, and author of several important works, including *Hitler 1936-1945* (2000) and *Hitler, the Germans, and the Final Solution* (2008).
- Christopher Browning. An American historian, also retired. Author of *Ordinary Men* (1992), *The Path to Genocide* (1998), and *The Origins of the Final Solution* (2004).
- Richard Evans. Retired Cambridge historian and author of an important three-volume series, *The Third Reich* (2003-2008). Regarding the Holocaust debate, his major contribution was *Lying about Hitler* (2001), recounting his version of the Irving-Lipstadt trial.
- Peter Longerich. A German historian currently working at the University of London. His books *The Unwritten Order* (2003), *Holocaust* (2010), and *Heinrich Himmler* (2011) have been influential in sustaining the orthodox view. As the youngest of the major active writers, Longerich may be expected to be the standard-bearer for some time to come.
- Hans Christian Gerlach. Another German historian, currently at the University of Bern, Switzerland. His book *The Extermination of the European Jews* (2013) is one of the more-recent traditionalist texts on this topic.

In addition to these individuals, we must also include the standard reference works: *Encyclopedia of the Holocaust* (1990; I. Gutman, ed.) and more recently *The Holocaust Encyclopedia* (2001; W. Laqueur, ed.). Finally, we have the leading research organizations, which would include the Israeli group Yad Vashem (www.yadvashem.org) and the US Holocaust Memorial Museum (www.ushmm.org).

Anti-revisionist forces have been notably quiet since the year 2000. Just one new English-language book has appeared,³¹ and only a handful of journal articles. This is in marked contrast to the outpouring of books by revisionists in that same period—some four dozen in total. Of course, thousands

³¹ The (unprinted) book—actually, a “white paper” available only as a PDF file online—is *Belzec, Sobibor, Treblinka: Holocaust Denial and Operation Reinhard* (Harrison *et al.*, 2011). This is a unique case, however. The five authors are all ‘professional bloggers,’ not affiliated with any university or research center, and generally lacking in any formal qualifications. They have, in fact, been denounced by their fellow traditionalists for their shoddy practices. But the work does offer a detailed response to many revisionist arguments. It has generated an even-more-detailed revisionist response, *The “Extermination Camps” of “Aktion Reinhardt”: An Analysis and Refutation of Factitious “Evidence,” Deceptions and Flawed Argumentation of the “Holocaust Controversies” Bloggers* (Mattoigno *et al.*, 2013). Furthermore, a rather significant German-language book by Morsch *et al.* appeared in 2011 whose title translates to *New Studies on National-Socialist Mass Killings by Poison Gas*. It collects papers presented during a 2008 Berlin conference of mainstream Holocaust historians from around the globe claiming to refute revisionist arguments. By its title and mission, the book is designed to give an update to an earlier work by the world’s elite of traditionalist Holocaust historians (Kogon *et al.* 1993). Like its predecessor, however, the new book also mostly avoids naming any revisionist authors, let alone citing their works or addressing their arguments (see Mattoigno [2016g] for a revisionist response).

of traditionalist books and articles have appeared in that time, but virtually none of these takes on the revisionist challenge. Officially, revisionism is now ‘unworthy’ of response; unofficially, it’s good policy to avoid a battle that you may well lose.

And in the Other Corner...

Early revisionism, as mentioned, was marked by as much polemics and inflammatory language as scholarship. Revisionists thus tend to fall into one of two subgroups: *activists* and *academics*. Both groups are important, and both have their own roles to play. Both groups require fortitude and courage, though in different ways. Naturally, some individuals fall into both categories; Faurisson and Töben come to mind.

For our purposes, the second group is of chief interest. The activists make the news, and poke their finger in the public eye, but it is the academics that do the important groundwork to establish the basis for revisionist claims. Academic revisionists conduct careful, scientific examination of the circumstances of the Holocaust, and write high-quality articles and books on their critiques. They deserve to be taken seriously. Early academics would include such people as Franz Scheidl and Paul Rassinier, whose initial work dates from the 1950s. But things did not really start heating up until the mid-1970s. From then on, we find a growing number of serious, dedicated works. The major revisionist academics include:

- Arthur Butz. His 1976 book *The Hoax of the Twentieth Century* marked the beginning of serious revisionism, at least in the US. The latest revised edition came out in 2015. A dense and challenging book, but useful for scholarly research. Butz has a PhD in engineering, and is currently a tenured associate professor at Northwestern University, near Chicago, Illinois.
- Paul Rassinier (died 1967). He further developed his ideas in the 1960s, which appeared in English translations as *Debunking the Genocide Myth* (1978) and *The Holocaust Story and the Lies of Ulysses* (1990, 2nd ed.).
- Robert Faurisson (died 2018). In the late 1970s, he published some notorious revisionist articles in the French newspaper *Le Monde*. Since then he has been a leading figure in the movement, at once an academic and a promoter. His magnum opus is the nine-volume French work *Écrits révisionnistes* (1974–2018). Faurisson was a retired professor of humanities from Lyon University.
- Wilhelm Stäglich (died 2006). A PhD and judge in Germany, he wrote *The Auschwitz Myth* in 1979 (English version 1986), causing an uproar.

- Walter Sanning. Pseudonym of a German scholar who wrote an influential study on worldwide Jewish demographic history: *The Dissolution of Eastern European Jewry* (1983/1990/2015).
- David Irving. A prominent historian and expert on the Third Reich. A borderline revisionist; the Holocaust is not really his area of expertise, but he seems to get drawn in time and again.
- Friedrich Berg (died 2019). A specialist on the diesel-exhaust issue. Berg is an engineer and has been a leading advocate of “scientific” revisionism, based on objective data and scientifically verifiable facts.
- Samuel Crowell (died 2017). Pseudonym of Alan B. Kennady, a former professor of history at Lafayette College in Easton, Pennsylvania. Though not a major figure in revisionism, Crowell was, along with Faurisson, the most scholarly. His monograph *The Gas Chamber of Sherlock Holmes* (2011) is an excellent “literary analysis” of the many problems with the conventional account.
- Thomas Kues. A multi-lingual Swedish scholar. Kues has written some 50 revisionist articles, with a focus on the so-called ‘Reinhardt’ camps: Bełżec, Sobibór, and Treblinka. Inactive since 2014.
- Germar Rudolf. As a scientist (chemistry), writer, lecturer and publisher, Rudolf is a leading figure in revisionism today. His *Dissecting the Holocaust* (2019, 3rd ed.) and *Lectures on the Holocaust* (2017, 3rd ed.) are essential reading for anyone serious about the subject.
- Jürgen Graf. A Swiss researcher and author or co-author of several important writings, including books on the Treblinka, Sobibór, Majdanek and Stutthof camps. He also wrote a definitive critique of Raul Hilberg, *The Giant with Feet of Clay* (2015, 2nd ed.), and a summary of revisionist criticism of 30 key witnesses on Auschwitz (2018).
- Carlo Mattogno. An Italian researcher, Mattogno is the leading writer of serious academic works. He has published detailed texts on the gas chambers and crematories of Auschwitz, and written or co-written major works on all five of the other ‘extermination camps.’ Unquestionably the leading technical expert among revisionists today.

If the reader is unfamiliar with most of the above names, we should not be surprised. There has been a concerted effort to ensure that the leading revisionist scholars are never engaged, never cited and never publicized. This is another clue that all is not as it seems in the Great Debate.

With this short background in place, we can now begin to take a serious look at the traditional Holocaust story, analyzing its strengths and weaknesses. Chapter 2 will recount this story and examine the troublesome nature of historical truth—troubles which are greatly magnified with the Holocaust.

Epilogue

“Holocaust denial is ideologically motivated. The deniers’ strategy is to sow seeds of doubt through deliberate distortion and misrepresentation of the historical evidence. Teachers should be careful not to unwittingly legitimize the deniers through engaging in a false debate. Care must be taken not to give a platform for deniers—do not treat the denial of the Holocaust as a legitimate historical argument, or seek to disprove the deniers’ position through normal historical debate and rational argument.”

—*Guidelines for Teaching about the Holocaust*
(2004)

“These Holocaust deniers are very slick people. They justify everything they say with facts and figures.”

—Steven Some, chair, New Jersey
Commission on Holocaust Education²⁷²

When I began my research for this book, I expected to find a well-documented, clear, coherent picture of the Holocaust, as recounted in the traditional view. I expected to find strong evidence—documentary, material and forensic—that supported it. I expected to find solid justification for the death tolls (especially the ‘6 million’), and solid rationales for the methods of killing and body disposal. Naturally there would be some incomplete aspects of the overall picture, but this was to be expected, given the horrendous circumstances. I expected in turn to find these shortcomings ruthlessly exploited by a handful of fanatical zealots, the ‘deniers,’ long on insults and short on brains. I expected to find strong traditionalist counterarguments that

²⁷² *The Star-Ledger* (Newark, NJ), 23 Oct 1996, p. 15.

directly responded to, and decisively defeated, revisionist claims. In fact I found none of these things.

Instead I found a Holocaust story in tatters. I found that many aspects of the traditional view had serious, unresolved problems. I found that the vast majority of Holocaust writers completely ignored revisionist challenges—a situation explicable only as either complete ignorance, or worse, deliberate deception. In the few cases where the revisionists were addressed, I found crude polemics and name-calling rather than reasoned counterarguments. I found an avoidance of the strongest challenges and the ablest critics. I found a traditionalism that was unafraid to deploy its considerable power, contacts and resources to keep the upper hand. I found, by all accounts, a movement with something to hide.

On the revisionist side, I found solid challenges and well-argued and articulate concerns. I found these issued by a small number of hardy and increasingly sophisticated individuals, who displayed an unflagging commitment to the pursuit of truth—often at a high personal cost. I also found a revisionist movement that was highly argumentative and combative, divided, unwilling to compromise, and overly confident in their own conclusions. I found some of them a bit too specialized and lacking in their own ‘big picture’ of events.

And I found a large middle ground of people who feign disinterest, who take no stand. I found people who are “not political”—a perfect excuse to avoid involvement. I found people unwilling to talk about the Holocaust, even in private, for fear of... *something*. I found people willing to overlook shoddy research, logical absurdities, unethical practices, moral outrages and crimes against humanity, all because it might cause them some personal inconvenience. I found that the more ‘important’ a person was, the less of a backbone they had. I found cowardice where I expected bravery, and capitulation to money and self-interest where I expected principled, ethical behavior. I found people who should have known better—but said nothing.

In short, I found a debate unlike any other in modern society. And it was all the more striking, owing to the great importance of this debate for the present-day world. The Great Debate is a kind of gigantic magnifying glass; it brings many issues to a single focal point, one that turns on our most basic understanding of a series of events that happened more than 70 years ago. I found in this debate a kind of key to understanding one aspect of the structure and operation of the Western powers—a key with the potential to open a Pandora’s Box of troubles for those at the top.

* * *

In the contentious atmosphere of this debate, it is easy to overlook the areas of common ground. With few exceptions, I think it is fair to say that all parties agree that:

- Hitler and his top men despised the Jews, and wanted a society cleared of them.
- As a consequence, they initiated a ruthless de facto policy of ghettoization, deportation, forced labor and murder.
- Many thousands of Jews died of non-homicidal causes while in German custody—in the ghettos, in the camps and in transit. They died from typhus, exposure, exhaustion and related ills.
- Many thousands more were directly killed through mass shootings, hangings and torture.
- Of these alleged crimes against the Jews, there is a near-complete lack of material evidence—especially for the death camps, the bodies and the means of killing.
- The total number of Jews who died, or were killed, is not known with any certainty.

A few other points also must be agreed to, by anyone willing to rationally consider the facts: The ‘6 million’ has little basis in fact, and rather seems to have been invoked as a symbolic figure; the Auschwitz ‘gas chambers’ were used far less often than is commonly portrayed; the mass disposal of bodies—in particular, the open-air burning—is unlikely to have happened in the manner described; and the Auschwitz air photos are disturbingly calm for an alleged death camp at the height of its activity.

The main points of contention, then, are really very few:

- The total number of Jewish deaths.
- The number of Jewish deaths, by cause, at each location or camp.
- The use of Zyklon gas chambers for mass murder.
- The use of diesel engine exhaust for mass murder.
- The veracity of the eyewitnesses, and the postwar testimonies.
- The method, and quantity, of bodies incinerated—both in crematoria and open-air.

The key to understanding these issues is the death matrix. By showing estimated deaths and disposals by month and by cause, we gain a very clear picture of what is alleged to have happened. We can see what was possible, and under what conditions. Obvious problems are thereby made transparent. And at the highest level—of the entire Holocaust—it forces us to create a complete and coherent picture of events.

I believe the present work is the first on either side of the debate to have introduced this device. This, to me, is quite surprising, considering how obvious a technique it is. But on the other hand, it is perhaps not so surprising;

the death matrix has a power of transparency that can quickly expose absurdities, and can quickly undermine an inconsistent position. One's pet theory can easily crumble. In one glance it exposes all the dark corners of the Holocaust story. The shell game is over; all the cups are overturned. There is nowhere to hide, no hidden recesses in which to stash the bodies. And I emphasize that this criticism holds for both sides of the debate, each of which has failed to put it to use.

* * *

In my research, and in my own attempt to come to conclusions, I was struck time and time again by items and facts that were either clearly at odds with the standard account, or were otherwise revealing of the reality of the situation. Here are a few topics that stand out for me, even though I was not able to explore them in detail.

1. Nazi concern for inmate welfare

On 26 October 1943, Senior Group Leader Oswald Pohl—reporting directly to Himmler, and head of the entire camp system—wrote a secret letter to all camp commandants. It was recapped by Danuta Czech in her book, *Auschwitz Chronicle* (1990). The letter is rather shocking, in that Pohl admonishes the commandants for the high death rates in the camps. There is an urgent need for labor, and thus all camps are ordered to take necessary actions to reduce deaths and improve inmate health. As Czech recounts:

Pohl states that... the concentration camps have become a significant factor in the German war effort. Henceforth, it is imperative to take all care not only that previous performance be maintained, but also increased. Commandants, SS Commanders, and Camp and Garrison Doctors are to be concerned primarily with maintaining the health and performance capability of the prisoners. Not out of any false sentimentality but rather because their arms and legs are needed... The first goal is to decrease by one tenth the number of inmates unable to work because of illness. All those responsible must achieve this goal. Indispensable for this are:

1. Proper and appropriate nourishment.
2. Proper and appropriate clothing.
3. Utilization of all natural means to encourage health.
4. Avoidance of every effort unnecessary for the performance of labor.
5. Use of performance prizes.

These points are treated in full by Pohl on three pages of instructions in which he even deals with how potatoes are to be stored, peeled, and prepared so that they are tasty and nourishing. ... Pohl emphasizes that he

will personally supervise the execution of the orders transmitted in the letter. (p. 515)

Hardly the words expected from one of the supposed “leading architects” of mass murder.

Traditionalists, however, have a ready response: all this applies only to the labor force—the extermination actions at Auschwitz and Majdanek would continue (the other death camps having been shut down by this point). But the letter makes no distinctions. Clearly labor was badly needed by this time, and a large majority of the Auschwitz Jews, for example, could have contributed.

Pohl’s letter is so damning to the traditional point of view that Czech felt compelled to add a footnote, “explaining” the situation for us: “the shortage of labor prompted Pohl to write this letter to the Commandants. It does not change anything in the camp conditions... The behavior of the SS men trained in ruthlessness and horror cannot be changed with a single letter...” Thus, in spite of what the letter actually says, Czech is convinced that its purpose “is not to stop the extermination, direct or indirect.” Its whole point, she says, is simply to “lead to a more intensive exploitation of the prisoners’ labor”—a process by which they would literally be worked to death.

To read this letter in such a way is indicative of someone with rigid and preconceived ideas—someone unable or unwilling to read things as they are, and who sees only secret, hidden meanings in place of clear and explicit text. It is, in fact, the mindset of someone who sees anti-Jewish conspiracies in every nook and cranny. This point is underappreciated: The greatest conspiracy theorists are the *traditionalists*, not their opponents.

Lest we think this an aberration, Mattogno (2016b: 13) cites the following letter from Pohl to his boss, Himmler, from April 1942. This was a full year and a half prior to the above, a time when the war was still going well for Germany—and Auschwitz, Chełmno, Bełżec and Sobibór were allegedly murdering thousands per day:

The war has brought a clear structural change in the concentration camps and has radically changed their duties with regard to the inmates. Increasing the number of inmates solely for reasons of security, rehabilitation or prevention is no longer the primary factor. The center of gravity has shifted to the economic aspect. Mobilization of the *full* working capacity of inmates, primarily for war-related tasks (increased armaments production) and *subsequently for peaceful tasks*, moves more and more into the foreground. From this recognition, necessary steps result that require a gradual shift of the concentration camps from their previous entirely-political form toward an organization that corresponds to economic tasks. [italics added]

Clearly no plans for imminent “extermination.”

And Pohl’s right-hand man, Richard Glücks, issued this decree to all camps a few months later, in December 1942 (Mattogno 2016b: 14):

The chief physicians in the camps must strive with all means at their disposal to ensure that the death rate in individual camps falls substantially.... Camp medical officers have to attach more importance to monitoring inmates’ food and to make proposals for improvements to the camp commandants in agreement with the authorities. These must not, however, remain only on paper, but must be regularly checked by camp doctors. Camp doctors must also ensure that working conditions in individual workplaces are improved as much as possible.... The Reichsführer-SS [Himmler] has ordered that mortality absolutely must be reduced.

We must ask ourselves: Are these the words of men intent on mass murder? We find no reference at all to gassings or mass killings, even in these high-level, top-secret correspondences. It should be obvious that every healthy inmate—Jew or otherwise—was a valuable asset, not to be squandered. If you’re going to kill them, for God’s sake wait until the war is over! Why annihilate your slave labor when you need it most?

2. *Postwar memoirs of three top Allied leaders—Eisenhower, Churchill, and De Gaulle—contain no mention of the Holocaust*

Eisenhower’s book, *Crusade in Europe* (1948), is a single volume of some 550 pages—the smallest of the three. Reviewing the index, one finds no listing for either ‘Auschwitz,’ ‘Holocaust,’ or ‘gas chambers.’ The single entry on persecuted Jews refers to the following paragraph:

Of all these displaced persons, the Jews were in the most deplorable condition. For years they had been beaten, starved, and tortured. Even food, clothes, and decent treatment could not immediately enable them to shake off their hopelessness and apathy. They huddled together—they seemingly derived a feeling of safety out of crowding together in a single room—and there passively awaited whatever might befall. To secure for them adequate shelter, to establish a system of food distribution and medical service, to say nothing of providing decent sanitary facilities, heat, and light was a most difficult task. They were, in many instances, no longer capable of helping themselves; everything had to be done for them. (pp. 439f.)

No mention of extermination, mass murder, gassing, crematoria—nothing. Only “beaten, starved, and tortured”—which, given the alternative, isn’t so bad.

Charles de Gaulle’s work, *The Complete War Memoirs* (1954-1959/1964), consists of three volumes and a total of more than 2,000 pages. In the

index we again find no reference whatsoever to ‘Auschwitz,’ ‘Holocaust,’ or ‘gas chambers’—nor this time even to Jews. This being the latest-written of the three works (the third volume of the original French edition appeared only in 1959), De Gaulle obviously had plenty of time to reflect on the Holocaust; evidently it merited no discussion at all.

The largest memoir was written by Churchill. *The Second World War* (1948-1953) is a massive, six-volume account of the war, consuming nearly 4,500 pages of text. Once again, the indices (one per volume) have no entries at all for ‘Auschwitz,’ ‘Holocaust,’ or ‘gas chamber.’ There are a few references to Jews, but most are simple passing comments. Only one entry, out of six volumes, addresses Jewish persecution. In Volume 1, page 58, we find one single phrase: “brutalities towards the Jews were rampant.”²⁷³

These men all knew what transpired at Nuremberg. They saw the concentration camp photos, and they personally visited some of the sites. They had access to the most confidential information available. And yet, no extermination camps, no ‘6 million,’ no gas chambers, no Auschwitz—only beatings, starvation and assorted brutalities. It is almost as if they thought there was no Holocaust at all.

3. *Postwar German leaders have feared, and continue to fear, Jewish power*

One may ask: Why don’t postwar German leaders expose the Holocaust story? Surely they would like to clear their collective reputation, not to mention save billions in reparations. But in reality, the opposite is true: they vigorously defend the orthodox account. Why is this?

Right after the war, Germany was an utterly devastated, occupied and starving country. Until 1955, all German politicians were at the mercy of the Allied occupational powers, who had just forced the Holocaust dogma onto them with the Nuremberg Trials, among other things. To make matters worse, influential Jewish individuals and organizations all over the world were impeding, if not outright sabotaging Germany’s attempts at getting foreign loans and trade agreements in order to get the ailing German economy back afloat.

In that desperate situation, the first postwar chancellor of West Germany, Konrad Adenauer, sought to assuage the Jewish wrath by offering them compensation money in return for an end to their continued boycott of anything

²⁷³ There is one further reference, not in the main text but in the Appendix to Volume 6. In a short note to Anthony Eden, allegedly referring to the Hungarian operation at Auschwitz, Churchill wrote, “There is no doubt that this is probably the greatest and most horrible crime ever committed in the whole history of the world, and it has been done by scientific machinery by nominally civilized men in the name of a great State and one of the leading races of Europe” (p. 693). Notably, there is no explicit mention of either Auschwitz, gas chambers or Jews.

German. Most Jews back then didn't want German "blood money", as they put it, but in the end, reason (or was it greed?) prevailed, and a deal was struck. Although Adenauer elaborated on the "great moral obligation" held by Germany toward Israel and Jews generally in a speech of 6 September 1952, the real motivation on both sides was money.²⁷⁴

I hope that the cabinet will not make things difficult for me. If the cabinet did cause problems, it would be a foreign policy disaster of the first order. It would not only be a political disaster, *it would also strongly impede all our efforts to acquire foreign credit again*. Let us be clear that now, as before, *the power of the Jews in the economic sphere is extraordinarily strong, so that this... reconciliation with the Jews is an absolute requirement* [for Germany]. (Emphases added)

The deal, known as the Luxembourg Agreement, was signed just four days later.

The Allied "re-education" program implemented after the war aimed at undermining, if not utterly destroying, any German nationalist or patriotic leanings. It was a success. Postwar West Germany—and after 1989, Germany as a whole—has never understood itself primarily as a nation, but more as an economic enterprise. Buying Jewish goodwill with billions of reparations was paid back a thousand-fold, with an economic and financial success story that has raked in trillions for the Germans. Anyone rocking the German economic boat by riling up Jewish sentiments against Germany has always been ousted very quickly. Today, such acts can even be illegal, threatened with fines and prison terms of up to 5 years.

By now, generations of Germans have been raised in an environment that feeds them Jewish-approved Holocaust propaganda around the clock, from cradle to grave. Any dissent is marginalized, ostracized, censored, outlawed, banned and literally burned. As a result, most Germans have been raised as true Holocaust believers. Few had a chance of getting exposed to alternative views. This includes today's mainstream politicians, who all toe the party line.

For instance, Chancellor Helmut Kohl, wearing a Jewish skullcap, pronounced Germany's "never ending shame" for the Holocaust in 1985. "We must not nor shall we ever forget the atrocities committed under the Hitler regime," he said.²⁷⁵

²⁷⁴ In Stackelberg and Winkle (2002: 400).

²⁷⁵ See, for example, *Los Angeles Times* (22 Apr 1985). This shows Kohl's remarkable learning aptitude, because according to Das Gupta (2016), two years earlier, "shortly after his election to Chancellor of Germany, he had adopted the popular cliché that Jews instrumentalize the Holocaust for political goals. The chancellor swashbuckled against 'leading Jews' in the U.S. They wanted to use the commemoration of the extermination of the Jews during World War Two 'as a moral lever in order to persistently tell the U.S. public that they had to support Israel come what may.'"

In a 2005 speech, Chancellor Gerhard Schröder accepted responsibility for “the greatest crime in the history of mankind,” one that involved “the murder of millions.” Camps such as Auschwitz were “a manifestation of absolute evil.” Jews and others “were exterminated with cold industrial perfection.” Germans today “bear a special responsibility” for the Holocaust; they must say “never again.”

In 2014, Angela Merkel vowed to strenuously fight a burgeoning German anti-Semitism. “I will personally do everything I can—as will my entire government—to ensure that anti-Semitism doesn’t have a chance in our country.” Of the growing Jewish population and culture there, she added, “We are proud and pleased that it was possible for that to grow in recent years.”²⁷⁶ Then in 2019, during a visit to Auschwitz, Merkel spoke of “the deep shame in the face of the barbaric crimes committed by Germans here.” “These crimes,” she said, “are, and will remain, part of German history, and this history must be told over and over again” (*Time*, 6 Dec). This, in a nation with a mere 0.14% Jewish constituency.

Again, such supplication is the result of an appalling blend of cowardice, pragmatism and a sort of subtle brainwashing of both the German elite and the German masses. Pragmatic issues certainly loom large; the global Jewish Lobby would undoubtedly exact fierce economic retribution if German leadership were ever to waver in their commitment to orthodoxy. Either way, it’s clear that the Lobby still has a stranglehold on the German government, and on German society at large. One can only hope that resurgent nationalist parties, such as the *Alternativ für Deutschland*, can begin to set things straight.

4. *Certain Holocaust statistics have fallen dramatically over the years*

Some may find it hard to believe that hundreds of Holocaust experts could be profoundly in error with respect to the ‘6 million,’ or the death statistics for the ghettos, the shootings, or the camps. But in fact they have been proven wrong, and dramatically so, on at least three occasions.

I mentioned the first case in Chapter 2 in my side comment on Auschwitz. Recall that, prior to 1990, many popular sources held that the camp witnessed 4 million total deaths (Jews and non-Jews).²⁷⁷ On 17 July of that year, the *Washington Times* announced: “Poland reduces Auschwitz death toll estimate to 1 million.” With little fanfare, the most infamous of death camps saw a 75-percent reduction in its fatalities. Worse yet, the reduction came entirely on the non-Jewish side of the ledger; these figures plummeted by over 90 percent.

²⁷⁶ Quoted by [LiveMint.com](https://www.livemint.com) (6 Sep 2014).

²⁷⁷ Though some historians, like Hilberg and Reitlinger, had long argued for lower numbers.

The second example was discussed in Chapter 9. Majdanek came to world attention with ‘authoritative’ claims of 1.5 million killed. Even as late as 1986, experts estimated 1.38 million Jewish deaths there. Today the curator of the camp museum claims just 59,000 fatalities—a reduction of 96 percent.

As a third example, consider another group allegedly targeted by Hitler: homosexuals. In 1975, the *New York Times* reported that “nearly a quarter of a million homosexuals were executed by the Nazis between 1937 and 1945” (10 Sep, p. 45). Six years later, Rector (1981: 116) wrote, “It seems reasonable to conclude that at least 500,000 gays died in the Holocaust because of anti-homosexual prejudice that consequently led to a Nazi policy of gay genocide...” “Actually,” he adds, “500,000 may be too conservative a figure.” Seventeen years later, however, Grau (1998: 140) admitted this: “An examination of the Third Reich’s trial statistics... reveals that these numbers are wildly exaggerated.” Putting hard figures to it, Novick (1999: 223) says, “The actual number of gays who died or were killed in the camps appears to be around five thousand, conceivably as high as ten thousand.” Another astonishing development. Here we see a drop from a “conservative” 500,000 to perhaps 5,000—the actual figures now coming in at a mere 1 percent of prior estimates.²⁷⁸

Thus we should not be too surprised if the overall Jewish death toll ultimately drops by 90 percent or more. Given the facts, it seems inevitable.

5. Objective data, when it comes to light, virtually always supports the revisionist position

Here is a good example: In 1990, forensic archaeologist Richard Wright was enlisted to find and excavate a rumored mass grave in the Ukraine, one which was the alleged work of the *Einsatzgruppen*. Recalling this event in 2010, Wright emphasized that the question “Where are the bodies?” is essential in proving war crimes. Eyewitness statements, he said, are “particularly vulnerable.” This poses a problem: “Without the bodies as material evidence of events such as the Holocaust, those who wish to deny that they happened can—and have tried hard to—set up a contest” in which both sides argue about the truth (Wright 2010: 99).

Wright traveled to Serniki, Ukraine, in an attempt to confirm reports of a then-16-year-old witness who had been conscripted to fill in an *Einsatzgruppen* mass grave in 1942. The young man reported that “the grave was some 50 meters long, 5 meters wide, and 2-3 meters deep. It contained up to 800 bodies, and was probably dug to below the local water table” (p. 98). We can do some quick calculations here. Assuming a 2.5 meter depth, the grave

²⁷⁸ Similarly, estimates of Gypsy deaths have dropped from more than 500,000 to something like 50,000.

would have been ($50 \times 5 \times 2.5 =$) 625 cubic meters in volume. At a presumed density of seven bodies per cubic meter, such a grave could theoretically hold 4,375 bodies. And yet the claim was only of 800 bodies.

“Locating and excavating such a site promised to be a formidable job,” says Wright. But find it he did, and this allowed a proper excavation that would confirm or refute the witness story. The grave “turned out to contain some 550 bodies and not the 800 he had estimated.” Furthermore, “the grave was some 10 m shorter than he said.” As Wright sees it, the witness is vindicated; despite the small errors, his general claims were “materialized in the soil”—in particular, “the general size and shape of the mass grave [and] the fact that there were hundreds of bodies in it.” In other words, close enough.

But Wright glosses over the critical calculation. The actual grave was found to be ($40 \times 5 \times 2.5 =$) 500 cubic meters. This grave held 550 bodies, resulting in a density of *only 1.1 bodies per cubic meter*. This is an astonishingly low figure, far below even the revisionist estimate.

If all *Einsatzgruppen* mass graves were of this density, or all death camp graves, it would mean the complete end of the traditional story. If the *Einsatzgruppen* killed, say, 1.5 million Jews, it would have required 1.36 million cubic meters to bury them all; or some 2,700 mass graves of the kind at Serniki. If all 900,000 alleged Treblinka victims were buried at a comparable density, it would have required 818,000 cubic meters, or some 1,600 Serniki-style graves. Such figures are sheer fantasy. They are utterly impossible.

And it makes sense that the Serniki grave was of typical density. Having shot 550 people, for whatever reason, it would not be reasonable to dig a smallish 80 cubic meter grave—perhaps of dimensions 10×4 meters and 2 meters deep—in which to hide them. The victims would be packed to within inches of the surface, and this would have been pointless as a means of hiding the bodies. Clearly you would want them all to be at least two meters below ground. In this case, the Serniki grave was the ideal size: wide enough for one or two layers of bodies at the bottom, and space to cover with two meters of soil. It makes sense—but then the whole traditionalist case falls apart.

Thanks to Wright’s work, revisionists now have one more solid, objective, irrefutable piece of data suggesting that they are right.

6. *The anti-revisionist response is highly revealing*

Since the year 2000, there have been only a few attempts by orthodox historians to respond directly to revisionist challenges. Two of these are particularly instructive: Richard Evans’s book *Lying about Hitler* (2001), and Deborah Lipstadt’s entry on “Denial” in the 2010 *Oxford Handbook of*

Holocaust Studies. Their tactics betray the many weaknesses of the conventional account.

In Chapter 4 of his book—"Irving and Holocaust Denial"—Evans attempts to summarize and rebut the revisionist point of view, with the ultimate goal of proving David Irving a 'denier.' In order to do so, he must define 'Holocaust denial,' show that it is wrong, and demonstrate that Irving supported it. On the first count, Evans proposes four pillars of denial: (1) less than 6 million Jews killed; (2) gas chambers were not used to any large degree; (3) the National Socialists' intention was deportation and not mass murder; and (4) the Holocaust story is "a myth invented by Allied propaganda," and "the supposed evidence... was fabricated after the war" (p. 110). We can agree with the first three, but the last is not defended by any revisionist of the past 30 years or so.

Evans then reviews the revisionist movement, employing a number of deceptive tactics. First, he liberally sprinkles his text with *ad hominem* attacks and other slanders, beginning with the generous use of the term 'denier.' The deniers, he says, "inhabit an intellectual world that [is] far removed from the cautious rationality of academic historical scholarship. What moved them seemed to be a strange mixture of political prejudice and bitter personal experience" (p. 105)—though one might wonder how Evans could know such things. They offer "a perverse kind of entertainment," something that belongs "to what some have called a paranoid style of historical writing." Deniers live in a kind of fantasyland; they claim "that virtually nothing of what [the survivors] had suffered had ever happened." More hyperbole from Evans; no serious revisionist has claimed that "nothing ever happened" to the Jews, or that they did not suffer greatly. But he goes on. "A good deal of [revisionist writing] seemed to be linked to racial hatred and antisemitic animosity in the most direct possible way." Another false statement, and tellingly, he offers neither citations nor any evidence to support this charge. In sum, says Evans, we must beware of the "weird and irrational world of Holocaust denial" (p. 110).

Next, Evans runs through a brief roll-call of prominent revisionists, but he gives an entirely misleading view of the field. He covers five individuals: Rassinier, App, Stäglich, Butz, and Faurisson. Certainly these men were important in the early development of revisionist ideas, but today only Butz is alive, yet no longer active. Critically, Evans elects not to mention *any* of the leading present-day revisionists. Mattogno, Graf, Rudolf, Kues and Berg are nowhere to be found in the chapter.²⁷⁹ Neither are their arguments.

Apart from his *ad hominem* attacks and distorted presentation of revisionism, Evans deploys a third common traditionalist tactic: silence on the

²⁷⁹ Mattogno and Berg appear in three footnotes later in the book, but only with regard to their oldest work.

key issues at hand. For example, he tells us nothing of the long and discrediting history of the ‘6 million’; nothing of the true meaning of vital German words such as *Ausrottung* and *Vernichtung*; nothing of what Hitler actually said about the Jews; nothing of the deportation plans such as Madagascar; nothing of the Auschwitz air photos; and nothing of the absence of bodies or remains at nearly every phase of the Holocaust.²⁸⁰

Finally, a fourth tactic: straw-man argumentation. Evans’s final pillar of denial is that the Holocaust is a “myth” and the evidence “fabricated.” He elaborates: “Reading through the work of Holocaust deniers like Arthur Butz, it was more than clear that they wanted their readers to believe that the evidence for the Holocaust was all fabricated” (p. 128). Later he refers to “the common position of Holocaust deniers that evidence for the Holocaust has been fabricated” (p. 139). These statements are utterly false, as should be clear from the entirety of the present work. Evans lays out an argument that revisionists *do not make*, knocks it down, and then declares victory. It is a classic logical fallacy. The fact that Irving—not a serious Holocaust revisionist—made two or three ill-considered remarks does not grant Evans license to smear the true revisionists with the same broad brush.

For a Cambridge historian, all this is completely unacceptable. Evans is either ridiculously ignorant of his subject matter, or is deliberately misinforming the reader by excluding nearly all of the most relevant information. Either way, he has lost all credibility.

More recent is Lipstadt’s 2010 essay. A professor of theology and a Zionist Jew, she has long promoted herself as an expert on the Holocaust and Holocaust denial. Here, if anywhere, we would expect to find a rational, logical and disinterested treatment of the many troublesome issues. But again we are disappointed. In her very first sentence, Lipstadt manages to deploy three argumentative fallacies. The “deniers” (slander) are led by a small group of men, including “Faurisson, Butz, and Irving” (misleading names), who “spread the notion that the Holocaust... never happened” (straw man and flat-out lie). A poor start, to be sure.

She then offers a list of 12 points of alleged commonality amongst all deniers. Of these, only five are legitimate and relevant: (1) no genocide took place, (2) homicidal gas chambers did not exist, (3) Jewish fatalities were much less than 6 million, (4) there are non-sinister explanations for many issues, including Zyklon use against typhus and the fact that *ausrotten* means

²⁸⁰ Interestingly, he does touch briefly on the decisive issue of diesel gassing—though giving just the slightest hint of the difficulties involved. Evans writes: “Irving also denied that diesel engines could be used for killing operations. ‘These engines,’ he [Irving] said, ‘exhaust non-lethal carbon dioxide, and only minute quantities of toxic carbon monoxide’” (p. 123). True, as we have seen. Evans’s reply? Nothing. He loftily declares Irving’s argument to be “specious and derivative,” and leaves it at that. This is actually quite common among orthodox historians. When compelled to discuss an inconvenient issue, they will mention it very briefly, explicitly or implicitly deem it false, and then drop it.

‘uprooting,’ and (5) the Nuremberg trials were a “victors’ court” that involved torture to extract false confessions. Her remaining points are irrelevant, deceptive or misleading.

The bulk of her piece focuses on “deniers’ tactics.” The list below summarizes these, and provides some obvious responses.

- Deniers often refer to “immoral equivalencies,” that is, downplaying Jewish persecution by the Germans because all parties in the war did terrible things. Response: Irrelevant to the Holocaust story and to revisionist arguments.
- “Deniers cast themselves as academics engaged in a reasoned pursuit of historical truth” (p. 563). Response: True and accurate. Why this is a problem is unclear—except that it makes the job of traditionalists like Lipstadt much harder.
- Survivor testimony “is ignored, discredited, or dismissed unless it can be interpreted as indicating that the Holocaust did not happen.” Response: Partly true. Outrageous, contradictory or blatantly false testimony is disregarded. Some testimony is useful, but must always be subjected to scrutiny. In no case is testimony used to support the idea that the Holocaust “did not happen.”
- “Deniers rely on verbal obfuscation,” as when they discuss the meaning of ‘final solution’ or ‘special treatment.’ Response: It is not “obfuscation” to refer to the actual words used by the Germans and to examine their true meanings in context. Notably, she does not mention here the issues with *ausrotten* and *vernichten*.
- Minor errors in either National Socialist or survivor testimony are used to discredit the entire testimony. Response: False. Each specific claim must be examined on its own merits. However, a statement containing even one flagrant falsehood must immediately be suspected of containing other falsehoods.
- Deniers try to exonerate leading National Socialists by attributing the murder of Jews to rogue elements of the army or to German allies. Response: Jewish deaths resulted from a wide variety of causes—none of which derived from explicit orders from the top. Call this ‘exoneration’ if you like.
- Related to the above, deniers emphasize that no one has found a Hitler order for mass murder, nor even reference to such an order. Response: True, and a significant fact, as I explained in Chapter 5. Lipstadt tries to brush away this inconvenient matter by stating that “reputable historians seldom base their conclusions on the existence, let alone the absence, of a single document” (p. 566). But no revisionist has ever based his claim on this single fact. It is only one of many that point to mass deportation, not mass murder.

- Deniers say that the Auschwitz Krema II ruins have no evidence of ceiling holes through which the Nazis poured the Zyklon pellets. Without such holes, there was no mass murder at Birkenau. And disproving mass murder at Auschwitz undermines the entire Holocaust story. Response: True, and another difficult fact for Lipstadt and her colleagues. She claims to know of “a wide variety of evidence that attests to their existence and location.” She points to one air photo allegedly showing something on the Krema II roof, and one ground photo showing “chimneys” under construction, but these fail to prove her case. In the end, the stubborn fact remains: if there were holes in the ceiling of Krema II, there would almost certainly be some tangible evidence today. But there is none.

Thus we can see the same deceptions at work here as in Evans’s book. (A) *Ad hominem* attacks abound: revisionists are ‘deniers,’ ‘anti-Semites,’ and ‘racists.’ (B) Misleading presentation of revisionism and the leading revisionists: no mention at all of Mattogno, Rudolf, Graf, Kues or Berg, nor anything at all on their many important publications through the decades up to today. (C) Silence on many of the same key issues: nothing on the ‘6 million,’ Hitler’s actual words, deportation plans, air photos or the glaring absence of bodies or remains. And (D) straw-man arguments: emphasis on ‘hoax,’ ‘myth,’ evidence fabrication, and the idea that ‘the Holocaust never happened.’ Such is the state of orthodox replies to revisionism.

* * *

In completing my inquiry into the Holocaust, let me return to a passing comment I made in Chapter 8. There, in the discussion of wood requirements for burning corpses to ash, I noted the striking contrast between revisionist claims of 160 kg of wood per typical 45 kg corpse (3.5-to-1 ratio) and orthodox claims that the same body requires only 25 kg of wood (0.56-to-1). Köchel (2015) analyzed actual incinerations of diseased farm animals in 2001, and his work roughly confirmed the revisionist position. I then suggested a little burning experiment to settle this issue.

Let me repeat and expand upon that idea. I hereby propose what I call the “Grand Holocaust Experiment.” Its purpose would be to confirm the critical gas-bury-exhume-burn sequence of the three Reinhardt camps. Here’s how it might go: Purchase 1,000 live hogs of various sizes, in a weight range of 10 to 200 lbs. Herd them tightly into an enclosed room, with a ceiling slightly higher than the largest hog. Ensure that the room is ‘hermetically sealed.’ Take a large modern diesel engine, remove the catalytic converter, and then route the exhaust pipe into the room. Record what happens. As we recall, on the traditional view, all the animals will be expected to die within 10 or 20

minutes. If, however, the engine repeatedly stalls, or the walls are blown out, or the animals simply refuse to die after, say, 1 hour, then just shoot each one.

Dig a pit in the ground of size 145 cubic meters—roughly 6m × 6m, and 4m deep. Pack all 1,000 dead hogs into the pit; this would approximate the claimed seven bodies per cubic meter. Cover the pit with dirt and wait six months.

Construct a typical Reinhardt-like pyre, using metal rails about 30 meters in length. Exhume the dead hogs, and weigh each corpse. Then stack as many as possible on the pyre, in any configuration desired. Record the maximum number stacked, if less than 1,000. Presuming all 1,000 can be piled up, then load the pyre with approximately $(1,000 \times 45 \times 0.56 =)$ 25,000 kg of dry hardwood.²⁸¹ Light the pyre, and record what happens.

If the traditionalists are right, the hog corpses will be largely burned to ash—except for their teeth and large bones. Gather up and weigh the full mass of ash, teeth, and bone. Then sift through the entire mass and extract all teeth and bones; weigh these. Pulverize the teeth and bones to dust, using only hammers or a 1940s-era grinder. Combine this pulverized mass with the other remaining ash, return to the original pit, measure the volume, and bury with dirt. Take core samples every, say, five years, and record the results.

Either side may conduct this Grand Experiment, but with their far greater financial resources, I would suggest that our orthodox defenders undertake it. Or better: that they fund a neutral party to conduct it. Either way, this relatively simple procedure could resolve many unanswered questions and contentious claims. It would go a long way toward settling the Holocaust debate. May the best man win.

* * *

As I stated at the beginning of this book, I have tried to serve as an objective party. My goal was to observe and analyze the arguments on each side from a neutral vantage point. As to the total number of Jewish victims, I have deferred in making definitive pronouncements. Given the ensemble of facts, however, the overall death toll is certainly less than 3 million, and very likely under 2 million. And in my estimation, there is a 50/50 chance that it is lower than 1 million. The difference between the 1 and 2 million range is likely to turn on the definition of ‘victim.’ Using a reasonably stringent definition—say, any Jew who was directly killed at the hands of the Nazis, or who died while in their custody—will likely lead to the lower figure; a more generous

²⁸¹ This is equivalent to about 46 cubic meters of solid wood. This would just about perfectly fill the space below a 30m × 2m pyre that was one meter high.

definition, such as DellaPergola's (see Chapter 3), will push toward the higher.

The reader is perhaps concerned that the arguments presented here favor revisionism, and that this somehow compromises my neutrality. I would beg to disagree. The arguments are what they are. It is up to the traditionalists—the experts—to respond. If they have no good response, the revisionist arguments stand. The situation presented in this book is simply a consequence of both parties laying out their best charges and countercharges. I have done my best to present the strongest and most complete case on each side. If there appear to be winners and losers, the praise (or blame) goes to the parties themselves, not to me.

In a criminal (non-jury) trial, a judge listens to both sides, dispassionately, weighs the evidence, and then reaches a determination. The fact that he makes a decision for one side or the other *does not invalidate his objectivity*. It does not mean that he 'favors' one side, or is in cahoots with them. If the best evidence on each side has been laid out and cross-examined, then we can expect that most rational, unbiased judges would reach a common conclusion. And I think the same is true here in the Great Debate—even though I have done less than offer judgment on it.

Here, each reader must be his own judge. Each must determine for himself which account of events—traditionalist, revisionist or something else altogether—is most likely true.

Because of its reliance on censorship, polemics and bullying rather than on rational objectivity, traditionalism is currently in a sorry state. But its advocates can take specific actions to regain some dignity in this whole affair:

- Put an end to the name-calling, censorship and harassment of revisionists.
- Deal directly with the strongest and latest revisionist arguments in a clear and objective manner.
- Utilize a death matrix, or related technique, to clearly show the entire picture.
- Conduct large-scale, scientific studies on the gassing and burning of animal corpses under death camp conditions; in other words, conduct the Grand Experiment. Analyze fuel consumption, burning time, ash content and mass.
- Conduct scientific excavations at Auschwitz, Sobibór, Treblinka, and Chelmno, taking soil samples and analyzing them for ash content and human remains.
- Admit the weaknesses in the standard view.
- Admit when you are wrong, and revise the story accordingly.

Alas, this is perhaps asking too much. With so much time, money, power and blood invested in the standard view, I'm afraid that few traditionalists will find it worthwhile to approach this debate in such a dignified manner. In which case, as usual, it is up to the rest of us.

Annex

Appendices

Appendix A: Calculation Assumptions

ESTIMATED VALUES			
QUANTITY	METRIC	US	ACCEPTED BY:
Max density of living bodies (in enclosed space, i.e. “gas chamber”)			
– Soviet-Polish report of 1944	6 per sq m	0.6 per sq ft	
– Revisionist:	10 per sq m	0.9 per sq ft	All revisionists
– Traditionalist:	22 per sq m	2 per sq ft	Düsseldorf court
	28 per sq m	2.6 per sq ft	Provan; Muehlenkamp
	38 per sq m	3.5 per sq ft	Gerstein
Max density of dead bodies (in mass graves)			
– Revisionist:	6 per cu m	1 per 6 cu ft	Ball (2019: 264)
	8 per cu m	1 per 4.5 cu ft	Mattogno and Graf (2005: 137)
– Traditionalist:	15 per cu m	1 per 2.4 cu ft	Gerstein (implied); Muehlenkamp
	19 per cu m	1 per 1.9 cu ft	Provan (1991)
	22.5 per cu m	1 Per 1.6 cu ft	Harrison et al. (2011: 418, 421)
Average weight of gassing victim (30% children)			
– Revisionist:	50 kg	110 pounds	Mattogno and Graf
– Traditionalist:	35 kg	77 pounds	Provan; Muehlenkamp
Average weight of partially decomposed corpse			
– Revisionist:	45 kg	100 pounds	Mattogno and Graf (2005: 145)
– Traditionalist:	25 kg	55 pounds	Muehlenkamp
Amount of seasoned (dry) wood, to completely burn 1 kg animal flesh (fixed-height pyre, open air)			
– Revisionist:	3.5 kg		Mattogno and Graf (2005: 148f.)
	11 kg		onethirdoftheholocaust.com
– Traditionalist:	2 kg		Muehlenkamp max
	1 kg		Muehlenkamp min
	0.56 kg		Harrison et al. (2011: 467)
Burning time: Amount wood burned in one hour, in one square meter			
– Revisionist & Traditionalist:	80 kg	176 pounds	Mattogno and Graf (2005: 149)
Ash data			
Wood ash: Remainder by weight	8 %		Revisionist (high): Mattogno (2004)
	0.3 %		Revisionist (low): Neumaier (2019: 502)
	4 %		Revisionist (mean)
Wood ash: Density	340 kg / cu m	21 lbs / cu ft	Accepted by all parties
Corpse ash: Remainder by weight	5 %		Accepted by all parties
Corpse ash: Density	500 kg / cu m	31 lbs / cu ft	Accepted by all parties
Total ash density	375 kg / cu m	23 lbs / cu ft	Mattogno and Graf (2005)
Total ash (wood + corpse), per average body			
– Revisionist (mean):	8.6 kg / body	18.8 lbs / body	
– Traditionalist:	2.8 kg / body	6.1 lbs / body	Muehlenkamp

Appendix B: Major Death Camp Witnesses – Pro & Con

Witness / Status	Testimony supporting orthodoxy	Revisionist Critique
AUSCHWITZ		
Höss (commandant)	<ul style="list-style-type: none">– Multiple dates (e.g. 3/16/46; IMT on 4/5/46; memoirs).– Covers all major aspects of extermination story.– “2.5M Jews gassed, 0.5M other ways.” (IMT)– “1.13M Jews killed in total.” (memoirs)– Memoirs are “extremely reliable.” (Zimmerman, p. 236)	<ul style="list-style-type: none">– Nothing new in any of his testimonies.– Memoirs are “model of incoherence and contradiction, containing a number of demonstrable untruths” (Crowell).– “No material or documentary support for the [memoir] claims” (Crowell).– The “3M” killed (IMT) is exaggerated by 200%.– Mentions only 1 Zyklon hole in Krema I roof.– In IMT, mentions 3 other camps: Treblinka, Belżec, and “Wolzek” – no such camp ever existed.– Claims to have visited above camps in 1941 – neither Treblinka nor Sobibór existed until 1942.– Claims <i>Sonderkommandos</i> “ate and smoked” (no gas masks) while unloading gas chamber – would have been fatal.– Describes “self-burning corpses”; use of “waste oil” and “methanol”; use of dynamite – all ludicrous claims for body disposal.– Exaggerated numbers of Jews living in Europe by a factor of 10.
Kremer (Nazi doctor)	<ul style="list-style-type: none">– 2 sources of information: diaries, and 3 trial testimonies (Krakow/1947, Münster/1960 and Frankfurt/1964).– Diaries describe quarantine and gassing against typhus and lice.– Diaries mention “special actions” (<i>Sonderaktion</i>) – presumed to mean homicidal gassing.– Describes Auschwitz as worse than Dante’s Inferno; calls it “anus mundi,” and “camp of annihilation.”– Confirmed “extermination” interpretation of diaries during trials.	<ul style="list-style-type: none">– “Gassings” only mentioned once in diaries, in connection with fumigation for lice.– Was only in Auschwitz for 10 weeks, then returned to University job – unlikely that he would have been allowed to return after witnessing mass murder.– Letter of 10/21/42 describes only typhus and typhoid fever as reasons for “Auschwitz hell.”– Use of phrase “<i>bei einer Sonderaktion AUS Holland</i>” refers to a deportation action, not murder.– Coerced into admitting “extermination” thesis; otherwise faced “merciless punishment.”– Claimed 6 million Jewish deaths at Auschwitz versus 1 million accepted today.
Broad (SS private)	<ul style="list-style-type: none">– Testified at NMT, and in 1959 and 1964.– Described mass shooting, cremation in pits.– Describes gassing at Krema I.– “More thorough” than Höss. (Zimmerman)	<ul style="list-style-type: none">– Claimed 4-6 bodies at once in muffle – impossible.– Claimed “flames” shooting out of chimneys– pure myth.– Claimed 4,000 people at once in chambers – an impossible 19/sq m.– Claimed 2-3 million Jews exterminated – vastly overestimated.– Described 6 Zyklon holes in KI, for “aeration” – wrong, and inconsistent with Höss.– Claimed gassing death came within 4 minutes – impossible.– Claimed Hungarian deaths up to 10,000/day – gross exaggeration.– Claimed Hungarians arrived Mar/Apr 1944 – actually, May-July.
Vrba (Jewish prisoner)	<ul style="list-style-type: none">– Aka Walter Rosenberg.– Leading author of “Auschwitz Protocols” (aka War Refugee Board Report).– Describes gassing procedure,	<ul style="list-style-type: none">– Sketch of camp is ridiculously inept.– No mention of gassing at Krema I in Main Camp, even though this went on for nearly 1 year.– Drawing of Kremas II/III layout is completely wrong,

Witness / Status	Testimony supporting orthodoxy	Revisionist Critique
	even though never personally witnessed it.	<p>both inside and out. Claims that muffles burned “3 normal corpses” at once, in 1.5 hours – gross exaggeration.</p> <ul style="list-style-type: none"> – Describes krema furnaces as “9 furnaces, each with 4 openings” – in fact, 5 furnaces with 3 openings each. – Claims that chambers gassed 2,000 in 3 minutes – technically impossible. – Claims a total of 1.76M gassed, up to April 1944 – impossibly high, and about 3x current orthodoxy.
Tauber (Jewish <i>Sonderkommando</i>)	<ul style="list-style-type: none"> – “Best witness for gassing” (Pressac). – Describes 4 Zyklon holes, fake showers. – Mentions 5 incineration pits near Krema V. 	<ul style="list-style-type: none"> – Burned 4-5 corpses per muffle, sometimes up to 8 – impossible. – Claimed that trench-burning was more efficient than kremas – wrong. – Trenches near Krema V never found. – Talks about ladling of liquid human fat from trenches to speed up burning – impossible. – Never actually witnessed a gassing. – Claimed 5-7 minutes/body cremation – impossible.
Müller (Jewish <i>Sonderkommando</i>)	<ul style="list-style-type: none"> – Claims to have spent 3 years in Auschwitz. – Mentions 4 incineration pits near Bunker 2. – Mentions 5 pits (50m long) near Krema V. 	<ul style="list-style-type: none"> – Unbelievably long time as <i>Sonderkommando</i> (normal was 3 months). – Bunker trenches never found. – Krema-V trenches never found. – Describes pits with boiling liquid human fat – impossible. – Claims pits were 2.5m deep – impossible, since water table only 1m deep. – Describes several quasi-pornographic gas chamber scenes. – Describes doctors cutting warm flesh from dead bodies, causing buckets to jump. – Claims furnace burning time of 7-12 minutes per body – impossible. – Describes wire-mesh Zyklon columns as having “spirals” in them, rather than moveable cages. – Claims that gassing victims were blue – does not happen. – Describes 6 holes in KI roof – inconsistent with Höss. – Never testified until his 1979 book – 35 years late.
Bendel (Jewish <i>Sonderkommando</i>)	<ul style="list-style-type: none"> – Aka Charles Sigismund. – Describes gassing procedure. – Describes 1000 people gassed at once, in Bunkers. – Mentions 3 pits, 12m long. 	<ul style="list-style-type: none"> – Claims KII/III gas chamber was 10m long actual, 30m. – Claims train tracks ran “up to the door” of KII/III – wrong. – Claims KII/III burn rates of 2,000/day comparable to impossible Hass numbers. – Describes 2 Zyklon holes “actually”, 4. – Said pits can burn 1000 bodies/hour impossible. – Describes ladling of liquid fat from pits impossible.
S. Dragon (Jewish <i>Sonderkommando</i>)	<ul style="list-style-type: none"> – Most important witness for Bunkers, even though worked there only 3 days. – Gave 2 testimonies: Feb. and May 1945. – Described fake signs “Zum Baden” and “Desinfektion.” – Claims 1700 people gassed in B1, and 2500 in B2 – Describes B1 burning pits: 4 pits, 35 m long. – Describes B2 burning pits: 4 (later, 6) pits, 35 m long. 	<ul style="list-style-type: none"> – Nothing in either testimony describes Bunker locations; never accompanied investigators to personally locate them. – 2 testimonies show many discrepancies. – Inconsistent distance between Bunkers – first 500m, then 3 km. – Can’t pack so many people into each Bunker – approx. 25/sq m (impossible). – Said gas smells “sweet” –actually, bitter almond smell. – Claimed to be with Mengele during selection in 12/42, but Mengele was not at Auschwitz until 5/43. – Claimed that <i>Sonderkommandos</i> could clear B1 in 2-3 hours – but from his own details, it would have taken 60-80 hours.

Witness / Status	Testimony supporting orthodoxy	Revisionist Critique
		<ul style="list-style-type: none"> – Mentions ladling of human fat from pits – impossible. – Burning pits never found. – Claimed B1 pits burned 7-8,000/day – impossible. – Claimed B2 pits burned 10,000/day – impossible. – Claimed both Bunkers combined burned up to 28,000/day – impossible!
Nyiszli (Jewish doctor)	<ul style="list-style-type: none"> – Claims to have worked with Mengele. – Describes 2 burning pits at Bunkers, each 50m long; could burn 5-6,000/day. – Described fake “Bath/Baden” signs. 	<ul style="list-style-type: none"> – Claimed Birkenau kremas could burn up to 10-20,000 bodies per day – vast exaggeration. – Pits never found; can’t burn that many bodies. – Described poison gas as “chlorine” – wrong (this was a standard WWI gas). – Mentions 4 elevators to lift bodies from chambers to furnaces – wrong (actually 1). – According to Pressac, all claims are “exaggerated by a factor of 4.” – Said all 4 kremas had 15 muffles – actually, only KII/III. – Claimed gas chamber room was 200 m long actually, 30 m. – Said Theresienstadt arrivals lived “2 yrs” in camp actually, 8 months.
Wiesel (Jewish inmate)	See text.	See text.
Levi (Jewish inmate)	<ul style="list-style-type: none"> – Spent 11 months at camp; liberated by Soviets. – Describes chambers as fake showers. 	<ul style="list-style-type: none"> – Expressed regret for being too sick to leave with the Nazis, prior to Soviet takeover! – Never set foot in Birkenau (only at Auschwitz III-Monowitz). – Only learned about gassings after the war. – Primary book (1947/1959, 1993) speaks rarely and vaguely of “the” gas chamber; however, 1976 Appendix suddenly has many details of the chambers. – Claims 24,000 Auschwitz deaths in one day – gross exaggeration.
V. Frankl (Jewish inmate)	<ul style="list-style-type: none"> – Spent 2 years at Theresienstadt ghetto, and 2 or 3 days at Auschwitz. – Claimed that “real extermination” took place at the smaller camps, not large ones like Auschwitz. 	<ul style="list-style-type: none"> – No discussion of the “facts” of Auschwitz. – Misleadingly implies he spent months there. – Never describes how he got out of the camp. – Claimed to see flaming chimneys.
Feinsilber (Jewish Sonderkommando)	<ul style="list-style-type: none"> – Aka: Fajnzylberg, Jankowski, Kaskowiak. – First to use term “Bunker.” 	<ul style="list-style-type: none"> – Claimed up to 12 corpses/muffle – impossible. – Claimed Birkenau kremas could burn up to 8,000 per day – vast exaggeration. – Describes 2 holes in Krema I roof – inconsistent with Höss, Müller, Broad. – Claimed Hungarian deaths up to 18,000/day – gross exaggeration.
BELŻEC		
Gerstein	See text.	See text.
Reder	See text.	See text.
Pfannenstiel (SS doctor)	– Witnessed gassing w/ Gerstein.	– Likely coerced, threatened w/ prosecution.
Oberhauser (SS Lt.)	– Claimed avg. 150 Jews killed per transport.	– Possible.
Schluch (SS Sgt.)	– “Showed Jews to the chambers.”	– Delousing chambers.
Klukowski (Polish dr.)	– Diary reports that 40 train cars/day arrived, people killed with “electricity.”	– Electricity myth completely rejected.

Witness / Status	Testimony supporting orthodoxy	Revisionist Critique
SOBIBÓR		
Stangl (commandant)	– “Never denied his crimes”	
Lambert (Sgt.)	– Constructed gas chambers.	– Delousing chambers
Fuchs (SS)	– Witnessed test gassing of 30-40 women.	
Bauer (SS)	– “ <i>Gasmeister</i> ”	– Claimed 350,000 total victims – gross exaggeration .
TREBLINKA		
Gerstein	See text.	See text.
Wiernik	<ul style="list-style-type: none"> – Spent 1 year in camp, before escaping during prisoner revolt. – Published influential booklet, “Year in Treblinka” (1944). – First to cite “engine exhaust” as killing method. 	<ul style="list-style-type: none"> – Describes gassing engine as from “dismantled Soviet tank” – highly improbable. – Claims 500 people in 25 sq m chamber – impossible 20/sq m. – Claims 1200 people in 49 sq m chamber – even more impossible 24/sq m. – Claims victims “suffered for hours” in closed chamber when engine failed, when they would have suffocated within 30 minutes. – Camp map plagiarized from a 1942 report. – Describes gassing victims as “yellow from the gas” – they would have been red or pink. – Claimed “millions” of deaths – gross exaggeration. – Claimed up to 20,000 gassed per day – gross exaggeration. – Describes burning 3,000 bodies per pyre – impossible. – Claimed that women’s bodies burned easier than men – nonsense.
Rajzman	<ul style="list-style-type: none"> – “Nestor of Treblinka survivors.” – Spent 10 months at camp. – Describes “fake train station” to fool Jews. 	<ul style="list-style-type: none"> – Claims gassed 10-12,000 per day average, and up to 25,000 per day – gross exaggeration. – Describes killing by “pumping out air” from chambers, and use of “chlorine gas” and “Cyklon.” – Failed to locate mass graves during postwar investigations. – Claimed 2,775,000 total victims – gross exaggeration. – Described burning pits of 300 m long, and 6 m deep – impossibly large.
Stangl (commandant)	Same as Sobibór	
Franz (2nd in comm.)	– “cannot say how many were gassed.”	Agreed.
Mentz (SS)	– “Gunman of Treb.” Shot people.	Agreed.
Matthes (SS)	– Mentions 6 chambers, holding 300 people each.	
Horn (SS)	– “describes gassing procedure.”	
Bomba (inmate)	– “Barber of Treblinka”	– Describes a 16 sq m (12’ × 12’) haircut room with 16 barbers and up to 70 (naked) women – over 5 people per square meter.

The Author

Arthur R. Butz was born and raised in New York City. He received his B.S. and M.S. degrees in Electrical Engineering from M.I.T. and his Ph.D. in Control Sciences from the University of Minnesota in 1965. In 1966 he joined the faculty of Northwestern University, Evanston, Illinois, where he is now Associate Professor of Electrical Engineering and Computer Sciences. Dr. Butz is the author of numerous technical papers.

Preface to the 2015 Edition

My investigations of the Jewish “Holocaust” commenced in 1972, and thirty-nine years have passed since the first publication of this book in 1976 in England as *The Hoax of the Twentieth Century*. Thirty-eight years have passed since the release of the slightly revised second British and first American edition of 1977. This text consists of the last, preceded by a short article I wrote for the student newspaper at Northwestern University in 1991¹ and followed by five supplements representing writings from 1979-2014. There is also an addendum to Appendix E (“The Role of the Vatican”), consisting of the obituary/tribute I wrote on Rev. Robert A. Graham. All except a late addendum to Supplement 5 were published in the *Journal of Historical Review*, which ceased publication in 2002. Also, Appendix A on Kurt Gerstein has been revised somewhat.

I am proud that this book remains of interest to anybody almost 40 years after its first publication. Nevertheless, the age of this text, and the great advances that have subsequently occurred in Holocaust revisionism, require some comments on the value of the book to today’s reader. How can such an old text not be obsolete today? What does today’s reader gain from it? Would it not be better to revise this text to take into account more recent developments?

From the perspective of today, the book has defects, and several people, of whom I am one, could now do better. In admitting such defects, I can plead that I was one man working with little help. Except for Wilhelm Stäglich, the correspondents I had before publication in 1976 were not then, and have not subsequently become, significant in revisionist work. The literature of revisionist orientation was scanty. Some of it was rubbish that constituted a minor nuisance. On the positive side were Paul Rassinier, Thies Christophersen, and Wilhelm Stäglich. At that time, the writings of Rassinier, a former political prisoner at Buchenwald, were of interest both as a primary source, relating personal experiences, and as historical exposition. (Today Rassinier is of interest only as a primary source.) Christophersen and Stäglich, Germans who had been stationed near Auschwitz during the war, were of value only as primary sources, although Stäglich later wrote a book of historical exposition. Even taking these three into account, the historical complex was not there, as I shall explain below.

A common complaint about this work has been that I am not a trained historian or history professor. It is, however, not unusual for people who are not academic historians to make contributions to historiography. The great American historian Francis Parkman was no history professor; he had only a brief academic appointment as Professor of Horticulture at Harvard. The late Arnaldo Momigliano urged wariness of academic historians and pointed out that

¹ *Daily Northwestern*, May 13, 1991, correction May 14.

none of the three leading Nineteenth-Century historians of the ancient world was a history professor, *e.g.* Mommsen was a Professor of Law.²

However, such examples do not satisfactorily illustrate the fact that history has a closer relationship to popular culture than most other academic disciplines. This is easily clarified and proved. In the major book reviews (*New York Times*, *New York Review*, etc.) one can find reviews of, and advertisements for, many works on the leading edge of historical research, *i.e.* works not specifically written for popular readership. No such attention is given to leading-edge works in electrical engineering and most other academic disciplines. Many intelligent laymen can read such historical works with comprehension. If many can read them, then some can write them. I could give reasons for this relatively popular status of serious history study, but it would carry us too far afield. In any case, there is no venality on the part of academic historians in approving of such popular promotion of their books.

Such observations show, however, that there is hypocrisy in the orthodox historians' common implication, when denouncing Holocaust revisionism, that only people with their kinds of Ph.D. degrees are competent to deal with historical issues.

The style of my book is certainly not elegant. I believe my style has improved much since then but, like most men with a technical education, my style remains at best dry and not elegant. It was, however, good enough to do the job. I have even sometimes wondered if elegance of style might be incompatible with a subject as dreary as the present one.

It is not immodest for me to say that mine is the best book of its type, because it is the only book of its type. To compare my book to others, the approach of mine is horizontal, the others vertical. Subsequent investigators have taken specific subjects and gone more deeply into them than I did. Such vertical approaches should be contrasted with my horizontal. I attempted to cover every reasonably relevant aspect of the problem. The question of the existence of homicidal gas chambers was only one of many. I tried to show what did happen as well as what did not. I showed the relevance of the Zionist and related movements. I discussed the Allied policies and the Jewish influences in them. My use of sources (*e.g.* the Nuremberg trials, Red Cross reports, Vatican documents, contemporary newspaper accounts) today seems obvious but it was not then. To aid in comprehending the early war crimes trials, I gave witchcraft trials as a useful precedent.

I claim an additional contribution of this book that may seem ridiculous on its face. I treated the German concentration camps as specific institutions that existed in specific locations, with the alleged events that took place in them taking place, if at all, in real space and real time, together with other events that happened simultaneously in those same camps or in real space. By "real space" I mean a space that we all exist in so that, whatever happened at Ausch-

² Momigliano.

witz, it happened at the same time President Roosevelt held meetings in Washington, and I as a child went to school, etc., and in the same space.

That is so obvious that it may seem preposterous for me to present it as an original perspective, but please hear me out. My impression of the extant literature was that the events claimed there may as well be imagined as having taken place on Mars, if at all, so absent was a concern for the broader context. As I reminded readers on page 226:

“There was a war going on during World War II.”

Consider my presentation of Auschwitz, the principal alleged “extermination camp.” I started by describing Auschwitz as a camp that performed functions similar to those performed by typical German camps that are not claimed to have been extermination camps; I outlined those functions, and I presented a map showing where the German camps were. Then I described Auschwitz in its unique respects and showed, why the Allies would have been interested in events transpiring at Auschwitz. I presented pictures of crematorium ovens at Auschwitz and other camps. I presented a map of the Auschwitz region, and a plan of the “Birkenau” section of the Auschwitz camp. That plan and the various maps showed the reader exactly where, in Europe, Poland, and at Auschwitz, the great gas chambers were supposed to have been located. Then I considered one of the specific groups of Jews, the Hungarian Jews, not only from the point of view of allegations of events in German camps but from the point of view of events in Hungary. That is, for me, the problem of the Hungarian Jews was as much a problem of what happened in Hungary as what happened at Auschwitz. Even in considering events at Auschwitz, I chose to place my perspective elsewhere, among the Allies who, at the time in question, were very interested in Auschwitz as an industrial bombing target and would have photographed the camp for that purpose.

The photographs were produced almost three years after publication of my book and confirmed my conclusions, but that is not the point that I am now trying to emphasize. My point is that, as unlikely as it may seem, my method of placing Auschwitz in its general historical context was essentially unique in this historical area. True, some of what I said in that respect is to be found in earlier books that purported to relate how the “exterminations” transpired, but in scattered bits and pieces that were usually incidental to those accounts. Even so, much had to be culled from diverse sources. For example, though it seems obvious that any useful discussion of the Auschwitz problem required a map of the Auschwitz region and of the Birkenau camp, the former had to be constructed by me from several sources and the latter had to be lifted, not from one of the standard “Holocaust” books such as those by Hilberg or Reitlinger, but from a book about a German trial of Auschwitz personnel that took place in 1963-1965. Hilberg, Reitlinger and similar authors were very stingy with maps and pictures, except in books specifically devoted to presenting pictures. We can say, with only minor oversimplification, that they would sell you a book of pictures or a book of text, but not one book integrating the two in any useful way.

I believe my analysis provoked investigations of specific problems, even when such influence was not acknowledged. My implied skepticism about the reality of the mysterious “German industrialist” who in 1942, according to the World Jewish Congress, passed along information that a plan to exterminate the Jews had been discussed in Hitler’s headquarters, may have provoked the later investigations attempting to determine his identity. Walter Laqueur and Richard Breitman, in *Breaking the Silence*, 1986, unconvincingly proposed Eduard Schulte. I also stressed the inaction of the Allies with respect to Auschwitz, which Laqueur (*The Terrible Secret*, 1980) and Martin Gilbert (*Auschwitz and the Allies*, 1981) tried without success to explain.³

The existence and relevance of the 1944 aerial reconnaissance photos of Auschwitz were, to the best of my knowledge, first argued in my book.⁴ I also believe that my book provoked, perhaps through some intermediary, the 1979 release of these photos by the CIA (Brugioni & Poirier), but again such influence is not admitted.

I analyzed the specifics of the alleged extermination process at Auschwitz. I showed that all of the specific material facts required a dual interpretation of relatively mundane facts, e.g. transports, selections, showers, shaving hair, Zyklon B, crematoria, etc., all real and all relatively mundane, had been given a second interpretation. That insight scarcely merits the label today, but it did then. It has been the main paradigm for all subsequent revisionist writing on Auschwitz and other alleged “extermination camps.” It may seem very simple and obvious after one reads this book; it certainly was not when I wrote it. The reader is shown what sorts of questions he should ask if he wants to go further. Those who have studied the development of ideas understand that the right answers are not attainable until the right questions are formulated (yes, questions can be right or wrong). This book, even today, shows how to do that.

I consider my book generally “right” even today in the sense of how the historical parts fit together, and they fit perfectly without major or fundamental mysteries. Contrast the gyrations of the typical orthodox historians who have nothing but mysteries. How and when was an order to exterminate given? Was such an order given at all? Why didn’t the Allies recognize what was (allegedly) happening at Auschwitz? Why didn’t the Pope forthrightly condemn physical extermination, even after the Germans had been driven out of Rome? Why didn’t the Allied press give greater prominence to reports of extermination of Jews, rather than bury them in the back pages of the larger newspapers?

This horizontal analysis remains unique in the revisionist literature. The book presented a historical complex that remains valid today. The book made

³ Editor’s remark: Laqueur’s and Gilbert’s books were also a reaction to the discovery by British historian David Irving that nothing points to Hitler having ordered, or ever been aware of, an extermination of the Jews. See Irving (1977) and Broszat.

⁴ There is an unconfirmed and disputed claim that U.S. Army Capt. Jacob Javits (later U.S. Senator) used the photos, in 1944, to argue for bombing Auschwitz. See letters in the New York Jewish weekly *Forward*, 23 Feb. 2001, 10, and 6 April 2001, 16. If the claim is true, the photos were forgotten until I argued, in my 1976 book, that they had to exist. I am inclined to think the claim is not true.

specialized studies easier because investigators did not have to worry about coherence of the larger picture; they could direct a curious person to my book. I did a good enough job for that, even if not a perfect job. The proof is that, among revisionists, defects of the book are certainly seen, but, unfortunately, there seems to be no great demand for an improved integrated work of comparable scope and no aspiring author in view.

An example. You want to discuss the question of homicidal gas chambers at Auschwitz. My old book won't help if you want to be current, and there would not necessarily be any reason to cite it.⁵ There are much-more recent and conclusive writings, but I could not imagine a person securely venturing into such a controversy without having a grasp of the general historical complex, as provided in my book. Thus, I cannot imagine contemporary Holocaust revisionism existing without a book such as mine, even if it is never necessary to cite it today.

It is still the only book of this sort. A better one would be nice but there are two problems that occur to me. First such a book, if written from the point of view of our knowledge today, would not fit into a single volume. This explains why I reject the idea of trying to bring this book up to date. Such a project would quickly run away from "updating," resulting in an entirely new work. Any attempt to respect the original content and organization of the book would be a handicap in the updating project. The best single volume for bringing the reader up to date on revisionist scholarship is a compilation of papers by many people, not an integrated work.⁶

Second, a paradox: a weakness of the book explains some of its strength. From the present point of view, there seems much in the book that is awkwardly presented. This is because I did not write this book as an expert. The book was written as works of research normally are: I was myself struggling to understand, as would an intelligent and serious reader. Thus, the book expresses a relationship of common perspective, and therefore implicit mutual empathy between author and reader that could not exist in a new book, written today from a position of expertise, and directed at a neophyte reader, which is the only relationship possible today. I believe this explains the occasional overwhelming effect the book has. From this point of view, the book is still contemporary, as well as "right," and ought not undergo major revision.

For these reasons, I have rejected any idea of "updating" this book. Rather, several later writings from 1979 on have been provided here, as specified above.

That this book is still valuable today is due to the distortions and misrepresentations that have continued to issue from the media and academe, resulting

⁵ The discussion of some issues of the alleged Auschwitz homicidal gas chambers as printed here in Supplement 5 is up to date, though.

⁶ Rudolf (2024). Expanded and updated version of the text originally published in German as Gauss (1994). There is also the multi-author, multi-volume effort crystallizing in the revisionist series *Holocaust Handbooks*, now counting 52 volumes: www.HolocaustHandbooks.com. See ads at the end of this book.

in millions of people so uninformed that a viewpoint of 1976 is a great revelation for them in 2024.

I consider this book as successful as could have been judiciously hoped under the circumstances, but it is important to view it as one of the successes in the phenomenon of Holocaust revisionism, for which no single person, or set of specific persons, can take credit. It seems to me to be just something that was timely and had to develop, and that I was just a part of this development. I discussed this in my paper reproduced as Supplement 1, but to try to make my point clearer, let me emphasize that the Jews have played a very important role in this development; they must take some of the credit. It was they who chose, in 1977, to spread the news of this obscure book to the most remote corners of the universe. Who could have imagined such massive publicity for a book from an unknown publisher, written by an unknown author, and only barely available in the USA? They have used their powerful positions in the media to keep the subject of "Holocaust" uppermost in the minds of the populace; we get it for breakfast, lunch, and dinner. The present "Holocaustomania," which younger readers may believe has been a permanent feature of our public affairs since World War II, can be fairly said to have started with the 1978 NBC-TV "docudrama" *Holocaust*. Only Jewish groups (either formally Jewish or having a largely Jewish membership), on the campus of Northwestern University, have maintained students' interest in my work on the "Holocaust." Such mutual dependency only holds for things that had to happen.

When I wrote this book, there were perhaps a half dozen serious Holocaust revisionist researchers (most not known by me). Today, there are too many for me to even try to list, and readers of contemporary Holocaust revisionist literature in all languages certainly number in the hundreds of thousands, perhaps millions.

There are many back-handed compliments to our success. Perhaps the most conspicuous is the U.S. Holocaust Memorial Museum. A February 1992 funds appeal for it, signed by "National Campaign Chairman" Miles Lerman, named "revisionists" as those whom the museum would "counter." The Museum formally opened in April 1993 with the "Intent on refuting revisionist attempts to diminish the scope of the Holocaust."⁷ As if that weren't enough, the 104th Congress passed, without dissent, a resolution making only two points: it "deplores" revisionism and "commends the vital, ongoing work of the [...] Museum."⁸ That silly Museum is an ironic monument to Holocaust revisionism.⁹

The Museum will not be the last such monument. In 1996, Jewish Senators Barbara Boxer and Arlen Specter handed Jewish movie director Steven Spielberg a check representing a \$1 million federal grant for his "Survivors of the

⁷ *Chicago Tribune*, 23 April 1993, sec. 1, 18.

⁸ Senate resolution 193 passed 9 Nov. 1995, and House resolution 316 passed 16 April 1996.

⁹ Perhaps the most telling point is that the Museum, after so much promotion and millions spent, has failed to depict a homicidal gas chamber. Robert Faurisson has commented on this (1994, 23) and related his humorous encounter with the Museum's director Dr. Michael Berenbaum (Weber (1994), 4).

Shoah Visual History Foundation” (a project of videotaping accounts of “survivors” – “Shoah” is the Hebrew word used in place of “Holocaust”). Specter motivated the grant in terms of opposing the considerable success of revisionists.¹⁰

A more recent example is the Holocaust Memorial in Berlin. A July 2001 advertisement, appealing for funds, raised the danger of revisionism.¹¹

Revisionist apostasy has been rare. It has been most visible in cases where some public figure who was not actually a revisionist made public remarks supportive of revisionism. A 1996 example was Abbé Pierre, a sort of French Mother Teresa (although more active in public affairs) who, despite his quick recantation of his revisionist remarks, will never be forgiven by his former friends.¹² This episode is one of many that illustrate the handicaps that Holocaust revisionism has labored under.

A final proof, if needed, of our success is the fact of laws passed in recent years, in several European countries, criminalizing the publication of revisionist views on the Holocaust. Such literature circulated freely in Europe until the present revisionist movement started making its impact in the late 1970s. In the United States, we are still free of state suppression, although there is considerable whining in some quarters about “First Amendment absolutism.” Here, the repression works largely by extra-legal means of intimidation and reprisal. For example, Fred Leuchter was the leading execution technologist in the USA¹³ when he published his famous 1988 report on the alleged homicidal gas chambers at Auschwitz and Majdanek.¹⁴ Since then, his business has been ruined and his marriage destroyed. All such developments are of course backhanded and evil tributes to the success of Holocaust revisionism. Even the most naive reader will see the point: they don’t want you to know these things! They are trying to hold back the wind.

We are successful, but we have a long way to go, as the brute strength of the dying monster is considerable.

¹⁰ *Boston Globe*, 24 July 1996, A6. Spielberg got into “Shoah business” (from an American expression – “there’s no business like show business”) via his *Schindler’s List* movie, which also failed to depict a gassing or homicidal gas chamber. On the basis of his other movies and other scenes in this one, I could not attribute the failure to squeamishness on Spielberg’s part. He is a good enough showman to have realized that a complete depiction of a gassing via Zyklon B, faithful to the legend and to physical possibility, would have been far too preposterous even for him. The Jewish worker who was shot for exceeding her assigned tasks was routine rubbish, but the gassing would have been too much.

Acknowledgments

A number of individuals contributed valuable suggestions and critiques which are reflected in the text of this book, but of course the responsibility for any errors of fact or interpretation, if such be found, is entirely my own. I also wish to reserve for myself any problems that may arise on account of the reaction to this book, and for this reason I refrain from making the applicable personal acknowledgments here.

Institutional acknowledgments are made to the U.S. National Archives, the U.S. Army Audio-visual Agency, and the Foreign Affairs Document and Reference Center of the U.S. Department of State, Washington, DC, to the Panstwowe Museum, Oświęcim, and to the Library of the University of Chicago, and the Center for Research Libraries, Chicago.

Special acknowledgment is made to the staffs of the Imperial War Museum, London, the national office of the Netherlands Red Cross, The Hague, and the Library of Northwestern University (especially the inter-library loan department), Evanston, all of whom contributed more than routine services without, of course, being aware of the exact nature of the research involved.

For the 2003 (English) and 2015 editions (English and German), I also wish to acknowledge the editorial work of Germar Rudolf. I could not have had a better editor.

Arthur R. Butz

Preface to the 1976 Edition

In common with virtually all Americans, who have had their opinions formed since the end of World War II, I had, until not very long ago, assumed that Germany had given the world a particularly murderous outburst during World War II. This view has ruled Western opinion since 1945 and earlier, and I was no exception in accepting the essentials of it.

An important qualification in the preceding is the term “essentials,” for the collection of crimes of which the Germans were supposedly guilty in World War II grows rapidly smaller as one examines the evidence and arguments assembled in readily available “revisionist” books. An elementary critical examination reveals that most of the crimes that are real even in the minds of “intellectuals” (e.g. lampshades manufactured by some Germans from the skins of human beings killed in concentration camps for the purpose) obviously had no basis in fact. Likewise with legends about mistreatment of American and British prisoners of war. Moreover, the general problem is elaborated considerably when one weighs, as the revisionists do, the appalling wartime and postwar brutalities of the Western Allies.

Such an investigation does not overturn the “Holocaust” legend, however, and the “six million” Jews murdered, mainly in “gas chambers,” can seem immovable fact. The revisionist books which overturn some of the most popular misconceptions seem to accept the gas chambers as factual. All educated opinion that the investigator consults accepts the “extermination” story. Professors of history who have specialized in Germany, if asked, seem to consider the charge as established as the Great Pyramid. Liberal and conservative publicists, though they have very different attitudes toward World War II and America’s entry into it, and though they squabble with each other on almost everything else, close ranks on the reality of the “Holocaust.”

Noting the obvious ways in which this legend is exploited in contemporary politics, notably in connection with the completely illogical support that the U.S. extends to Israel, I had long had lingering doubts about it, and there was also the fact that there existed a small number of respected observers whose views had not been formed entirely after World War II and who, in the very limited channels open to them and with various degrees of explicitness, denied even the approximate truth of the legend. A good example is the distinguished American scholar John Beaty, who was called to active duty in the military Intelligence Service of the War Department General Staff just before the entry of the U.S. into the war and attained the rank of Colonel by the end of the war. Among other things, Beaty was one of the two editors of the daily secret “G-2 Report,” which was issued each noon to give persons in high places, including the White House, the world picture as it existed four hours earlier. In his book *Iron Curtain Over America*, published in 1951, he ridiculed the six million legend with a few remarks that were unfortunately brief and inconclusive, but,

coming from a man who was one of the best informed in the world during the war, carried some amount of authority.

Elementary investigation into the question, of the sort the non-historian customarily does, led me nowhere. The meager amount of literature in the English language which denied the truth of the legend was not only unconvincing; it was so unreliable and unscrupulous in the employment of sources, when sources were employed, that it had a negative effect, so that the case for the truth of the essentials of the legend (disregarding quantitative problems, e.g., whether it was six million or four million or only three million) seemed strengthened. At the time I became aware that there existed additional literature in French and German but, being quite unaccustomed to reading texts in those languages except on rare occasions when I consulted a paper in a French or German mathematics journal, I did not undertake to acquire copies of the foreign language literature.

Moreover, I assumed that if such literature was worth more than what was being published in English, somebody would have published English translations.

Still possessing my lingering doubts I sat down, early in 1972, and started to read some of the “Holocaust” literature itself rather more systematically than I had previously, in order to see just what claims were made in this connection and on what evidence. Fortunately, one of my first choices was Raul Hilberg’s *The Destruction of the European Jews*. The experience was a shock and a rude awakening, for Hilberg’s book did what the opposition literature could never have done. I not only became convinced that the legend of the several million gassed Jews must be a hoax, but I derived what turned out to be a fairly reliable “feel” for the remarkable cabalistic mentality that had given the lie its specific form (those who want to experience the “rude awakening” somewhat as I did may stop here and consult pp. 567-571 of Hilberg¹⁵).

Although my long-lingering skepticism in regard to the legend was no longer on the defensive, my information could not, early in 1972, be considered conclusive, and my knowledge of the subject was not comprehensive, so I set out, at first in my “spare time,” to investigate the subject with the thoroughness that was required.

The reader will have surmised that my “spare time” eventually expanded considerably.

Several – for me startling – discoveries made the subject irresistible in a purely intellectual sense. I acquired the foreign language literature. Ultimately, I spent the entire summer of 1972 working on an exposé of the hoax, since by then I had penetrated and demolished the whole sorry mess. While the book you are holding differs considerably in quantity of factual content and general quality from the picture I had formed by the summer of 1972, that picture, whose essentials are transmitted here, was in such overwhelming contradiction to the lies that Western society had equipped me with, that my attention could

¹⁵ Vol. 3, 885-890, in the “revised and definitive edition” of 1985. Editor’s note: Cf. Graf (2022), Mattogno (2021).

not be drawn from the subject by any appeal to prudence or any such practical calculation. Because even early in the summer of 1972, it was evident that my research had carried the subject beyond the existing literature, I felt an inescapable obligation and an intellectual imperative to put forward for society's evaluation what I knew about this most pernicious hoax. It quickly became clear that only a book would do; the subject could not, given the years of propaganda, be treated in a research paper or pamphlet and, *a fortiori*, it could not be treated in the form of a lecture.

The body of a text was written in the summer of 1972, and then the manuscript was gradually improved in the course of the next two years. A trip to Europe in the summer of 1973 was very rewarding, as was a trip to Washington later in the year. The book was essentially finished in late 1974.

There will be those who will say that I am not qualified to undertake such a work, and there will even be those who will say that I have no right to publish such things. So be it.

If a scholar, regardless of his specialty, perceives that scholarship in acquiescing, from whatever motivation, in a monstrous lie, then it is his duty to expose the lie, whatever his qualifications. It does not matter that he collides with all "established" scholarship in the field, although that is not the case here, for a critical examination of the "holocaust" has been avoided by academic historians in all respects and not merely in the respect it is treated in this book. That is, while virtually all historians pay some sort of lip service to the lie, when it comes up in books and papers on other subjects, none has produced an academic study arguing, and presenting the evidence for, either the thesis that the exterminations did take place or that they did not take place. If they did take place then it should be possible to produce a book showing how it started and why, by whom it was organized and the line of authority in the killing operations, what the technical means were and that those technical means did not have some sort of more mundane interpretation (*e.g.* crematories), who the technicians involved were, the numbers of victims from the various lands and the timetables of their executions, presenting the evidence on which these claims are based together with reasons why one should be willing to accept the authenticity of all documents produced at illegal trials. No historian has undertaken anything resembling such a project; only non-historians have undertaken portions.

With these preliminary remarks, therefore, I invite your study of the hoax of your century.

A Short Introduction to the Study of Holocaust Revisionism

First published in the Daily Northwestern, May 13, 1991, correction May 14.

I see three principal reasons for the widespread but erroneous belief in the legend of millions of Jews killed by the Germans during World War II: U.S. and British troops found horrible piles of corpses in the west German camps they captured in 1945 (e.g. Dachau and Belsen), there are no longer large communities of Jews in Poland, and historians generally support the legend.

During both world wars, Germany was forced to fight typhus, carried by lice, in the constant traffic with the east. That is why all accounts of entry into the German concentration camps speak of shaving of hair, showering, and other delousing procedures, such as treatment of quarters with the pesticide Zyklon. That was also the main reason for a high death rate in the camps and the crematories that existed in all.

When Germany collapsed in chaos, then of course all such defenses ceased, and typhus and other diseases became rampant in the camps, which quartered mainly political prisoners, ordinary criminals, homosexuals, conscientious objectors, and Jews conscripted for labor. Hence the horrible scenes, which, however, had nothing to do with "extermination" or any deliberate policy. Moreover, the West-German camps involved were not the alleged "extermination camps," which were all in Poland (e.g. Auschwitz and Treblinka) and which were all evacuated or shut down before capture by the Soviets, who found no such scenes.

The "Final Solution" spoken of in the German documents was a program of evacuation, resettlement and deportation of Jews, with the ultimate objective of expulsion from Europe. During the war, Jews of various nationalities were being moved east, as one stage in this Final Solution. The legend claims that the movements were mainly for extermination purposes.

The great majority of the millions allegedly exterminated were east European, not German or west European, Jews. For that reason, study of the problem via population statistics has been difficult to impossible, but it is a fact that there are no longer large communities of Jews in Poland. However, the Germans were only one of several parties involved in moving Jews around. The Soviets deported virtually all of the Jews of eastern Poland to their interior in 1940. After the war, with Polish and other Jews pouring out of the east into occupied west Germany, the Zionists moved large numbers to Palestine, and the U.S. and other countries absorbed many Jews, in most cases under conditions making impossible a numerical accounting. Moreover, the Polish borders were changed drastically at the end of the war; the country was literally moved west.

Historians generally support the legend, but there are precedents for nearly incomprehensible blindness on the part of scholars. For example, throughout the Middle Ages, even the Pope's political enemies conceded his false claim that the 4th-Century Emperor Constantine had ceded rule of the west to the Pope, although all knew very well that Constantine had been succeeded by more emperors. Near unanimity among the academics is especially suspect when there exist great political pressures; in some countries, Holocaust revisionists have been prosecuted.

It is easy to show that the extermination legend merits skepticism. Even the casual reader of the Holocaust literature knows that during the war virtually nobody acted as though it was happening. Thus, it is common to berate the Vatican, the Red Cross, and the Allies (especially the intelligence agencies) for their ignorance and inaction, and to explain that the Jews generally did not resist deportation because they did not know what was in store for them. If you add all this up, you have the strange claim that for almost three years German trains, operating on a continental scale in densely civilized regions of Europe, were regularly and systematically moving millions of Jews to their deaths, and nobody noticed, except for a few of our Jewish leaders who were making public "extermination" claims.

On closer examination, even those few Jewish leaders were not acting as though it was happening. Ordinary communications between the occupied and neutral countries were open, and they were in contact with the Jews whom the Germans were deporting, who thus could not have been in ignorance of "extermination" if those claims had any validity.

This incredible ignorance must also be attributed to Hans Oster's department in German military intelligence, correctly labeled "the veritable general staff of the opposition to Hitler" in a recent review.

What we are offered in evidence was gathered after the war, in trials. The evidence is almost all oral testimony and "confessions." Without the evidence of these trials, there would be no significant evidence of "extermination." One must pause and ponder this carefully. Were trials needed to determine that the Battle of Waterloo happened? The bombings of Hamburg, Dresden, Hiroshima and Nagasaki? The slaughter in Cambodia?

Yet this three-year program, of continental scope, claiming millions of victims, required trials to argue its reality. I am not arguing that the trials were illegal or unfair; I am arguing that such historical logic as the legend rests on must not be countenanced. Such events cannot happen without generating commensurate evidence for their reality, just as a great forest fire cannot take place without producing smoke. One may as well believe that New York City was burned down, if confessions to the deed can be produced.

Detailed consideration of the specific evidence put forward in support of the legend has been a focus of the revisionist literature, but I shall mention one point here. The claim of the legend is that there were no technical means provided for the specific task of extermination, and that means originally provided for other purposes did double duty in improvised arrangements. Thus, the Jews

were allegedly gassed with the pesticide Zyklon, and their corpses disappeared into the crematories along with the deaths from “ordinary” causes (the ashes or other remains of millions of victims never having been found).

Surely, any thoughtful person must be skeptical.

Chapter 1: Trials, Jews and Nazis

Trials and Doubts

The “war crimes trials,” which the victors in World War II conducted, mainly of Germans but also of many Japanese, were precedent-shattering in their scope and in the explicitness of the victorious powers’ claims to some sort of legal jurisdiction in respect of laws or understandings, which did not exist at the time they were allegedly broken by the Axis powers. Thus, in disregard of European honor conventions, which had been respected for centuries, German civilian and military prisoners, many of the highest rank, met violent deaths while in Allied captivity as a supposed consequence of these extraordinary proceedings.

Nothing resembling the trials of 1945-1949, which were conducted by the wartime enemies of Germany, has ever occurred before. The case of Joan of Arc comes to mind, but that involved a solitary prisoner, not an entire state, and the English who were, in the last analysis, responsible for the trial did everything to make the issue appear to be one of heresy and witchcraft, already formally proscribed, to be decided by an impartial and universal church according to pre-existing rules of evidence and procedure.

In the United States, the real progenitor of the trials, opinion on the appropriateness of having conducted such trials has always been divided, but the balance has varied. In the immediate post-war period, opinion generally favored the trials with, however, some significant voices in opposition. In the middle of the heated election campaign of 1946, just before the major Nazis Göring, Ribbentrop *et al.* were to be hanged, Senator Robert A. Taft delivered a speech attacking both the legal basis for the trials and the sentences which had been imposed; his speech seems to have hurt his Republican Party in those elections.

A decade later, views had evidently changed somewhat, since at that time the then obvious presidential candidate John F. Kennedy published a book, *Profiles in Courage* (a survey of various people whom Senator Kennedy thought courageous), in which he commended Taft for taking this stand, adding that Taft’s views “are shared [...] by a substantial number of American citizens today.”¹⁶

With the Eichmann abduction in 1960 and subsequent “trial” and with the associated later publicity, opinion seemed to move again, however slowly, toward approval of the trials. Many reasons may be offered for this extraordinary

¹⁶ Kennedy, 216-219; 236-239 in Memorial Edition.

reversal, but it seems to me that what had happened was that in a peacetime, generally non-hysterical atmosphere the world's attention had been focused on one tale of a peculiarly macabre sort: the killing, mainly in "gas chambers," of several (usual figure, six) million Jews of all ages and conditions by the Nazis during the war, as part of a program of ridding Europe of Jewry. Gerald Reitlinger's *The Final Solution*, 2nd edition (1968), is generally accepted as the most detailed and useful presentation of this claim, and Raul Hilberg's *The Destruction of the European Jews* (1961) tells essentially the same story. Other writings are Nora Levin's *The Holocaust* (1968), several books by Léon Poliakov, and *The War Against the Jews, 1933-1945*, by Lucy S. Dawidowicz (1975).

Returning to the problem of the appropriateness of the war crimes trials, everybody would agree as to the (at least) shaky legal foundations of the trials, but apparently many people would go along with the claim that the trials were appropriate anyway because normal wartime excesses were not involved; the extraordinary nature of the crime, the extermination of the European Jews, called for extraordinary proceedings. Such cruelty must not only be punished but documented as well, the argument goes.

I do not propose in this book to settle the question of what degree of cruelty justifies what degree of legal irregularity. Rather, a rarely heard point, which is at least relevant to the debate, is insisted upon here: It is a fact that without the evidence generated at these trials, there would be no significant evidence that the program of killing Jews ever existed at all. One has only to examine the sources employed by Hilberg and by Reitlinger to see this. If the trials had not been held, a person claiming the existence of the extermination program could not, if challenged, produce any evidence for this, save a few books (not including Hilberg or Reitlinger) whose claims are just as unsupported as his original claim. Thus, the problem that had been involved in deciding whether or not to hold trials on the Jewish extermination aspect was not a simple question of whether or not to try mass murder; unlike the usual murder case there was legitimate and very solid doubt that the deed had been committed at all.

This may surprise the reader who regards the tale of Jewish extermination as a near certainty; such is simply not the case. There are many considerations supporting this view, and some are so simple that they may surprise the reader even further. The simplest valid reason for being skeptical about the extermination claim is also the simplest conceivable reason: at the end of the war, they were still there.

This must be qualified only slightly. Consider a West European observer, who had been familiar with the status of European Jewry prior to the war, making a survey of West European Jewry in, say, late 1946 (East European Jewry was out of bounds). He would have found Italian, French, Belgian, and Danish Jewry essentially unscratched (these points will be discussed more fully in later chapters). On the other hand, he would have found that large numbers of Jews, possibly majorities, were missing from Luxembourg, the Netherlands, and Czechoslovakia (then accessible from the West). German-Austrian

Jewry was confused because, although most had emigrated before the war, it was difficult to be precise about what numbers had emigrated to where. In any case, large numbers, possibly majorities, of those who had remained were no longer resident in their former homes.

However, the absences were offset by the obvious fact that displaced persons' camps in Germany were full of Jews (a figure of more than 250,000 has been given¹⁷) and that many European Jews had emigrated to the U.S. or Palestine or elsewhere since the beginning of the war. The facts available to the West European observer in late 1946 argued very strongly against the extermination claims, which had received such wide publicity during the war and at the recent trial at Nuremberg.

The passage of a quarter of a century has, despite superficial developments, gradually strengthened this view of the extermination tale, although for many years there was only one serious writer in the field, the late French geographer Paul Rassinier. In 1948, he published a book, *Passage de la Ligne*, on his experiences as a left wing political prisoner at Buchenwald, 1943-1945, "generally received with sympathy, provoking only muffled and inconclusive gnashings of teeth on a certain side."¹⁸ Then in 1950, he published *Le Mensonge d'Ulysse* (The Lie of Ulysses), a critical study of the concentration camp literature, in which he challenged the certainty of the gas chambers: "It is yet too early to pronounce a definitive judgment on the gas chambers."¹⁹ This provoked a violent press campaign, which led ultimately to legal actions, in which author, preface author, and publisher were first acquitted, then found guilty with judgments involving fines, damages, and suspended prison sentence, and finally acquitted again.

In 1955, the two books were combined as *Le Mensonge d'Ulysse*, 2nd edition, in which material increasingly critical of the gas chamber claim had been added. The most common (but not very common) edition today is the fifth (referenced here), published in 1961, in which year Rassinier also published a short "complementary" volume, *Ulysse Trahi par les Siens*, consisting of three essays showing that he had moved rather strongly in the direction of a negative judgment on the gas chambers; the last essay is the text of a speech given in several German and Austrian cities in the early spring of 1960 (just before the Eichmann affair). In 1962 followed *Le Véritable Procès Eichmann* (The Real Eichmann Trial), a study of the entire range of alleged German crimes in their historical and political contexts; by this time, he had reached a definitive conclusion on the tale of extermination of the Jews: "a historic lie: the most tragic and the most macabre imposture of all time."²⁰

Rassinier employed two basic approaches to reach this conclusion: the material and the demographic.

¹⁷ Grayzel, 792.

¹⁸ Rassinier (1961a), 9.

¹⁹ *Ibid.*, 175.

²⁰ Rassinier (1962), 112.

By the material approach, we mean the analysis of the evidence that mass executions of Jews by gassings or other specific means were in fact conducted by the Germans during World War II. The material approach is nearly synonymous with analysis of the war crimes trials evidence, or of the trials evidence as interpreted by Hilberg and by Reitlinger, and as supplemented by them with similar evidence. Rassinier only tentatively explored the demographic approach in *Le Véritable Procès Eichmann*, but in his final general work on the Jewish extermination problem, *Le Drame des Juifs Européens* (The Drama of the European Jews), 1964, he presented a lengthy analysis of the question from a demographic point of view. In 1965, he published *L'Opération "Vicaire,"* a critique of Rolf Hochhuth's play *The Deputy*. One must comment that it is necessary to check up on Rassinier in his interpretation of sources; some do not check out, and, in addition, he employs some clearly unreliable sources at a few points. There are also some glaring but relatively irrelevant errors of fact, such as characterizing Hanson Baldwin as the *New York Times*' "expert in matters of Jewish population" (it is doubtful that the *Times* ever had a staff member who could be characterized thus) and in asserting that the majority of American Jews are anti-Zionist and support the outlook of the anti-Zionist American Council for Judaism (which was never a politically significant organization). However, Rassinier was a courageous pioneer in an ignored area and, despite the various shortcomings of his work, no fair minded person could read it without becoming at least skeptical about the "exterminations." Rassinier passed away in July 1967. His books had appeared in German, Spanish, and Italian translations, but no English translation was published for some years.²¹

Rassinier's books were followed by three books, which Josef Ginsburg published under the pseudonym J. G. Burg: *Schuld und Schicksal* (Guilt and Fate), 1962, *Sündenböcke* (Scapegoats), 1967, and *NS-Verbrechen* (National-Socialist Crimes), 1968.²² Ginsburg's books are not particularly well researched, since his views are based mainly on what he had read in the newspapers plus his personal experiences as a Jew who, together with his family, was deported during the war to occupied eastern territory by the Nazis and the Romanians. After the war, Ginsburg took his family to Israel, but he eventually became very anti-Zionist and moved back to Europe, eventually setting up a bookbindery in Munich. While he believes that many Jews perished as a result of the combined effects of Nazi policies and wartime conditions, he denies that the German government ever contemplated the extermination of the Jews of Europe, and he is particularly scornful of the six million figure. He is unsure of the existence of gas chambers, but he believes that many Jews perished on account of epidemics, pogroms, air raids, and executions of partisans, and offers

²¹ Editor's note: A collection of the most important texts by Rassinier was published in 1978; another English language volume appeared in 1979; his first book *Ulysse's Lie* appeared in 2022.

²² J. Ginsburg wrote a number of other books, which got increasingly polemical with time, for instance *Majdanek in alle Ewigkeit* (Burg 1979, 2022). Editor's remark.

an estimate of about three million as the maximum possible number of victims, although he believes the correct figure is much lower. As a reward for his efforts to get at the truth, Ginsburg, a small man and not young, was beaten up by Jewish thugs while visiting his wife's grave in the Israelite cemetery in Munich.²³

[Editor's Note: In this context, the seven-volume work *Die Geschichte der Verfemung Deutschlands* (The History of Germany's Defamation) by the Vienna author Franz J. Scheidl ought to be mentioned, which was self-published in 1967/68. It was disseminated only in small numbers, and is not widely known today even among revisionists. The work has a wide scope reaching from atrocity propaganda during World War I (vol. 1) to the injustice done to Germany and the German people after World War II (vols. 6 & 7). Especially volumes 3 to 5 tackle the orthodox Holocaust narrative head-on. A large part of Scheidl's work consists of quotes from more or less revisionist writings which appeared earlier. It offers only little new material based on the author's own research. Scheidl is moreover rather polemical at times and does not cite his sources properly in all cases. The value of this work lies primarily in its encyclopedic presentation of revisionist knowledge as it existed in the mid-1960s.]

In 1969, a short book was published in the United States, *The Myth of the Six Million*, attributed to an anonymous author.²⁴ While some things can be said in favor of this book, e.g. I learned of Rassinier there, it also contains so many errors of fact that it illustrates that it is not enough that a book's thesis be correct, for quite a few people who used it as a basis for prosecuting public controversy got burned as a result.

The next development was the publication in Germany of a book by Emil Aretz, *Hexen-Einmal-Eins einer Lüge* (The Witches' Multiplication Table of a Lie), of which only the third edition, Munich, 1973, seems to have attained significant circulation. Aretz carries the case against the exterminations only slightly beyond Rassinier. He depends heavily on Rassinier in this respect, although he provides some new material. A major function of his book is the presentation of a remarkably bold and forthright general defense of the German nation.

The unreasonable continuation of war crimes trials in West Germany, and the absence of any statute of limitations with respect to alleged war crimes by Germans have had a seldomly remarked implication: people who "were there" have been afraid to come forward and report what, to their knowledge, actually happened. They would rather not call attention to the fact that they "were there." However, it was inevitable that a few courageous individuals would come forward nevertheless. The most important of these, to date, has been Thies Christophersen, author of the booklet *Die Auschwitz Lüge* (The Auschwitz Lie). Christophersen was at Auschwitz from January to December 1944. In 1973, he published his recollections and his firm view that no extermina-

²³ The Ginsburg beating incident is well known and is mentioned by App, 20.

²⁴ This brochure had been authored by US historian David Hoggan; Editor's note.

tions ever took place there. An English translation of Christophersen's booklet, to which some colorful announcements had been added, was published in 1974. Christophersen was followed by Dr. Wilhelm Stäglich, a retired Hamburg judge, who had been assigned to an anti-aircraft unit near Auschwitz during 1944, and had visited the camp on a few occasions. For such honest reporting of his recollections, Stäglich was punished with a five-year, twenty percent reduction of his pension.²⁵

In late 1973, Austin J. App, a retired English professor in Maryland, published a short booklet, *The Six Million Swindle*. Early in 1974, Wolf Dieter Rothe published the first volume of his study, *Die Endlösung der Judenfrage*, and later in 1974, Richard Harwood published in England his book, *Did Six Million Really Die?* Harwood's booklet is quite good in convincing power, although it has some weak points, and the reader is referred to Rassinier for a definitive treatment of the subject. It was favorably reviewed by Colin Wilson in the November 1974 issue of the influential British monthly *Books and Bookmen*, setting off a months-long controversy in the pages of that journal.²⁶

In early 1975, Harry Elmer Barnes's translation of one of Rassinier's books, *The Drama of the European Jews*, was issued by a small publisher in the United States.

How Many Jews?

In this introductory chapter, we quickly review the principal problems that arise when demographic questions are asked. We then indicate how demographic problems are resolved in this book, but indicate that the specific task of resolution must be deferred until later in the book.

The problems inherent in a demographic study are formidable. First, all sources of post-war primary data are private Jewish or Communist sources (exclusively the latter in the all-important cases of Russia and Poland). Second, it appears that one can get whatever results desired by consulting the appropriately selected pre-war and post-war sources. Consider world Jewish population. The 1939 study of Arthur Ruppin, Professor of Jewish Sociology at the Hebrew University of Jerusalem, gave 16,717,000 Jews in the world in 1938.²⁷ Because Ruppin (who passed away in 1943) was considered the foremost expert on such matters, on account of many writings on the subject over a period of many years, the estimates of other pre-war sources tend to agree with him. Thus, the American Jewish Committee estimate for 1933, which appears in the 1940 *World Almanac*, was 15,315,359. The *World Almanac* figure for

²⁵ *Nation Europa*, vol. 23 (Oct. 1973), 50; vol. 25 (Aug. 1975), 39. Editor's remark: later Stäglich wrote an entire book (1979, Engl.: 1986), for which his doctor title was revoked. The book was ordered seized and destroyed; cf. Stäglich (2015b), 411-416.

²⁶ This brochure had a decisive influence on revisionism. Cf. Zündel. Editor's remark.

²⁷ Ruppin, 30-33.

1945 is 15,192,089 (page 367); no source is given, but the figure is apparently based on some sort of religious census. The 1946 *World Almanac* revised this to 15,753,638, a figure which was retained in the editions of 1947 (page 748), 1948 (page 572), and 1949 (page 289). The 1948 *World Almanac* (page 249) also gives the American Jewish Committee estimate for 1938 (*sic*), 15,688,259, while the 1949 *World Almanac* (page 204) reports new figures from the American Jewish Committee, which were developed in 1947-1948: 16,643,120 in 1939, and 11,266,600 in 1947.

However, *New York Times* military expert Hanson Baldwin, in an article written in 1948 dealing with the then forthcoming Arab-Jewish war on the basis of information available at the UN and other places, gave a figure of 15 to 18 million world Jewish population as well as figures for such things as Jews in Palestine, Jews in the Middle East, Arabs in Palestine, total Arabs, total Moslems, etc.²⁸

Such a sketch illustrates some of the simpler uncertainties that exist in a demographic study. To carry the matter further, the 11-12 million postwar world Jewish population figure, which it is necessary to claim in order to maintain the extermination thesis, is very vulnerable on two points. The first is the set of statistics offered for the U.S., and the second is the set offered for Eastern Europe. Both, especially the latter, are subject to insuperable uncertainties. Let us first consider the United States. Census figures for the total U.S. population are:²⁹

Table 1: U.S. total population

YEAR	POPULATION
1920	105,710,620
1930	122,775,046
1940	131,669,275
1950	150,697,361
1960	179,300,000

while U.S. Jewish population figures, as given by the Jewish Statistical Bureau (subsidiary of either the American Jewish Conference or the Synagogue of America), H. S. Linfield, Director, are:³⁰

Table 2: U.S. Jewish population

YEAR	JEWISH POPULATION
1917	3,388,951
1927	4,228,029
1937	4,770,647
1949	5,000,000
1961	5,530,000

²⁸ *New York Times* (Feb. 22, 1948), 4.
²⁹ *World Almanac* (1931), 192; (1942), 588; (1952), 394; (1962), 251.
³⁰ *World Almanac* (1931), 197; (1942), 593; (1952), 437; (1962), 258.

It is important to note that all of the U.S. Jewish population figures are given by the same source (Linfield).

The indicated growth of U.S. Jewish population, 1917-1937, is 40.8%, while the growth of total U.S. population, 1920-1940, is 24.6%. This contrast is generally reasonable, since in the period under consideration Jewish immigration was fairly heavy. However, Jewish immigration into the U.S. raises some problems of its own. The American Jewish yearbook gave a net Jewish immigration for the years 1938-1943 and 1946-1949 (inclusive) of 232,191.³¹ Figures for 1944 and 1945 do not seem to be available. It was in those two years, incidentally, that an indeterminate number of Jews were admitted to the U.S. "outside of the regular immigration procedure." It was claimed that there were only 1,000 such Jews quartered at a camp near Oswego, New York, and that they were not eligible for admission to the U.S. This was supposed to be a U.S. contribution to relieving the problems of refugees, but the whole episode seems most strange and suspicious.³²

Rather than attempt to settle the problem of the extent of Jewish immigration, suppose one allows the Jewish population a growth rate in 1937-1957 at least equal to that of the U.S. Jewish population of 1917-1937, as seems at least reasonable in view of various facts, *e.g.*, the reasons which sent 1.5 million Jews to Palestine during the World War II and aftermath period appear to motivate immigration to the U.S. just as well, and no national or racial immigration quotas were applicable to Jews as such. In such a case, there should be at least 6,678,000 Jews in the U.S. in 1957, not the 5,300,000 that are indicated. There are about 1,400,000 Jews missing from the interpolated figures for 1957, and we consider this a conservative figure for the reason given. The period 1937-1957 was one of Jewish movement on an unprecedented scale.

On the other hand, we can adopt an equally conservative approach and assume that the 4,770,647 Jews of 1937 grew in 1937-1957 at the same rate as the U.S. population in 1940-1960. Under this assumption, these should have become 6,500,000 Jews in the U.S. in 1957. If one adds the reasonable figure of 300,000 more due to immigration, we have 6,800,000 in 1957. Thus, by either method of extrapolation the figures offered for post-war U.S. Jewish population are at least approximately 1.5 million short for 1957.

The specific major fault of the U.S. Jewish population figures is the inexplicably small claimed growth from 1937 to 1949 despite record Jewish movement and a very open U.S. immigration policy.

Eastern Europe, however, presents the core of the demographic problem. In order to avoid very serious confusion, one must first recognize that there have been extensive border changes in Eastern Europe in the course of the Twentieth Century. A map of Europe on the eve of World War I (1914) is given as Fig. 1. A map for January 1938 showing, essentially, Europe organized according to the Treaty of Versailles, before Hitler began territorial acquisitions,

³¹ *World Almanac* (1952), 438.

³² US-WRB (1945), 64-69; *New York Times* (June 10, 1944), 1; (June 13, 1944), 1; (Aug. 10, 1944), 5; (Oct. 24, 1944), 14; (Oct. 25, 1944), 13; Myer, 108-123.

is given in Fig. 2, and Fig. 4 shows the post-war map of Europe. The principal border change at the end of World War II was the moving westward of the Soviet border, annexing the three Baltic countries (Lithuania, Latvia, and Estonia) and parts of Romania, Czechoslovakia, Poland, and East Prussia. Poland was compensated with the remainder of East Prussia and what used to be considered eastern Germany; the effect was to move Poland bodily westward.

Pre-war (1938) Jewish population estimates for Eastern Europe were offered by H. S. Linfield and the American Jewish Committee in the 1948 (*sic*) *World Almanac* (page 249). Post-war (1948) figures are published in the 1949 *World Almanac* (page 204).

Table 3: Eastern European Jewish population (est.)

COUNTRY	1938	1948
Bulgaria	48,398	46,500
Hungary	444,567	180,000
Poland	3,113,900	105,000
Romania	900,000	430,000
USSR	3,273,047	2,032,500
TOTALS	7,779,912	2,794,000

The claimed Jewish loss for Eastern Europe is thus 4,985,912. The figure for the USSR includes, in both cases, the three Baltic countries and the Jews of Soviet Asia. The pre-war figures are in all cases in close agreement with the figures that Ruppin published shortly before the war. To the extent that the extermination legend is based on population statistics, it is based precisely on these statistics or their equivalents.

The trouble is that such figures are absolutely meaningless. There is no way a Western observer can check the plausibility, let alone the accuracy, of such figures. He must either be willing to accept Jewish or Communist (mainly the latter) claims on Jewish population for Eastern Europe, or he must reject any number offered as lacking satisfactory authority.

It is possible to reinforce our objection on this all important point and simultaneously deal with a reservation that the reader may have; it would appear excessively brazen to claim the virtual disappearance of Polish Jewry, if such had not been essentially or approximately the case or if something like that had not happened. This seems a valid reservation, but one must recall that much of the territory that was considered Polish in 1939 was Soviet by 1945. It was possible for Polish Jewry to virtually disappear, if, during the 1939-1941 Russian occupation of Eastern Poland, the Soviets had dispersed large numbers of Polish Jews into the Soviet Union and if, during 1941-1944, the Germans had concentrated Polish Jews eastwards, with the Soviet Union ultimately absorbing many of these Jews into its territory, with those who did not wish to remain in the Soviet Union emigrating, mainly to Palestine and the U.S., but also to some extent to the new Poland and other lands. This, in fact, is what happened to the Jews who had resided in Poland before the war.

Whatever may be said about Soviet Jewish policy after, say, 1950, it is clear that the earlier policies had not been anti-Jewish and had encouraged the absorption of Jews into the Soviet Union. It is known that many Polish Jews were absorbed during and immediately after the war, but of course numbers are difficult to arrive at. Reitlinger considers this problem and settles on a figure of 700,000, without giving reasons why the correct figure might not be much higher. He then notes that the evidence that he employs of extermination of Jews in Russia (documents alleged to be German) indicates about the same number of Soviet Jews exterminated, from which he correctly infers that, in the period 1939-1946, the Soviet Jewish population may have actually increased.³³ This important concession, coming from the author of *The Final Solution*, shows that our unwillingness to accept the Communist figures need not be regarded as motivated merely by the necessities of our thesis. The figures are inarguably untrustworthy. It is claimed by the Soviets that their Jewish population declined by 38%, despite the acquisition of territory containing many Jews. Since the USSR is one of the lands where "Jew" is a legally recognized nationality, the Soviets do indeed possess accurate figures on the number of Jews they have but have chosen (in Reitlinger's opinion, if you choose not to accept this author's) to claim an utterly mythical Jewish population loss of 38%.

Likewise with the value to be attached to the remainder of the figures offered.

The most relevant research by a demographer appears to be that of Leszek A. Kosinski of the University of Alberta (*Geographical Review*, Vol. 59, 1969, pp. 308-402 and *Canadian Slavonic Papers*, Vol. 11, 1969, pp. 357-373), who has studied the changes in the entire ethnic structure of East Central Europe (*i.e.* excluding Germany and Russia) over the period 1930-1960. He explains the extreme difficulties with basic statistics:

"The criteria used in compilation differ from country to country and are not always precise. In principle, two types are used: objective criteria, such as language, cultural affiliation, and religious denomination, and subjective criteria, based on the declaration of the persons themselves. Each type has virtues and deficiencies. Objective criteria define nationality only indirectly and are difficult to apply in marginal cases (for example, bilingual persons).

The same criticism applies even more to subjective criteria. External pressure and opportunism can influence the results, especially where national consciousness is not fully developed or where an honest answer can bring undesirable consequences. Official data are not always reliable, then, even when they are not forged, as has also occurred. However, criticism of the official data cannot be applied in the same degree to all the countries, and reliability is very much a function of national policy."

³³ Reitlinger, 534, 542-544.

Jews are of course one of the groups Kosinski is interested in, and he presents various figures, generally comparable to those given above, for numbers of pre-war Jews. However, his post-war data are so useless from this point of view that he does not even attempt to offer specific post-war numbers for Jews, although he offers post-war figures for other groups, *e.g.* gypsies, giving numbers less significant, statistically, than the numbers of Jews who, according to the extermination mythologists, survived in Eastern Europe. It is true that he accepts the extermination legend in a general way and presents a bar graph showing a catastrophic decrease in the Jewish populations of Poland, Hungary, Romania and Czechoslovakia. He also remarks that the combined war-caused population losses for Yugoslavs, Jews, Poles and east Germans was about 12.5-14 million, not breaking the total down, and referring the reader to the statistical summary *Population Changes in Europe Since 1939* by Gregory (Grzegorz) Frumkin, whose figures for Jews come from the American Jewish Congress, the Zionist Organization of America, and the *Centre de Documentation juive contemporaine* (Center for Contemporary Jewish Documentation) in Paris.

However, the point is that Kosinski arrives at no figures for Jews, as he obviously should not, given the problems he has noted. The ethnic population figures from Communist Hungary are based on language, and the figures from Communist Poland, Communist Czechoslovakia, and Communist Romania are based on "nationality," whatever that means in the various cases. Naturally, he apologizes for his use of "official statistics, imperfect as these may be." We will return to demographic problems, especially those which involve the Polish Jews, in Chapter 7.

We must also remember that the problem of counting Jews in Western countries contains enormous difficulties on account of the lack of any legal, racial, or religious basis for defining a "Jew." As an example, the statistics available to Reitlinger indicate to him that early in World War II there were 300,000 Jews in France, including refugee German Jews.³⁴

The Nazis, on the other hand, thought that there were 865,000, and I see no motivation for deliberate inflation of this figure; other figures used by the Nazis were not wildly inflated compared to the figures of other sources.³⁵ I should add that I really have no idea how many Jews there are in the U.S. I can consult the *World Almanac*, which will tell me that there are about 6,000,000, but I cannot see how that figure was arrived at and have little confidence in it. As far as I know, the correct figure could as easily be 9,000,000. There must be at least 4,000,000 in the New York area alone.

To summarize what has been said with respect to Jewish population statistics: the problem of compiling such statistics is formidable even without political interference or pressure. Moreover, in the demographic argument for a five or six million drop in world Jewish population, the sources and authorities for the figures used are Communist and Jewish and thus, by the nature of the prob-

³⁴ Reitlinger, 327.

³⁵ NG-2586-G in NMT, vol. 13, 212.

lem we are examining, must be considered essentially useless. In addition, the post-war figures for the United States are demonstrably too low by a significant amount.

One should not form the impression that it is essential to my argument that any demographic conclusions seemed to be reached above be accepted by the reader. It has only been shown what sorts of problems arise if one attempts a too direct demographic approach; it is not possible to settle anything in such a manner. In the final analysis, the difficulty is that the figures available amount to nothing more than statements, from Jewish and Communist sources, that millions of Jews were killed. Such claims are to be expected, but they must certainly not deter us from looking deeper. We will take up the demographic problem later in the book, however, because the nature of the situation is such that reasonably useful demographic conclusions are possible once it is understood what, in general, happened to the Jews.

Rassinier's demographic study, in fact, does not really even attempt to settle the problem, strictly speaking. His basic approach is to analyze the inferences that have been drawn from two different sets of data, that of the *Centre de Documentation juive contemporaine* and that of Hilberg, both of whom infer from their data five to six million Jewish victims of the Nazis. Rassinier's conclusion is that the former can only claim 1,485,292 victims from its data and the latter 896,892.³⁶ Rassinier accepts the reality of about a million Jewish victims of Nazi policies, while rejecting the claims of extermination. For example, it is known that some East European peoples took advantage of general political-military conditions to persecute Jews. Also, many Jews who were deported from their homes no doubt perished as a result of generally chaotic conditions, which accompanied the latter part of the war.

Believing that the task is not possible, I will offer here no definite estimate of Jewish losses. However, I have no strong reason to quarrel with Rassinier's estimate.³⁷

Our Method, Argument, and Conclusion

As stated, the "material" approach will be extended here and, in addition, a "historical-political" approach will be "introduced." This is just a fancy way of saying that we will grasp that there are two political powers involved in the problem, not just one. That is to say, we have a tale of extermination, and we should inquire into the circumstance of its generation. Clearly, there are two states involved in the problem. Germany had an anti-Jewish policy involving, in many cases, deportations of Jews from their homes and countries of citizenship. That is certain. The wartime policy of Washington was to claim extermination, and the post-war policy was to hold trials, at which there was generated

³⁶ Rassinier (1964), 220.

³⁷ Editor's note: compare in this regard Sanning (1983), Benz (1991) and Rudolf (2024a).

the only evidence that we have today that these wartime claims had any foundation. That is also certain. The policies of both states are necessarily of interest, and if there is any respect, in which this book may be breaking fundamentally new ground on the problem, it is in its insistence in seeing Washington as an active agent in the generation of the story. Thus, we are interested not only in what Hitler, Himmler, Göring, Goebbels, and Heydrich were doing during the war in regard to these matters, but also what Roosevelt, Hull, Morgenthau, and the *New York Times* and associated media were doing during the war, and what the various tribunals controlled or dominated by Washington did after the war. This is not only a fair but, more importantly, an illuminating historical approach.

The conclusion is that Washington constructed a frame-up on the Jewish extermination charge. Once this is recognized, the true nature of German Jewish policy will be seen.

The War Crimes Trials

Before we review the details of the story, it should be pointed out that there are excellent *a priori* grounds for expecting a frame-up. There is of course the very general argument that political enmity of a magnitude to bring on armed conflict between two states necessarily excludes the impartiality on the part of one of them, which is a necessity for a fair trial and for which there exists no substitute. The judges had pursued political careers in the contexts of the internal politics of the Allied powers hostile to Germany and after the trials would, assuming they had not done anything highly improbable at the war crimes trials, return to these careers. They had, in addition, for several years heard only the anti-German viewpoint. In sitting on the military tribunals, they were *ad hoc* political appointees. Such considerations exclude approximate impartiality.

There are, however, much more specific reasons for expecting a frame-up. In order to see this, it is only necessary to consider the easily obtainable facts concerning the various tribunals involved.

First, there was the “big trial” conducted by the “International Military Tribunal” (IMT) at Nuremberg immediately after the war. This was the trial of the top Nazis Göring, Hess, Ribbentrop, *et al.*, which ran from November 1945 to October 1946. The judges and prosecutors were American, British, French, and Russian. As with all “military” tribunals, there was no jury. There were three acquittals, seven prison sentences, and eleven death sentences. The latter were carried out almost immediately after the trial, except that Göring escaped the noose by swallowing a potassium cyanide capsule just before the hangings. It was never determined where Göring had obtained the poison or how he had managed to hide it for any length of time. A unique sequel to this episode was that the first Nuremberg prison psychiatrist, Dr. Douglas M. Kelley, a leader in

Table 4: NMT Trials

CASE NO.	U.S. VS.	DESCRIPTION	NMT VOLS.

12	von Leeb	High Command Case	10, 11

the treatment of psychiatric disorders with drugs, shortly later published a book on his experiences at Nuremberg, giving Göring and Göring’s last act a laudatory treatment.³⁸

“He stoically endured his long imprisonment that he might force down the Allied Tribunal and browbeat the prosecuting lawyers on their own terms. [...] His suicide [...] was a skillful, even brilliant, finishing touch, completing the edifice for Germans to admire in time to come. [...] History may well show that Göring won out at the end, even though condemned by the high court of the Allied powers.”

A decade later, Dr. Kelley followed Göring by taking one of several potassium cyanide capsules which he possessed, said to be ‘souvenirs’ taken off Göring’s body.³⁹

The IMT trial was the only one that received very great attention. It was important in the sense that the Allied powers committed themselves to a specific version of the extermination claim, but there was little evidence presented of any substantial nature relative to Jewish extermination; it was almost entirely testimony and affidavits, not at all difficult for the victorious powers to produce under the circumstance. The only relative merit of the IMT trial, for our purposes, is that the complete transcript and a reasonably complete selection of the documents put into evidence are readily available in numerous libraries as a 42-volume set with a very complete subject and name index (see References).

From 1946 to 1949 a series of twelve superficially less important trials were held by the Americans before what is here called the Nuremberg Military Tribunal (NMT). They are referred to variously according to the “case number,” the major defendant, or a more descriptive title, see Table 4.

³⁸ Kelley, 76f.

³⁹ *New York Times* (Jan. 2, 1958), 18; Robertson, 266.

Several death sentences resulted from these trials, but the great majority received prison sentences, in many cases rather lengthy ones. However, almost all were free by the early Fifties.

The only cases among these that will concern us here in any way are Case 1, a trial of medical personnel involved in euthanasia and medical experiments, Case 4, a trial of concentration camp administration, Cases 6 and 10, self-explanatory, Case 8, dealing with German resettlement policies, Case 9 (the *Einsatzgruppen* were used for rear security in the east) and Case 11, a trial of officials of various ministries. The U.S. Government published a fifteen-volume set of books, referred to here as the “NMT set,” in which may be found “summaries” of the cases, along with very limited “selections” of the documents put into evidence. The volume numbers corresponding to the various cases are listed in the above-mentioned table.

On this point, the student encounters a significant difficulty because, as can be seen by consulting Hilberg and Reitlinger, almost all the evidence for the extermination claim was developed at the NMT, not the IMT. That is to say, the important documents, those which, for better or for worse, constitute major source material for writing any history of Nazi Germany, are those of the NG, NI and NO series, and these documents were put into evidence at the NMT trials. Documentary evidence is, especially in view of the irregular legal and political circumstances which prevailed, immeasurably more weighty than testimony, as has been suggested. The relevant documentary evidence generated at the NMT consists of certain kinds of material allegedly supporting the extermination charges: documents dealing with concentration camp administration, with crematory construction, with deportations, with certain Farben and Krupp operations which employed prisoner labor, with general Jewish policies of the German Government, etc. There is of course no direct documentary evidence for an extermination program. As Dr. Kubovy of the Center for Jewish Documentation in Tel-Aviv admitted in 1960:⁴⁰

“there exists no document signed by Hitler, Himmler, or Heydrich speaking of exterminating the Jews and [...] the word ‘extermination’ does not appear in the letter from Göring to Heydrich concerning the final solution of the Jewish question.”

The difficulty for the normally circumstanced person is that only small fractions of the NMT testimonies and documents are widely accessible in English translations (in the fifteen volume NMT set). Additionally, these translations cannot always be trusted, as will be seen. Also, the extracts which are published have been selected by unknown criteria.

Finally, the fifteen volume NMT set is likely to be found only in cities of moderately large size.⁴¹

⁴⁰ Rassinier (1962), 83. See also Dawidowicz, 121.

⁴¹ Editor’s note: In 2008 the Library of Congress posted both the 42 volumes of the IMT series as well as the 15 volumes of the NMT series online:
www.loc.gov/rr/frd/Military_Law/Nuremberg_trials.html

The situation is better if one lives in a very large city, since reasonably complete collections of documents together with the mimeographed trial transcripts (almost always in German) exist in certain library centers. However, the normally circumstanced person may encounter trouble in arranging to examine specific pieces, which he may call for, and in some cases general browsing even by university faculty is not welcome. In addition, no subject or name indexes exist for the NMT trials (indexes of testimonies of witnesses, with many errors, appear in the NMT volumes).

The IMT and NMT trials are almost the only ones of significance here. Of general significance are a series held by the British; of these, only the Belsen case and the Zyklon B case interests us to any extent. The Poles, Russians, French, Dutch, and Italians have all held trials of no significance except to the victims. The Bonn Government has held some trials of slight interest, for example the "Auschwitz trial" of 1963-1965, reported on by Langbein, by Latenser, and by Naumann.

The manner in which the IMT and the NMT were constituted can be set forth with sufficient completeness for our purposes. Since the autumn of 1943, there had been in existence a United Nations War Crimes Commission, headquartered in London. However, the Commission never really did anything except realize, at one point, that if anything was to be done, it would be done by the individual Allied governments.

The first serious moves started in the United States. In August 1944, the Joint Chiefs of Staff considered a proposed program for dealing with war crimes. The proposal had been approved by the Judge Advocate General of the U.S. Army. On October 1, 1944, the Joint Chiefs approved this proposal and, at about the same time and in accordance with directives of the Secretary of War, a "War Crimes Branch" was established in the Department of the Judge Advocate General. The War Crimes Branch, headed by Brigadier General John M. Weir with Colonel Melvin Purvis as his assistant, was responsible for handling all war crimes matters for the State, War, and Navy Departments.

The proposal that had been approved by the Joint Chiefs did not survive for very long, for its character had been rather traditional, in that it contemplated, basically, the trial of persons who had broken the accepted laws of war in the field. Thus, offenses committed before the war or acts by enemy authorities against their own nationals were not considered to be under Allied jurisdiction. Thus, for example, all measures against German Jews were considered outside the jurisdiction of the planned war crimes trials. The concept of war crimes was, at this point, strongly under the influence of the principle, never questioned, that a belligerent may try enemy soldiers for the same sorts of offenses for which he may try his own soldiers.

The Secretary of War, Stimson, had a conference with President Roosevelt on November 21, 1944, at which Roosevelt made it clear that he had in mind a much broader idea of war crimes and that the proposals approved by the Joint Chiefs were completely unsatisfactory.

Accordingly, in January 1945, Roosevelt designated Judge Samuel Rosenman as his personal representative in discussions on war crimes problems. A meeting of January 18, among Stimson, Rosenman, Attorney General Francis Biddle, and others resulted in general agreement on very much expanded conceptions of war crimes to be tried.⁴²

Biddle was later to sit as a judge at the IMT, although, for Roosevelt's use at the Yalta conference, he had written in January 1945 that "the chief German leaders are well known and the proof of their guilt will not offer great difficulties." The Russian IMT "Justice" Nikitchenko was slightly more direct in declaring before the trial that "we are dealing here with the chief war criminals who have already been convicted."⁴³

In early May 1945, President Truman approved the revised proposals and appointed Robert H. Jackson, an Associate Justice of the Supreme Court, to act as Chief of Counsel for the U.S. in the forthcoming trial and also to represent the U.S. in negotiations with foreign governments relative to constituting the trial. On June 6, 1945, Jackson made an interim report to the President, and later in June, Jackson and his staff set up headquarters in London, where much of the preliminary work for the IMT was done.

A key member of Jackson's London staff was Colonel Murray C. Bernays, who was one of the first people who had been involved in war crimes problems. Graduated from Harvard in 1915, he established a law practice in New York. He was given a commission in the Army in 1942, and in October 1943, he was made chief of the Special Projects Branch, Personnel Division, Army General Staff. His major project in this position was the preparation of plans for trials of German "war criminals." After each stage of negotiations with the White House and others, he made the appropriate revisions in the plans being considered, although he was the author of the plan that was eventually settled on, if one is to credit his account. In any case, shortly after the appointment of Jackson, Bernays was awarded the Legion of Merit, the citation reading in part:

"Early recognizing the need for a sound basis in dealing with the problem of war criminals and war crimes, he formulated the basic concept of such a policy and initiated timely and appropriate action which assured its adoption as the foundation of national policy."

Bernays returned to the U.S. in November 1945 and immediately resigned from the Army. Because, as we have seen, there was considerable dialogue at higher levels relating to plans for war crimes trials, it is doubtful that one can take Bernays's claims at full value, but he no doubt had a great deal to do with the drafting of the plans for the trials. Moreover, he had certainly been an appropriate choice for something as novel as the formulation of the "legal" structure for the war crimes trials, since his views of justice were equally novel. After his return to the U.S., he had a chat with some editors (who characterized

⁴² Taylor (Aug. 15, 1949), 1-3; *New York Times* (Feb. 1, 1945), 4.

⁴³ Davidson, 6, 18, 21n.

him as “the man behind the gavel”), and in answer to their queries as to “how the small fry are going to be hooked,” he replied:⁴⁴

“There are a good many Nazi criminals who will get off if the roundups aren’t conducted efficiently. But if we establish that the SS, for example, was a criminal organization, and that membership in it is evidence per se of criminality, the Allies are going to get hold of a great many more criminals in one swoop. You know, a lot of people here at home don’t realize that we are now the government of Germany in our zone and that no judicial system can exist other than one we approve. We are the law. If we wanted to, for instance, we could try Germans for crimes twenty, thirty, forty years old.

We’ll be too busy with the current crop of war criminals, though, to have much time to look into ancient wrongdoings.”

In London, Jackson negotiated with the Allies on the trials, and his interim report of June 6 became the basis for the “London Agreement” of August 8, signed by the U.S., Britain, Russia, and France. An “indictment” was filed against twenty-four individuals and six organizations (the SS, the General Staff, etc.) on October 18, and the trial opened at Nuremberg on November 20, 1945. Three of the listed defendants did not stand trial. Martin Bormann was never found, Robert Ley committed suicide before the trial, and Gustav Krupp was too ill and too old to stand trial. An attempt was made by the prosecution to substitute Krupp’s son as defendant, but this was too much even for that court, so the trial of Alfred Krupp had to wait until the NMT.

In passing we should note that Justice Jackson, in addition to being the American chief prosecutor at the trial, was also in a formal sense the leading personality in the London negotiations relative to the formulation of the legal system, under which he was to operate at the trial. A rare opportunity for a prosecutor, and probably an utterly unprecedented one in respect to proceedings that civilized people have seriously considered to be trials.

Equally unique features of the final charter of the IMT were that its jurisdiction was not restricted to acts taken in connection with the war but extended over the entire life of the Nazi Party, that the defense of superior orders was inapplicable, and that defendants could be compelled by the prosecution to testify.

The War Crimes Branch that had been set up in 1944 did not cease to operate, because in connection with the IMT trial Jackson had “enlisted the cooperation and participation of the War Crimes Branch of the Judge Advocate General’s Department.” Moreover, in the early months of the IMT trial (and perhaps also later), the ordinary prosecution staff, exclusive of Jackson, was “on the payroll of the Judge Advocate General.”⁴⁵

A significant role for the Judge Advocate General’s department (JAG) was most natural under the circumstances because the JAG was the legal agency of

⁴⁴ *New York Times* (June 21, 1945), 6; (Dec. 16, 1945), sec. 4, 8; *New Yorker* (Nov. 17, 1945), 24; *Survey Graphic* (Jan. 1946), 4-9; *Reader’s Digest* (Feb. 1946), 56-64.

⁴⁵ Taylor (Apr. 1949), 248-255; Select Committee, 1536.

the Army, and the basic American administrative machinery in Germany immediately after the war was that of the U.S. Army. The traditional role of the JAG had been the administration of military justice: courts-martial and related matters. However, during World War II, the operations of the JAG had spread to all phases of military activity where legal matters arose; it even got involved in litigations relative to war production contracts. The Judge Advocate General, Major General Myron C. Cramer, had given a speech in May 1945, in which he declared that the pursuit and arraignment of Nazis was to tax to the utmost the capacity of the War Crimes Branch and become a major activity of the JAG, whose resources he pledged to Jackson. While it is not specified exactly what the War Crimes Branch did in connection with the IMT, it is most likely that it effectively supervised the American (hence major) role in the screening and selection of prosecution and defense lawyers and staff, in the selection of other staff such as translators, and in interrogations. Of course, Jackson formally held much of this authority, but it is reasonably sure that such responsibilities were, in fact, exercised by the War Crimes Branch.⁴⁶

The involvement of the War Crimes Branch in trials was, however, much deeper.

While the IMT and NMT trials were being conducted, several lesser trials were taking place. Among these were the trials held at the Dachau camp (outside Munich and thus not far from Nuremberg) of the staffs of some concentration camps (Buchenwald, Flossenbürg, Dachau) that had been captured by the Americans, and of those accused of killing 83 American prisoners at Malmedy during the Battle of the Bulge. These trials were supervised by the War Crimes Branch.⁴⁷ They were perhaps the most shameful episodes in U.S. history.

The entire repertoire of third degree methods was enacted at Dachau: beatings and brutal kicking, to the point of ruining testicles in 137 cases, knocking out teeth, starvation, solitary confinement, torture with burning splinters, and impersonation of priests in order to encourage prisoners to “confess.” Low rank prisoners were assured that convictions were being sought only against higher ranking officers, and that they had absolutely nothing to lose by cooperating and making the desired statements. Such “evidence” was then used against them when they joined their superiors in the dock. The latter, on the other hand, had been told that by “confessing” they had taken all responsibility onto themselves, thereby shielding their men from trial. A favorite stratagem, when a prisoner refused to cooperate, was to arrange a mock trial. The prisoner was led into a room in which civilian investigators, dressed in U.S. Army uniforms, were seated around a black table with a crucifix in the center, with two candles providing the only light. This “court” then proceeded to hold a sham trial, at the conclusion of which a sham death sentence was passed. The “condemned” prisoner was later promised that, if he cooperated with the prosecutors in giving evidence, he would be reprieved. Sometimes interrogators threatened to turn prisoners over to the Russians. In many cases, the prisoner’s

⁴⁶ *New York Times* (Oct. 17, 1943), sec. 6, 10; (May 20, 1943), 15.

⁴⁷ Kolander; Taylor (Aug. 15, 1949), 4, 10, 13, 14.

family was threatened with loss of ration cards or other hardships if cooperation was not obtained.

As distinct from the mock trials, the official trials were also an apparently deliberate mockery of any conception of due process. The mockery started with the "indictment," which made only general reference to very broad categories of crimes allegedly committed in the years from 1942 to 1945 (in the cases of concentration camp personnel), and then proceeded to present a long list of defendants accused of being criminal in the extremely general sense stated. Specific crimes by specific people on specific dates were not part of the indictments (e.g. document 3590-PS).

In some cases, the "defense counsel" was an American with no legal training who could not speak German. Competent interpreters were not provided at the trial. The "prosecution" also lacked legal training, as did the "court," which consisted of ten U.S. Army officers. There was one person with legal training present, all of whose rulings on the admissibility of evidence were final. There were 1,416 convictions out of 1,672 tried, with 420 death sentences.

While the prosecution could hunt all over Europe for witnesses and, if necessary, torture or otherwise coerce Germans in order to get "evidence," the accused, cut off from the outside world and without funds, were rarely able to summon anybody to their defense.

In addition, the "Association of Persons Persecuted by the Nazis," by a propaganda campaign, forbade former concentration camp inmates to testify for the defense.

The American lawyer George A. McDonough, who had had the rather peculiar experience of having served as both a prosecutor and defense counsel in the war crimes program and later on as a member of a reviewing board and an arbiter on clemency petitions, wrote to the *New York Times* in 1948 complaining about the lack of legal basis for the trials and remarking that "in nine problems out of ten the authorities and the textbooks had no answer" to the legal questions that regularly and consistently came up for anybody seriously concerned with matters of legality. For McDonough, the major problem was whether or not a defense of superior orders should be accepted in war crimes trials. He wrote:

"At the Dachau trials, the claim of the accused that he would have been shot himself if he had not obeyed his superior's order to commit an act which he, in ignorance, may have believed to be a legal order, or knew to be illegal, seemed to be handled by the courts as an issue of fact. The availability of this defense seemed to depend upon the age and the rank of the accused, and the state of battle existing at the time of the offense. Again it would seem high-handed procedure to hold an enlisted man to the knowledge of the illegality of a particular act when the international authorities themselves are in disagreement as to its illegality or have never defined the act at all.

[...] Hearsay evidence was admitted indiscriminately and sworn statements of the witnesses were admissible regardless of whether anybody

knew the person who made the statement or the individual who took the statement. If a prosecutor considered a statement of a witness to be more damaging than the witness' oral testimony in court he would advise the witness to go back to his home, submit the statement as evidence, and any objection by defense counsel would be promptly overruled."

One notable incident occurred when investigator Joseph Kirschbaum brought a certain Einstein into court to testify that the accused Menzel had murdered Einstein's brother. When the accused was able to point out that the brother was alive and well and, in fact, sitting in court, Kirschbaum was deeply embarrassed and scolded poor Einstein:

"How can we bring this pig to the gallows, if you are so stupid to bring your brother into court?"

The U.S. Army authorities in charge admitted some of these things. When the chief of the Dachau War Crimes Branch, Colonel A. H. Rosenfeld, quit his post in 1948, he was asked by newspapermen if there was any truth to the stories about the mock trials, at which sham death sentences had been passed. He replied:⁴⁸

"Yes, of course. We couldn't have made those birds talk otherwise. [...] It was a trick, and it worked like a charm."

The Malmedy defendants had had a competent defense attorney, Lieutenant Colonel Willis M. Everett, Jr. It was Everett's repeated appeals to, among others, the U.S. Supreme Court, plus a chorus of protests from German clergymen and others, plus such details regarding what was going on that managed to get into the press by various routes, that persuaded the American military governor, General Lucius D. Clay, to request an investigation of the trials at Dachau. On July 29, 1948, the Secretary of the Army appointed a commission consisting of two American judges, Gordon Simpson of Texas and Edward Van Roden of Pennsylvania, both JAG reserve colonels. They were assisted by JAG Lieutenant Colonel Charles Lawrence, Jr. The commission submitted its report to the Secretary of the Army in October 1948, and selected portions were made public in January 1949.

Subsequent public remarks by Van Roden and also, to some extent, by Simpson, plus an independent investigation by a review board appointed by Clay, decisively exposed the whole affair to the point where the defenders of the trials could only haggle about the numbers of German prisoners subjected to brutalities. The review board confirmed all that Van Roden claimed, taking exception only in respect to the frequencies of the brutalities.⁴⁹ Oddly, in his book, *Decision in Germany*, Clay denies the brutalities, but he is contradicted by his own review board.

The cases, especially the Malmedy case, attracted a good deal of attention through 1949, and a subcommittee headed by Senator Baldwin conducted an

investigation. One witness, formerly a court reporter at the Dachau trials, testified that he was so repelled by what had gone on there that he quit the job. He said that the “most brutal” had been Lieutenant Perl, Frank Steiner, and Harry W. Thon. He explained that both Perl and his wife had been in Nazi concentration camps, and that the Nazis had killed Steiner’s mother.

Judge Gordon Simpson (unlike Van Roden, trying to put the best interpretation, even if very strained, on the sorry facts that had come out) conceded that this was probably “a poor team,” and explained that the shortage of German-speaking American lawyers and interpreters had forced the Army to “draw on some of the German refugees.” Steiner, Kirschbaum, and Thon (later chief of the evaluation section of the civil administration division of the U.S. military government) appeared later and denied all, but they were shaken by the testimony of investigator Bruno Jacob, who admitted a few things. Speaking for the press, investigators Dwight Fanton and Morris Elowitz also denied all. Colonel Rosenfeld denied almost all. He charged that Lieutenant Colonel Harold D. McGown, commander of the American soldiers massacred at Malmédy, had fraternized with SS Colonel Joachim Peiper, the German commander, and this explained why McGown had appeared at Dachau as a defense witness for Peiper and had testified that Peiper had held talks with him and had been responsible for saving a number of Americans. As evidence for the fraternization, Rosenfeld claimed that McGown and Peiper had been “entirely too friendly during those nights they spent talking together” and that, when Peiper and his men were later able to escape a U.S. Army trap, “McGown was with them.” Of course, McGown was Peiper’s prisoner.⁵⁰

It will, of course, be argued that these nightmarish Dachau “trials” have little to do with our subject because the standard maintained in the trials at Nuremberg were not comparable and because the bearers of the extermination legend do not cite any of the “evidence” produced at these trials. There is partial truth to these contentions; brutality and coercion were not nearly as extensive at the prominent Nuremberg trials as they were at the Dachau trials, and mass exterminations were not emphasized in the Dachau trials (although gas chambers made occasional appearances in testimony). However, the Dachau trials cannot be waved aside so easily because the administering agency, the War Crimes Branch, was also deeply involved in the Nuremberg trials, as we have noted, and as we are to reconfirm shortly in a particularly striking respect. In addition, coercion was, in fact, employed in order to get evidence at the Nuremberg trials, but that subject is discussed in Chapters 5 and 6.

None of the four powers was happy with the IMT arrangement, and after the “big trial” they split up and held the kinds of trials they were interested in. The British trials reflected a general interest, but on points of relatively minor significance here. The only major French trial was of Saar industrial magnate Hermann Röchling, whom the French had also tried, *in absentia*, after World War I. Planning for the American NMT trials had actually started in 1945, and

⁵⁰ *New York Times* (Mar. 5, 1949), 4; (Apr. 30, 1949), 2; (Sep. 6, 1949), 9; (Sep. 7, 1949), 9; (Sep. 8, 1949), 9.

in March 1946, a division of Jackson's office, headed by Telford Taylor, had been created for this purpose.

It is worth noting that in all of these trials of Nazis, from the IMT through the Eichmann "trial" of 1961 (in which defense witnesses were not permitted) to the "Auschwitz trial" of 1963-1965 (which the Bonn Government would not allow Rassinier to attend as observer), the defense lawyers had no staff of trained research assistants to go through the documents and, in addition, almost all of the documents which were available to them were controlled by the prosecuting powers.⁵¹ Whatever the legalistic evaluation of such a situation, it can produce a very distorted historical picture if not approached skeptically.

Under the legalistic schema of the occupation, there was an important constraint on the NMT and other single-nation tribunals:

"The determination of the International Military Tribunal in the judgments [...] that invasions, aggressive acts, aggressive wars, crimes, atrocities or inhumane acts were planned or occurred, shall be binding on the tribunals established hereunder and shall not be questioned except insofar as the participation therein or knowledge thereof by any particular person may be concerned. Statements of the International Military Tribunal in the judgment [...] constitute proof of the facts stated, in the absence of substantial new evidence to the contrary."

Two administratively distinct organizations functioned at the NMT. One was the collection of "Military Tribunals," the judges, functioning administratively through a Secretariat, headed by a Secretary General. The judges were recruited in the U.S. "by the Department of the Army." There were three or more judges at any one trial.

The second organization was the Office, Chief of Counsel for War Crimes (Telford Taylor), which had come into existence on October 24, 1946, immediately after Ribbentrop *et al.* had been killed. It filed its first indictment the next day. Although there was a trivial difference in their titles, Taylor, who had been an associate trial counsel at the IMT, was really the successor to Jackson in the trials being staged in the Nuremberg courthouse.⁵²

We will have much to say of the NMT trials in this volume. However, the reader can grasp much of the spirit of these proceedings even from remarks made by some of the American judges who had been recruited by the U.S. Army to serve at Nuremberg. Understandably, these people were normally very reluctant to speak out publicly against what they observed. Thus, the remark of one of the judges in the Farben trial, that there were "too many Jews on the prosecution," was a privately expressed hint to the prosecution, certainly not intended for publication. However, the presiding judge in Case 7 (trial of German generals for alleged wholesale murder of hostages), Charles F. Wennerstrum, spoke out publicly and forcefully immediately after sentences had been pronounced:⁵³

⁵¹ Arendt, 201, 251, (221, 274 in 1964 edition); Aretz, 28f.

⁵² Taylor (Apr. 1949), 272-276.

⁵³ DuBois, 182. *Chicago Tribune* (Feb. 23, 1948), 1, 2; (Feb. 24, 1948), 3; (Feb. 25, 1948), 4;

"If I had known seven months ago what I know today, I would never have come here.

Obviously, the victor in any war is not the best judge of the war crime guilt. Try as you will, it is impossible to convey to the defense, their counsel, and their people that the court is trying to represent all mankind rather than the country which appointed its members.

What I have said of the nationalist character of the tribunals applies to the prosecution. The high ideal announced as the motives for creating these tribunals has not been evident.

The prosecution has failed to maintain objectivity aloof from vindictiveness, aloof from personal ambitions for convictions. It has failed to strive to lay down precedents which might help the world to avoid future wars.

The entire atmosphere here is unwholesome. Linguists were needed.

The Americans are notably poor linguists. Lawyers, clerks, interpreters and researchers were employed who became Americans only in recent years, whose backgrounds were imbedded in Europe's hatreds and prejudices.

The trials were to have convinced the Germans of the guilt of their leaders.

They convinced the Germans merely that their leaders lost the war to tough conquerors.

Most of the evidence in the trials was documentary, selected from the large tonnage of captured records. The selection was made by the prosecution.

The defense had access only to those documents which the prosecution considered material to the case.

Our tribunal introduced a rule of procedure that when the prosecution introduced an excerpt from a document, the entire document should be made available to the defense for presentation as evidence. The prosecution protested vigorously. General Taylor tried out of court to call a meeting of the presiding judges to rescind this order. It was not the attitude of any conscientious officer of the court seeking full justice.

Also abhorrent to the American sense of justice is the prosecution's reliance upon self-incriminating statements made by the defendants while prisoners for more than two and a half years, and repeated interrogation without presence of counsel. Two and one-half years of confinement is a form of duress in itself.

The lack of appeal leaves me with a feeling that justice has been denied.

[...] You should go to Nuremberg. You would see there a palace of justice where 90 per cent of the people are interested in prosecution.

[...] The German people should receive more information about the trials and the German defendants should receive the right to appeal to the United Nations."

(Feb. 26, 1948), 1, 8; (Feb. 28, 1948), 4, 8; (Feb. 29, 1948), 2; *New York Times* (Feb. 23, 1948), 5; (Feb. 25, 1948), 10; (Feb. 29, 1948), 10; (Mar. 6, 1948), 6.

Ironically, the validity of Wennerstrum's attack on the low or non-existent standard of integrity maintained by the Nuremberg prosecution was confirmed even by the nature of Telford Taylor's reaction to Wennerstrum's statements, which were made in supposed privacy in Nuremberg for publication in the *Chicago Tribune*. *Tribune* reporter Hal Foust sent the message to Berlin for transmission to the U.S. on a wireless channel, which was supposedly secure from prying. However, the prosecution, apparently by employment of a ruse, managed to obtain a copy of the message. Ernest C. Deane, Taylor's press officer, immediately phoned Foust in order to attempt "to talk him out of sending the story." However, the story had already been sent, and Foust replied that "Taylor could not properly have knowledge of the article until its publication." Taylor thereupon prepared a reply to Wennerstrum's remarks, and the reply was actually made public before the *Tribune* published the Foust story containing Wennerstrum's attack. Taylor accused the judge, among other things, of making remarks "subversive to the interests and policies of the United States." Wennerstrum, on arrival in the U.S. shortly after the publication of Taylor's "reply" and of the *Tribune* story, stood firm on his remarks and again criticized Taylor.

This incident was one of the notable "government spying" incidents of the year 1948. The Army issued an order against such spying, and there was much speculation that Taylor might be court-martialed. When reporters asked Taylor for his opinion on the legality of his action, the following exchange occurred:

"I don't know whether it was legal or not," he replied.

"Weren't you general counsel of the Federal Communications Commission for two years before being commissioned in the army?"

Yes, but what does that have to do with it?"

Taylor steadfastly refused to express an opinion of the legality of his action but

"off the record indicated he was as pleased with himself as a field officer [...] which he never was [...] who had just scored against the enemy by a trick outside the rules of warfare as prescribed by the 1907 Geneva convention."

The quote is from Hal Foust's story about the Taylor press conference. Foust claimed that this was the second instance of Army interference with his messages to his newspaper, and that in the first instance he had been picked up by Army agents for interrogation after his story had been sent.

Who was in Charge?

In our examination of the Nuremberg trials, we are naturally interested in who supervised the NMT proceedings. *Pro forma*, Taylor supervised almost everything except the appointments of the judges, since the Chief of Counsel's formal responsibilities were not confined to the mere prosecution of cases. His Office was also charged with determining who should and who should not be tried (there was no separate proceeding for formulating indictments, such as a grand jury), what the former were to be charged with, and how the latter were

to be disposed of. The Office also took over the functions of the Nuremberg staff, and hence one may assume that the Office took over, at least formally, the (expanded) Nuremberg staff itself. Thus, the Office was responsible for interrogations, field work examination of documents, court reporting, and translating and interpreting.⁵⁴

We have given reasons why one should expect that this Nuremberg staff had been under the effective supervision of the War Crimes Branch, and it will shortly be seen that, whatever Taylor's formal powers, his actual functions do not suggest that he ever took over the Nuremberg staff in any effective sense. The War Crimes Branch, although quartered in far-off Washington, continues to be involved in our consideration of the Nuremberg trials.

On June 12, 1948, the American press carried a story which reported that an officer of the U.S. Army, Colonel David "Mickey" Marcus, a West Point graduate operating under the alias "Mickey Stone," had been killed in action while serving as supreme commander of the Jewish forces in the Jerusalem sector in the Arab-Jewish war for the control of Palestine (actually, Marcus had been erroneously shot by one of his own sentries). The *New York Times* summarized his career. He had been Commissioner of Corrections in New York before the war and, as an Army officer, had helped draft the German and Italian surrender terms. He was a legal aid at the Potsdam conference (summer of 1945), after which point, if one judges for the adulatory *New York Times* article only, his career ended, since we are told of no other activity of Marcus until he turns up with the Haganah in Palestine in January 1948, visits the U.S. in April, receiving a medal at a ceremony in the British Embassy in Washington (probably a cover for negotiations on the details of the final British capitulation), and then returns to Palestine after three weeks to take over in Jerusalem. The only hint we get of any activity in the period August 1945 to January 1948 is a story on June 24, p. 15, reporting that the London *Daily Telegraph* of the same date said that:

"He was at the time of his death a full colonel in the Judge Advocate General's office of the organized reserve of officers. [...] Although not subject to military discipline, he had agreed to remain subject to recall."

Marcus had, in fact, been Weir's successor as head of the War Crimes Branch. Immediately after the war, he had been "number three man in making American policy" in occupied Germany, but was taken out of this position early in 1946 in order to take the war crimes job. His appointment was effective as of February 18, 1946, but he spent a few months in Japan after leaving Germany, and then moved into the Washington office of the War Crimes Branch until April 1947, when he retired from the Army and went into private law practice.⁵⁵

Our previous observations obviously suggest that it was in reality the War Crimes Branch that exercised the crucial functions in respect to the NMT. This

⁵⁴ Taylor (Apr. 1949), 272-276.

⁵⁵ Marcus; *Encyclopedia Judaica*, vol. 11 (1945); Berkman, 44f.; *Saturday Evening Post* (Dec. 4, 1948), 179.

is the case, as is made clear by a careful reading of Taylor's official final report on the NMT trials, although the fact is not emphasized there.⁵⁶ The fact is confirmed by the remarkable book by Josiah E. DuBois, who headed the I. G. Farben NMT prosecution, and Berkman's book about Marcus provides some sketchy information on this aspect of Marcus's career.⁵⁷

Marcus was made head of the War Crimes Branch primarily in order "to take over the mammoth task of selecting hundreds of judges, prosecutors and lawyers" for the NMT and Far East (Tokyo) trials. In December 1946, DuBois had been summoned to Marcus's office in Washington to discuss the possibility of DuBois taking over the prosecution of leading officials of the great German chemicals firm, I. G. Farben. DuBois had been undecided, so he conferred at length with Marcus on the problems involved; one of the problems being whether or not there was sufficient evidence to charge Farben with an "aggressive war" plot and, if so charged, the possible political repercussions that might ensue. They discussed the general advantages of bringing the Farben men to trial. One point Marcus made was that a trial might show how Farben managed to develop certain weapons in total secrecy. Then too, if they went free, they might start working for the Russians. Marcus displayed great knowledge of Farben. He pointed out that there was a "warehouse full" of Farben records in nearby Alexandria, Virginia, a fact that DuBois forgot, until later events forced him to recall and act on it during the pre-trial investigation.

They got around to the required length of the pre-trial investigation. Marcus said: "As far as I'm concerned, you could go over there for as long or as short a time as you liked." DuBois suggested that he would need about four months, and Marcus replied: "I have no objection to that. Within a few days after you get home, you should get a wire from Telford Taylor agreeing to it."

Taylor, of course, was in Europe in his capacity of Chief of Counsel. DuBois records Taylor's activities relative to the Farben trial. He responded favorably to a staff member's suggestion that DuBois (under whom the staff member had worked in the Treasury Department during the war) be appointed to prosecute Farben. He passed the recommendation on to Washington. After DuBois had taken the job, he had plans to see Taylor to get his okay for adding another man, specified by DuBois, to the prosecution staff. The okay was granted. Taylor went to Paris to plead before the French cabinet for the extradition of a key Farben man. Taylor gave the opening speech at the Farben trial and then disappeared from the proceedings. Taylor was not involved in the pre-trial investigation or in the formulation of the specific charges made by the prosecution.

All of this suggests rather strongly that Taylor's role was in public relations and that he was not deeply involved in the details of the running of the trials, which were his formal responsibility. Such situations are not unusual in large scale operations.

⁵⁶ Taylor (Aug. 15, 1949), 13f., 34f.

⁵⁷ DuBois, 19-22, 31, 53, 63, 69f., 74f.; Berkman, 195-199, 157-159.

The facts show that the real organizers of the NMT trials were not as much in the public eye as Taylor was; in effect and possibly in intention Taylor was a front man. Marcus, as head of the War Crimes Branch, no doubt exercised effective control of much of the Nuremberg staff, and he selected the judges and lawyers for the trials (with only a handful of exceptions). The book by DuBois shows that Taylor was not involved with the trials on the working level, so the inescapable conclusion is that the substantial powers of Taylor's office were actually exercised either by the War Crimes Branch or by persons subordinate to Taylor. In examining the prominent persons in the latter group, one encounters Robert M. W. Kempner, who is discussed in Chapter 5.

Marcus seems to have had a real importance quite incommensurate with his relatively common rank of colonel, because we are told that during the war he had made a "favorable impression on FDR [...] he was one of the anonymous handful who charted American policy behind the scenes." A man whose career was remarkably intertwined with that of Marcus was General J. H. Hilldring, who headed the Army Civil Affairs Division (CAD), to which Marcus was assigned in 1943. The CAD had been created in 1943 within the Army General Staff in anticipation of a need for a group to concern itself with policies to be followed in occupied territories. It had been thought that Fiorello LaGuardia was to head the CAD, but the job went to Hilldring. Marcus became a member and later the chief of the Planning Branch of the CAD. It was as a consequence of Marcus's activities in the CAD that he made his mark; his assignment to the military government of Germany was a direct result of his CAD responsibilities. It was Hilldring who, several months later, pulled him out of his military government position and assigned him to head the War Crimes Branch (which was transferred from the JAG to the CAD on March 4, 1946). Then Hilldring immediately moved over to the State Department as an Assistant Secretary of State in charge of occupied areas problems; in this capacity he headed a secretariat, which coordinated Army, Navy, and State Department policies in Germany. In September 1947, he left the State Department and became an adviser to the U.S. delegation at the United Nations, where the diplomatic battle between the Zionists and the Arabs was being waged. Hilldring "was a tower of strength from the outset [...] as information link with the Jewish representatives, he frequently conversed with Zionist strategists." Then, at about the time Marcus was made supreme commander of the Jewish forces in Jerusalem, Hilldring was appointed back to the State Department as Assistant Secretary of State for Palestine. Zionist sources have subsequently boasted that both the UN and second State Department appointments were direct result of Zionist lobbying.⁵⁸ Quite a pair, Marcus and Hilldring.

The filling of the War Crimes Branch position with a fanatical Zionist, the "first soldier since Biblical times to hold the rank of General in the Army of Israel," is not only significant in terms of what the Zionist might do in the posi-

⁵⁸ Marcus; Berkman, 191-193, 199; John & Hadawi, vol. 2, 209n, 367; Zink, 209, 210; *New York Times* (Apr. 8, 1943), 12; (Apr. 16, 1943), 10; (Mar. 17, 1946), 15; (Sep. 16, 1947), 10; (Apr. 29, 1948), 16; Blum, 383.

tion, but also significant in revealing, in a simple way, the nature of the overall political forces operating at the trials. This is the important point. It is simply not possible to imagine an appointment that would make these trials more suspect.

Under these political conditions it is simply silly to expect anything but a frame-up at the “trials.” The associated “extermination” hoax will be exposed with complete clarity in these pages.

The Nazis

This book is written for people who are already informed on the European side of World War II and the immediately preceding years. We have no intention of reviewing the nature of the Nazi state, the roles of Göring, Himmler, Goebbels, etc., or the anti-Jewish measures that were taken prior to the war, except that these matters will be touched upon here and there as a matter of course. The major events and approximate dates associated with the war are assumed known by the reader.

When Europe was dominated by the Germans, it was not organized according to the plan of the Treaty of Versailles; Figure 3 presents a map of Europe as it was organized in the autumn of 1942, at the apex of Hitler’s power. Germany had annexed Austria, Alsace-Lorraine, part of Czechoslovakia, and a great deal of Poland (more than just the part that had been taken from Germany after World War I). The part of Poland that remained was called the “General Government,” and had the status of a subject province governed by the Germans, as did the three Baltic states of Lithuania, Latvia, and Estonia. In the same subject status were White Russia, the Ukraine, Bohemia-Moravia (formerly western Czechoslovakia), and Banat (long a part of Hungary dominated by ethnic Germans). The eastern part of Czechoslovakia had become the independent state of Slovakia, and Yugoslavia had been reorganized as Croatia and Serbia, corresponding to the two dominant of the five nationalities that had constituted Yugoslavia. Italy also had an interest in this area of Europe, controlled Albania, and shared influence in adjoining countries with her German ally. Finland, Hungary, Romania, and Bulgaria were also allied with Germany, and the Waffen-SS (regular military units within the SS) recruited troops all over Europe, particularly in the Baltic states, in the Ukraine, in Scandinavia, and in the Netherlands and Belgium.

Norway, Denmark, the Netherlands, Belgium, and much (later all) of France were occupied by the Germans. Sweden, Switzerland, Spain, and Portugal remained neutral throughout the war.

It is convenient to review, at this point, some matters pertaining to the SS, a strange bureaucracy, which had responsibility for certain improbable combinations of functions.

Only three of these functions – security, concentration camp administration, and resettlement policies – are of interest in our study.

The best known agency of the SS was the RSHA, Reich Security Main Office, which embraced the Gestapo (Secret State Police, headed by SS Lieutenant General Heinrich Müller), the SD (Security Service, headed by SS Lieutenant General Schellenberg), the Kripo (Criminal Police, headed by SS Lieutenant Generals Nebe and, later, Panzinger) and related functions. The first head of the RSHA had been SS General Reinhardt Heydrich, an ambitious and ruthless young man whose methods generated many enemies for him.

Ever since the Röhm purge of 1934, the substantial ambitions of the SS in respect to military matters had resulted in growing conflict between the SS and the regular military establishment, the Wehrmacht, and Heydrich was not in the least bit delicate in the methods he employed to prosecute the conflict. In 1938, he had forced the resignation of the Minister of War, General Blomberg, by showing that Blomberg's new wife had been a prostitute. Blomberg's obvious successor was General von Fritsch, so Heydrich constructed a frame-up of von Fritsch, based on perjured allegations of homosexuality. Although von Fritsch was eventually exonerated, his career had been ruined, and the bitterness toward Heydrich swelled.

The SS had a second basis for rivalry with the military establishment. The German intelligence services were the *Abwehr*, German military intelligence, responsible to the military high command and headed, since 1935, by Admiral Wilhelm Canaris, and the SD, the political intelligence arm, responsible to Heydrich and Himmler. Since the two types of intelligence activity cannot be strictly separated, Canaris and Himmler inevitably became rivals. Heydrich appears to have attempted to be cooperative with Canaris, at least at first; this may have been due to Heydrich's own background as a naval intelligence officer who, during the twenties, had served and trained under Canaris and had even been a frequent visitor to his home.

More significantly, the Admiral was a traitor; he is one of the awesome mysteries of World War II. During and even before the war (he was in contact with Churchill in 1938), Canaris betrayed Germany at every opportunity. A British official has expressed the role of Canaris most succinctly: "We had Admiral Canaris." The man's motivations remain as mysterious as his personality and his antecedents. Ian Colvin, one of the authorities on World War II intelligence operations, wrote a whole book about Canaris and, yet, never deciphered him:

"The readers will have to judge for themselves whether Admiral Wilhelm Canaris was a German patriot or a British spy, a European statesman or a cosmopolitan intriguer, a double agent, an opportunist, or a seer. It will not be easy for them to make up their minds."

It may be of some relevance that the man whom Colvin, in his 1951 book, characterized as one of Canaris's "close personal friends," Otto John, the *Abwehr* man in the all-important neutral capital of Lisbon during World War

II, later became Chief of State Security for the Bonn Government and was subsequently exposed (in 1956) as a Soviet agent.⁵⁹

The Canaris case is sometimes confused by grouping Canaris with the men behind the abortive coup d'état of July 20, 1944. This is utterly erroneous since Canaris used all his powers to betray Germany, whereas the men of July 20 merely betrayed Hitler, and would never have betrayed Germany. No Englishman, after the war, could have truthfully said: "we had Erwin Rommel." The most one can say about Canaris's involvement is that he was no doubt aware of the conspiracy in its early states, and naturally gave its members the impression that he was with them. Canaris was a grand master at giving such impressions.

To return to Heydrich, great ambition had gotten the young SS General appointed Deputy Protector of Bohemia-Moravia in late 1941; he was thus starting to look bigger than his superior, Reichsführer-SS Heinrich Himmler. It might also be interesting to speculate that, at about this time, Heydrich may have started to grasp Canaris's game; as chief of the RSHA and as a former associate of Canaris, no man was better situated and motivated to penetrate Canaris' secret than Heydrich was. When one considers the long burning antagonism of the Army, it appears that Heydrich, by early 1942, had accumulated a very long list of powerful enemies in Germany. It was thus remarkable that at this point in Heydrich's career the English, it is said, fortuitously removed him in May 1942 by dropping two assassins from the sky. In accord with the all-too-common scenario for political assassinations (e.g. the Abraham Lincoln and John F. Kennedy assassinations), the alleged assassins were said to have been killed before they got an opportunity to talk.

In an appointment that caused general astonishment, Heydrich was succeeded in early 1943 by the relatively obscure and much less ambitious Dr. Ernst Kaltenbrunner. Evidently desirous of avoiding repetition of the situation that had developed with Heydrich, Himmler retained a rather more direct control of the Gestapo and the SD than he had held previously. However, both agencies continued to be formally responsible to the head of the RSHA, now Kaltenbrunner. Himmler also charged Kaltenbrunner with a special task: to build up the intelligence service of the SD. This was a particularly timely decision on the part of Himmler, since Canaris fell from power (without being fully exposed) in February 1944 and, by a special Hitler decree, all military and political intelligence functions were taken over by the RSHA, thus uniting all intelligence activity under SD chief Schellenberg.

Canaris was arrested after the July 20 coup, and he was executed shortly before the end of the war.

Concentration camp administration was under the WVHA, Economic-Administrative Main Office, headed by SS General Oswald Pohl. As its name suggests, the WVHA was concerned with the economic role of the SS which had arisen, for the most part, on account of the availability of the labor of con-

⁵⁹ Colvin, vii, 1-6; *New York Times* (Dec. 23, 1956), 1; (Jul. 6, 1969), 11. See Sturdza, 161-162, for an episodic illustration of Canaris at work.

centration camp inmates. The commandants of the concentration camps reported to the Inspectorate of Concentration Camps, headed by SS Brigadier General Glücks, who reported to Pohl. Pohl reported to Himmler, and was formally equal in rank to Kaltenbrunner and Heydrich.

It is convenient to state at this point, in very general terms, what was going on with respect to the Jews of Europe during the life of the Nazi regime. Before the war, the German Government had used all means to encourage the emigration of Jews from Germany, and most German Jews had left Germany before the outbreak of the war. The persistent problems in connection with this emigration program were, first, the dislocations of the economy which were entailed in moving the Jews out and, second, the difficulty in arranging for other countries to take the Jews. By the summer of 1941, Germany was at war with Russia, and huge numbers of Jews, *i.e.*, the greater part of all the Jews of Europe, were in the German sphere of influence. However, the war had also opened up, temporarily, vast new territories for the Germans, and consequently, a program of Jewish resettlement got under way in the autumn of 1941. Through the course of the war, as long as Germany controlled any significant amount of eastern territory, European Jews were being resettled in the East. There were also a certain number of young, adult Jews conscripted for labor.

On account of certain political problems and the priority of war requirements, the resettlement program was only partially carried out and, of course, nowhere near six million Jews were involved. Excluding Polish and Romanian Jews, perhaps 750,000 Jews were resettled, primarily in the Ukraine, White Russia, and Latvia. Not all Polish Jews fell under German domination. Apart from those who managed to flee before or after the German occupation, several hundred thousand or perhaps a million Jews had been deported from Poland by the Russians in 1940, and had been dispersed in the Soviet Union. For the most part, the Polish Jews who came into German hands were crowded into ghettos in eastern Poland (1939 boundaries).

What happened to all of these people can be established only in a very general way, because all of the territory that the Jews had been resettled onto became Soviet territory after the war, and because the victorious powers engaged in considerable suppression of the data. However, there is sufficient evidence to permit us to see approximately what happened. Although it is very likely that a fair number perished in the disorderly and chaotic conditions that accompanied the German retreats, it is established that a large number of Jews, predominantly of pre-war Polish nationality, were absorbed into the Soviet Union, and the remainder of the Jews who had been uprooted ultimately resettled in Palestine, the U.S., Europe, and elsewhere.

These general remarks are supplied here to serve as a background to assist the reader in interpreting the analysis of the "extermination" claims, which is the task of the next few chapters. However, the major evidence for these remarks concerning what actually happened to the Jews will not be presented until Chapter 7.

The RSHA was responsible for carrying out most aspects of this Jewish policy. Within the Gestapo there was an office, "B4," which designated the "religions and cults division – Jewish religion subdivision," headed by one Karl Adolf Eichmann, whose highest attained rank had been lieutenant colonel or colonel.⁶⁰ Eichmann did the routine chores associated with the Jewish emigration and resettlement policies of the German Government; most of his time was spent arranging with the various Jewish Councils to draw up transport lists of Jews, and arranging for transportation for the deportees. There is no evidence that Eichmann ever participated in formulating policy, and since he was not involved in concentration camp administration, he could not have been directly involved in whatever it was that happened in those camps.

It is, therefore, quite ridiculous that it was possible to get so many people excited about the case of a person such as Eichmann, who had performed completely routine functions in Nazi Germany. Those functions were carried out in accordance with specific orders transmitted by his superiors. His Jerusalem testimony was given "after consulting Reitlinger and Poliakov, (producing) seventeen multicolored charts, which contributed little to a better understanding of the bureaucratic machinery of the Third Reich."⁶¹ I see no point in viewing the Eichmann affair as anything but a publicity stunt on the part of a state accustomed to disregarding the constraints that other states feel bound to respect. A short discussion of the Eichmann case and of Eichmann's Jerusalem testimony is provided in Chapter 6 (pages 243ff.).

Other departments of the SS, which were involved in resettlement activities were the RKFDV (Reich Commission for the Strengthening of Germandom, headed by SS General Ulrich Greifelt), the RuSHA (Race and Settlement Main Office, headed by SS Generals Otto Hofmann and, later, Richard Hildebrandt) and the VoMi (Liaison Office for Ethnic Germans, headed by SS General Werner Lorenz). The most important responsibility of these departments was the resettlement of ethnic Germans on conquered territories, and Greifelt was the main personality in this program. However, they inevitably got involved in the program of Jewish resettlement to some degree.

Chapter 2: The Camps

Horror Scenes and ‘Extermination’ Camps

When Germany collapsed in the spring of 1945, it was after a long Allied propaganda campaign that had repeatedly claimed that people, mainly Jews, were being systematically killed in German “camps.” When the British captured the camp at Bergen-Belsen in northern Germany, they found a large number of unburied bodies lying around the camp.

Photographs, such as Fig. 10, and pictures of guards with unfortunate facial expressions, such as Fig. 12, were accordingly reproduced all over the world.

It is, I believe, Belsen, which has always constituted the effective, mass propaganda “proof” of exterminations, and even today you will find such scenes occasionally waved around as “proof.” In fact these scenes, repeated in varying degrees at other German camps, *e.g.* Dachau and Buchenwald, were much less related to “extermination” than the scenes at Dresden after the British-American raids of February 1945, when many, many times as many bodies were found lying around.⁶² The deaths at Belsen were the result of a total loss of control, not a deliberate policy. Equivalent scenes could easily have existed in any country invaded on all sides by enemy armies, crippled by powerful “strategic” bombings, which had caused all sorts of shortages and chaotic conditions.

The major cause of the deaths at Belsen was a typhus epidemic. Everybody agrees that typhus was a constant menace in all German camps and eastern military operations; for this reason there was a real fear of typhus spreading throughout Germany, and vigorous countermeasures were applied.⁶³ The typhus problem will play a most significant role in our story, because it was not merely at the end of the war that it manifested itself; the scenes at the end of the war were due to the total collapse of all measures against a disease that had plagued the German concentration camps since early in the war. The typhus was of the sort carried by the body louse, and consequently, defensive measures consisted in killing the lice, whose spread was due mainly to the constant rail traffic with the East.

Thus, all “survivor literature,” sincere or inventive and regardless of the type of camp involved, report the same basic procedures involved in entering a German camp: disrobe, shave hair, shower, dress in new clothes or in disinfected old clothing.⁶⁴

⁶² Veale, 133-136; Martin, 121.

⁶³ Reitlinger, 122, 402; Hilberg (1961), 570-571; DuBois, 127.

⁶⁴ Burney, 9; Buber, 188; Lenz, 31; Cohen, 120-122.

At Belsen, the trouble had started in October 1944 with a breakdown of these measures. In the account of a political prisoner there:⁶⁵

“Towards the end of February 1945 my own situation changed completely.

By that time typhus had become a serious danger for the whole camp. It was the species of typhus which is transmitted by lice. At one time all the transports which arrived at Belsen had had to pass through a ‘human laundry’ and this disinfection seems to have been effective enough to keep the camp free from lice until the autumn of 1944.

At the end of October a big transport had, for the first time, been admitted to the camp without being disinfected, because there had been some damage to the machinery of the shower-baths. Unfortunately the people of this transport were louse carriers, and from that day the lice gradually spread over the whole camp. [...] Typhus broke out in Camp I about the end of January. At first there were only a few cases, but a month later a dozen had appeared, and it became impossible to check the disease [...].”

Another serious complication was that, in the final months, Belsen was considered a *Krankenlager*, a sick camp, so that many people entering were sick to begin with.⁶⁶ The British could not check things at once, and over a quarter of those alive when they took over the camp were to perish in the first four weeks.⁶⁷

Despite the very effective propaganda role of the Belsen scenes, nobody acquainted with the most easily obtainable facts claims exterminations at Belsen, and the British military court which tried the commandant, SS Captain Kramer, never accused him of supervising an extermination camp at Belsen.⁶⁸ Today, in fact, exterminations at any of the concentration camps in Germany are not claimed by anybody trying to be serious; Belsen, Buchenwald, Dachau, etc. were not extermination camps. The extermination camps are all supposed to have been in occupied Poland, namely the camps referred to as Auschwitz, Belżec, Kulmhof (Chełmno), Lublin (Majdanek), Sobibór, and Treblinka.⁶⁹

Also, exterminations of Jews were supposed to have been conducted in Russia by the *Einsatzgruppen*, employing either mass shooting or “gasmobiles.” The camps in Poland are also claimed to have employed “gas chambers” but, except for the case of Chełmno, stationary rather than mobile ones.

Thus, the exterminations are supposed to have taken place only at locations which had been abandoned before being captured by the Russians, not at camps which were still functioning, however disastrously, when captured by Western troops.

Although six extermination camps are claimed, one of them, Auschwitz, is the key to the whole story. It is for Auschwitz that quantities of documentary

⁶⁵ Sington, 117f.

⁶⁶ Phillips, 152.

⁶⁷ Sington, 48.

⁶⁸ Phillips, 17.

⁶⁹ Hilberg (1961), 561-564; Reitlinger, 94, 147-150, 154.

evidence are offered; there is little of any sort offered for the others. It was Auschwitz, as will be seen, that got the very special attention of Washington long before the end of the war. Thus, much of this work is necessarily concerned with the claim that at Auschwitz Jews were being exterminated during World War II.

The Camps and Their End

The subject of this book is the question of whether or not the Germans attempted to exterminate the European Jews. We are not concerned with considering in any detail the general question of alleged Nazi brutalities of all sorts, or with presenting a complete picture of the functioning of German camps. However, it has been found that many people have such distorted views of these camps that, because at Auschwitz there were camps, it is difficult to separate Auschwitz at the outset, and consider it in isolation from other camps. Thus, a few general words about the camps are in order. Fig. 23 presents a map (January 1938 boundaries) that shows the locations of a few of the most frequently referred to camps, together with the locations of a few large cities.

There were many types of German camps, and only a fraction of them were called “concentration camps.” There were thirteen German concentration camps, each of them actually being a collection of neighboring camps. Only two of the six alleged “extermination camps,” Auschwitz and Lublin, were “concentration camps.” A table of many types of German camps, which includes many ordinary prisons, is given by Aronéanu, pp. 203-251, who lists about 1,400 “camps,” together with their locations and “characters.” While this table gives some idea of the scope and diversity of the German prison and camp systems, it has obvious major errors, such as giving the “character” of Birkenau as “medical experiments.” The major significance of Oranienburg, near Berlin, was that it quartered the Inspectorate of Concentration Camps, and was thus in direct communication with all concentration camps.

The typical inmate of a German concentration camp was a person being detained for punitive or security reasons. There were five major categories, and they were distinguished by colored insignia, which were associated with their uniforms:⁷⁰

Table 5: Concentration camp inmate insignia

COLOR	CATEGORY
Green	Criminals
Red	Political prisoners (mainly communists)
Pink	Homosexuals
Black	Asocials (vagrants, drunkards, etc.)
Purple	Considered disloyal on account of religious views (mainly Jehovah’s Witnesses)

⁷⁰ Cohen, 26-28.

At Auschwitz and some other camps, a triangle of the appropriate color was attached to the uniform. If the prisoner was Jewish, a yellow triangle was superimposed on the first triangle, forming a star of David. This is referred to as the Auschwitz “star system.”

Economic conditions being what they were, the German government made every effort to use concentration camp inmates for labor. Prisoners of war (POWs) were also used to the extent that such use did not conflict with the relevant conventions, as the Germans interpreted their obligations under them. Thus, Russian POWs were used freely, because Russia did not respect the conventions. Employment of western POWs was restricted to cases where certain legalistic “transformations” into civilian workers were possible, as with many French POWs,⁷¹ or some cases where the work was not considered to be ruled out by the conventions, as with some British POWs employed under conditions to be discussed.

The number of inmates in the entire German concentration camp system was about 224,000 in August 1943, and 524,000 a year later.⁷² These figures include only camps referred to by the Germans as concentration camps, and do not include any transit camps or camps referred to in other terms, such as the Theresienstadt ghetto or any other establishments intended for quartering families.

It is generally accurate to say that there was no such thing as a “concentration camp” for Jews as such, but this remark must be clarified; there are three distinct categories of Jews, which must be considered in this connection.

First, a fraction of those interned for punitive and security reasons were Jews, and under the National-Socialist system it was natural, in the camps, to segregate them from the “Aryan” inmates. Thus, sections of the camps could, in this sense, be considered “for Jews.” Second, specific legislation existed for the labor conscription of Jews, and many selected specifically for labor found their ways into concentration camps on this basis.

The third category was Jewish families, but the closest they got to “concentration camps” was in certain *Durchgangslager*, transit camps, which in some cases were independent camps such as Westerbork in the Netherlands⁷³ and others (to be mentioned) and in some cases were separate compounds, which existed at some concentration camps, *e.g.* Belsen, possibly Dachau,⁷⁴ and others (to be mentioned). The transit camp, as its name suggests, was intended only for temporary quartering pending transport to some other destination.

In addition to the transit camps, there were “camps” for some Jewish families, such as Theresienstadt in Bohemia-Moravia and others far to the East, but the most pejorative term applicable in these cases would be “ghetto,” not “concentration camp.” In addition, as we shall see, toward the end of the war,

⁷¹ Red Cross (1948), vol. 1, 546-547.

⁷² 1469-PS and NO-1990 in NMT, vol. 5, 382, 389.

⁷³ Cohen, xiii.

⁷⁴ Aronéanu, 212.

as the Russians were approaching on the eastern front, the Germans put many formerly free Jews into ghettos for security reasons.

The full story regarding the position of Jews relative to German-controlled camps of all types is rather complicated. Rather than attempt to say here exactly what that position was, the subject will be touched on at many points in the book, and the reader will be able to form a reasonably complete picture.

There is no point in attempting to discuss the entire German camp system here. For our purposes, it will suffice to discuss the three that are referred to most frequently (excluding Auschwitz): Belsen, Buchenwald, and Dachau (inmate populations in August 1943: 3,000, 17,600, and 17,300 respectively⁷⁵). Then we will pass on to preliminary discussion of the alleged “extermination camp” Auschwitz in Poland.

Belsen

Belsen had only a very brief history. It had originally been a Wehrmacht camp for wounded POWs. In mid-1943, the SS took over half the camp for the purpose, among others, of turning it into an “exchange camp,” a transit camp for foreign nationals and Jews whom the Germans contemplated exchanging for Germans held abroad. Some new grounds and buildings were also added to the camp. Jews from Salonika, Greece, who possessed Spanish passports were the first Jewish arrivals (it was hoped to send them to Spain), but eventually the Dutch Jews predominated (about 5,000). A fraction of the Dutch Jews were there on a semi-permanent basis, because they numbered many of the skilled craftsmen of the essential Amsterdam diamond cutting industry, and thus, their diamond cutting operations had merely been moved to Belsen. The quarters for Jews at Belsen formed what was called the “Star Camp,” which was strictly separated from the rest of the camp and was essentially untouched by the typhus epidemic of the last months.⁷⁶

The Dutch Jews were particularly heavily hit by deportations; reasons for this will be given later. It was at Belsen in March 1945 that Anne Frank is said to have perished from typhus, although the Jewish families were mostly isolated from the typhus epidemic.⁷⁷ The question of the authenticity of the diary is not considered important enough to examine here; I will only remark that I have looked it over and don’t believe it. For example, as early as page 2 one is reading an essay on why a 13-year-old girl would start a diary, and then page 3 gives a short history of the Frank family and then quickly reviews the specific anti-Jewish measures that followed the German occupation in 1940. The rest of the book is in the same historical spirit.

The remainder of the Belsen concentration camp contained the usual assortment of inmates, and the fate of the camp has been seen. Bergen-Belsen

⁷⁵ 1469-PS in NMT, vol. 5, 382.

⁷⁶ Reitlinger, 364f., 406; Hilberg (1961), 377-379, 632f.

⁷⁷ A. Frank, 285.

never had a significant economic-industrial aspect, except for the diamond cutting.⁷⁸

Buchenwald

The major significance of Buchenwald was industrial; its satellite camps at Beuchow, Dora, Ellrich, Elsing, Gandersheim, and Halberstadt existed primarily for the sake of an underground aircraft factory, which employed the usual concentration camp and foreign labor, in addition to regular German labor.⁷⁹ There were, however, two other aspects, the medical experiments conducted at the main camp Buchenwald, and the activities of commandant Koch; these offer quite perfect illustrations on how the meanings of facts have been distorted in speaking of these camps. We are fortunate in having a book by Christopher Burney, a former inmate; this book not only indulges in some of this distortion but also offers us some facts or hints which enable us to see through the distortion. Burney's book should illustrate to any reader the necessity, when reading "personal experience" literature of this sort, of sharply and rigorously distinguishing between the scenes the author actually claims to have witnessed or the claims he had read or heard, on the one hand, and the inferences he has drawn or pretended to draw on the other. The differences are often most stark. Describing commandant Koch:⁸⁰

"No cruelty was foreign to him, no single cell of his brain had not at some time or other contributed to the planning of new refinements of anguish and death for the rats in his trap."

Burney goes on to explain that, because Koch was a homosexual, Frau Ilse Koch used to make out with the prisoners, "who were then sent to the crematorium," except that highly valued tattooed skin was saved for lampshades. At this point in Burney's book, things obviously look bad for him, especially if he has tattoos and Frau Koch finds him but, happily, all of that had happened before he arrived there in early 1944. Koch had been arrested in 1943 for embezzlement and was succeeded by Pister who was "one of the mildest concentration camp commanders in history" so that:

"in the last year of its existence a casual observer who came to the camp and looked generally at it without probing its corners, would have seen little or no beatings, a large number of men doing no work, a much larger number working with a lethargy taught them by the Russians [...], living blocks which were clean, kitchens with huge, horrifyingly modern soup-cookers and a hospital which would just pass muster at first glance."

The Koch arrest had, in fact, been part of the breaking of a ring of corruption which had spread through the German concentration camp system and had involved the murder of some prisoners who knew too much. It was exposed

⁷⁸ Regarding Belsen see in general Barton and Weber (1995).

⁷⁹ Aronéanu, 207, 213, 214, 217, 220.

⁸⁰ Burney, 10-14.

through the efforts of SS Judge Konrad Morgen. Koch was executed by the SS.⁸¹

The tattooed skin was undoubtedly due to the medical experiment role of Buchenwald. As remarked by Burney, when a Buchenwald inmate died, the camp doctors looked his body over and if they found something interesting they saved it.⁸² It is fairly certain that the collection of medical specimens thus gathered was the source of the tattooed skin and the human head that turned up at the IMT as “exhibits” relating to people “murdered” at Buchenwald. What is probably the greater part of the collection is pictured in Figure 32. The head is normally pictured, without any explanation, in the company of some soap (Fig. 24), allegedly made from human bodies, which was submitted as evidence by the Russians who, when they learned there was to be a trial, evidently read up on what the Germans had been charged with in World War I.⁸³ By the time the IMT was done “developing” the fact about the tattooed skin found at Buchenwald, we had an official deposition:⁸⁴

“In 1939 all prisoners with tattooing on them were ordered to report to the dispensary. No one knew what the purpose was, but after the tattooed prisoners had been examined, the ones with the best and most artistic specimens were kept in the dispensary and then killed by injections. [...] the desired pieces of tattooed skin were detached from the bodies and treated. The finished products were turned over to Koch’s wife, who had them fashioned into lampshades and other ornamental household articles. I myself saw such tattooed skins with various designs and legends on them, such as ‘Hansel and Gretel’ which one prisoner had on his knee, and designs of ships from prisoners’ chests.”

Frau Koch was convicted of such crimes at her trial before a U.S. military court, but in 1948, the American military governor, General Lucius Clay, reviewed her case and determined that, despite testimony produced at her trial, Frau Koch could not be related to the lampshades and other articles, which were “discovered” (*i.e.* planted) in the Buchenwald commandant’s residence when the camp was captured in 1945. For one thing, she had not lived there since her husband’s, and her own, arrest in 1943. Also her “family journal,” said to be bound in human skin and which was one of the major accusations against her, was never located and obviously never existed. Clay thus commuted her life sentence to four years imprisonment for ordinary sorts of brutalities.

What happened after the commutation provided one of the many episodes which, together with the 1948-49 revelations of what had transpired at the Dachau “trials,” exposed quite effectively the lawlessness that prevailed in the war crimes trials. Rabbi Wise and other influential people protested the com-

⁸⁴ 3421-PS; IMT, vol. 3, 515; quoted Shirer (1960), 984.

mutation so strongly that there was a Senate investigation into the matter, which concluded that:

“military authorities say they have been unable to find evidence of any other crime Ilse Koch committed on which she could be tried without violating the rule of double jeopardy. However [...] because the trial conducted by our special military government court was based on charges that the various accused had mistreated ‘non-German nationals,’ the German courts might well try Ilse Koch under their law for crimes committed against German nationals. [...] Should the German people bring Ilse Koch to trial on such charges, the subcommittee is convinced that it would then be the duty of our military authorities to give complete cooperation to the German authorities.”

This distinction between crimes against Germans and crimes against non-Germans was merely a bit of sophistry that was trotted out for the occasion. Not only had the U.S. war crimes courts always assumed jurisdiction in cases of alleged crimes against German Jews, but the distinction was irrelevant anyway, for Clay’s commutation of her sentence was based on a conclusion that she was not guilty of the major charges against her, which had to do with lampshades and the like, irrespective of the nationality of the alleged victims.

Clay did not change his position throughout the long public controversy concerning efforts to try Frau Koch a second time on essentially the same charges, a controversy which, according to the *New York Times*, “rocked the United States and Europe.” Clay was firm on his decision in the Ilse Koch case and explained that

“examination of the record, based upon reports which I received from the lawyers, indicated that the most serious charges were based on hearsay and not on factual evidence. For that reason the sentence was commuted.

I hold no sympathy for Ilse Koch. She was a woman of depraved character and ill repute. She had done many things reprehensible and punishable, undoubtedly, under German law. We were not trying her for those things. We were trying her as a war criminal on specific charges.”

Despite this empathic stand of the American military governor, pressures from the U.S. induced the German authorities to move against Frau Koch after she was released from American detention in October 1949. She was again tried on the familiar “lampshade” charges. Although the defense was able to show that the testimonies of two of the prosecution witnesses contradicted declarations that they had made in connection with earlier proceedings, thus forcing the German court to strike their testimonies from the record, Ilse Koch was found guilty and sentenced to life imprisonment. She hanged herself in her cell in 1967.⁸⁵

⁸⁵ *New York Times* (Sep. 24, 1948), 3; (Oct. 1, 1948), 11; (Oct. 8, 1948), 10; (Oct. 22, 1948), 5; (Dec. 27, 1948), 1, 12; (Dec. 20, 1950), 15; Jan. 16, 1951), 1; (Sep. 3, 1967), 1; cf. also A.L. Smith.

Burney reports some Belsen-like scenes at Buchenwald, but mainly among incoming prisoners evacuated from more eastern locations during the final chaotic weeks. So much for Buchenwald.⁸⁶

Dachau

Dachau was one of the oldest Nazi concentration camps, with an emphasis on Austrian political prisoners, Roman Catholic priests (detained for reasons that need not be examined here), and old and semi-employable people of all categories. The camp also had its group of ordinary criminals. Work was mainly at outside factories, but a herb plantation was being built up at the camp, and some prisoners worked at draining swamps.⁸⁷

It is useful here to go into some detail on how, at the end of and immediately after the war, Dachau was misrepresented as an extermination camp with gas chambers. In showing that such events never took place at Dachau, we are not, of course, contradicting the present story put forward by the bearers of the extermination legend, who do not claim Dachau in this connection, and build their story around the camps in Poland, with Auschwitz occupying the central position in this respect. The point of exploring these details regarding Dachau is that the credibility of the U.S. occupation is thereby demolished. The U.S. propaganda had claimed exterminations in the German camps, and Dachau was the major camp taken over by the Americans (Buchenwald was later surrendered to the Russians). Thus, an effort was made to distort and misrepresent what had happened at the Dachau concentration camp. A recognition of the amazing crudeness and clumsiness of that effort, and the ludicrous nature of the “evidence” put forward will prime the reader quite suitably for our analysis of the central part of the hoax, the Auschwitz lie.

The conditions in the camps had forced the German government, in March 1945, to take the final step in reversal of its earlier policy of absolute exclusion of the International Committee of the Red Cross (ICRC) from the concentration camps (existing conventions covered POWs, not concentration camp inmates). On March 29, 1945, SS General Kaltenbrunner authorized the ICRC to place one delegate in each camp for the purpose of distributing relief supplies, on the conditions that the delegate remained there until the end of the war.⁸⁸ The ICRC organized road transport for relief supplies (use of the railways was out of the question) but its effectiveness was to a degree influenced by the attitudes of individual concentration camp commanders; for example, the reception at Mauthausen on April 23-30 was at first negative. SS Colonel Ziereis claimed that he had not heard of the Kaltenbrunner order.⁸⁹

At Dachau, the ICRC had gotten a relatively warm reception on April 27 (after some coolness on April 26), and a delegate was allowed to establish

⁸⁶ Burney, 106-109; cf. in general Weber (1986).

⁸⁹ Red Cross (1947), 134-137.

himself in the camp. By Sunday, April 29, it was found that most of the German officers, guards, and employees had fled, and the effective command of the camp had fallen to a certain SS Lieutenant Wickert, who had similar intentions of leading a flight of the remaining guards. Because this raised many dangers, notably violence by prisoners against German civilians of the area, and the spread of epidemics, the delegate talked Wickert out of this. They came to an agreement regarding surrender of the camp, which the ICRC delegate was to do his best to have respected. First, guards would remain in the towers to prevent the escape of prisoners.

Second, the soldiers not standing guard would assemble, unarmed, in one of the courtyards.

Third, the garrison would be allowed to withdraw to its own "battle lines," after the transfer of the camp to the Americans.

The ICRC delegate then affixed a white towel to a broomstick and, taking a German officer with him, left the camp to hunt up some Americans. After a while, they encountered an American motorized unit, and the delegate presented himself to the American general (not named in the delegate's report on these events) who, on learning the identities of his new guests, immediately asked that the delegate and the German officer accompany them for the purpose of taking press photos at the camp, particularly of a certain train which was full of dead bodies. Although the Red Cross delegate had been at the camp for two days, he had apparently been too busy to learn of this train while at the camp, and learned of it from the general.

With its mission thus defined, the column set off for the camp. On the way, the delegate was able to ask a Major Every to communicate to the general the agreement for the transfer of the camp, but apparently this attempt to communicate with the general was not successful.

On arrival at the camp, they found that some Americans had already arrived, the German guards in the towers had been replaced, and all the Germans had surrendered. The inmates were in great disorder, and some were armed; shots were fired at SS guards, and this resulted in some killed on both sides. The delegate was finally able to gain the attention of the general to present the plan for the transfer of the camp. The general assented to the plan, but the German prisoners were not allowed to leave anyway, and many of them suffered at the hands of inmates seeking vengeance. As many of the inmates were disarmed as possible, but this did not end the disorders. Some inmates embraced the American soldiers while others tore down barbed wire fences and escaped. Some shots were fired by the Americans over the heads of inmates, and an uneasy calm was finally reached by 10 p.m. There were, however, occasional shots fired during the following night. The following day, April 30, it was possible to pass out adequate food, and on the next day, Tuesday May 1, some members of the ICRC legation arrived and, according to the delegate,

they visited not only piles of corpses but “equally the execution chamber, the gas chamber, the crematory ovens, etc.”⁹⁰

The preceding is a summary of the report of the Red Cross delegate. It contains no assertions similar to later assertions made independently by former inmates Johann M. Lenz and Nerin E. Gun, both of whom claim that the Americans, on arrival, started killing all SS guards in sight (unquestionably at least an exaggeration). Gun claims that this policy even extended to the dogs in the kennels, while Lenz claims that the general ordered a two hour bombardment of the defenseless town of Dachau (he was eventually dissuaded from this) in retaliation for the bodies which had been found lying around.⁹¹ If there is any truth to these claims (in fact, this massacre of the wholesale execution of all SS members was even photographed by the U.S. Army),⁹² the ICRC delegate made a fairly significant omission in his report.

It is very important to recognize what the Red Cross delegate refers to as the “gas chamber” in his report. The tone of the delegate’s report is tongue-in-cheek and contemptuous at several points, for it was written in defensive awareness of all the drivel that was being given mass circulation in the press. Thus, he remarks, in connection with the bodies found on the train at Dachau, that “many of these men had been killed while the others were probably dead of hunger.” Also, while the delegate is happy to pass along the names of *le lieutenant* Wickert and *le major* Every and others, he refuses to mention the name of the U.S. commander (apparently either Linden or Patek), who is referred to only as “*le general*.”

There were two types of rooms which were claimed as gas chambers by the U.S. propaganda after the camp was captured, and Gun reproduces the relevant photographs. Here we present Figs. 16 and 22. The former shows an ordinary shower which the U.S. propagandists had the audacity to claim was a gas chamber disguised as a shower. Fig. 19 shows the entrance to this “*Brausebad*” (shower bath).

The second type of room, which was claimed as a gas chamber, was indeed a gas chamber, the door of which is shown as Fig. 22. This door certainly appears to be genuine and not manufactured for the propaganda. To see what is involved, examine Fig. 13 (top). On the left, one can perceive the very same door, and near the door a heap of dirty prisoner clothing. That “gas chamber” was obviously a chamber for disinfesting clothing; such equipment was necessary and existed at all of the German concentration camps. The interior of the disinfestation room is shown in Fig. 6.

The building shown in Fig. 13 housed disinfestation chambers, the shower bath of Fig. 16, and the crematory of Fig. 17. This building has been maintained, and is regularly visited by tourists. It is removed from the main part of the camp, located in a relatively isolated spot. It was perfectly logical to locate

⁹⁰ Red Cross (1947), 144-146, 149-152.

⁹¹ Lenz, 270; Gun, 63-64.

⁹² Editor’s note: This massacre was photographed by the U.S. troops, see Fig. 21, bottom right. Compare also Buechner; see also *Dachauer Hefte*, issue 1 (1985): “Die Befreiung”.

both the disinfestation chamber and the crematory in such a way that inmates did not come into frequent contact with such things (the former for reasons of health and the latter for reasons of morale). The shower was necessary, obviously, to decontaminate the people who worked in this building before they returned to the main part of the camp. I do not know whether this shower bath also serviced incoming prisoners, or if a separate shower existed for that purpose. As suggested by Fig. 16 and confirmed by the literature, it was almost always the shower bath, rather than the disinfestation chamber, which served the propaganda as a “gas chamber.”⁹³ The latter was probably considered too small to represent as a gas chamber, which had claimed countless victims.

Naturally, the “war crimes trials” produced witnesses who claimed gasings at Dachau (e.g. IMT witness Franz Blaha, who also claimed tattooed skin scenes as at Buchenwald⁹⁴). Naturally, the people whose bodies had been found at the camp when it was captured, especially those on the train, were always represented as having been murdered.

The number of bodies on the train at Dachau was approximately 500. Finding dead people on trains in Germany toward the war’s end was not unusual even on ordinary passenger trains; in January 1945, 800 Germans, frozen to death, had been found on a train which had arrived in Berlin.⁹⁵ The German rail system was in utter chaos, and conditions in April 1945 are difficult to imagine, but some attempt should be made to see some of these corpse-laden trains in context. Some thought might also be given to the possible conditions of people as they started their journeys on these trains. It is entirely possible that the typical individual concentration camp commander, presented with what he considered insane orders to “transfer” N inmates to X camp, reasoned that putting the half dead on the train had the double merit of minimizing numbers of deaths and also getting some of the dying off his hands. However, such problems are not of essential or central interest here.

The truth about Dachau was not long in coming out, but did not receive wide publicity. The causes for the dead bodies, which were found at the camp when it was captured, were described in a 1948 publication of the American Association for the Advancement of Science. As the U.S. Army advanced into Germany, it encountered the sorts of conditions, which its medical services had anticipated and for which they had prepared counter-measures:⁹⁶

“Germany in the spring months of April and May was an astounding sight, a mixture of humanity traveling this way and that, homeless, often hungry and carrying typhus with them. [...] The more territory that was uncovered, the greater was the number of reported cases; for Western Germany in the areas of the American advance was rather uniformly seeded with typhus. To be sure, there were heavily involved communities and

⁹⁵ Burney, 107; Red Cross (1947), 151.

⁹⁶ Gordon, 23-25.

others lightly affected. There were great accumulations of cases in the concentration and prison camps, and in nearby small communities.

As estimated 35,000-40,000 prisoners were found in [Dachau], living under conditions bad even for a German camp of this kind and worse than any other that came into American hands. Extreme filthiness, louse infestation, and overcrowding prevailed throughout the camp buildings. Several car-loads of human bodies were found packed in box cars in the railroad yards adjacent to the camp, the vestiges of a shipment of prisoners from camps further north who were transferred to Dachau in the late days of the war to escape the advancing United States troops.

The number of patients with typhus fever at the time the camp was first occupied will never be known. Days passed before a census of patients could be accomplished. Several hundreds were found in the prison hospital, but their number was small compared with the patients who continued to live with their comrades in the camp barracks, bed-ridden and unattended, lying in bunks 4 tiers high with 2 and sometimes 3 men to a narrow shelflike bed; the sick and the well; crowded beyond all description; reeking with filth and neglect – and everywhere the smell of death.”

It is not surprising that Dachau had experienced catastrophes very similar to those at Belsen. Since the beginning of 1945, there had been an estimated 15,000 prisoner deaths from typhus, mostly in the final two months.⁹⁷

The Americans brought the camp under control, and it served, as we have seen, as an American camp and center of “war crimes trials.” An American lawyer, Stephen S. Pinter, who was stationed there and evidently disapproved of what had been carried out there in the name of the United States, wrote in 1959:⁹⁸

“I was in Dachau for 17 months after the war, as a US War Department Attorney, and can state that there was no gas chamber at Dachau. What was shown to visitors and sightseers there and erroneously described as a gas chamber, was a crematory. Nor was there a gas chamber in any of the other concentration camps in Germany. We were told that there was a gas chamber at Auschwitz, but since that was in the Russian zone of occupation, we were not permitted to investigate, since the Russians would not permit it.

[...] uses the old propaganda myth that millions of Jews were killed by the national socialists. From what I was able to determine during six post-war years in Germany and Austria, there were a number of Jews killed, but the figure of a million was certainly never reached. I interviewed thousands of Jews, former inmates of concentration camps in Germany and Austria, and consider myself as well qualified as any man on this subject.”

In 1960, the *Institut für Zeitgeschichte* of Munich, “the paragon of hostility and resistance to Nazism,” declared:⁹⁹

⁹⁷ Red Cross (1947), 150.

⁹⁸ Letter by Pinter in Catholic weekly *Our Sunday Visitor* (Jun. 14, 1959), 15; cf. Schwensen.

⁹⁹ *Die Zeit* (Engl. Edition, Aug. 26, 1960), 14 (letter by M. Broszat); Rassinier (1962), 79.

“The gas chamber in Dachau was never completed and put into operation [...] The mass extermination of Jews by gassing started in 1941/1942, and took place [...] with the aid of installations technically designed for this purpose, above all in occupied Polish territory [but nowhere in the Old Reich ...].”

This is essentially the Dachau myth as it stood in the summer of 1973: the information given the visiting tourist at Dachau correctly identified the disinfection room as such, without any attempt to represent it as a gas chamber for exterminating people. In regard to the shower bath, the leaflet explained that

“This gas chamber, camouflaged as a shower room, was not used. The prisoners selected for ‘gassing’ were transported from Dachau to the Hartheim Castle, near Linz (Austria) or to other camps.”

So much for Dachau, a close examination of which was necessary in order to evaluate the general credibility of the U.S. propaganda.¹⁰⁰

The Industrial Role of Auschwitz

The camps at Auschwitz were, of course, part of the same concentration camp system as the camps we have just discussed. However, the operations referred to with the term “Auschwitz” were really, in many ways, in a class by themselves. This is so much the case that, in order to see the role of Auschwitz clearly, it is necessary to go back considerably in time. It is also necessary, unfortunately, to indulge in a certain amount of discussion that may seem excessively technical at first.

The principal cause of the German defeat in World War I in 1918 had been shortages brought about, chiefly, by the British blockade. Shortages of such things as oil and rubber had been crippling the Army, and near starvation conditions in Germany had made the internal political situation unpredictable and unstable. Germany capitulated, a victim of, among other things, the Twentieth Century’s first “energy crisis.”

The extreme vulnerability of Germany in respect of raw materials had, of course, been realized by the German chemical industry during the war, and after the war the popularity of the concept of “autarky,” non-reliance on imports or foreign aid, was partially based on this consideration. The only raw materials that concern us here are oil and rubber, of which there was essentially none in Germany. In Europe, only Romania had significant oil resources, and there was no natural rubber anywhere in Europe. There were, however, huge sources of coal in Germany and elsewhere in Europe.

Rassinier refers to the German edition of *Die Zeit* (Aug. 19, 1960).

¹⁰⁰ Editor’s remark: Around the turn of the millennium the Dachau Museum made an about-face and has claimed ever since that some homicidal gassing did occur in this shower room; cf. Schwertfeger; Mattogno (2022).

The great German chemicals company, I. G. Farben, was in 1918 a collection of six smaller companies, which later combined in 1925 to form Farben. The principal predecessor company, *Badische Anilin und Soda Fabrik* (BASF) of Ludwigshafen-am-Rhein had, starting early in World War I, been working on processes for producing synthetic oil and synthetic rubber from coal. These investigations continued after the formation of Farben and also after the rise of Hitler in 1933. The Nazi government soon adopted a policy of subsidizing these autarky-oriented developments.¹⁰¹ Thus, on account of government encouragement, the real need for the synthetics, and the general German scientific-technological pre-eminence of the time, especially in chemistry and chemical engineering, Germany was substantially ahead of the rest of the world in these areas.

Synthetic oil was by far the easier of the two problems. Coal is mainly carbon; the general principle is that coal treated with hydrogen gas at high pressure and temperature ("hydrogenation") resulted in oil. The usual range of chemical products could be made from this oil: dyes, explosives, drugs, etc. Another state of hydrogenation yielded gasoline. The idea was basically simple, although the process was inherently expensive, and most research consisted in a search for the most effective catalysts. During World War II, there were many synthetic oil plants in and around Germany; they produced about 75 percent of the oil available to the Germans; the rest came mainly from Romania.¹⁰²

Synthetic rubber was a different matter; the technical problems in developing a sufficiently economic synthetic rubber suitable for tires were most severe, and were not really resolved until approximately the beginning of the war.

The basic steps in making rubber are first making long chains of molecules of some sort, polymerization, and then causing these chains to "cross-stitch" – to join each other at various points – vulcanization. One needed a molecule congenial to polymerization and vulcanization, and it was found that butadiene was particularly suitable. In the late twenties, it had been found that sodium was an excellent catalyst for polymerization of the butadiene, and consequently the synthetic rubber that was being made from butadiene with sodium (Na) as catalyst was called "Buna" rubber. The sodium had been dropped by 1935, but the term "Buna" was retained. By replacing 25 per cent of the butadiene with styrene, "Buna-S" rubber, the type particularly suited for tires, was obtained.¹⁰³

The earliest serious German Buna-S plant, and the largest, was the Schkopau plant, started in 1937 and completed in 1939. It had a capacity of 6,000 tons per month. A second plant was started at Hüls in 1938, and was in operation in August 1940; its capacity was 4,000 tons per month. A third plant was started in January 1941 at Ludwigshafen, Farben research headquarters,

¹⁰¹ Howard, 3, 11-22, 44, 60-62; NMT, vol. 7, 79-80.

¹⁰² Craven, 172.

¹⁰³ Howard, 35-37.

and it was producing Buna in March 1943; its capacity was 2,500 tons per month. The fourth, at Auschwitz, was begun in 1941, and was designed for a capacity of 3,000 tons per month.

During all this plant construction, research on new processes continued, and the differences in the processes used in the four plants reflected this. All started from coal, but at Schkopau the butadiene was produced via a classical calcium carbide-acetylene-butadiene sequence; at Hüls the carbide state was replaced by one involving hydrocarbon gases. Ludwigshafen reverted to the classical sequence, but the superior Reppe process was introduced for the acetylene-butadiene state. The Buna plant at Auschwitz also used a version of the classical sequence.¹⁰⁴

The reason for the appearance of Auschwitz in this context is very simple: Auschwitz was a huge industrial operation.

When Germany annexed a large part of Poland after the partitioning of Poland in 1939 by Germany and Russia, it came into the possession of the great coal fields of Polish Upper Silesia. It was naturally decided to exploit this, and the possibilities for a hydrogenation and Buna plant were examined. It was found that the little town of "Oświęcim" (population 13,000), translated into German as "Auschwitz" (Auschwitz had been a duchy of the Habsburg Empire before World War I), was ideally located, because the three rivers that joined there could provide the necessary water, while a fourth river for carrying off the waste was nearby. In addition, Auschwitz was on the southern border of the Silesian coal fields, the Kattowitz (Katowice) mining region of Poland.¹⁰⁵

In early 1941, it was decided to build a hydrogenation and a Buna plant at Auschwitz employing both free and prisoner labor. By pure chance, there was already near the town a partisan POW camp holding 7,000 prisoners (it had formerly been a Polish artillery barracks); this camp became the nucleus for expansion via its own enlargement, and also the construction of additional camps. It was quickly transformed into, and remained to the last, a camp for political prisoner-workers; it is usually referred to as Auschwitz I. The terms "main camp," "*Hauptlager*," and "*Stammlager*" are also sometimes used.¹⁰⁶

Sometime in 1941, work had begun on a second camp, Auschwitz II, generally referred to as Birkenau (German for birch meadow). It was one to one and a half miles northwest of Auschwitz I, and was initially referred to as a POW camp. Part of it was completed by April 1942; Russian POW labor was used for constructing the camp. Its functions will be examined at length.

Some 4,000 Jews were moved out of the town to another town to make room for free labor attached to the industries. On November 16, 1941, it was decided to build a third camp, generally referred to as Monowitz, three miles east of the town and close to the Farben plant, for quartering labor working on

¹⁰⁴ Dunbrook, 50; Naunton, 107.

¹⁰⁵ DuBois, 154-155.

¹⁰⁶ Reitlinger, 110, 128; NO-034 in NMT, vol. 5, 356-358.

and in the plant. Russian POW's were again used for constructing the camp.¹⁰⁷ The relative locations of the three camps are shown in Fig. 5.¹⁰⁸

There was also a large number of smaller camps in the outlying region, most of them within a radius of 25 miles. These "outer camps," of which Raisko and Harmense were two relatively close-in examples, were administered by the Auschwitz camp administration, and the number has been variously given as 13 to 39, depending upon what is considered a single camp.¹⁰⁹ The smaller or outer camps were mainly for those who worked at the five blast furnaces or five coal mines. Monowitz and the collection of all outer camps taken together are sometimes referred to as Auschwitz III. The collection of all camps, Auschwitz I, Birkenau (Auschwitz II) and Auschwitz III, together with the industries which employed the inmates, is usually what is referred to under the blanket term "Auschwitz."¹¹⁰

The prisoner population of Auschwitz II was nothing unusual except that there was a significant number of British POWs.¹¹¹ The NMT judgment was that the use of British POWs was not contrary to the Geneva Convention, because the Buna factory had an ultimate peaceful purpose.¹¹² The Red Cross apparently concurred because, although it was specifically aware of this situation, it did not mention the employment of British POWs in its later report on the problems it had encountered during the war in respect to the use of POWs for war-related work.¹¹³

Typical camp strengths were 20,000 for Auschwitz I, 35,000 for Birkenau (30 to 60 percent women) and 15,000 for Auschwitz III. By a wide margin, Auschwitz was the largest complex of concentration camps in the German system; in August 1943, the second largest was Sachsenhausen with a population of 26,500.¹¹⁴ There were also many free laborers working and living in the area. For example, less than thirty per cent of the workers at the Farben plant were in the "prisoner" category; more than half were free foreign workers who had enlisted voluntarily for labor, and the remaining approximate twenty per cent were ordinary German employees.¹¹⁵

Auschwitz I was the administrative center for all SS functions at Auschwitz. These SS functions included the guarding, feeding, clothing, housing, recreation, and disciplining of the prisoners, and also their medical services. The working hours at Auschwitz were those standard for the German concentration camps: eleven hours per day, six days a week, with extra work on Sun-

day mornings in “emergencies.”¹¹⁶ At Auschwitz, there were divers recreational activities: concerts, cabaret performers, movies and athletic contests. There was even a brothel for the prisoners, staffed by professionals recruited for the purpose.¹¹⁷ Medical services receive further comment later on.

The providing of such extensive services naturally meant that companies using the labor of the prisoners “rented” them from the SS; a typical rate seems to have been RM 4.00-RM 6.00 (\$1.00-\$1.50) per day and up.¹¹⁸ Thus, the prisoners were at the basis of Himmler’s bureaucratic and economic empire, and accordingly this resource, together with the supporting functions of feeding, clothing, etc. were jealously guarded. Nevertheless, Farben had been big enough to get a special arrangement for those at Monowitz; it was granted full authority for the care of the prisoners there, and consequently the payments to the SS were reduced. This led to the expected scraps between the SS and Farben. The SS complained of beatings and other mistreatment such as unsanitary conditions at the Monowitz hospital. Also, one-fifth of the people who had been registered at this hospital were discharged by being sent to Birkenau, at which time the Farben appropriations for their care immediately ceased, and they became the responsibility of the SS which, already wounded by not being accorded its customary rights in regard to employable prisoners, was incensed at receiving in return only the unemployable from Monowitz. The SS therefore demanded that the Monowitz hospital, which had only 300 beds, be enlarged, but the reply to this, of course, was that “if they aren’t strong enough to work, they don’t belong on the factory grounds.”¹¹⁹

Birkenau, like Auschwitz I, had a responsibility of supplying labor for Farben and for sub-contractors to Farben. It also supplied labor for other enterprises such as the Krupp fuse plant and the Siemens electrical factory. In addition, inmates worked at clearing demolished structures, draining the marshy land, road construction, operating an establishment for the cultivation of special plants (Raisko), building and operating a model farm (Harmense), clothing manufacture, etc.¹²⁰ Birkenau had other functions, as will be seen. It will be particularly necessary to examine the claim that at Birkenau a program of mass killings of Jews via gas chambers was in operation, the Jews having been transported to Auschwitz primarily for this purpose.¹²¹

The rough figures given above for camp populations are only illustrative; the Birkenau figure actually varied a great deal, and in addition, the Birkenau camp was never completed. The projected capacity of Birkenau seems to have been 200,000 prisoners, while Auschwitz I expanded to a capacity of about

¹²¹ Reitlinger, 115, 157; Hilberg (1961), 565, 574.

30,000 and then stabilized.¹²² Thus, on the basis of seniority and also on account of quartering the Auschwitz SS administrative offices, Auschwitz I was indeed the “main camp,” but Birkenau, designed for the specific requirements of the Auschwitz operations, was clearly intended as the “principal camp” in terms of inmate accommodating functions.

While the Auschwitz-Kattowitz region was ideal from a technical point of view, it was also wretched from a human point of view. The ground was extremely flat with no means of draining away water in many places; it was dotted with stagnant ponds which poisoned the air and caused the area to be constantly muddy. Malaria and typhus were natural, not wartime-created, dangers in this region; the war conditions greatly aggravated matters. It is said that “motor cars were disinfected after each journey carrying prisoners or their clothing.”¹²³

After 1942, the hydrogenation plant at Auschwitz produced oil and gasoline and other chemicals, but by the time the camp was evacuated in January 1945, it had not produced any Buna; it was only at the point of producing acetaldehyde from acetylene.¹²⁴ This relative slowness in plant construction was no doubt due to the initially virgin character of the area, the use of prisoner labor, and the bad health of many prisoners; the latter had further implications, which will be seen later in proper context.

I do not know whether the Auschwitz Buna plant was to have been essentially the same as the Ludwigshafen plant, an improved version of the latter, or a new generation in Buna plant construction. In any case, if it had been finished, there would have been no more advanced Buna rubber plant in the world at the time.

Chapter 3: Washington and New York

The Rubber Crisis of 1942

The military situation of the Allied powers in 1942 was superficially a desperate one. After the winter of 1941-1942, the German armies continued their advance across Russia. The destruction of most of the American Pacific fleet at Pearl Harbor on December 7, 1941, had made the Pacific a virtual Japanese lake. America was suddenly faced with a problem that was, for her, a strange one: lack of a crucial raw material without which no war effort appeared possible. Japan controlled what had been the source of ninety per cent of America's rubber, Malaya and the East Indies, and the source of the other ten per cent, Central and South America, was hopelessly inadequate.¹²⁵

The manner in which America extricated herself from this grave situation will go down as one of the great ironies of history. America, one would expect, could not resolve this problem because nobody in America had thought in terms of "autarky."

Standard Oil of New Jersey had the essentials of the I. G. Farben Buna rubber process. This was on account of a series of agreements between the two companies, commencing in 1927, covering technical cooperation and mutual licensing arrangements. Standard was quite interested in Buna rubber because it could also be made (more easily) from oil.

The cooperation continued, with the consent of the German government, right up to the outbreak of war and even, to some extent, after the outbreak of war. The American side benefited hugely from these arrangements, but the German side got almost nothing out of them.¹²⁶

The outbreak of war in September 1939 between Germany on the one hand and England and France on the other threw these arrangements between Farben and Standard into a certain amount of legal confusion, which need not be explored here. Farben wished to clarify the confusion, and so a meeting was arranged at the Hague on September 22, at which certain legal arrangements were made. Standard official Frank A. Howard was puzzled by all of this:¹²⁷

"I could not escape the conviction, however, that the Germans themselves were the only people who could profit from a military standpoint by leaving the relations between Standard and the I. G. in the situation into which the war had thrown them."

¹²⁵ Howard, 4-7, 216; U.S. Special Committee, 24.

¹²⁶ Howard, chapters 2-9.

¹²⁷ Howard, 82f.

The arrangements that had been made at the Hague soon proved to be inadequate, so it was decided in the spring of 1940 that another meeting was necessary. Howard saw another motivation for an additional meeting:

"[...] we intended also to ask them to supply some of their detailed designs of manufacturing equipment and technique for Buna. We hoped that I. G. might obtain permission of its government to sell to us the plans for the Buna polymerization plants they had erected in Germany under the government program."

These hopes were dashed at the conference between Standard and Farben which finally took place in Basle, Switzerland, in mid-April 1940 during the German occupation of Norway, which signaled the end of the *Sitzkrieg*. The new political conditions arising from the German realization that the situation was a serious one brought about at the conference the effective termination of the relations between Farben and Standard. Naturally, Standard got nowhere with its proposals to buy plant designs. However, as Howard explains:

"One other point was very much on our minds. We wanted to make sure, if possible, that the Germans had not, since the outbreak of the war in Europe, made any radical change in their Buna manufacturing processes or formulas. Direct questions were out of order, since the I. G. men could not discuss any phase of Germany's industrial war effort. But during the settlements of patent transfers and discussions of license definitions needed to implement the Hague agreement, we obtained sufficient data to feel sure that all of the fundamentals of the Buna operation had remained unchanged. This conclusion was later fully confirmed."

This was the "last direct contact Standard had with the Germans on Buna rubber."¹²⁸

All American knowledge of the Buna processes, which made the American war effort possible, came from these relationships with I. G. Farben, and this is accepted fact in the rubber industry.¹²⁹ Nevertheless, Standard later came under some rather stupid criticism and even later legal action on account of them.¹³⁰

The sudden unavailability in 1942 of a source of rubber set off a major political crisis in the United States. There had been a Buna program in existence since mid-1940, when the Rubber Reserve Corporation had been created within the Reconstruction Finance Corporation. This agency, headed by Jesse H. Jones, supervised the stockpiling of reserve crude rubber, and also sponsored the construction of Buna plants, which started in 1941. However, nobody in authority had foreseen the complete loss of the Far East rubber, so the synthetic rubber program had been modest in scope. Consequently, in 1942 there was almost no practical experience with large scale use of the Farben processes.

The emergency had been realized immediately after the attack on Pearl Harbor, because three days later, the U.S. government banned the sale of new

¹²⁸ Howard, 104-108.

¹²⁹ Naunton, 104.

¹³⁰ DuBois, 284.

automobile tires for civilian purposes. General rationing of rubber followed quickly. Early in 1942, it became realized that, if there was to be any American war effort, a gigantic synthetic rubber industry would have to be created in record time. The apparently dismal prospects for such an achievement were the cause of some amount of panic, and naturally, scapegoats were sought. Jesse Jones was a favorite target, and his claim that 300,000 tons of synthetic rubber would be produced in 1943 and 600,000 tons in 1944 was jeered at (U.S. rubber consumption in 1940 was 648,500 tons). Standard Oil also came in for outrageously unfair abuse by people who interpreted the Farben-Standard agreements as a conspiracy to retard synthetic rubber development in the U.S. Harry S. Truman, chairman of a Senate committee, which investigated war production problems, first became prominent in connection with the rubber crisis of 1942.

The crisis also set off internal political conflicts. The big oil interests had a long lead in the production of Buna-S, but the farm bloc was dominant in Congress. Now, Buna can be made not only from coal and oil, but also from alcohol, an agricultural product. Foreseeing the birth of a major new industry, the farm interests started arguing in favor of making Buna from alcohol (the most expensive method). They cited the fact that the Russians, also long active in the synthetic rubber field, started from alcohol. They also produced a Polish refugee who was supposed to have made some revolutionary invention in connection with making Buna from alcohol.

There was another political bloc tied up with South American interests, which proposed subsidies for plantations. There was also a small farm bloc which pressed for more extensive planting of the guayule plant in the southwest. The effect of these internal political battles was to generate massive confusion and retard the progress of the existing U.S. Buna program.

The rubber crisis filled the press in 1942 and was, in fact, the major crisis the U.S. faced in connection with the war. There was constant lamenting that Germany was well ahead of the U.S., and that the U.S. lacked the vital experience with the processes that the Germans possessed. Methods being used in Germany were cited in connection with discussing the prospects of the U.S. program.¹³¹

The farm bloc's battle against what it called the "oily interests" achieved a temporary major success in July 1942, when the Congress passed the weird "Rubber Supply Act of 1942." The Act would have established a new agency for rubber production, entirely under the control of Congress and outside the domain of the War Production Board, the Army, the Navy, or any executive agency of the Government. Of course, the Act also specified that the rubber

¹³¹ As stated, the rubber crisis "filled the press," but the following stories seem to summarize the crisis adequately: *Business Week* (Jan. 31, 1942), 22+; (Mar. 14, 1942), 15+; (May 30, 1942), 15+; (Jun. 20, 1942), 15+; (Aug. 15, 1942), 15+; (Sep. 19, 1942), 15+; (Dec. 19, 1942), 28+; *Newsweek* (Apr. 6, 1942), 46+; (Apr. 13, 1942), 56+; (June 1, 1942), 46+; (Sep. 21, 1942), 58+; *New York Times* (Jan. 11, 1942), sec. 7, 6+; (Jul. 26, 1942), sec. 7, 3+; *Fortune* (June 1942), 92+; *Nature Magazine* (May 1942), 233+; *Harper's* (Dec. 1942), 66+.

was to be made from grain alcohol. President Roosevelt vetoed this bill on August 6 and announced the appointment of a committee to study the rubber problem and make some recommendations in regard to the organization of an American synthetic rubber program: "probably the most widely acclaimed action on the domestic front in the history of the war program." The members of the committee were Dr. James D. Conant, President of Harvard, Dr. Karl T. Compton, President of MIT, and the financier and political leader Bernard M. Baruch, who served as Chairman. The committee is normally referred to as the Baruch Committee.¹³²

These three men were chosen partially because they were not considered connected with any specific interests in the conflict, and also because of their expertise. The appointment of Baruch as chairman of such a technically oriented group may seem peculiar at first, but this is not the case. Besides being a man of diverse talents and important financial, industrial and political connections, he had chaired the War Industries Board during World War I. Moreover, for a period of more than thirty years, he had been interested in industrial ventures involving rubber, and had independently inventoried, with war requirements in mind, American rubber stocks in the spring of 1941. As a consequence, he had gotten into fights with various people, mainly Jesse H. Jones. In addition, unlike the usual chairman of a "name" Washington *ad hoc* committee, Baruch threw all his energy into the work of the Committee. His assistant Sam Lubell also was put to work on the Committee's assignment. Even after the issuing of the final report, Baruch maintained interest: Howard reports that Baruch later expressed a wish to speak to the Standard people, and that a meeting was accordingly held, at which the major technical-economic problems were discussed.¹³³

The work of the Baruch Committee was completed with remarkable speed, and the final report was issued on September 10, 1942; the best explanation for this speed would appear to be Baruch's independent prior involvement in the problem.

We must attempt to see this problem as the Committee must have seen it in 1942. Primarily, it was a political problem requiring the reconciliation of the various interests contending for the synthetic rubber business. Thus, the final report of the Committee recommended the creation of a capacity to produce 100,000,000 gallons of additional grain alcohol per year. A second problem involved the lack of practical American experience with the Buna processes. Technical specifications were at hand, but there existed many questions on many details, and quite a few alternative versions of the processes.

Thus, in order to accelerate the American synthetic rubber program, the Baruch Committee saw a need to learn as much as possible of the experiences of others. It made a specific recommendation that an immediate effort be made to learn the experiences of the Russians in the production of synthetic rubber, and make use of them in the American program (Jesse Jones had been charged

¹³² Naunton, 108; Howard, 210-213.

¹³³ Howard, 221f.; Coit, 120f., 162-222, 513-520.

with overlooking this possibility). The effort was made but yielded no results of any value.¹³⁴ Under such conditions, it is necessary to assume that somebody in America looked into new developments in Germany in as close detail as possible at the time, and the new German development in rubber in 1942 was Auschwitz, the site of the most advanced developments in Buna rubber at that time.

Auschwitz of Great Interest to Americans

The point to be made in our discussion of the American rubber crisis of 1942 is that American intelligence must have known what was going on at Auschwitz in that year.

Clearly, it would be delightful if we could learn exactly what U.S. military intelligence knew about events in and around Germany during the war. However, intelligence agencies are notoriously reluctant to release such information, even many years after the events in question. With respect to World War II intelligence operations, a few sensational episodes are known, but on the whole, the content of Allied intelligence information has not been divulged. The intelligence relative to Auschwitz will be a long, long time in being made public, if it is ever made public.

In attempting to estimate, therefore, what information was possessed by Allied intelligence agencies, one must proceed very much on the basis of common sense. The difficulty is that my common sense may differ very much from another's, and that agreement on such matters may be most difficult to arrive at. Now, my common sense tells me that, quite apart from the rubber crisis, Allied intelligence would have known, in mid-1942, what was happening at the largest German concentration camp. If additionally, as every version of the extermination legend asserts, there had been anything as *outré* as a program of systematic extermination of Jews at Auschwitz in the summer of 1942, then my common sense tells me that it is a certainty that U.S. military intelligence would have known about it.

If another's common sense does not lead him to the same conclusion, it is very doubtful that the disagreement could be settled by discussion. However, with Auschwitz we have the fact that it was of interest not only as a large concentration camp (and also, if the extermination claims were correct, an extermination camp), but also as the site of the most advanced developments in synthetic rubber. In 1942, no location in the German Reich was of greater interest, and no industrial operations of greater strategic importance. Therefore, if one wishes to claim that U.S. (or the closely related British) intelligence did not know what was happening at Auschwitz in the summer of 1942, then I am afraid that one must logically claim the complete ignorance and incompetence of these intelligence agencies.

¹³⁴ Howard, 227f.; U.S. Special Committee, 13, 18, 50f.; Dunbrook, 40-46.

Auschwitz was of the greatest interest to the U.S. in mid-1942 on account of its enormous technological significance. Above we saw Howard's great interest, in 1940, in any information about possible new developments that could be obtained directly or inferred indirectly. A similar interest on the part of the Americans in 1942 must be assumed. It is a certainty that intelligence had developed the basic facts about the industry at Auschwitz: a plant for hydrogenation and other chemical processes aimed at producing gasoline and rubber. It has been seen that each one of the German Buna rubber plants employed processes differing in important details from the others, and that the Auschwitz processes were to be the beneficiary of accumulated experiences with several different versions. We are thus justified in assuming, on account of the peculiar urgency of the rubber problem and the peculiar position of Auschwitz relative to this urgency, that the intelligence had gone into unusual detail in regard to Auschwitz, probably going over every inch via aerial photographic intelligence, and that the assembled information was available to various people in the U.S. The information probably included many details not greatly relevant to the rubber problem, such as the employment of prisoner and POW labor at Auschwitz.

Although concealment of information has been the rule in the area of military intelligence, we can nevertheless assume that the means of gathering intelligence data on Auschwitz included more or less conventional methods: exploitation of contacts with commercial representatives of Farben who were stationed in neutral countries (Portugal, Spain, Turkey, Sweden, Switzerland), aerial photographic intelligence (aircraft used for such purposes may always have longer ranges than bombers on account of their lack of armaments), general knowledge of German industrial and economic matters, spies and informers in German industry and in the German government (*e.g.* Admiral Canaris), and informers in the employ of advantageously situated neutral organizations (such as the Swiss and Swedish diplomatic corps and also firms doing business in Germany). Although all of these means no doubt played a role, photographic intelligence was probably particularly important; the technology of photographic intelligence had attained a respectable level in 1942 so that a "you are there" effect was possible in blown-up aerial photos of even heavily defended positions. There were other channels of information, whose nature and existence are of some particular importance here, and which will be discussed in due course.

Not being sufficiently acquainted with the technical problems that were associated with Buna at the time, we have no idea what information the Americans might have been after, and how it could be inferred from the intelligence data, any more than we have an understanding of what questions were on the minds of the Standard people at the Basle meeting, and how partial answers could be inferred from the legal ritual that took place at that meeting. We can, however, offer one possibility by way of example, without any claim that such was the specific case.

We have seen that the first German Buna plant at Schkopau employed a carbide-acetylene-butadiene process, and that at the Hüls plant the process was hydrocarbons-acetylene-butadiene. The new plant at Ludwigshafen, nearing completion when the Baruch Committee was meeting, had reverted to making the acetylene from carbide, and had modernized the acetylene to butadiene stage. Because either a carbide or a hydrocarbons process was potentially applicable to the processes to be employed in the U.S. (which could have started from oil or grain alcohol), it was no doubt of great interest whether Auschwitz was to employ a carbide process (as was the case), suggesting abandonment of the hydrocarbons version on the basis of the Hüls experience, or was to employ a hydrocarbons or other process, suggesting failure to make a commitment to carbide processes.

Moreover, the carbide *vs.* hydrocarbons question could probably be answered on the basis of aerial intelligence, if necessary.

What was the ultimate value, in terms of the problems the Americans faced, of the detailed information about contemporary German Buna developments, which, we feel certain, they examined closely approximately in middle-late 1942? Perhaps none, as was the case with most categories of information; it is just that you don't miss a bet in the sort of situation in which the Americans found themselves regarding rubber in 1942.

Consideration of technical matters has been necessary here because it was in a technical context that Auschwitz first became prominent in Washington. However, it is not the technical matters that have been our objective here but simply the fact of prominence, or heavy exposure, in U.S. inner circles in the summer of 1942; this is the only point relevant to our subject. We have no direct evidence of this, but we have reviewed reasons why such exposure may be assumed. It remains to show that events at Auschwitz at this time were such as to suggest an "extermination factory" charge to those in the inner political circles, who were alert to the appearance of semi-factual bases for atrocity stories. The events at Auschwitz in late 1942 – early 1943 will be covered in a second context in the next chapter, and hence are not annotated here.

The eeriest aspect that Auschwitz must have presented while the Baruch Committee was meeting was that of the site of a ghost factory; starting around August 1, the Buna plant had been closed. There was no activity to be seen except possibly an occasional watchman. This must have excited great curiosity, and no doubt special steps were taken to find out what was going on.

Our ugly old friend typhus was at Auschwitz; an epidemic had shut down the Buna plant for two months, so that work did not resume until late September. By this time, the number of dead must have been a few thousand, although there is a large degree of uncertainty here. The German policy was to cremate the bodies of camp inmates who died, but the epidemic caught the Auschwitz authorities with inadequate crematory facilities. There was a small crematory at Auschwitz I, but more extensive facilities at Birkenau, plans for which existed in January 1942, were still under construction in 1942, and the first complete new unit, consisting of fifteen conventional crematory muffles, was not

available until March 1943. It appears that many of the victims of the epidemic were immediately cremated in pits, but it is possible that many were buried, at least temporarily. That the Germans were constructing crematories at Birkenau was probably evident to continued Allied surveillance (which we assume existed) in the autumn of 1942. The buildings housing the Birkenau ovens had certain halls, rooms, or cellars, which the accusations say were the “gas chambers.”

Several books offer versions of Fig. 7, which is claimed to be a photograph of gassed victims about to be burned in pits, taken by an Auschwitz inmate in 1944.¹³⁵ We have no way of knowing when, where, or by whom it was taken. However, such scenes were common at Auschwitz in 1942, when the camp presumably attained some prominence in Allied intelligence. Indeed, the poor quality of the picture caused some initial speculation on my part that it is an aerial intelligence photograph; the low angle does not rule out the possibility because such angles were frequently attained even with highly defended positions.¹³⁶ Also, the versions I examined in the various books do not have the border material which tends to support the claim that it was taken on the ground. Our Fig. 7 is reproduced from a print obtained in 1973 from the museum operated by the Polish government at Auschwitz, and there remain a number of mysteries concerning it. The version reproduced here is the only one, so far as I know, that is not obviously falsified to some extent.¹³⁷ However, such an observation does not settle the matter because of the strange fact that the falsified (or, at least, retouched) versions display more apparently genuine background detail (*e.g.* the fence and trees).

In any case, Birkenau was, in a very real sense, a “death camp;” dead, dying and sick people were sent there and, after the crematories were built, the dead were disposed of in them. If one is to claim an “extermination camp” when there is none, what better choice is there but a “death camp”?

While the preceding adequately suggests how the Auschwitz lie originated, it is not relevant to the circumstances, under which the more general extermination legend originated. The claims of exterminations of Jews have their origin not in Allied intelligence information but in the operations of the World Jewish Congress, whose leaders were at first either unconcerned with, or uninformed about, the facts pertaining to Auschwitz.

In this connection, one must reject two possible fallacious expectations. The first is that Allied propaganda would strive to maximize Auschwitz propaganda after it was realized that the propaganda possibilities were excellent. The second is that the claims made in the Allied propaganda relative to Auschwitz would be almost completely devoid of real fact.

¹³⁵ The photograph appears in Schoenberger, 162 (206 in paperback), and in Central Commission, Fig. 39.

¹³⁶ C.B. Smith, 166-171 and photographs.

¹³⁷ Editor's note: There are some reservations about the authenticity of this picture, see Walendy (2024), 241-244.; Mattogno (2016a), 41-46, 154-156.

We have indicated already that this should not be expected. Washington had excellent and accurate information about Auschwitz, as it had about all important phases of German industrial activity, and it has been remarked above that the real facts about Birkenau seemed to invite distortion of interpretation.

If, as is claimed here, there was no German extermination program, but certain propagandists in the U.S. wished the acceptance of the thesis that there was, it would have been a most serious blunder for the propagandists to give maximum emphasis to Auschwitz or any other place as an alleged extermination camp, for this would amount to making a charge that the Germans could answer. If high U.S. officials, such as Roosevelt or his cabinet members, had made specific remarks about exterminations, naming sites where exterminations were taking place under circumstances where their remarks received the wide publicity normally given to public statements by officials of their rank, then both the Germans and the Allies would have been put on the spot on the question, and the truth would not have been long in coming out. On the contrary, as we shall see in Chapter 5, the first period, in which there was a persistence of references to Auschwitz as an extermination camp, appearing even under obscure circumstances, was immediately after D-Day (June 6, 1944), when nobody was paying any attention to such stories. Later in the summer of 1944, the emphasis shifted to the Lublin camp, which the Russians had just captured. The first reference to emerge from a U.S. government source that was high enough so that it could not be ignored, and which charged exterminations at Auschwitz, came in late November 1944, after the exterminations are supposed to have been terminated.¹³⁸ Otherwise, people such as Roosevelt and Churchill and their ministers spoke only in very general moralistic terms about exterminations. It is only if one believed there actually were exterminations taking place at Auschwitz, and one wanted to stop them, that one would have made a specific charge concerning Auschwitz, to which the Germans would have felt obliged to respond. No such challenge ever materialized. Despite the fact that, in all versions of the extermination legend, the Auschwitz exterminations had certainly started by the late summer of 1942, and despite the fact that U.S. military intelligence must have known whatever it was that was going on at Auschwitz at that time, no specific extermination charges came from any high source until much later.

The First 'Extermination' Claims and Washington

The first "inside" events relative to the extermination propaganda were in the context of a conflict involving the U.S. State and Treasury Departments and the World Jewish Congress (and American Jewish Congress), headed by Rabbi Stephen S. Wise. The prominent characters in the story are Treasury Secretary

¹³⁸ Hilberg (1961), 631; Reitlinger, 493-495.

Morgenthau, later the nominal author of the notorious “Morgenthau Plan” for the despoliation of Germany, Secretary of State Cordell Hull and Undersecretary of State Sumner Welles, who were mildly reluctant to be carried along by the propaganda, and Assistant Secretary of State J. Breckenridge Long, who was very resistant to the propaganda. Also involved are the World Jewish Congress representatives in Switzerland, Gerhard Riegner and Professor Paul Guggenheim, who transmitted stories of supposedly European origin to Wise or to other persons in the U.S., notably to the State Department through the U.S. Ambassador to Switzerland, Leland Harrison, or through the U.S. Consul in Geneva, Paul C. Squire. The principal work that has set forth the events surrounding the birth of the extermination legend is Arthur D. Morse’s *While Six Million Died*, a book which is supplemented to some extent by Henry L. Feingold’s *The Politics of Rescue*. Additional material had been contributed by post-war accounts given by Morgenthau, historians J. M. Blum and Anthony Kubek (in interpreting Morgenthau’s papers, the latter for the U.S. Senate publication *Morgenthau Diary*), historian F. L. Israel (in summarizing the papers of J. Breckenridge Long), and J. DuBois, who was at first Chief Counsel of the Treasury’s Foreign Funds Control, involved in these matters chiefly in connection with efforts to extend assistance to refugees.¹³⁹

The first extermination claim appears to have been made by the London section of the World Jewish Congress in June 1942. It was claimed that one million Jews had been killed in some undesignated and unlocated “vast slaughterhouse for Jews” which had been established in Eastern Europe. The only attempt to provide evidence for this claim was a remark that the Polish government in exile in London had received confirming information. The allegation was carried in the *New York Times* in a story that will be reviewed below.

The evidence for this London claim was obviously too flimsy to serve as effective propaganda, so an effort was made to improve matters slightly. On August 8, 1942, Riegner and Guggenheim approached the U.S. Consulate in Geneva, which had been cooperating with the World Jewish Congress to the extent of allowing it to use diplomatic channels for messages, with a story that some anonymous German industrialist had informed them that he had learned of a decision to kill all non-Soviet Jews under German control. Discussions, which the industrialist had overheard, were being held in the Führer’s Headquarters regarding the methods to be employed. One method under discussion was gassing with Prussic acid (hydrogen cyanide gas) after the Jews had been concentrated at camps in Eastern Europe. This story was forwarded to Washington by the Consulate via U.S. diplomatic channels and to London via British diplomatic channels. The “industrialist” has remained anonymous to this day.

¹³⁹ Unless otherwise noted, our treatment of the early extermination propaganda, related developments in Washington and New York, and the conflicts between the State Department, on one hand, and Zionists and the Treasury Department on the other, and the events leading up to the establishment of the War Refugee Board, is based on Morse, 3-99; Feingold, 167-247; DuBois, 183-189; Blum, 207-227; Israel, 173f., 216f., 306-337; Morgenthau.

When the U.S. State Department received the message, it was evaluated, and it was decided that:

"[...] it does not appear advisable in view of the [...] fantastic nature of the allegations and the impossibility of our being of any assistance if such action were taken, to transmit the information to Dr. Wise as suggested."

The message was accordingly suppressed, but Wise learned of its contents anyway. It is said that he learned from London, but it is also possible that he had composed the message in the first place, and learned of its transmission and suppression through his various connections.

Wise immediately contacted Welles, who had approved the decision to suppress, in order to protest the State Department's handling of the matter. Welles replied that the "information" was somewhat too unsubstantiated to be taken seriously, and that some confirmation should be obtained before any public announcement was made. Welles then instructed the U.S. representative in the Vatican to attempt to check the allegations with Vatican sources. At that time, almost nobody in Washington pretended to take these claims seriously, and even President Roosevelt assured Justice Felix Frankfurter that the Jews who had been deported to the East were merely being used to help build fortifications.

In September 1942, two anonymous persons showed up in Geneva claiming to have escaped from German controlled areas. They reported the extermination of Polish Jews, and the utilization of the Jewish corpses for the manufacture of fertilizer. This was forwarded to Washington through diplomatic channels, and again an attempt was made to get confirmation by the Vatican (which had thus far ignored the first request for confirmation). At about the same time, Wise had received a message from a World Jewish Congress official in Europe reporting on the "manufacture of soap and artificial fertilizer" from Jewish corpses.

In late September 1942, Riegner came forward with two new documents. The first had, he said, been prepared by an (anonymous, naturally) officer attached to the German High Command, and had reached Riegner through several intermediaries. The anonymous officer claimed that there were at least two factories in existence which were manufacturing soap, glue, and lubricants from Jewish corpses, and that it had been determined that each Jewish corpse was worth 50 reichsmarks. The second document consisted of two coded letters that had, it was said, been written by a Swiss Jew resident in Warsaw. The anonymous Jew reported wholesale exterminations of Warsaw Jews deported to the East. All of these messages were forwarded to Washington and then filed.

In passing, we should note the resemblance of such claims to World War I propaganda, and the appalling lack of originality and creativity on the part of the World Jewish Congress. It scarcely requires remarking that the soap and glue factories were a very transient propaganda phenomenon, and that the only similar charges made at Nuremberg were made by the Russians. These charges were largely ignored even then, and nobody, to my knowledge, has since come

forward with the locations of these factories, the identities of the persons who managed them, or similar information. Reitlinger does not claim the existence of such factories, and Hilberg (page 624) does not believe they existed.

On October 10, the Vatican finally informed the U.S. representatives that it had been unable to confirm the many reports it had heard of severe measures against the Jews.

On October 22, Riegner met with Ambassador Harrison, and presented him with more of the same sort of "evidence," this time reporting "information" provided by yet another anonymous German informant (whose name, however, is said to have been presented to Harrison in a sealed envelope, and to have been kept secret from everybody but the Office of Strategic Services, OSS) and also an anonymous official of the International Red Cross. Harrison forwarded this material to Washington, but also wrote two personal letters to Welles in late October, claiming that he knew the name of the German industrialist, and also claiming that the anonymous Red Cross official was Carl Jacob Burckhardt, the distinguished Voltaire-Goethe scholar who was prominent in the International Red Cross during the war. He enclosed an affidavit that Guggenheim had deposed before Squire on October 29, in which Guggenheim claimed that he had obtained from an anonymous German informant information confirming Riegner's claims. The anonymous German informant had gotten his information from an anonymous official of the German Foreign Ministry and from an anonymous official of the German Ministry of War. Moreover, an anonymous Swiss informant, resident in Belgrade, had also given information to Guggenheim supporting the claims.

In order to confirm the claims, Squire arranged an interview with Burckhardt, which took place in Geneva on November 7. On November 9, Squire communicated to Harrison his memorandum on the interview, in which he had recorded that Burckhardt's information was that Hitler had signed an order that before the end of 1942 Germany must be free of all Jews. Squire's account of the interview explains:¹⁴⁰

"I then asked him whether the word extermination, or its equivalent, was employed, to which he replied that the words must be Juden-frei (free of Jews) were utilized. He then made it clear that since there is no place to send these Jews and since the territory must be cleared of this race, it is obvious what the net result would be."

This, the report of an ambiguous remark, made by an imperfectly informed Swiss citizen, reported by an intermediary who was friendly to the World Jewish Congress, and eager to discover a sinister interpretation to such facts as were available, is as solid as this "evidence" ever got. To my knowledge, Burckhardt never spoke out publicly, during or after the war, in connection

¹⁴⁰ Guggenheim's affidavit is in dispatch no. 49 of October 29, 1942, of the retired files of the U.S. Consulate, Geneva, which are in the archives of the Foreign Affairs Document and Reference Center, Department of State, Washington. Squire's memorandum of his interview with Burckhardt is attached to Squire's personal letter of November 9, 1942 to Harrison, which is in the same file.

with these matters. He answered some written questions, which were put to him by Kaltenbrunner's defense during the IMT trial, but these questions relating to Kaltenbrunner's efforts to permit the Red Cross to enter the German camps toward the end of the war were not relevant to our subject. Nobody asked Burckhardt about exterminations.¹⁴¹

Late in November 1942, the State Department received "information" from an anonymous Vatican source consisting of a three page description, in French, of events allegedly transpiring in Poland. The document is unsigned, and the only sort of endorsement is a handwritten notation, "from Mr. F. at Vatican City," which appears in an unknown hand on the first page. The document reports, *inter alia*:¹⁴²

"Farms for the breeding of human beings are being organized to which women and girls are brought for the purpose of being made mothers of children who are then taken from them to be raised in Nazi establishments. [...] Mass execution of Jews continues. [...] They are killed by poison gas in chambers especially prepared for that purpose (often in railway cars) and by machine gun fire, following which the dead and the dying are both covered with earth. [...] Reports are being circulated to the effect that the Germans are making use of their corpses in plants manufacturing chemical products (soap making factories)."

During the late summer and autumn of 1942, Wise had continuously campaigned for the Allied governments to take a public position directly condemning the alleged exterminations of Jews in Europe. On December 8, 1942, Wise led a delegation to the White House, and presented to President Roosevelt a twenty-page document entitled *Blue Print for Extermination*, which was based on the sort of "information" we have reviewed. Related Jewish pressures finally brought capitulation to Wise on the mythical exterminations, and on December 17, 1942, the Allies, led by Washington, issued a statement condemning the exterminations. A related statement, released two days later, claimed exterminations at Belżec and at Chełmno, but Auschwitz was not mentioned (the relevant news stories are reviewed below).

Despite this public declaration, the group headed by J. Breckenridge Long continued to resist the propaganda. On January 19, 1943, Riegner gave Harrison the "information" that "in one place in Poland 6,000 Jews are killed daily." On January 21, Harrison communicated this material to the State Department and also to certain unspecified "private Jewish agencies," apparently meaning Wise. The message was merely filed, and the Department made no public mention of it. For a time, the private Jewish agencies were also silent about the message. On February 10, Long's group took a further step in suppression of such propaganda. In a message signed by Welles (who is said to have not read

¹⁴¹ The question put to Burckhardt and his answers are IMT document Kaltenbrunner 3, IMT Vol. 40, 306.

¹⁴² The statement of the "Vatican source" is in the U.S. National Archives as Department of State file 740.00116 EW/726.

the message) and with particular reference to Harrison's cable of January 21, it instructed Harrison:

"in the future, reports submitted to you for transmission to private persons in the United States should not be accepted unless extraordinary circumstances make such action advisable. It is felt that by sending such private messages which circumvent neutral countries' censorship we risk the possibility that neutral countries might find it necessary to take steps to curtail or abolish our official secret means of communication."

Finally, on February 14, the *New York Times* published the story (see below). For explanation of the delay of four weeks in publishing the story, despite its being received by "private Jewish agencies" on January 21, and despite the evident policy of publishing the unsupported claims of such agencies, we can only conjecture that certain unknown persons were hoping that the State Department, given the precedent of the declaration of December 17, would release the "information" so as to confer a greater credibility than would have been granted to the story as it eventually appeared: a claim indistinguishable in terms of authority from the average sort of atrocity claim.

The Treasury (which, because of Morgenthau's long crusade against Germany, had repeatedly interfered in the conduct of foreign affairs since at least 1936¹⁴³) was soon to come into conflict with State over this suppression. A second and more substantial basis for conflict between the two Departments was also established in February 1943. It was learned that the Romanian government was prepared to transfer 70,000 Jews to Palestine on Romanian ships bearing Vatican insignia (it is unlikely that the Romanians really cared where the Jews were sent, so I assume that the Palestine destination must have been somehow specified by the Zionists involved in the formulation of the proposals). An important condition was specified by "officials who were in charge in Romania of Jewish interests." A cost of 250 pounds (about \$1200) per capita was specified. There were other difficulties. The British policy at the time was not to antagonize the Arabs, especially in view of the potentially catastrophic consequences of an Arab uprising in wartime, and thus the British at first refused to consider the admission of so many Jews to Palestine. The British took the position that, if such Jews were to be taken out of Europe, the U.S. should provide camps in North Africa for them. In addition, both the British Foreign Office and the U.S. State Department took the position that there would inevitably be spies in such a large group of people, that the logistical problems involved in transporting and accommodating such numbers were formidable, and that the money demanded might fall into the hands of the enemy (who valued Allied currency for various purposes). The Treasury was eager to get into the business of aiding Jewish refugees, and thus, it sought to overcome such objections. By July 1943, there was said to be bribe money demanded for the Romanian Jews, \$170,000, and the Treasury and the World Jewish Congress proposed that Romanian Jewish businessmen could produce

¹⁴³ Hull, 471-473.

the bribe money, if they could be reimbursed after the war with money to be held in escrow in Switzerland. However, the British objections to admitting Jews to Palestine stood, and efforts to circumvent them by proposing other destinations for the Jews ran into the opposition of various candidate countries and also into U.S. immigration laws.

The State Department, especially J. Breckenridge Long and associates, considered all the talk about “exterminations” to be just wartime propaganda in the same spirit as the stories invented during World War I. They were, after all, continually considering proposals to move these exterminated people out of Europe. As late as January 1944, the Department was taking steps to encourage Jews to leave Poland for Hungary. Long wrote that one danger in supporting the proposals of Wise was that it “may lend color to the charges of Hitler that we are fighting this war on account of and at the instigation and direction of our Jewish citizens.” State considered the whole project pointless and, indeed, in conflict with the requirements of an optimum war effort. Long wrote that:

“Wise always assumes such a sanctimonious air and pleads for the ‘intellectuals and brave spirits, refugees from the tortures of the dictators’ or words to that effect. Of course only an infinitesimal fraction of the immigrants are of that category – and some are certainly German agents. [...] I did not allude to the Navemar – en route from Lisbon to Havana and New York – a freight boat, passenger accommodations for 15 and 1200 poor Jews above and below decks with no sanitary arrangements, no service, no kitchen facilities, at from \$700 to \$1500 apiece, 4 dead before reaching Bermuda, 6 hospitalized there, 1 of which died, victims of the greed of their fellows – not of Germany or the United States policy. The vessel is a menace to the health of any port where it stops and a shame to the human greed which makes it possible. But I did not allude to it in reply to Rabbi Wise. Each one of these men hates me. I am to them the embodiment of a nemesis. They each and all believe every person, everywhere, has a right to come to the United States. I believe nobody, anywhere has a right to enter the United States unless the United States desires.”

The State Department either procrastinated on the matter or actively sabotaged the proposed project. At the end of the summer of 1943, it was learned that 6,000 Jewish children could be taken out of France, and this possibility got involved in the problem.

The people from the Treasury and the World Jewish Congress kept pressing for the proposed projects, and continually asserted, with apparent complete seriousness, that the only alternative was the death of the people in question at the hands of Hitler. It was even openly charged that the failure to approve the projects was “acquiescence of this Government in the murder of the Jews.” Pressure was also put on the British by various people. Long had become a whipping boy both publicly and within government circles, and he wrote bitterly that

“the Jewish agitation depends on attacking some individual. Otherwise they would have no publicity. So for the time being I am the bull’s eye.”

As a result of this campaign, Wise and Morgenthau achieved a breakthrough in December 1943, when arrangements were finally made for the evacuation of Romanian Jews, and money was put into a Swiss account controlled by Riegner and the U.S. Treasury. Moreover, in December 1943, Romania put out peace feelers, and was assured it would be treated well if it treated its Jews well; Romania immediately decided to repatriate Jews it had resettled by the Sea of Azov in Russia.

This Morgenthau victory had been achieved at a December 20 meeting of Hull, Long, Morgenthau, and John Pehle, chief of the Treasury’s Foreign Funds Control. Morgenthau had evidently decided on a showdown with State over the entire matter, for at that meeting he casually requested a copy of the complete text of the February 10 message from Welles to Harrison (the suppression instruction). The State Department complied, but deleted the reference to Harrison’s message of January 21, thereby causing the message of February 10 to appear utterly routine. In thus editing the message, State was obviously unaware that the complete contents of this correspondence had already been leaked to DuBois in the Treasury by Donald Hiss of the State Department (brother of Alger Hiss and later identified in Bentley-Chambers testimony as a Communist, although he denied it), who had acquired copies of the messages only with great difficulty and, in complying with DuBois’s request, nevertheless cautioned the latter that the messages were “none of Treasury’s business” and that Hiss could lose his job for the leak.¹⁴⁴

When Morgenthau received the edited message, he knew that he had another weapon to use against Long and associates, and thus, he brought on a collision by charging editing of the message, and demanding to see the unedited files, which were produced shortly later, exposing State’s clumsy attempt at concealment. The State Department people were now very much on the defensive, and further examination of the State Department files (which the Treasury was now in a position to insist on) revealed that, in response to a request by Wise, Welles had cabled Harrison in April to meet with Riegner, and transmit new information that Riegner was supposed to have obtained. The confused Harrison did as requested (Riegner’s information had to do with proposals to assist Jewish refugees in France and Romania) and also remarked to Welles that such material should not be subjected to the restriction imposed by the February 10 message.

Morgenthau was victorious in the State-Treasury collision; Roosevelt, drawn into the issue, sided with him by establishing in January 1944 the so-called War Refugee Board consisting of Morgenthau, Hull, and Secretary of War Stimson. However, the executive director was “Morgenthau’s fair haired boy,” John Pehle, and Josiah DuBois was the general counsel. It was thus Morgenthau’s Board. The WRB naturally acquired the powers that had been

¹⁴⁴ Kubek, 6.

held by the three Government Departments that were involved in the proposed projects for taking Jews out of Europe. Thus, the State Department became committed to appointing special attachés with diplomatic status on the recommendation of the Board (the UNRRA – United Nations Relief and Rehabilitation Administration – set up the previous November, was to have a similar function but only after the war ended).¹⁴⁵

In order to completely grasp the nature of its development and its import in terms of our subject, we should go beyond noting the obvious fact that the WRB was to serve, to a great extent, simply as an instrument of the World Jewish Congress and other Zionist organizations. The Communist apparatus was also through one of the directors involved, for the person to whom Morgenthau had delegated all of the Treasury's powers in the areas relevant to the WRB was Harry Dexter White, later exposed as a Soviet agent. White became a member of Morgenthau's inner circle in the spring of 1938. A week after Pearl Harbor, Morgenthau announced that "on and after this date, Mr. Harry D. White, Assistant to the Secretary, will assume full responsibility for all matters with which the Treasury Department has to deal having a bearing on foreign relations [...]." The extreme generality of the wording of this order, especially the phrase "having a bearing on," were to create grand opportunities for White in the years ahead. In early 1943, Morgenthau amplified White's responsibilities:

"Effective this date, I would like you to take supervision over and assume full responsibility for Treasury's participation in all economic and financial matters [...] in connection with the operations of the Army and Navy and the civilian affairs in the foreign areas in which our Armed Forces are operating or are likely to operate. This will, of course, include general liaison with the State Department, Army and Navy, and other departments or agencies and representatives of foreign governments on these matters."

White, who became an Assistant Secretary of the Treasury in early 1945, took full advantage of these powers, especially in connection with occupation policy in Germany. It is also evident that, because the WRB was to a large degree an arm of the Treasury, its operations fell into White's domain. It is also worth remarking that the general counsel of the WRB, DuBois, was "closely associated" with the Communist agent William L. Ullmann, and was also a witness of White's will.¹⁴⁶

Long had mixed and, as it developed, prescient thoughts about the implications of these developments:

"[...] it will be only a few more days now before I relinquish jurisdiction in connection with refugees and let somebody else have the fun. And it has been a heavy responsibility – domestic as well as foreign, because there are 5 million Jews in the country, of whom 4 million are concentrated in and around New York City. And we have no Arab or Moslem population,

¹⁴⁵ *New York Times* (Jan. 22, 1943), 6; (May 13, 1943), 8; (Sep. 5, 1943), 7; (Sep. 6, 1943), 7; (Jan. 23, 1944), 11.

¹⁴⁶ Kubek, 6-9.

but we do have increasingly important commercial interests – principally oil – in the Moslem countries. In addition our ally England has hardly any Jewish citizenship but a very large political interest in the Near East. So our policy is increasingly based in part – a large part – on a domestic situation, while England’s is based entirely on a foreign affairs base – and the two are hard to reconcile [...] it is good news for me [...] this ensures me staying out. What they can do that I have not done I cannot imagine.”

Long miscalculated on the last point, for the WRB eventually did a considerable amount of Jew relocation, and its acts on behalf of refugees are of great importance in this book, and are discussed in Chapter 7. In the final weeks of the war, it also aided concentration camp inmates through the Red Cross.¹⁴⁷ As an instrument of Wise and other Zionists, the WRB also did considerable propagandizing,¹⁴⁸ and its most consequential propaganda achievement was a booklet, *German Extermination Camps: Auschwitz and Birkenau*, Executive Office of the President, Washington, November 1944. The booklet is hereafter referred to as the WRB report.

The WRB report constituted the formal birth of the “official” thesis of exterminations via gas chamber at Auschwitz. In it all of the essentials and many of the details of the later Auschwitz hoax are found. The Nuremberg charges grew out of the WRB report. There does not seem to have been any particularly strong reaction, one way or the other, to the WRB report at the time that it was issued. However, an American journalist, Oswald F. Schuette, wrote a critical letter to Stimson (one of the signers of the report), but Schuette did not get a satisfactory reply.¹⁴⁹

Of course, the WRB report failed to change the opinions of the State Department people who had scoffed at the extermination propaganda from the very beginning. In private with DuBois, they were blunt in their opinion of the WRB report:

“Stuff like this has been coming from Bern ever since 1942. [...] Don’t forget, this is a Jew telling about the Jews. [...] This is just a campaign by that Jew Morgenthau and his Jewish assistants.”

The WRB report was said to have been transmitted from Bern to Washington. The report will be discussed in depth after we have surveyed a key part of the wartime propaganda in its public aspect. First, however, we should point out that some otherwise keen observers misinterpret the role of Auschwitz in the extermination legend. The distinguished American journalist and historian Harry Elmer Barnes wrote in 1967 that the extermination¹⁵⁰

“[...] camps were first presented as those in Germany, such as Dachau, Belsen, Buchenwald, Sachsenhausen, and Dora, but it was demonstrated that there had been no systematic extermination in those camps. Attention was then moved on to Auschwitz, Treblinka, Belzec, Chelmno, Jonowska,

¹⁴⁷ DuBois, 198-199; Red Cross (1947), 20, 23, 59-60; US-WRB (1945), 9-10, 56-61.

¹⁴⁸ US-WRB (1945), 45-56.

¹⁴⁹ Kubek, 805-810; Aretz, 366-368.

¹⁵⁰ Barnes, quoted in Anonymous (David L. Hoggan), 3.

Tarnow, Ravensbruck, Mauthausen, Brezeczna, and Birkenau, which does not exhaust the list that appears to have been extended as needed."

The basis for Barnes's misunderstanding, of course, is that at the end of the war the mass media, for the sake of sensation mongering, did indeed seize on the scenes found in the German camps as proof of exterminations, and it is also true, as we indicated in the previous chapter, that these scenes have served as the mass propaganda "proof" of exterminations. However, our analysis shows that Auschwitz had been carefully chosen in 1944 as the core for the extermination hoax. This point will be supported by material to be reviewed below and also in Chapters 4 and 5. By publishing the WRB report in November 1944, Washington committed itself to a specific form of the hoax. That form was maintained in the trials in Nuremberg, and even today, the form of the hoax does not differ in any significant respect from the WRB report.

After his WRB victory, Morgenthau busied himself with other things, particularly with the policies to be followed in occupied Germany. He found that existing plans actually paid regard to the Hague and Geneva Conventions, to which the United States was signatory, and which prohibited such things as the seizure of private personal property of no military significance, the detaining of POWs long after the end of hostilities, and the needless imposition of starvation rations. He therefore campaigned for the harsher policies, which later became known as the Morgenthau Plan, and of which many were actually adopted and put into practice. David Marcus in the CAD sponsored Morgenthau's objectives there, and kept him informed about his opponents. Colonel Bernard Bernstein, long associated with Morgenthau, performed a similar function for him at Supreme Headquarters Allied Expeditionary Forces (SHAEF) in London. Baruch also helped out.¹⁵¹

The First 'Extermination' Claims and New York

The thesis of this book is that the story of Jewish extermination in World War II is a propaganda hoax. Obviously, therefore, we must examine the origins of the hoax in wartime propaganda. We have already discussed many of the "inside" aspects, and the public aspects remain to be examined.

The enormity of the task plus the "controversial" nature of the subject seem to have discouraged a thorough study of the propaganda. There have been studies of special aspects. John T. Flynn, in *While You Slept*, surveyed the propaganda in respect to communist and pro-communist influences, especially in regard to Asia. James J. Martin made a study of the manner, in which the American media treated the Soviet Union, the negotiated peace question, and the Allied terror bombings during the war.

It is out of the question to survey all of the atrocity and extermination propaganda pertaining to the European theater in World War II. Here, we may

¹⁵¹ Blum, 343, 383.

economize on the magnitude of the survey to be undertaken by noting that we are interested only in the Jewish extermination question, and only in what important people were doing. We will therefore find that examination of stories concerning alleged Jewish extermination which appeared in the *New York Times*, spring 1942 through 1943, together with a summary of 1944 propaganda, which will be presented in Chapter 5, is all that is required to get a satisfactory conception of the propaganda. Therefore, we start here with spring 1942 stories.

Concurrent commentary will be made. In many cases there is a story involved – allegedly originating in Europe – claiming mass killings, and the matters of particular interest in such cases are the source of the story, the location of the alleged killings, and the method of killing allegedly employed. It should also be kept in mind that the post-war extermination legend claims only three varieties of mass exterminations: gassing at six sites in Poland,¹⁵² “gasmobiles” in Russia,¹⁵³ and mass shootings in Russia.

April 6, 1942, p. 2: “*REPORTS NAZI SLAUGHTER OF JEWS*”

Kuibyshev, Russia, April 5 (AP). The Anti-Fascist Jewish Committee reported today that the Germans have killed 86,000 Jews in and around Minsk, 25,000 at Odessa and ‘tens of thousands’ in Lithuania, Latvia and Estonia. In Estonia, the report said, the entire Jewish population numbering 4,500 was wiped out.”

June 13, 1942: “*NAZIS BLAME JEWS FOR BIG BOMBINGS*”

Berlin, June 12 (From German broadcast recorded by the United Press in New York). Propaganda Minister Joseph Goebbels said tonight that Germany would carry out a mass ‘extermination’ of Jews in reprisal for the Allied air bombings of German cities which, he acknowledged, have caused heavy damage.

Dr. Goebbels, in an article in the publication The Reich, said the Jews would be exterminated throughout Europe ‘and perhaps even beyond Europe’ in retaliation against the heavy air assaults.”

Goebbels’s remark was directed against the Jewish controlled press, which he regarded as largely responsible for the propaganda atmosphere which made the terror bombings possible. His remark in *Das Reich* was:¹⁵⁴

“In this war, the Jews are playing their most criminal game, and they will have to pay for that with the extermination (Ausrottung) of their race in Europe and perhaps far beyond. They are not to be taken seriously in this conflict, because they represent neither British nor American, but exclusively Jewish interests.”

¹⁵² Alphabetically listed: Auschwitz (incl. Birkenau), Belzec, Kulmhof/Chelmno, Lublin-Majdanek, Sobibór, Treblinka. Later, gassings were also claimed for the Stutthof Camp, but it was not located in Poland at that time; Editor’s note.

¹⁵³ Gas vans are also claimed to have been deployed in the Chelmno camp as well as in Serbia; cf. Alvarez; Editor’s note.

¹⁵⁴ *Das Reich* (Jun. 14, 1942), 2

Now this is indeed an extermination threat, because the primary meaning of the term “*Ausrottung*” is “extermination” (the English “uprooting,” to which the word is related etymologically, is only a secondary meaning). Similar totally public utterances were also made occasionally by Hitler. Examples are “the result of this war will be the destruction of Jewry,” and “it will not be the Aryan peoples that will be annihilated but it will be Jewry.”¹⁵⁵

In reaction to this, one should observe that (a) extreme statements were a pervasive feature of Nazi oratory and rhetoric, (b) the extermination mythologists find it necessary to claim that the exterminations were carried out in the most extreme secrecy, which makes it somewhat untenable to take such occasional references in the public declarations of Nazi leaders as evidence of exterminations, (c) it is necessary to fully grasp the specific circumstances of the Goebbels remark, *i.e.* it was a reaction to Allied terror bombings, (d) people can say heated things in wartime, and bloodthirsty statements were made by supposedly responsible people on both sides during the war, and (e) it is often the case that a complete understanding of context is necessary when interpreting the specific meaning of a reference to “extermination” or “annihilation” (or, in German, “*Ausrottung*,” “*Vernichtung*,” respectively). Moreover, the German word for “Jewry,” *das Judentum*, is ambiguous in meaning. Let each of these five points be examined in order.

(a) It is well known that Nazi oratory and rhetoric tended to have a provocatively inflammatory character whose origins go well back into the days when the Nazis were a minor party in Weimar Germany. It appears that this was a result of a deliberate and studied policy, for in 1931 Hitler explained the reasons for it in a private interview:¹⁵⁶

“What some madman of an editor writes in my own press is of no interest to me. [...] We can achieve something only by fanaticism. If this fanaticism horrifies the bourgeoisie, so much the better. Solely by this fanaticism, which refuses any compromise, do we gain our contact with the masses.”

Put more simply, he often found that he could get attention by making wild statements.

Naturally, all of the Nazi leaders, especially Goebbels, were infected with this attitude to some degree. It is true that, after the Nazis came to power and assumed responsibility for ruling Germany, their public declarations became much more moderated in tone, but the tendency never entirely departed from them, and of course the war and the problem of attempting to reach public opinion in the Allied countries revived the feature somewhat. Under the circumstances, it is actually remarkable that Hitler and Goebbels only rarely made such declarations.

(b) We shall see in following chapters that the extermination mythologists are forced to take the position that the Nazis went to extremes to preserve the secrecy of their killing program of continental scope, and did in fact preserve this secrecy to a most remarkable extent. What is known of the behavior of Eu-

¹⁵⁵ Jäckel, 62f.

¹⁵⁶ Calic, 34f. Hitler also made relevant remarks in *Mein Kampf*.

ropean Jews during those days, for example, despite the claims of some individual authors and the indubitable fact that there were all sorts of rumors current, shows that the Jews were not conscious of any extermination program. When they were told to pack up for transport, they did just that, and went without resistance. On p. 151, we shall note Theresienstadt Jews *volunteering* for transport to Auschwitz as late as August 1944, for the Jews at Theresienstadt knew nothing of any extermination program at Auschwitz or anywhere else. On p. 280, we shall note that the Nazis were allegedly even unwilling to commit anything to confidential documents for, we are told, 'the drafting of circumspect minutes was one of the major arts of Hitler's Reich.' Because this is the case put forward by the extermination mythologists, then it is not merely that occurrences of the sort of remarks under consideration do not support their case; the problem becomes that of explaining such occurrences.

(c) The Goebbels remark should be seen for what it was: a professional propagandist's reaction to the Allied bombings, which obsessed German policy in various ways from May 1940 on. Because the facts in this connection, although well established, are not well known, they are very briefly summarized here, but in order to avoid an inexcusably long digression, the summary is indeed brief. The reader interested in more thorough treatment is referred to Veale and to Colby.¹⁵⁷

At the outbreak of war in 1939, German air doctrine viewed the bomber as a form of artillery, and thus a weapon to be used in support of ordinary ground operations. It was in this connection that the well-publicized bombings of Warsaw in 1939 and Rotterdam in May 1940 took place: only after these cities had actually become the scenes of military operations, and the laws of siege applied. "Strategic bombing," as we understand the term, played no role in German combat operations (although of course it had been and was under study by German military planners).

This was not the case in Britain, however, for at the time that the Germans were using their bombers as artillery in the Netherlands, the British made the "splendid decision" to bomb German civilian targets, knowing perfectly well that Hitler had no intention or wish to engage in warfare of this sort (Hitler, indeed, did not want war with Britain at all).

There was a moderate amount of German bombing of targets in England during the early summer of 1940, but only specifically military targets were attacked, even while such cities as Hamburg and Bremen were undergoing general attack. It was only after three months of this, and with the greatest reluctance, that Hitler felt himself forced to reply in kind, and in this way the well-publicized "Blitz" hoax was established. The British people were not permitted to find out that their government could have stopped the German raids at any time merely by stopping the raids on Germany.

The British raids on Germany, while of no military significance in 1940, had put the German government on the spot in German popular opinion, be-

¹⁵⁷ Frederick J. P. Veale, *Advance to Barbarism*, and Benjamin Colby, *'Twas a Famous Victory*.

cause the German people naturally thought that their government should be able to do something about them. The only reason the Germans adopted retaliatory bombing was as a last resort. In announcing the policy, Hitler declared in a *Sportpalast* speech of September 4, 1940:¹⁵⁸

"If the British Air force drops two or three or four thousand kilograms of bombs, we will drop a hundred and fifty, a hundred and eighty, two hundred thousand, three hundred thousand, four hundred thousand kilograms and more in a single night."

This was a gross exaggeration of his capabilities relative to the British, for his bombers were designed for support of troops and not for the "strategic bombing," for which the British bombers were equipped, although at the time Germany's bombers were numerically superior to the British. Nevertheless, violent words are cheap, and after the Luftwaffe, which was never more than a nuisance for the Allied bombing operations, violent words (sometimes coupled with promises of secret new weapons) were about all Hitler and Goebbels were able to come up with in 1940 or at any subsequent time to oppose the bombings. It is in this context that the Goebbels remark should be grasped.

(d) There were bloodthirsty remarks made on both sides during the war. In the U.S., there were many examples of wild views earnestly put forward by apparently civilized persons, which were received with apparently thoughtful reactions of approval by equally respected persons. Because there were so many such people, it will suffice to remark only on Clifton Fadiman, the well-known author and critic who, at the time, was the book review editor of the *New Yorker* weekly magazine.

Fadiman was the principal luminary of the Writers War Board, a semi-official government agency that did volunteer writing for government agencies in connection with the war. The Board was chaired by Rex Stout. The thesis that Fadiman and Stout carried to the writers' community in 1942 was that writings on the war should seek "to generate an active hate against all Germans and not merely against Nazi leaders." This generated some heated controversy, and writers and observers took sides in what became a debate hot enough for Fadiman to declare that he knew of "only one way to make a German understand and that's to kill them and even then I think they don't understand."

These were not isolated outbursts, for Fadiman welcomed the opportunity to set down his views on Germans in a more organized context through his column in the *New Yorker*. In April 1942, he had found the juvenile concept he needed in a book by de Sales, *The Making of Tomorrow*. Taking for granted the reader's concurrence that the Nazis were at least the worst scourge to come along in centuries, he wrote that de Sales's

"argument is simply that the present Nazi onslaught is not in the least the evil handiwork of a group of gangsters but rather the final and perfect expression of the most profound instincts of the German people. 'Hitler is

¹⁵⁸ Hitler, 848; Domarus, vol. II, 1580.

the incarnation of forces greater than himself. The heresy he preaches is two thousand years old.' What is the heresy? It is nothing more or less than a rebellion against Western civilization. Mr. de Sales traces five such German rebellions, beginning with Arminius. At first you are inclined to be skeptical of the author's grand indictment – his anti-Germanism may conceivably stem from his French ancestry – but as you follow his argument it becomes more and more cogent and the true proportions of this war emerge with great clarity."

His reviews of books on the war expressed the historical concept that he had found in de Sales's nonsense. Scoffing at Howard K. Smith's claim that "If we can offer (the Germans) a real alternative to extermination, the nation, though it may not succumb to actual revolution, will fall into our hands," Fadiman wrote:

"The world has been appeasing the Germans ever since their human wolf packs broke out of their forest lairs in the time of Arminius. The result is a Europe on the verge of suicide."

This was followed by his obvious approval of "Hemingway's extraordinary [...] suggestion that 'the only ultimate settlement' with the Nazis is to sterilize them. He means just that, in a surgical sense." Of course, Fadiman also saw no distinction between Nazis and other Germans, and ridiculed Dorothy Thompson's "passionate argument" for such a distinction as well as her conviction "that our postwar efforts must be directed toward the construction of a European federation of states, with Germany, under democratic leadership, occupying a leading position." Although Fadiman never advocated the killing of all or most Germans, at least not in so many words, this was the clear sense of his declarations. After all, what else can be done with "wolf packs who broke out of their forest lairs," who are now trying to enslave the rest of the world, and who "understand" only if you "kill them," and must not be given "a real alternative to extermination?"¹⁵⁹

Clifton Fadiman was only a very prominent and semi-official example of a "school of thought" that existed among leaders of opinion in the U.S. during the war. James J. Martin and Benjamin Colby have published longer studies of Allied propaganda based on hatred of all Germans, the latter presenting a particularly thorough study of the Writers War Board.

The climate of wartime opinion in Britain, of course, was about the same and, on account of England's earlier entry into the war, of longer standing. In reacting to Hitler's Berlin *Sportpalast* speech on the initiation of German air raids on British cities (quoted above), the London *Daily Herald* gloated that Hitler had made "a frantic effort to reassure his raid-harassed people" who "are in an extremely nervous condition and stay awake even when there is no alarm." The same issue of the *Herald* goes on to present the recommendations of the Reverend C. W. Whipp, vicar of St. Augustine's Leicester:

¹⁵⁹ *New York Times* (Oct. 29, 1942), 20; *New Yorker* (Apr. 18, 1942), 62; (Sep. 12, 1942), 53; (Oct. 24, 1942), 64f; (Nov. 28, 1942), 82; (Dec. 5, 1942), 82.

"The orders ought to be, 'wipe them out,' and to this end I would concentrate all our science towards discovering a new and far more terrific explosive.

These German devils (that is the only word one can use) come over our cities and turn their machine-guns on women and children.

Well, all I hope is that the RAF will grow stronger and stronger and go over and smash Germany to smithereens.

A Minister of the Gospel, perhaps, ought not to indulge in sentiments like these.

I go further, and I say quite frankly that if I could I would wipe Germany off the map.

They are an evil race and have been a curse in Europe for centuries.

There can be no peace until Hitler and all those who believe in him are sent to hell which is their place of origin and their final home."

The *Herald* remarked that Whipp "has aroused considerable local controversy," so it is evident that in Britain, as in the U.S., there were many people who kept their heads despite the Fadiman types.

The peculiar *ad hoc* philosophy of history enunciated by de Sales and promoted by Clifton Fadiman also made its apparently independent appearance in England. An article by Reginald Hargreaves in the June 1941 issue of the respected journal *National Review* (not to be confused with the *National Review* that was founded in the U.S. in 1955) proposed as a war aim (as distinct from an unavoidable consequence of the war) that "at least three million Nazi soldiers (be) put permanently out of action," it being:

"[...] an absolutely vital prerequisite to the laying down of arms that a sufficient number of the present-day corrupted, brutalized and delirious young dervishes of Nazidom should be left dead upon the field."

The necessity for this arose from the consideration that:

"[...] throughout her whole history Germany has shown herself as utterly uncivilized and worthy of nothing but detestation and disgust. From the very beginning the behavior of the Teutonic peoples had qualified them for the role of pariahs – the outcast mad dogs of Europe. [...] Our real war aim must be, not only military triumph in the field, but the reduction of the German people to such a shrunken and delimited condition that never again will they be in such a position to 'start anything' to the detriment of generations yet to come. Our conflict, despite mushy affirmations to the contrary, is with the German people; a race so savage, so predatory, so unscrupulous and so utterly uncivilized that their elimination as a major power is the only hope for a world that has no choice but to take the surgeon's knife and cut out this cankerous growth from its body-politic, thoroughly, relentlessly, once and for all."

Such declarations seem even more extraordinary when one considers that they came from a nation noted for *understatement*.

The point of this discussion is not that there had grown up any consensus in the U.S. and Britain that all Germans are by nature monsters and should be

killed or at least sterilized. Everybody would agree that no such consensus existed (and even the extermination mythologists would agree, I think, that no consensus favoring extermination of the Jews existed in Germany). Moreover, as we all realize, the genocidal policies advocated or implied by many leaders of opinion in the U.S. and Britain were not, in their literal form, within the bounds of the possible; the American and British people would never have permitted such deeds to be done in their names. The point is that during the heat of wartime the most extraordinary things were said. For the most part (unfortunately, one can only say for the *most* part) such lunacies were not realized in events, but they were expressed nevertheless.

Murderous things were said on both sides, and in my opinion and dim recollection of the times, the rhetoric in the U.S. (especially in regard to the Japanese) seems to me to have been more violent than anything that now seems to have been current in Germany during the war, although such a comparison is difficult, and perhaps should not be attempted in regard to degree, on account of the very different roles played by “public opinion” and by the statements of political leaders in the two political systems involved.

On the Axis side, one should also note that Fascist Italy had various anti-Jewish laws that were however very mild in application and certainly never approached murder. Nevertheless, the anti-Jewish rhetoric in the Fascist press was at least as violent as anything generated in Germany, and assuming the *New York Times* (October 22, 1941) reported accurately, it even advocated that all Italian Jews be “annihilated as a danger to the internal front,” because “this is the moment to do away with half-way measures.”

(e) A final point is that one must use some common sense and a feeling for the context in interpreting references to “extermination” and “annihilation” properly. In the American Civil War, many wanted Lincoln to “annihilate” the South, and it is not inaccurate English to say that Lincoln did just that, but it was understood, then as now, that the killing of all Southerners was not contemplated.

Naturally, the same observation may be made in connection with public declarations of Nazi leaders, but there is an additional point to be made in this connection. Very often the Jews were referred to via the German word *das Judentum*, one of whose correct translations is “Jewry,” but which can also mean “Judaism” or even “Jewishness” or “the idea of Jewishness.” Thus, a Hitler reference to “*die Vernichtung des Judentums*,” if lifted out of context and interpreted in a purely literal way, can be interpreted as meaning the killing of all Jews, but it can also be interpreted as meaning the destruction of Jewish influence and power, which is what the politician Hitler actually meant by such a remark, although it is true that he could have chosen his words more carefully. Alfred Rosenberg made specific reference to this ambiguity in his IMT testimony, where he argued that “*die Ausrottung des Judentums*,” a term he had used on occasion, was not a reference to killing in the context in which Rosenberg had used it.

The lengthy digression made necessary by Goebbels's "*Ausrottung*" remark being concluded, we return to the survey of stories in *The New York Times* for 1942-1943.

June 14, 1942, p. 1: "258 JEWS REPORTED SLAIN IN BERLIN FOR BOMB PLOT AT ANTI-RED EXHIBIT

by George Axelsson – by telephone to the New York Times Stockholm, Sweden, June 13. At the Gross Lichterfelde Barracks in the western suburbs of Berlin 258 Jews were put to death by the SS on May 28, and their families deported, in retaliation for an alleged Jewish plot to blow up the anti-Bolshevist 'Soviet Paradise' exhibition at the Lustgarten. [...] If there were any bombs, they evidently were discovered before they had time to explode. [...] The SS wanted the executions to be published. [...] Instead [...] leaders of the Jewish colony were called in.

Observers are inclined to see a link between the Berlin executions and the massacre at Lidice, in Czechoslovakia, after the assassination of Reinhard Heydrich."

June 30, 1942, p. 7: "1,000,000 JEWS SLAIN BY NAZIS, REPORT SAYS

London, June 29 (UP) [...] spokesmen for the World Jewish Congress charged today.

They said Nazis had established a 'vast slaughterhouse for Jews' in Eastern Europe. [...] A report to the Congress said that Jews, deported en masse to Central Poland from Germany, Austria, Czechoslovakia and the Netherlands were being shot by firing squads at the rate of 1,000 daily.

Information received by the Polish Government in London confirmed that the Nazis had executed 'several hundred thousand' Jews in Poland."

No such "slaughterhouse" where executions were by "firing squad" is claimed today. As noted above, this was the start of the World Jewish Congress's campaign of extermination propaganda. It is quite possible that this first story was inspired by Goebbels's then recent "*Ausrottung*" remark.

July 22, 1942, p. 1: "NAZI PUNISHMENT SEEN BY ROOSEVELT

[...] President Roosevelt declared last night in a message read to 20,000 persons at Madison Square Garden [...]

President's Message

'The White House

'Washington

'July 17, 1942

'Dear Dr. Wise:

'[...] Citizens [...] will share in the sorrow of our Jewish fellow-citizens over the savagery of the Nazis against their helpless victims. The Nazis will not succeed in exterminating their victims any more than they will succeed in enslaving mankind.

The American people [...] will hold the perpetrators of these crimes to strict accountability in a day of reckoning which will surely come. [...]

Text of Churchill Message

[...] you will recall that on Oct. 25 last, both President Roosevelt and I expressed the horror felt [...] at Nazi butcheries and terrorism and our resolve to place retribution for these crimes among the major purposes of this war. [...]”

Such vague statements of the wartime leaders, while devoid of any specific charges, carried more weight among the public than any of the more specific stories that the leaders may have seemed, by their statements, to be endorsing. We shall see that the specific claims of the time, at least for several months, did not very much resemble the claims made at the later trials. Nevertheless, the politics of the situation, as perceived by Roosevelt and Churchill, made it opportune for them to “go along,” at least to the extent of making vague public statements supporting the propaganda.

September 3, 1942, p. 5: “*50,000 JEWS DYING IN NAZI FORTRESS*”

London, Sept. 2 (UP) – Fifty thousand Jews from Germany and Czechoslovakia have been thrown into the fortress at Terezin and several thousand who are ill or charged with ‘criminal’ acts are in underground dungeons where they are ‘dying like flies’ a Czech Government spokesman said tonight.

‘All hope for them has been abandoned,’ the spokesman said. [...] The spokesman said the Germans had launched a campaign to exterminate Jews from the protectorate and that of 40,000 Jews formerly in Prague only 15,000 remain. Pilsen and Bruenn have been cleared of Jews, he said, many of them being sent to Terezin, largest concentration camp in Nazi-controlled Europe.

A European observer said the Germans planned to exterminate the Jews not only in Europe, but throughout the world. He declared the Nazis had executed 2,000,000 Jews in the past three years [...].”

The only truth in this story lies in the fact that the death rate of Jews was rather high at Terezin (Theresienstadt) due to the German policy of sending all Reich Jews over 65 there. Another category at Theresienstadt was the “privileged” Jews – the war veterans – especially those with high decorations. There were other Jews, many of whom were eventually moved out, but if they suffered, it was not at Theresienstadt. The place was visited by the Red Cross in June 1944, and the resulting favorable report angered the World Jewish Congress.¹⁶⁰ There will be more to be said about Theresienstadt in subsequent chapters. While it was not the “largest concentration camp in Nazi-controlled Europe,” it nevertheless plays an important role here.

September 5, 1942, p. 3: “*US REBUKES VICHY ON DEPORTING JEWS*”

Washington, Sept. 4 – The State Department has made the ‘most vigorous representations possible’ to the French Government through the American Embassy in Vichy over the mass deportation of Jews from unoccupied France, it was announced today by the American Jewish Committee.

¹⁶⁰ Reitlinger, 176-186.

The protest followed representations by four Jewish organizations, and the action was communicated to them in a letter by Sumner Welles, Under-Secretary of State. [...] Mr. Welles said: 'I have received your communication of Aug. 27, 1942, enclosing a letter [...] in regard to the mass deportation of Jewish refugees from unoccupied France.

'I am in complete agreement with the statements made concerning this tragic situation, which provides a new shock to the public opinion of the civilized world. It is deeply regretted that these measures should be taken in a country traditionally noted for adherence to the principles of equality, freedom and tolerance.

'The American Embassy at Vichy [...] has made the most vigorous representations possible to the highest authorities at Vichy [...].'

[...] The letter of the four organizations to the Secretary of State follows:

'On behalf of the organizations we represent [...] the undersigned respectfully request our government to transmit to the government of France a solemn protest against the action taken recently by that government to turn thousands of refugees over to the agents of the Nazi government for deportation to Poland and to other Nazi-occupied regions in Eastern Europe.

'Reports reaching us [...stating] that the government of France is permitting the [...] deportation by the Nazis of Jewish refugees who have been interned in a number of camps in the south of France. This action began about Aug. 8, when a total of 3,600 men, women and children were rounded up, loaded on trains and sent off without any word regarding their destination.

'The reports agree that these 3,600 were the first contingent of a total of 10,000 Jewish refugees which the French government has agreed to deport to eastern territories [...]

'[...] Mass deportations of Jews from Germany and from territories under German occupation have been going on ever since the conquest of Poland. In accordance with the announced policy of the Nazis to exterminate the Jews of Europe, hundreds of thousands of these innocent men, women and children have been killed in brutal mass murders. The rest are being herded in ghettos in Eastern Europe under indescribably wretched conditions, as a result of which tens of thousands have succumbed to starvation and pestilence.'"

We should only note at this point that even the four Jewish organizations are not completely secure in claiming exterminations, because they allow themselves an "out" by referring to those being "herded in ghettos." Welles's reply, while "in complete agreement" with the letter, avoids direct endorsement of the extermination claim.

November 24, 1942, p. 10: "*HEBREW PAPERS MOURN*

JERUSALEM, Nov. 23 (UP) – The Hebrew press appeared today with black borders around reports of mass murders of Jews in Poland. The re-

ports, received by the Jewish Agency, asserted that systematic annihilation of the Jewish population was being carried out by a special German 'destruction commission' [...] on the former frontier between German and Russian Poland, thousands were thrown into the Bug river and drowned."

December 13, 1942, p. 21: "*TARDY WAR REPORT HELD AID TO FAITH* [...] Rabbi Israel Goldstein declared: 'Authenticated reports point to 2,000,000 Jews who have already been slain by all manner of satanic barbarism, and plans for the total extermination of all Jews upon whom the Nazis can lay their hands. The slaughter of a third of the Jewish population in Hitler's domain and the threatened slaughter of all is a holocaust without parallel.'"

December 18, 1942, p. 1: "*11 ALLIES CONDEMN NAZI WAR ON JEWS* Special to the New York Times Washington, Dec. 17 – A joint declaration by members of the United Nations was issued today condemning Germany's 'bestial policy of cold-blooded extermination' of Jews [...]. The declaration was issued simultaneously through the State Department here, and in London. [...]

Text of Declaration

'[...] From all the occupied countries Jews are being transported in conditions of appalling horror and brutality to Eastern Europe. In Poland, which has been made the principal Nazi slaughterhouse, the ghettos established by the German invader are being systematically emptied of all Jews except a few highly skilled workers required for war industries. None of those taken away are ever heard of again. The able-bodied are slowly worked to death in labor camps. The infirm are left to die of exposure and starvation or are deliberately massacred in mass executions. The number of victims of these bloody cruelties is reckoned in many hundreds of thousands of entirely innocent men, women and children.'"

This was the beginning of the State Department involvement in the extermination legend, and that it came from such a seemingly official source was the basis for special comment in the *Times* editorial of the same day:

December 18, 1942, p. 26: "*HITLER'S TERROR* Despite all that has been written about Nazi persecution of the Jews, the facts in the joint statement issued yesterday in Washington, London and Moscow in the name of the United Nations will come as a shock to all civilized people who have preserved a modicum of human decency. For this statement is not an outcry of the victims themselves to which many thought it possible to close their ears on the ground that it might be a special plea, subject to doubt. It is the official statement of their own governments, based on officially established facts. [...]"

Clearly, it was believed that atrocity claims apparently coming from the State Department were more credible than claims coming from such groups as the World Jewish Congress, which is no doubt what is meant by the "victims themselves." However, we have seen that Wise was also behind the "joint declaration." The December 17 statement marked the start of U.S. and British

government complicity in the extermination legend. The German government did not see the event as laden with import, and von Stumm of the Foreign Office's press section flippantly explained to the neutral press that the Allied declaration was for the purpose of helping the Christmas sales of the Jewish department stores of New York and London.¹⁶¹

December 20, 1942, p. 23: "*ALLIES DESCRIBE OUTRAGES ON JEWS*

What is happening to the 5,000,000 Jews of German-held Europe, all of whom face extermination, is described in a statement released yesterday by the United Nations Information Office. [...]

[...] Novel methods of mass execution by shooting and lethal gas are cited in the main body of the report, which states that this destruction of the Jews is not 'isolated in one country but is continent-wide. Early in December 1942 the State Department in Washington gave some figures showing that the number of Jewish victims deported and perished since 1939 in Axis-controlled Europe now reached the appalling figure of 2,000,000 and that 5,000,000 were in danger of extermination. [...]

The document concludes:

'The means employed in deporting from the ghetto all those who survive murders and shooting in the street exceeds all imagination. In particular, children, old people and those too weak for work are murdered. Actual data concerning the fate of the deportees is not at hand, but the news is available – irrefutable news – that places of execution have been organized at Chelmno and Belzec, where those who survive shootings are murdered en masse by means of electrocution and lethal gas.'

The alleged electrocutions at Belzec appeared a few times in the propaganda and will be discussed again on p. 197. They are one of the versions of exterminations that were quickly forgotten about after the end of the war. Nevertheless, we can see, at this point, a clear tendency of the propaganda to resemble the claims which have become the fixed features of the legend, the gas chambers and the approximate 6,000,000 killed during the course of the war. We will have more to say a bit later on the origin of the six million figure.

December 28, 1942, p. 21: "*DEMAND JEWS BE SAVED*

Albany, Dec 27 (AP) – Dr. Wise, president of the American Jewish Congress and the World Jewish Congress [... urged] formulation of an Allied program to halt the Nazi slaughter of civilians.'

Jan. 8, 1943, p. 8: "*93 CHOOSE SUICIDE BEFORE NAZI SHAME*

Ninety-three Jewish girls and young Jewish women, the pupils and the teacher of a Beth Jacob School of Warsaw, Poland, chose mass suicide to escape being forced into prostitution by German soldiers, according to a letter from the teacher, made public yesterday by Rabbi Seth Jung of the Jewish Center of New York City.'

¹⁶¹ Reitlinger, 439.

February 7, 1943, VI, p. 16, magazine article by Sholem Asch: "*IN THE VALLEY OF DEATH*

[...] *gas chambers and blood poisoning stations which are established in the outlying countryside, where steam shovels prepare community graves for the victims.*"

February 14, 1943, p. 37: "*TYRANNY OF NAZIS SHOWN*

Warsaw is being subjected to a deliberate Nazi pattern of death, disease, starvation, economic slavery and wholesale elimination of population, the Office of War Information states in a twenty-four page pamphlet, 'Tale of a City,' published today.

Declaring that Warsaw has been the testing ground for Nazi plans of world conquest [...]

'[...] there is no way of telling at this time exactly how many Poles have been murdered by the Nazis in Warsaw.' The execution spot is now Palmiry, near Warsaw, where mass shootings occur either at dawn or during the night."

February 14, 1943, p. 37: "*EXECUTION 'SPEED-UP' SEEN*

Mass executions of Jews in Poland on an accelerated tempo was reported by European representatives of the World Jewish Congress in a communication made public by Rabbi Stephen S. Wise, president of the American Jewish Congress.

In one place in Poland 6,000 Jews are killed daily, according to the report, dated Jan. 19. Jews left in Poland are now confined in fifty-five ghettos, some in the large towns and some in the smaller towns that have been transformed into ghettos."

This was the propaganda story involved in the conflict between State and Treasury. As noted in connection with the remarks on the *Times* editorial of December 18, if this story had managed to emerge from the State Department, greater credibility would, apparently, have been attached to it. Unfortunately for the propaganda inventors at the time, they had to settle for Rabbi Wise as ostensible source.

February 16, 1943, p. 7: "*NAZIS SHIFT 30,000 JEWS*

Geneva, Switzerland, Feb. 15 (ONA) – All the aged and feeble [from Czystachowa, Poland] were sent to Rawa-Russka, in Galicia, for execution by the Nazis, sources from inside Poland said."

February 23, 1943, p. 23: "*ATROCITIES PROTESTED*

Thirty-five hundred children [...] held a solemn assembly of sorrow and protest against Nazi atrocities in Mecca Temple, 133 West Fifty-fifth Street. [...] Six refugee children related their experiences at the hands of the Nazis."

March 2, 1943, pp. 1, 4: "*SAVE DOOMED JEWS, HUGE RALLY PLEADS*

Immediate action by the United Nations to save as many as possible of the five million Jews threatened with extermination [...] was demanded at a mass demonstration [...] in Madison Square Garden last night.

[...Rabbi Hertz said] *'appalling is the fact that those who proclaim the Four Freedoms have so far done very little to secure even the freedom to live for 6,000,000 of their Jewish fellow men by readiness to rescue those who might still escape Nazi torture and butchery. [...]*'

[...Wendell Wilkie said] *'Two million human beings, merely because they are Jews, have already been murdered by every fiendish means which Hitler could devise. Millions of other Jews [...] face immediate destruction [...]*'

[...Chaim Weizmann said] *'Two million Jews have already been exterminated. [...]*

'The democracies have a clear duty before them. [...] Let them negotiate with Germany through the neutral countries concerning the possible release of the Jews in the occupied countries. [...] Let the gates of Palestine be opened to all who can reach the shores of the Jewish homeland [...]'"

March 7, 1943, p. 30: "600 JEWS SENT TO SILESIA

Stockholm, Sweden, March 6 (Reuter) – Nearly 600 Norwegian Jews [...] are now known to have reached Polish Upper Silesia. Most of the men have been sent to work in the mines near Katowice."

March 10, 1943, p. 12: "40,000 HERE VIEW MEMORIAL TO JEWS

Forty thousand persons listened and watched [...] last night to two performances of 'We Will Never Die,' a dramatic mass memorial to the 2,000,000 Jews killed in Europe. [...] The narrator said 'There will be no Jews left in Europe for representation when peace comes. The four million left to kill are being killed, according to plan.'"

April 1, 1943, p. 2: "FRENCH JEWS SENT TO A NAZI OBLIVION

Wireless to The New York Times London, March 31 – A system of 'death convoys' under which French Jews are being rounded up [...] and then shipped out to various points in Eastern Europe, after which they are no longer heard from, was described here today by the British section of the World Jewish Congress, which charged that the 'full force' of the Nazi and anti-Jewish terror now was being concentrated in France.

Basing its report on first hand information supplied by a prominent French Jew who has escaped to a neutral country, the Congress declared the last 'convoy' left France about Feb. 20. It involved 3,000 Jews of all classes and ages, and all that was known about its eventual destination was that it was somewhere in the East.

In mid-February, the Congress added, the Gestapo raided the Lyon headquarters of the General Union of French Jews, arrested the entire staff, removed them to the Drancy concentration camp and since has shipped them, too, to some 'extermination center' on the other side of Europe."

Reitlinger (page 327) tells us that "less than a tenth of the Jews who were deported (from France) possessed French nationality." By his figures that is perhaps 5,000 of the 240,000 French Jews, suggesting that maybe the 5,000 enlisted for work voluntarily or were actually "politicals" or partisans.

April 12, 1943, p. 5: "NAZIS ERASE GHETTOS IN TWO POLISH CITIES
London, April 11 (AP) – The Polish Telegraph Agency said tonight that the Germans had erased the ghetto at Krakow in a three-day massacre that started March 13, and also had eliminated the ghetto in Lodz.

The fate of the Jews in the latter city was unknown, but the agency said it was believed they also were killed."

April 20, 1943, p. 11: "2,000,000 JEWS MURDERED
London, April 19 (Reuter) – Two million Jews have been wiped out since the Nazis began their march through Europe in 1939 and five million more are in immediate danger of execution. These figures were revealed in the sixth report on conditions in occupied territories issued by the Inter-Allied Information Committee.

[...] The report said lethal gas and shooting were among the methods being used to exterminate the Jews."

April 20, 1943, p. 11: "RESCUE OF JEWS URGED
The Jewish Agency for Palestine, in a memorandum addressed to the Bermuda Refugees Conference yesterday, urged that measures of rescue be launched immediately on behalf of 4,000,000 Jews estimated to be still surviving in Nazi occupied countries.

The Agency, headed by Dr. Chaim Weizmann, is recognized in the Mandate for Palestine as a body to advise and cooperate with the Government of Palestine on matters affecting the establishment of the Jewish National Home.

The memorandum declares that 'should the announced policy of the enemy continue unchecked, it is not impossible that by the time the war will have been won, the largest part of the Jewish population of Europe will have been exterminated.'"

April 25, 1943, p. 19: "SCANT HOPE SEEN FOR AXIS VICTIMS
Special Cable to the New York Times Hamilton, Bermuda, April 24 – The large scale movement of refugees is impossible under wartime conditions, and neither the United States nor Great Britain, alone or jointly, can begin to solve the refugee problem. These two concrete impressions have emerged after almost a week's discussion of the refugee problem by the American and British delegations here."

Because almost all Jews outside the Continent, particularly those in the U.S., believed the extermination claims, they brought political pressures which resulted in the Bermuda Conference. It was believed,¹⁶² correctly, that the Nazis wished the emigration of the Jews from Europe (under appropriate conditions), and this put the British and American governments, on account of the propaganda basis for their war, into an awkward position, around which they were obliged to continually double-talk.¹⁶³ We have described the conflict between State and Treasury in this regard. The British had, at that point, no intention of opening Palestine, and both the British and Americans had no intention of

¹⁶² DuBois, 197.

¹⁶³ *New York Times* (Nov. 1, 1943), 5; (Dec. 11, 1943), 1; (Dec. 13, 1943), 11; (Jan. 3, 1944), 9.

providing the resources, in the middle of the war, for massive operations undertaken for reasons that were valid only to the degree that their propaganda was taken seriously. No sane modern statesmen believe their own propaganda. This is the dilemma, which J. Breckenridge Long and other State Department officials felt themselves facing.

Another point that should be made here before proceeding with the survey of the propaganda is that the six million figure had its origin apparently in the propaganda of 1942-1943.¹⁶⁴ An examination of the problem of the origin of the six million figure could easily lead to the conclusion that it had its origin at the IMT, where the indictment mentioned a figure (supplied by the World Jewish Congress) of 5,721,800 “missing” Jews, and Wilhelm Höttl of the SD signed an affidavit, 2738-PS, asserting that he had gotten a figure of six million from Eichmann. According to Höttl, Eichmann had visited his Budapest office in a depressed mood because he was convinced that the war was lost, thought that the Allies would punish him as a major war criminal, and then declared, with no other witnesses present, that four million Jews had been killed in extermination camps, and that two million had met death in various other ways, mainly through executions carried out by the *Einsatzgruppen* in Russia.

Here we offer a different theory regarding the origin of the six million figure. Its very first appearance seems to be Rabbi Goldstein’s statement of December 13, 1942, followed by the story of December 20 to the same effect, except that it specified a potential seven million in danger of being exterminated, rather than the six million implied by Goldstein’s statement. However, it could correctly be argued that one must not infer the origin of the six million figure purely on the basis of these stories.

However, the appearances of the two million killed – four (or five) million to be killed – extermination claim at the public affairs reported on March 2 and 10, 1943, must be taken much more seriously. More information about the latter affair can be extracted from an advertisement that also appeared on March 10 (page 10), reporting that the show had been organized by the “Committee for a Jewish Army of Stateless and Palestinian Jews,” headed by Senator Johnson of Colorado. The advertisement makes the same extermination claim (two million killed, four million to be killed) and also lists the sponsors of the organization, which included many members of Congress and other notables. The same organization had also run a full page advertisement on February 16 (page 11), specifying two million killed and four million to go (and also claiming that the only Arabs who objected to massive Jewish immigration into Palestine were Nazi agents). The two stories of April 20 suggest rather widespread usage of the two million killed – four (or five) million to be killed – form of the extermination claim in early 1943. We therefore have very general usage of the six (or seven) million figure, long before the end of the war, by the political establishment that wrote the charges at Nuremberg: Thus, I believe that we can take late 1942/early 1943 propaganda as the origin of the six

¹⁶⁴ Editor’s remark: Historically speaking, the origin is way older and reaches into the time prior to World War One; cf. Heddesheimer.

million figure. The complete independence of that figure of any real facts whatever is reflected in Reitlinger's elaborate apologies for his belief that he can claim only 4.2 to 4.6 million Jews, almost all East European, who perished in Europe during World War II, one third of them dying from "overwork, disease, hunger and neglect."¹⁶⁵ However, Reitlinger's figures are also mostly independent of any real facts, but that matter will be discussed in Chapter 7.

It is not at all remarkable that after the war somebody could be found to declare at Nuremberg that the propaganda figure was correct. Höttl, indeed, was a completely appropriate choice, because he was one of those stereotype "operators," with which the world of intelligence work is plagued. Born in 1915, he entered the SD in 1938 and soon acquired a reputation for mixing official business with personal business deals. His teaming up with a Polish countess friend in a Polish land deal led to an SS investigation of his activities in 1942. The report of the investigation characterized him as "dishonest, scheming, fawning [...] a real hoaxer," and concluded that he was not even suitable for membership in the SS, let alone a sensitive agency such as the SD. He was accordingly busted down to the ranks, but then the appointment in early 1943 of his fellow Austrian and Vienna acquaintance Kaltenbrunner to head the RSHA seems to have reversed his fortunes, and he rose to the rank of Lieutenant Colonel by the end of the war and played a responsible role in foreign intelligence work. After the war, he worked for the U.S. Army Counter-Intelligence Corps until 1949 in lining up ex-SS personnel to give information. It is said that he managed to make this job rather lucrative. After 1949, he immersed himself in the snake pit of Vienna cold war politics, maintaining links with neo-Nazis, Soviet agents, and nearly everybody else. He had a particularly close relationship with one Soviet agent Kurt Ponger, a naturalized U.S. citizen whom he had met when Ponger was employed as a translator at the IMT (in addition a Kurt Ponger, probably the same person, was a prosecution lawyer in NMT Case 4). Höttl consequently became suspect in the Verber-Ponger espionage case of 1953 and was arrested by U.S. authorities in March in Vienna but released a few weeks later. In the mid-Fifties, he published two books on his wartime experiences. In 1961, he signed a prosecution affidavit for Eichmann's trial (substantially the same as his IMT affidavits).¹⁶⁶

Authors on my side have written that Höttl was an Allied agent during the war. This is not correct. The only real fact that is involved in this claim is that Höttl was in touch with Allen Dulles of the OSS in Switzerland toward the end of the war. This was a part of his duties: the RSHA was attempting to arrange a favorable conclusion of the hostilities, and Höttl was one of the persons involved in the secret contacts with the western Allies.

No doubt, during the very last weeks of the war many of these intelligence officers started acting with their personal interests in mind, and also without

¹⁶⁵ Reitlinger, 533, 545f.

¹⁶⁶ *Time* (Jul. 12, 1954), 98, 100; *New Republic* (Dec. 20, 1954), 22; *New York Times* (Apr. 7, 1953), 20; (Apr. 12, 1953), 33; Eichmann, session 85, A1-L1; IMT, vol. 11, 228; see also Höttl's autobiography (1997).

doubt, Höttl would have been delighted to have been enlisted as an Allied agent at this juncture of the war, and may even have volunteered some favors to Dulles with this development in mind. However, these contacts are no more evidence that Höttl was an Allied agent than they are that Dulles was an Axis agent (Dulles is even said to have peppered his conversation with anti-Semitic remarks when he was trying to win the confidence of some German contacts¹⁶⁷). If Höttl had been an Allied agent, it would seem that he would boast about this in one of his two books (*The Secret Front* and *Hitler's Paper Weapon*), but he makes no such claim. In addition, Ian Colvin, who knows as much about these matters as anybody, wrote the Introduction for *The Secret Front*, and makes no remarks in this connection.

April 27, 1943, p. 10: "*NORWEGIAN DEPORTEES DIE*

Stockholm, Sweden, April 26 (ONA) – Reports from Oslo said today that most of the Norwegian Jewish women and children deported from the country [...] had died of starvation.

Transports of deportees that left Oslo in November and February were removing them toward an ultimate destination in the Silesian mining region around Katowice. [...]"

May 3, 1943, p. 12: "*BRITAIN SCORED ON JEWS*

An audience of 1,500 persons [...] heard Pierre van Paassen [...] assert that Palestine presented the only solution to the refugee problem.

[...] Mr. van Paassen said that Great Britain had made a 'hollow mockery' of the refugee conference in Bermuda by excluding discussion of Palestine among the possible solutions.

'Britain feels that the modernization of Palestine by the Jews endangers the pillars of her empire. [...] That is the real reason many more Jews face death because Britain wants to keep the doors of Palestine shut to them.'

May 20, 1943, p. 12: "*EDEN TIES VICTORY TO REFUGEE HOPES*

Special Cable to the New York Times London, May 19. [...] Eden [...] insisted that it was not fair to accuse the British Government of utterly ignoring the situation.

[...] he disclosed that the war Cabinet had approved the [Bermuda Conference] report [...]

[WJC DISAPPOINTED WITH BERMUDA CONFERENCE]

London, May 19 (Reuter) – The World Jewish Congress [...] expressed deep disappointment with the results of the Bermuda Conference.

The note [...] pointed out that the way to Palestine is now also free."

May 22, 1943, p. 4: "*JEWS LAST STAND FELLED 1,000 NAZIS*

Wireless to the New York Times London, May 21 – Nearly 1,000 Germans were killed or wounded in the battle in the Warsaw Ghetto in the last two weeks when the Nazis undertook the final liquidation of the ghetto.

[...] More news of the anti-Jewish campaign in Poland was picked up today from SWIT, the secret Polish radio station. It said the Nazis had

¹⁶⁷ R. H. Smith, 214f.

started liquidating the ghetto of Cracow and Stanislawow [...] shooting Jews wherever they were found or killing them in gas chambers."

June 7, 1943, p. 15: "‘RALLY OF HOPE’ IS HELD

Six thousand children [...] participated yesterday in a ‘Rally of Hope’[...]. ‘[...] Jewish children and their parents are tortured and put to death by a barbarous enemy. [...]’"

June 9, 1943, p. 3: [DEPORTATIONS OF JEWS]

"London, June 8 (Reuter) – No fewer than 3,500 Jews have recently been deported from Salonika, Greece, to Poland, it was stated here today. Men, women and children were herded indiscriminately into cattle trucks, which were then sealed, it was added."

June 13, 1943, p. 8: "NAZI GAS KILLINGS OF REFUGEES CITED

By Telephone to the New York Times Stockholm, Sweden, June 12 – More than 10,000 Jews were killed since last October in the Brest-Litovsk district [...] according to the Swedish language Jewish Chronicle published in Stockholm.

Thousands were gassed to death in hermetically sealed barns and others have been shot in groups of sixty in adjoining woods, the paper says.

[...] When Dr. Robert Ley, chief of the German Labor Front, recently spoke at Koenigsberg, Bialystok and Grodno he said: ‘The Jews are the chosen race, all right – but for extermination purposes only.’"

June 15, 1943, p. 8: "NAZIS DEPORT 52,000 BELGIANS

London, June 14 (AP) – The Belgian Government in exile said today that the Germans had removed nearly all 52,000 Belgian Jews to concentration camps in Germany, Poland and occupied Russia."

Reitlinger reports for Belgium the same situation as in France. Among the Jews deported from Belgium, "virtually none" were Belgian Jews. It is worth remarking that essentially the same held for Italy and Denmark.¹⁶⁸

June 21, 1943, p. 2: "BERMUDA PARLEY SCORED

A resolution condemning the ‘inaction’ of the Bermuda Conference and another calling upon President Roosevelt and Prime Minister Winston Churchill to open the doors of Palestine to refugees were adopted unanimously yesterday by the order of the Sons of Zion [...] at the Hotel Pennsylvania."

June 21, 1943, p. 3: "ROMANIANS BLAMED FOR KILLING OF 5,000

Berne, Switzerland, June 20 (UP) – Swiss newspapers said tonight that 5,000 bodies reported by Axis propagandists to have been buried near Odessa were those of Romanian Jews killed by the Romanian secret police.

The Romanian press announced the discovery of the mass tomb on April 22, claiming the bodies were those of Romanians killed by the Russians after the latter occupied Bessarabia and Bukovina in 1940."

June 23, 1943, p. 8: "NETHERLAND JEWS OUSTED BY NAZIS

¹⁶⁸ Reitlinger, 367, 370f., 378.

London, June 22, (UP) – All Jews in Amsterdam have been deported by the Germans to Poland, thus completing the removal of the entire Jewish population of the Netherlands, the Aneta news agency said today.”

This story is not true. Nevertheless, the majority of Dutch Jews were deported. The reasons for the great differences in policy in the Netherlands (and Luxembourg) on the one hand and in Belgium and France and other countries on the other will be seen on page 284. It will be shown that the ultimate, as distinct from immediate, destination of the Jews deported from the Netherlands was most probably not Poland. Of the 140,000 Dutch Jews, about 100,000 were deported.¹⁶⁹

June 28, 1943, p. 8: [ARYANIZATION OF JEWISH PROPERTY]

“London, June 27 (Reuter) – A German radio broadcast tonight quoted Premier Nicholas von Kallay of Hungary as stating that all remaining property of Jews in Hungary would pass into ‘Aryan’ hands at the end of this year. This property will be distributed among those who have distinguished themselves in the war and families with many children, it is said.”

June 29, 1943, p. 6: “NAZIS EXECUTE 150 JEWS

London, June 28 (Netherlands News Agency) – The Germans have launched mass executions of Netherlands Jews deported to Poland, it was reported tonight.

[...] 150 Jews in the village of Turck had been mowed down with machine gun fire. [...] At Socky [...] 340 Netherlands Jews were machine-gunned, and 100 women and children were slain near Potok. [...] They were among the thousands of Jews who had been transported from the Netherlands to the notorious Treblinka concentration camp.”

It seems odd to transport people out of an extermination camp and then kill them. Whoever composed this story was evidently not only uninformed on what Treblinka was supposed to be, but also on the order of magnitude of the numbers that were supposed to be thrown around.

July 21, 1943, p. 13: “QUICK AID IS ASKED FOR EUROPE’S JEWS

Immediate action to rescue the Jews of Nazi-dominated countries was demanded last night by speakers at the opening session of the Emergency Conference to Save the Jews of Europe, held at the Hotel Commodore.

[...] Representative Rogers pointed out that some 3,000,000 of Europe’s 7,000,000 Jews already have perished and insisted that ‘this is a problem which cannot be solved through the exercise of vocal cords and routine protests.’

[...] ‘Certainly there are enough open spaces and unpopulated areas to accommodate 4,000,000 tortured human beings,’ he said. ‘Palestine is the logical place. It is nearer and over land instead of over water [...]’

[...] Count Sforza voiced the hope that Jews and Arabs would be able to cooperate in the future in the building of a great Near East federation, with Palestine as a member.”

¹⁶⁹ Reitlinger, 352.

August 2, 1943, p. 10: "16,000,000 MADE REFUGEES BY AXIS

Washington, Aug. 1 – A survey of the European refugee problem, published today by the Foreign Policy Association, said that only a collective effort on the part of the great powers or an international organization could deal effectively with the situation that would follow the end of the war.

[...] On the basis of reports from the governments in exile and other informants, the report said, it was estimated that of the Jews who in 1939 inhabited European countries now held by the Axis, two million already have been deported or had perished from various forms of mistreatment or deliberate extermination."

The Foreign Policy Association does not seem to be very secure in asserting exterminations, because it gives the impression that most of the Jews had been "deported," even though by this time other propagandists were speaking of three million dead Jews.

August 8, 1943, p. 11: "2,000,000 MURDERS BY NAZIS CHARGED

London, Aug. 7 – Polish Labor Fights, a publication issued here today, printed an account of a house maintained by the Germans at Treblinka, Poland, for the extermination of Jews. In this place alone, it is said, the Germans have killed 2,000,000 persons.

[...] 'When the cells are filled they are closed and sealed. Steam is forced through apertures and suffocation of the victims begins. At first cries can be heard but these gradually subside and after fifteen minutes all is silent. The execution is over.

[...] 'Often a grave digger is too weak to carry two bodies, as ordered, so he ties arms or legs together and runs to the burial ground, dragging them behind him.'"

Of course, the post-war story was that the bodies were burned, not buried, because these millions of buried Jewish bodies simply did not exist.¹⁷⁰

August 27, 1943, p. 7: "REPORT BARES FATE OF 8,300,000 JEWS

[...] a 300-page survey made public yesterday by the [...] American Jewish Congress and the World Jewish Congress.

More than 3,000,000 Jews have been destroyed by planned starvation, forced labor, deportations, pogroms and methodical murders in German-run extermination centers in eastern Europe since the outbreak of the war in 1939, according to the report, while 1,800,000 Jews have been saved by migration into the interior of the Soviet Union and 180,000 have succeeded in emigrating to other countries.

[...] The survey [...] declares that 1,700,000 Jews have been victims of organized massacres and pogroms, [...] that 750,000 Jews perished as a

¹⁷⁰ Editor's remark: orthodox historiography assumes that most victims allegedly murdered at Treblinka – between 700,000 and 800,000 – were initially buried, yet later exhumed and incinerated. Cf. Mattogno & Graf (2023), 137-154. More important is the discrepancy regarding the claimed murder weapon: steam. It dominated the early reports but was completely abandoned later on. Cf. *ibid.*, 47-76.

result of starvation and its consequences, and that 350,000 died in the process of deportation.

[...] A table showing how the process of extermination has been carried out [...] follows:

<i>Germany</i>	<i>110,000</i>	<i>Belgium</i>	<i>30,000</i>
<i>Poland</i>	<i>1,600,000</i>	<i>Holland</i>	<i>45,000</i>
<i>USSR</i>	<i>650,000</i>	<i>France</i>	<i>56,000</i>
<i>Lithuania</i>	<i>105,000</i>	<i>Czechoslovakia</i>	<i>64,500</i>
<i>Latvia</i>	<i>65,000</i>	<i>Danzig</i>	<i>250</i>
<i>Austria</i>	<i>19,500</i>	<i>Estonia</i>	<i>3,000</i>
<i>Romania</i>	<i>227,500</i>	<i>Norway</i>	<i>800</i>
<i>Yugoslavia</i>	<i>35,000</i>		
<i>Greece</i>	<i>18,500</i>	<i>Total</i>	<i>3,030,050"</i>

August 27, 1943, p. 7: "DELIBERATE NAZI MURDER POLICY IS BARED BY ALLIED OFFICIAL BODY

London, Aug. 26 (UP) – The Inter-Allied Information Committee [...] tonight accused Germany, Italy and their satellites of [...] a deliberate program of wholesale theft, murder, torture and savagery unparalleled in world history.

[...] Poland: Exhaustion, torture, illness and executions have created a life expectancy of only nine months from the time an individual is thrown into a concentration camp. Conditions are particularly severe at the Oswiecim camp, where 58,000 persons are believed to have perished.

At least 1,000,000 Jews have been slaughtered, starved or beaten to death in Poland during the past three years. In Warsaw food rations permit only 23.4 per cent of the calories necessary to keep a human being alive."

This was one of the very few pre-1944 specific references to the Auschwitz concentration camp (although the stories of March 7 and April 27 were oblique references).¹⁷¹ The interesting thing about this reference to Auschwitz is that it is essentially correct, as shall be confirmed in the next chapter, although one cannot be confident of the accuracy of the 58,000 figure and "torture" and "executions" should not be included as causes of the high death rate. The important point is that this story implicitly rejects the post-war extermination claims which assert that thousands were killed at Auschwitz almost every day, starting at the latest in the summer of 1942 and continuing to the autumn of 1944.

October 8, 1943, p. 5: "ALL-EUROPE PURGE OF JEWS REPORTED

¹⁷¹ Editor's remark: An earlier reference by the Allied propaganda to Auschwitz as an extermination center – by the British radio station *Sviet* (transmitting in Polish) – occurred on 23 March 1943 right after the German discovery of the mass graves near Katyn. The 3,000 Polish victims of Stalin, who had initially been discovered by the Germans, were contrasted by the British propaganda with the claim that the Germans would "burn some 3,000 human beings, 'mainly Jews,' in the crematory at Auschwitz every day". This also reveals the nature of this "news": atrocity propaganda designed exclusively for Polish ears in German occupied Poland; cf. Maser, 343.

Stockholm, Sweden, Oct. 7 – Well-informed circles here said today that a decree had been issued in Berlin ordering the removal of all Jews from Europe before the end of the war. The source said that the order was issued by Adolf Hitler himself.

[...] The power behind the Nazi persecution of Danish Jews is the so-called 'Jew Dictator,' Storm Trooper Eighman [sic...] who was born in Palestine of German emigrants and brought up there [and] is known for his sadistic hatred of Jews. He engineered all the extermination action against Jews in Germany and the occupied territories. [...]"

This seems to be Eichmann's debut in the propaganda and, probably, the source of the myth that he was raised in Palestine (he was born in Solingen, Germany, and raised in Linz, Austria).

November 23, 1943, p. 4: "*WIFE OF MIKOLAJCZYK HOSTAGE OF GERMANS*

The 43-year-old wife of Premier Stanislaw Mikolajczyk of Poland is being held by the Germans as a hostage in the Oswiecim concentration camp and may be facing imminent execution, the Polish Telegraph Agency reported from London yesterday.

[...] Oswiecim is the most notorious German prison in Poland, where thousands of helpless victims have been tortured to death. [...]

The names of the Germans chiefly responsible for the massacre of Polish Jews were given in a Polish statement in London. [...]

'There are ten of them, headed by Ludwig Fischer, the Nazi Governor of the Warsaw area. [...] A member of the Polish National Council said that most of the Jews in Poland had already been wiped out.'"

November 29, 1943, p. 3: "*50,000 KIEV JEWS REPORTED KILLED*
By W. H. Lawrence.

Kiev, Russia, Oct. 22 (Delayed) – Kiev authorities asserted today that the Germans had machine-gunned from 50,000 to 80,000 of Kiev's Jewish men, women and children in late September, 1941 and, two years later – when Kiev's recapture by the Red Army seemed imminent – had forced Russian prisoners of war to burn all the bodies completely destroying all the evidence of the crime.

[...] On the basis of what we saw, it is impossible for this correspondent to judge the truth or falsity of the story told to us. [...]"

December 6, 1943, p. 10: "*CAPTIVE KILLINGS LAID TO GERMANS*

London, Dec. 5 (UP) – Evidence that Russian prisoners of war were executed and cremated in German concentration camps has been offered to the emigre Czech Government by a Czech Army officer who spent several years in a German prison camp before he escaped to England.

[...] The officer's teeth had been kicked out when he was struck on the mouth, he was deaf in one ear from a blow on the head and on his body was the scar of a swastika that he said had been carved by Germans to whom he went for treatment of an infection.

Jews were chosen at random from those in the camp and shot, he said. [...]"

This completes the survey of relevant *New York Times* stories for the period of spring 1942 through 1943. Selectivity on my part was, of course, necessary, but I believe that an adequate picture has been given of the sort of stories that were in circulation in supposedly intelligent circles.

What cannot be recaptured is the hysterical atmosphere of the time. The unusually critical reader will have noticed the rather high page number of many of the stories cited, especially those which report specific instances of mass killings. In practical politics only page one counts, and these things seldom appeared on page one. If Roosevelt said something, it was normally printed on page one, but only because he said it, not because he said anything interesting or significant. The allegations of exterminations of Jews do not appear to have had great importance to the public during the war, if one judges from the lack of any prominence given to such stories. Another way to express it is to say that if one spends some time examining the newspapers of the time, a high degree of hostility to the Nazis is obvious, but the specific basis of the hostility is virtually impossible to distinguish. Thus, there is something of an emotional nature missing from our survey, but this is unavoidable.

Two principal observations should be made in regard to the extermination propaganda. First, the legend has its origin among Zionists and, second, Auschwitz was not claimed as an extermination camp until very late in the war.

We have seen that the first extermination claims were not based on one scrap of intelligence data. Zionists, principally the World Jewish Congress, merely presented their nonsense to the Allied governments, in particular to the U.S. government, demanding endorsement of their nonsense. The first reactions in Washington were to scoff at the claims but, on account of various political pressures, and only on account of those pressures and not because corroborating information had been procured from military intelligence, official Washington eventually cooperated with the extermination propaganda to the extent of having high officials make vague public declarations in support of it, and of having propaganda agencies make more specific declarations of an obscure nature. The early propaganda had features which are retained in the legend to this day, such as the six million figure, and also features which were quickly forgotten, such as the soap factories, although both features were authored by the same Zionist circles.

In regard to our terminology, it should be remarked that the word "Zionist" is not being employed here as a code word for "Jewish;" the evidence shows that, while the hoax is certainly a Jewish hoax, in the sense of having been invented by Jews, it is also a Zionist hoax, in the sense of having been invented by Jews who were Zionists, on behalf of Zionist ends. The Zionist character of the propaganda is quite clear; note that, as a rule, the persons who were pressing for measures to remove Jews from Europe (under the circumstances a routine and understandable proposal) coupled such proposals

with demands that such Jews be resettled in Palestine, which shows that there was much more in the minds of the Zionist propagandists than mere assistance to refugees and victims of persecution.

We have also noted that Auschwitz was absent from the extermination propaganda in 1942 and 1943 although, if there had been exterminations at such a prominent site, military intelligence and others would certainly have learned of it. To be sure, Auschwitz appeared in the propaganda, but the specific claims, bearing on a high death rate due to more or less normal causes, were in their essentials true, however amplified their content. There were no claims of gas chambers or exterminations. Naturally, I make the reservation that this statement is based on the fact that, after a reasonably thorough study, I have not noted Auschwitz in the 1942-1943 extermination propaganda; Treblinka, Bełżec, and Chełmno appeared in the newspaper extermination stories, but not Auschwitz.

This view is confirmed by the periodicals and books of the period that I have examined. Three periodical publications are of particular interest. The issue of *Commonweal* for June 4, 1943 carried an article by Jacques Maritain, which summarized what he, evidently after some investigation, believed to be the chief features of the extermination program. Auschwitz is not mentioned, although exterminations via “poison gases, electrocution, mass piling into enclosed spaces where asphyxia takes place by degrees, suffocation [...] in sealed freight cars” are mentioned, and particular reference is made to Chełmno.

The *New Republic* for August 30, 1943 was a special issue devoted to the plight of the Jews in Europe and made no reference to Auschwitz. A two page advertisement, placed by the Jewish Labor Committee (New York), mentions only Treblinka, Bełżec, and “hermetically sealed cars where Jews are being poisoned.”

Survey Graphic for April 1943 carries a two-page article by William L. Shirer. The subject is the whole range of alleged German atrocities, and thus Auschwitz (Oświęcim) is mentioned, but only in connection with an alleged high death rate of 250 Poles per day, due to “executions, inhuman treatment, hunger, and epidemics.” Shirer claims exterminations of Jews at Bełżec.

The Shirer story cites a March 7 report from the Polish government in London as the source for the statements about Auschwitz. This is the earliest reference that I know of to Auschwitz in the propaganda.¹⁷² The only candidate for an earlier claim that I know of appears in *The Black Book of Polish Jewry*, J. Apenszlak, ed., 1943. Pages 56 and 59 tell of reports in the “*East London Observer*” in early 1942 that the ashes of Jews who had been sent to Auschwitz were being returned to their relatives (contradicting post-war propaganda). However, as far as I have been able to determine, the *East London Observer* did not exist. *The Black Book* does not claim exterminations at

¹⁷² Editor’s remark: The earliest report about gas chambers or gassings at Auschwitz go back to October 1941 and originated from the Polish resistance; cf. Aynat (2004); Mattogno (2021b), Part 2. These and other early reports were ignored by the Allied propaganda, though.

Auschwitz but speaks of exterminations via gasmobile at Chełmno (pages 115-117, in agreement with later claims); via electrocution in baths at Bełżec followed by burial (page 131, not in agreement); through being left in freight cars for days near Bełżec followed by burning (pages 137-138, not in agreement); via steam baths at Treblinka followed by burial (page 143, not in agreement; the Diesel engine whose exhaust gases were used for killing in later versions of the story is used for digging the graves in *The Black Book*).

There remains one source which conveys the impression that Auschwitz appeared in the extermination propaganda early in 1943 or even earlier. This is the book *The Devil's Chemists* by Josiah DuBois, whom we have encountered as a wartime Treasury official. At the NMT after the war, DuBois was the chief prosecutor in the Farben trial, and his book is his account of the trial and such other matters that he considered relevant. According to him, a message dealing with Auschwitz crossed his desk in November 1942. The message transmitted the contents of a note, a "crumpled testament of despair," which had allegedly been written by a worker-inmate at Auschwitz, and then passed along underground in hand-to-hand relay to Bern:

"We worked in the huge 'Buna' plant. [...] There was a chain of sentry posts overlooking every 10 square meters of workers, and whoever stepped outside was shot without warning as 'having attempted to escape.' But attempts were made every day, even by some who tried to crawl past the sentries because they could no longer walk."

The note also applied to Farben's Ter Meer "stereotyped images of swastika and riding crop and fixed sneer" (which had not characterized Ter Meer at any time during his life). The claimed origin and history of the note make the whole thing appear rather silly, but one should note the strong element of fact in the note: at approximately this time, many workers at Auschwitz were indeed not in a condition to work or even walk. Thus, this message was not really extermination propaganda, and we cannot be certain that it really existed, but if it did, all it suggests is that the propagandists were well aware, in late 1942, of what was happening at Auschwitz.

DuBois then proceeds to misinform his reader that the two messages of January and April 1943 from Harrison to the State Department, discussed above, dealt with Auschwitz, *i.e.* it was at Auschwitz that 6,000 were allegedly being killed every day. In reporting this, DuBois is simply passing along misinformation. His motive seems to be that, as the prosecutor in the Farben case, he was attempting to maximize the significance of Auschwitz in every respect possible, and has thus read in the record something that simply is not there.¹⁷³

¹⁷³ DuBois, 137f., 186-188.

German Reactions

It is of passing interest to comment on what the Germans were saying about the Allied propaganda stories. We have seen that von Stumm of the press section of the German Foreign Office ridiculed the extermination claim when it was first made by the Allied governments, but that was a rare reference on the part of the German government to any specific Allied propaganda concoction. The weekly newspaper *Das Reich*, published by the Goebbels Ministry, and the *Völkischer Beobachter*, the daily newspaper of the Nazi Party, had much comment of a general sort on the “*Greuelpropaganda*,” but there were few references to specific propaganda claims. The usual situation was one of no commentary on the Jewish extermination claim as well as on other specific propaganda claims, e.g. starvation and torturing of American and British POWs and the various gruesome inventions of Hollywood, such as the draining of the blood of children in occupied countries for the use of the Wehrmacht.

The reason for this relative silence on specific propaganda claims was no doubt that there was no need, from the German point of view, to review its content. They had seen it all before, during World War I. Thus, the German press treatment of the “*Greuelpropaganda*” was on a higher level, and rather than concern itself with the specific contents of the stories, it concerned itself with such questions as the nature of the political interests that were served by the propaganda, and the extent and means of Jewish influence in the Allied press (e.g. *Das Reich* for December 20, 1942).

The War Refugee Board Report: Birth of the Auschwitz Legend

The high level Washington commitment to the claim that Auschwitz was an extermination camp came in November 1944, after the claimed termination of the killing program, in the form of the WRB report (the claim had appeared many times in the propaganda earlier in 1944; those stories are reviewed in Chapter 5). The issuing of the report was carried by the *New York Times* on November 26, 1944 (page 1) and some excerpts were given.

The WRB report is described as two reports, one written by “two young Slovakian Jews” and the other by “a Polish major,” all of whom had been inmates at Auschwitz from the spring of 1942 until the spring of 1944, when they escaped (the two Jews on April 7).

There is an additional short supplement said to be written by two other young Jews who escaped on May 27, 1944, and made their way to Slovakia (under German domination until 1945) to make their report, which is said to have been received in Switzerland on August 6, 1944. The authors are com-

pletely anonymous, and this anonymity is duly apologized for “whose names will not be disclosed for the time being in the interest of their own safety.”

Sections 1, 2 and 3 constitute the first part of the report, and section 4 the second part. The first section is the major part of the report. It is said to have been written by a Slovakian Jew who arrived at Auschwitz on April 13, 1942, and was given a registration number (tattooed onto his left breast) in the neighborhood of 29,000. He eventually became registrar in the Birkenau infirmary. The feature of this first section is a detailed record, for the period April 1942 to April 1944, of the transports which arrived at Auschwitz, together with the registration numbers assigned. About 55 groups of transports (sometimes more than one transport are in a group) are reported, and the (admittedly approximate) registration numbers assigned to the people in each group are given. The numbers start at 27,400, and run to 189,000 in the consecutive numbering system in which a number was not used twice. For each group the nationalities represented as well as other information is given (Jewish or Aryan, political prisoners or other, occasional names of individuals, numbers “gassed” instead of registered, etc.). The WRB report, if it is approximately correct in these matters (interpreting the people “gassed” as either never having existed or having been sent on to another destination), is one of the few known sources of significant amounts of such information (another is the referenced set of Netherlands Red Cross reports, which is the subject of Appendix C).

Almost all of this information is given by the author of the first section of the WRB report, but after he escaped, the authors of the third, supplemental section of the report kept an account of this information for the period April 7 – May 27, and have contributed it to the report.

The second section of the report is said to be written by a Slovakian Jew who arrived at the Lublin camp around June 4, 1942, but was sent to Auschwitz around June 30, 1942. According to the first section of the report, he then would have received a registration number around 44,000, which was tattooed onto his left forearm (the tattooing system had changed). The two authors of the first two sections of the report are the two young Slovakian Jews who escaped together on April 7, 1944. The third section of the report is the short supplement, and the fourth section is the contribution of the “Polish major.”

The anonymity of the authors of the report is certainly a vulnerable feature, but the major implausibility is simply the contents of the WRB report. Examination shows that the information given in the report, which is most likely true to semi-true, is the sort of thing that could have been built up from intelligence data, not from reports of “two young Slovakian Jews and a Polish major” who “escaped.” This is exactly as one should expect; Germany’s enemies had certain means of gathering information about German camps and about events in Europe, and simply used information gathered by such conventional methods, plus a considerable amount of invention, to compose the WRB report. It is just not believable that intelligence agencies were in such a primitive position with respect to, of all things, the industrial center Auschwitz that they were obliged

to depend for information on miraculous escapes by unusually well-informed prisoners. This point will be amplified below. Of course, such an observation does not rule out the possible use of reports of former employees or inmates, escaped or otherwise, as part of the data.

The report presents the following information (or estimates, or guesses, or claims, or inventions):

1. The number of prisoners at Auschwitz I in the month of April 1942, the predominant nationalities present, and the main causes of internment. Description of the inmate registration number system and the "star system" of inmate insignia. A list of various factories in the area (pt. I, 1-2).
2. An accurate map of the area, comparable to our Fig. 5 (pt. I, 4).
3. Dimensions related to the Auschwitz I camp size, its fences and its guard towers. Ditto for Birkenau. Description of barracks (pt. I, 5-7).
4. In the case of a natural death of a prisoner, a death certificate was made out and sent to Oranienburg central camp administration. If the inmate was gassed, his name was entered in a special register and marked "S.B." (*Sonderbehandlung*, special treatment) (pt. I, 9).
5. Four buildings, referred to as Crematories I, II, III, and IV, were in use in spring 1944 at Birkenau; use of at least one of them had started in February 1943. Each building contained: (A) a furnace room of ovens; (B) a large hall; (C) a gas chamber. The first two buildings each contained 36 muffles, and the other two 18 each. Three bodies are put in one muffle at a time, and the burning took an hour and a half. Thus, one could dispose of 6,000 bodies per day. This was considered, at the time, an improvement over burning in trenches (the method previously employed) (pt. I, 14-15).
6. The specific product used for generating the gas for the gas chamber was a powder called "Cyklon," manufactured by a Hamburg concern. When exposed, it released cyanide gas, and about three minutes were required to kill everybody in the gas chamber. The containers for the Cyklon were marked "for use against vermin" (pt. I, 16).
7. Prominent people from Berlin attended the inauguration of the first crematory in March 1943. The "program" consisted in the gassing and burning of 8,000 Cracow Jews. The guests (no names given) were extremely satisfied with the results (pt. I, 16).
8. A detailed breakdown of the numbers and classifications of the inmates at Birkenau in April 1944 (pt. I, 23-24).
9. In the camp, each block has a "block eldest" who "has power of life and death." Until February 1944, nearly 50 per cent of the block eldests were Jews, but this was stopped by order of Berlin. Under the block eldest is the block recorder, who does all the clerical work. If the recorder has noted down a death by mistake, as often occurs, the discrepancy is corrected by killing the bearer of the corresponding number. Corrections are not admitted (pt. I, 25).
10. A passage strikingly similar to the November 1942 "crumpled testament of despair":

"We worked in the huge buna plant to which we were herded every morning about 3 AM. [...] As our working place was situated outside the large chain of sentry posts, it was divided into small sectors of 10 x 10 meters, each guarded by an SS man. Whoever stepped outside these squares during working hours was immediately shot without warning for having 'attempted to escape.' [...] Very few could bear the strain and although escape seemed hopeless, attempts were made every day." (pt. I, 30).

11. A "careful estimate of the numbers of Jews gassed in Birkenau between April 1942 and April 1944," summarized in a tabular form. The numbers showed up in the published record of the IMT trial and are presented here as Fig. 25 (pt. I, 33).
12. Great excitement prevailed as a consequence of the escape of the two young Slovakian Jews (this is supposedly written by the authors of the supplementary section 3), and the friends and superiors of the two escapees were closely questioned. Because the two had held posts as "block records," all Jews exercising such functions were removed for punishment and as a precautionary measure. This, of course, contradicts the implication of the "Foreword" of the WRB report that the Germans did not know the identity or even registration numbers of the two escapees, because it withholds such information "in the interest of their own safety." (pt. I, 34).
13. Starting May 15, 1944, Hungarian Jews started arriving at Birkenau at the rate of about 15,000 per day. Ninety per cent were killed immediately and, because this exceeded the capacity of the ovens, the method of burning in trenches, which had existed earlier, was reverted to. The ten percent who were not killed were also not registered at Birkenau but sent eventually to camps in Germany: Buchenwald, Mauthausen, Gross-Rosen, Gusen, Flossenbürg, Sachsenhausen, etc. (pt. I, 36-37).
14. A new inmate registration number system was also put into effect in the middle of May 1944. At about the same time, a visit by Himmler to nearby Cracow was reported in the Silesian newspapers. These newspaper reports apparently omitted to mention, however, that on this trip, Himmler had also visited Birkenau, and that his party made a special visit to Crematory I (pt. I, 37-38).
15. In the late summer of 1943, a commission of four distinguished Dutch Jews had visited Auschwitz for the purpose of inspecting the condition of the Dutch Jews (who were then specially prepared by the Germans with new clothes, better food, etc.). The commission saw only a part of the Dutch Jews sent to Auschwitz but were told that the others were in similar camps. The commission was satisfied with this, and signed a declaration that everything had been found in good order at Auschwitz, but after signing, the four Jews "expressed a desire to see the camp of Birkenau and particularly the crematoria about which they had heard some stories. [...] The commission was then taken to Birkenau [...] and immediately to Crematorium No. 1. Here they were shot from behind. A telegram was

supposedly sent to Holland reporting that after leaving Auschwitz the four men had been victims of an unfortunate automobile accident.” (pt. I, 38).

16. The area around Auschwitz, within a radius of 100 kilometers, had been evacuated, and the buildings not to be taken over by the camp were to be demolished (pt. II, 6).
17. Description of the Auschwitz I hospital and its procedures. In the autumn of 1942, the hospital mortality rate was so high that Berlin requested an explanation. An investigation uncovered that the “camp doctor” had been administering lethal injections to weak and sick people, certain prisoners condemned to death, and some teenagers considered to be orphans. For “punishment,” the camp doctor was simply sent to the same job at the Buna plant (probably meaning Monowitz; the SS continued to provide some services to the camp administered by Farben) (pt. II, 8-10).
18. As a result of bad treatment, a Jew could not last more than two weeks, irrespective of his physical condition (pt. II, 12).
19. In the summer of 1942, Jews were being gassed in the birch forest (*Birkenwald*, where Birkenau was located) in special sealed buildings giving the impression of showers. Because the crematories were not completed, the bodies were buried in mass graves, causing putrefaction. In the autumn of 1942, the four crematories were completed, and many bodies were exhumed and burned (this is the Polish major’s account, contradicting that of the two young Slovakian Jews, who said that part of the new crematories were put into operation in February 1943, and that prior to that date, bodies were burned in trenches) (pt. II, 16-17).
20. Details on how it was decided exactly when to execute somebody already condemned to death (pt. II, 16-17).

The foregoing is effectively illustrative of the contents of the WRB report. It is a mixture of truth, guesswork, and invention, the factual part of which could have been, and obviously was, put together on the basis of inside information available in 1944.

The contradiction in the two accounts of exterminations serves to enhance the credibility of the claim that these are unsolicited reports of escaped inmates, but it is not clear that such increased credibility was the motivation for composing the report thus. The first version, that large crematories were in operation at Birkenau in early 1943, and that mass cremations took place in trenches before that date, is the one subsequently put forward (and the correct one in regard to the date of availability of the crematories) but the second version of mass graves might have some truth in it also, because there had been a typhus epidemic in the summer, at a time when inadequate crematory facilities existed.

Reitlinger uses the WRB report as a source. This is not entirely justified, but it is not entirely without justification either. One must assume that much of the material in the report is true. As will be elaborated below, there is no question of the competence of the authors of the report. However, one must be careful in this regard, obviously, and accept only that, which seems corrob-

rated by either common sense or independent evidence. Given the protagonistic and propagandistic role of the report, but recalling that a well-organized hoax necessarily contains much valid fact, this is perfectly reasonable.

One can be rather specific about the routes, by which information flowed out of the camps. In cases where there was significant industrial activity, the inmates inevitably came into contact with many people who were not camp inmates (company employees, railroad employees, etc.), and these contacts were the basis for an extensive system of clandestine channels of communication. Auschwitz, of course, furnished numerous and excellent opportunities for such contacts, and on account of the communist organization, there were very effective channels to outside underground centers, especially in nearby Cracow. Information about the camp, including, it is claimed, copies of orders received from Berlin or Oranienburg, flowed constantly out of Auschwitz. These channels were also used to send such things as money, medicine and forged papers into the camp. In addition, as discussed in another connection on page 154, the Communists in all of the camps were highly organized for illegal radio listening. If they had receivers, they no doubt also had transmitters. There has been witness testimony to possession of radio transmitters by camp inmates, and Reitlinger believes that Auschwitz inmates had transmitters.¹⁷⁴

In order to grasp completely the nature of the information and propaganda channels that existed, one should take special note of the War Refugee Board and the OSS. The WRB maintained constant contact with events in Hungary even after the German occupation in March 1944. For example, it had its agent, Raoul Wallenberg, in the Swedish diplomatic corps, and there were other links through Jewish organizations. Jewish leaders in Budapest were in constant contact with those in Slovakia, and the Slovakian Jewish leadership was in contact with Polish Jewry, particularly in Cracow.¹⁷⁵

Possibly more important than the WRB, although its role in the hoax is not nearly as obvious, was the Office of Strategic Services, OSS, the predecessor of the CIA. The OSS was set up early in World War II under the leadership of General William Donovan. Its mission was intelligence of a political nature and related matters (*e.g.* sabotage, propaganda, guerilla warfare) as distinct from the more conventional forms of military intelligence, to which its operations were related somewhat as the operations of the German SD were related to those of the *Abwehr*, although high-placed Washington observers complained that the OSS seemed to enjoy unlimited funds, and knew no bounds on its authority.

With only a few exceptions, the OSS was not staffed by military people but by persons recruited from private life. Thus, it included many political types, ranging from Communists to émigré monarchists. On account of their organi-

¹⁷⁴ NMT, vol. 5, 820; Reitlinger, 466; Borwicz, 66-76.

¹⁷⁵ US-WRB (1945), 24-33. For contacts of Slovakian Jews with Poland, especially Cracow, and with Budapest, see Neumann's book and also the testimony of Freudiger: Eichmann, session 51, Ww1-Eee1; session 52, A1-Bb1. Wallenberg discussed in Poliakov & Wulf (1955), 416-420.

zation, the Communists were naturally a significant force in the OSS, irrespective of their numbers.

The OSS was deeply involved with propaganda. The OWI (Office of War Information), the most prominent U.S. wartime propaganda agency, had been the propaganda division of the "Office of the Coordinator of Information" (Donovan) when it split off from the OSS in 1942, and the remainder of Donovan's organization was renamed the OSS. Despite this separation, the OSS remained active in the propaganda field, and when the Anglo-American PWB (Psychological Warfare Branch) was set up in Eisenhower's headquarters, it drew its American personnel from both the OWI and the OSS.

Another propaganda operation of the OSS, one which employed a large number of "progressive writers," was the MO (Morale Operations) Branch. The mission of MO was "black propaganda," *i.e.* MO specialized in manufacturing propaganda presented in such a way that it would appear to have come from within the ranks of the enemy. MO thus distributed forged newspapers and military orders among enemy personnel, operated clandestine transmitters that purported to be broadcasting from within enemy territory, and started rumors in the Axis and Axis occupied countries. Its staff included "liberals and communists alike, all dedicated to the idealist interpretation of the fight against fascism."

A particularly relevant facet of the OSS operations was that they had enlisted the cooperation of the Jewish Agency in Palestine (which was really the unofficial Israeli government of the time). The Jewish Agency, on account of extensive and elaborate contacts with Jews in Europe, especially in the Balkans, was able to undertake many important missions for the OSS. Thus, the channels to Jews in Hungary, Slovakia, and beyond were open.

Finally, it is of interest that the OSS was very significant on the prosecution staff at the IMT trial, especially in the early stages.¹⁷⁶

The point to be made in this discussion of the WRB report is certainly not that it was invented in the OSS or the WRB. I do not know the identity of the authors, and do not believe that the question is of great significance. The main point is that two "internationals," the Communist and the Zionist, played important roles in the intelligence, propaganda, and refugee assistance programs of the U.S. The WRB, effectively taking its orders from Harry Dexter White, Henry Morgenthau Jr., the World Jewish Congress, and other Zionists, and the OSS, with its staff of Communists and its Jewish Agency allies, show that the situation was perfectly suitable for the manufacture of a Jewish extermination propaganda lie, built about Auschwitz, which, as a precaution, contained enough real facts to suggest to the unreflective that the allegations were true.

The interior of the Auschwitz camp was not, by any exercise of the imagination, isolated from the Allies. The world's most efficient intelligence organization, the Communist Party, could transmit any information desired to any destination whatever, and the situation was such that the ubiquitous Zionist In-

¹⁷⁶ R. H. Smith, 2, 12, 23, 62, 125, 239; Kimche & Kimche, 108.

ternational was in a position to manufacture and transmit whatever items seemed appropriate for the occasion. Even if the contents of the WRB report were entirely true, an escape by inmates would not have been at all necessary to get the “facts” into the hands of the Allies. Note that we are told that the *entire* contents of the WRB report are due to *three independent* escapes by remarkably informed inmates. In view of what we know about the channels of communication that existed, this is silly in the extreme.

The authors of the WRB report remained anonymous for quite a bit more than “the time being.” The report became a prosecution document at Nuremberg under the number 022-L. The descriptive material accompanying the document, dated August 7, 1945 (the “staff evidence analysis”), seems distressed at the anonymity of the authors. It tells of a certain Dr. Joseph Elias, “Protestant Pastor of Jewish ancestry, organizer of Jewish resistance in Hungary, head of Jo’Pasztor Bizottsag, who interrogated the first two Slovak Jews after their escape.” Then it tells of “Dr. G. Soos – Secretary of Hungarian underground movement MFM, who brought the first report (of the first two Slovak Jews) to Italy.” The organization “Jo’Pasztor” was real, but of the activities of Elias or Soos in connection with these matters nothing, it seems, is known. Of the origins of the parts of the report attributed to the other three people we are told nothing. It is said that R. D. McClelland, Bern representative of the WRB, forwarded the report to Washington in early July 1944 (the supplemental part was presumably not included).

The WRB report was put into evidence at the IMT as document 022-L by Major Walsh on December 14, 1945.¹⁷⁷ There was no defense objection, at the IMT, to the acceptance of the report into evidence. At the Farben trial, the prosecution submitted the report (Document Book 89) as evidence, but the defense objected, and this objection “as to the competence and materiality of each and every document in the book” was sustained by that court. The result of the ensuing legal argument was that the court agreed to taking a certain very ambiguous “judicial notice” of the documents.¹⁷⁸

Anonymity was maintained for several more years, because the first edition (1953) of Reitlinger’s *The Final Solution* considers the authors anonymous. In considering the beginnings of the gassings, reference is made to “the very reliable report of the Birkenau infirmary registrar or *Blockschreiber*, who escaped to Hungary in April 1944” (page 110). In connection with information about Theresienstadt Jews transported to Auschwitz, “we are indebted to a Slovak Jewish doctor, who escaped to Hungary in April 1944. This man, who was in charge of the Birkenau infirmary records [...]” (pages 169-170). In discussing the WRB report, Reitlinger told us that “the most important document is that of the anonymous Slovak Jewish doctor who escaped to Hungary in April 1944” (page 540). In all three cases Reitlinger was referring to the author of the first section of the WRB report, who, the report says, was the Slovakian Jew who arrived on April 13, 1942, and was given a registration number

¹⁷⁷ IMT, vol. 3, 568.

¹⁷⁸ DuBois, 173-175.

around 29,000. Reitlinger refers to him as a doctor, but the report actually does not make it clear what he was; it appears that he was supposed to be an “intellectual” or a “clerk.”

The next development seems to have been the publication in 1956 in Israel of the book *Im Schatten des Todes*, by J. Oskar Neumann. Neumann had been one of the leaders of the various Jewish councils and resistance organizations in Slovakia. In his account, Rabbi Michael Dov Ber Weissmandel (or Weissmandl), originally a Hungarian Jew resident in a part of Hungary that was annexed by Czechoslovakia after World War I, was the leader of Jewish resistance in Slovakia. In Neumann’s story, the two young Slovakian Jews appear on schedule in Slovakia, as does the Polish major (actually, the WRB report does not say where the Polish major escaped to). Neumann gives the impression that he actually met these people: “Yet here sit eye-witnesses, who have told the whole truth.” His account does not mention the two authors of the third, supplementary, section of the WRB report, and he does not tell us the names or tattooed registration numbers of the escapees. Since they were in great danger of being found by the Gestapo, which was looking for them, they “were sent to an outlying mountainous area to rest.” Rabbi Weissmandel communicated the report to Budapest, Switzerland, and other destinations, in order to warn other Jews and to bring help.¹⁷⁹

Weissmandel emigrated to the United States after the war, and set up an orthodox Talmudic seminary in New York State. He died in November 1957. However, his war memoirs were published posthumously in 1960, unfortunately in Hebrew, which I am not able to read. The WRB report is a major subject of his book. I have assumed that his story is essentially similar to Neumann’s, because the two authors were similarly situated and had the same connections. However, I could be wrong.¹⁸⁰

Rudolf Vrba

It appears that the next event involved Reitlinger. The anonymity of the authors of the WRB report is a striking and disturbing feature of the first edition of Reitlinger’s book, as I am sure he realized. This no doubt bothered him, for it appears that he set out to locate the authors of the report, for he writes in his second edition, published in 1968, that Rudolf Vrba, the author of the “most important” part of the WRB report, *i.e.*, the first section, was “in hospital practice in Cardiff in 1960.” Reitlinger’s contact with Vrba in 1960, thus, would appear to be the first appearance of an alleged author of the report in any sort of historical record. Vrba was apparently produced as a consequence of Reitlinger’s investigations. The town of Cardiff in south Wales is incidentally only about 150 miles from Reitlinger’s home in Sussex. Reitlinger does not

¹⁷⁹ Neumann, 178-183.

¹⁸⁰ *New York Times* (Nov. 30, 1957), 21; *Encyclopedia Judaica*, vol. 16, 418f.

mention the name of any of the other authors. He considers a stencil book by Silberschein, Riegner's World Jewish Congress colleague in Switzerland, as including the "complete version" of the report.¹⁸¹

Both authors of the first two sections of the WRB report (the first two young Slovakian Jews) acquired identities at Eichmann's trial in 1961. Two witnesses testified regarding the report, and it was offered in evidence with the explanation that the first two young Slovakian Jews were Alfred Wetzler (or Weczler) and Rudolf Vrba (ex Rosenberg or Rosenthal, then resident in England). The document was rejected on the grounds that certain contradictions in the figures offered required further explanation. Therefore, late in the trial, the prosecution produced an affidavit by Vrba. The affidavit explains how Vrba arrived at the impressively detailed figures regarding the transports to Auschwitz, which are the main feature of the WRB report. His affidavit gives the impression that, while he got assistance from various people, he was solely responsible for drawing up the figures, and he does not give the name of or even mention his companion who allegedly escaped with him in April 1944. He mentions a Philip [recte Filip] Müller,¹⁸² who helped him somewhat with his figures, because Müller "is apparently the only survivor alive at present." Vrba's affidavit was rejected by the court on the grounds that there was no excuse for the prosecution not bringing him to Jerusalem to testify.¹⁸³

Vrba appeared again at the Auschwitz trial in Frankfurt in 1964; his book *I Cannot Forgive* (with Alan Bestic), also appeared in 1964, shortly before his Frankfurt appearance. Vrba's companion in his supposed escape appeared, too; Alfred Wetzler was said to have been the other young Slovakian Jew. Wetzler was (in 1964) a 46-year-old civil servant in Czechoslovakia, who had arrived at Auschwitz on April 13, 1942, and been given registration number 29,162. He had been a block registrar at Birkenau. Vrba was identified as a 40-year-old biochemist living in England, who had arrived at Auschwitz on June 30, 1942, and been given registration number 44,070. He had also been a block registrar at Birkenau. They had, they said, escaped on April 7, 1944, and made their way to Bratislava, Czechoslovakia, where they made their report to the Jewish elders and also to the Papal Nuncio. The report was smuggled to Budapest by Rabbi Weissmandel.¹⁸⁴

The 1964 story differs, therefore, from that which was told to the authors of the IMT staff evidence analysis in 1945. The most serious apparent contradiction, however, is in the credit for the reporting of the figures related to the transports to Auschwitz. Vrba, in his 1961 affidavit (which did not mention Wetzler) and also in his Frankfurt testimony, presented himself as being primarily responsible for the figures. The WRB report, on the other hand, while it

attributes the figures to both men, present the figures in the first section of the report, whose author is supposed to be Wetzler.

Vrba does not explain, in his 1964 book, why he waited 16 years to talk about his escape from Auschwitz, and his delivery of the statistics that were eventually published by Washington. His book follows roughly the story of the WRB report with a few contradictions of varying degrees of importance. For example, in the book (page 128) Vrba writes that the girls working in the "Canada" area were in very good health, but in the WRB report (part I, page 31) these women were "beaten and brutalized and their mortality was much higher than among the men." Other oddities in his book are his claim to have helped build the crematories (page 16, not mentioned in the WRB report) and his description of an Allied air raid on April 9, 1944, of which there is no record (page 233; he says that he and Wetzler hid in a woodpile for three days at Auschwitz after their April 7 escape. The possibility of an Allied air raid in April is discussed below on page 203). Wetzler just barely manages to get mentioned in Vrba's book. Vrba says nothing about the Polish major or the two Jews who supposedly escaped later on to supplement the Auschwitz transport figures. In the book the other prisoners refer to him as "Rudi," although his original name, and the name by which he was supposedly known at Auschwitz, is supposed to have been Walter Rosenberg (a point Vrba's book does not bring up but is claimed elsewhere, *e.g.* in *They Fought Back*, edited by Yuri Suhl, and in *Fighting Auschwitz* by Jozef Garlinski). Vrba says nothing about resting in a mountain retreat after escaping.

Just as conclusive, in our evaluation of Vrba's story, as the various contradictions of either the WRB report or known fact, is the general tone of the book, and his description of how various people behaved at the camp. Although the book presents utterly incredible material in this connection from beginning to end, the best example is Vrba's description of an alleged visit by Himmler on July 17, 1942 (pages 9-15, not mentioned in the WRB report). The prisoners were drawn up for inspection, and the orchestra was in readiness to play when Himmler arrived. As they waited, the leader of the orchestra:

"[...] stood, baton raised, motionless, poised to weave music for the honored guest.

And then it happened. The catastrophe that every actor dreads. The moment of horror that only great occasions merit. The crisis that seems to dog every moment of truth.

In the tenth row outside our Block, the Block senior found Yankel Meisel without his full quota of tunic buttons.

It took some seconds for the enormity of the crime to sink in. Then he felled him with a blow. [...]

Out of sight, [...] they beat and kicked the life out of him. [...]

[...] Himmler's suite was twenty yards away. The baton moved [...] and the orchestra followed [...] with an excerpt from Aida.

It was 'The Triumph March.' [...]

He lined us up and rapped: 'I am the Reichsführer. Let's see how you behave in front of me.'

Slowly he marched down the ranks, a little killer aping a big killer, glaring at each of us in turn. If he found dirty finger nails or wooden shoes not properly blacked, he howled abuse at the offender and thumped him with his heavy bamboo cane. He even inspected us, nursery fashion, behind the ears and then went prowling through the barracks, searching for blankets which had not been folded with precision."

Vrba mentions a second Himmler visit (pages 15-19; the visit seems to correspond to the March 1943 visit of dignitaries from Berlin) in January 1943 to witness the gassing of 3,000 Polish Jews. The event was scheduled for 9 AM, but Himmler took until 11 AM to finish breakfast, so the 3,000 Jews had to wait two hours in the gas chamber. Himmler finally witnessed the gassing in a cheerful and relaxed mood, chatting with the commandant and others, occasionally throwing a glance through the peephole to observe the Jews being gassed.

The book manages to maintain this utterly incredible tone throughout, as you can verify by reading it, if you can stand it.

Reitlinger does not cite Vrba's book in any connection in the second edition of his book. He still writes of Vrba as the author of the "most important" part of the WRB report, the first section, although the data offered shows that this role should be attributed to Wetzler. It does not appear important or relevant to Reitlinger that Vrba was only 18-years-old when, as he claims, he started collecting the numerical and other data concerning the transports to Auschwitz with the intention of making this information available to the outside world.

There has been no claimed break, so far as I know, in the anonymity of the Polish major.¹⁸⁵ In an article in Suhl's book, Erich Kulka of the Hebrew University in Jerusalem offers names for the two authors of the supplementary section (Czesław Mordowicz who changed his name to Petr Podulka, and Arnost Rosin who changed his name to Jan Rohác),¹⁸⁶ but I know nothing of these people other than that they remained quiet about their heroic exploits for an even greater number of years than Vrba and Wetzler did. Moreover, neither Elias, nor Soos, nor Vrba (as Vrba or as Rosenberg), nor Weissmandel appeared as witnesses in any of the Nuremberg trials, despite the sometimes contested role played by Document 011-L at those trials.

The records of the International Tracing Service in Arolsen, West Germany, report that two Jews named Wetzler and Rosenberg did escape on April 7, 1944,¹⁸⁷ and this agrees with the *Kalendarium* published by the Polish government in 1964 as number 7 of *Hefte von Auschwitz*, which also declares that two Jews named Mordowicz and Rosin escaped on May 27, 1944. Because

¹⁸⁵ Editor's remark: later identified as Jerzy Wesolowski aka Jerzy Tabeau; Mattogno (2021b), 143f.

¹⁸⁶ Kulka (1975).

¹⁸⁷ See Figure 35.

there were many successful escapes from Auschwitz during this period (many, many more than Vrba seems to think there were – compare page 217 of Vrba with Garlinski's remarks about escapes), this data may well be correct, but it still does not authenticate the authorship of the WRB report, especially because we are told today that, after escaping, the four Jews adopted aliases for concealment purposes, and that three of the four retained these different names after the war rather than reassume their real names.

The details behind the manufacture of the WRB report will probably never be completely uncovered, but it is entirely possible that its creators went to great lengths in simulating a report miraculously smuggled to Slovakia and then to Switzerland. If it was written in Slovakia, then it seems clear that Rabbi Weissmandel should be credited with at least co-authorship. It is also possible that, as claimed, the report was given to the Papal Charge d'affaires in Slovakia, Giuseppe Burzio, and that it was forwarded by him to Rome. It is clear that Burzio was contacted by Jewish propagandists, and that he forwarded at least some of their "information" to Rome. Examples that Burzio transmitted to the Vatican were March 22 claims that the Germans were taking young Jewish women from their families to make them prostitutes for German soldiers on the eastern front (a complete fantasy) and an early 1943 letter from a Bratislava priest claiming that both Jewish and responsible German sources had told him of soap factories supplied with the bodies of gassed and machine-gunned Jews. Whether Burzio forwarded such material purely as routine procedure or because he gave credence to it is hardly relevant, although the later appears to be the case. The Vatican received and filed many such reports during the war, but never gave any credence to them. Its present position is that, during the war, neither it nor the "Jewish agencies were aware that the deportations were part of a general mass annihilation operation" (see also Appendix E).¹⁸⁸

In any case it is obvious that the WRB report is spurious. The data given in the report is not the sort of information that escapees would carry out; the claim that two more Jews escaped later on to supplement this data is more than doubly ridiculous. Instead of coming forward immediately after the war with ostensible authors of the report in order to lend more support to the lie, it appears that it was assumed that the whole thing was irrelevant until, for some reason (probably Reitlinger's curiosity), an author was produced sixteen years after the event. That person's story is not credible.

Thus was born the Auschwitz legend.¹⁸⁹

¹⁸⁸ *New York Times* (Apr. 27, 1974), 7. *Actes et documents*, vol. 8, 476, 486-489; vol. 9, 40, 178n.

¹⁸⁹ Editor's remark: For more recent critiques of the WRB report see Aynat (1990), Mattogno (1990), (2021b), 217-243.

Chapter 4: Auschwitz

Structure of the Legend

We now consider the specific Auschwitz “extermination” story that we are offered.

The trials that generated the evidence on which the extermination claims are based took place in a prostrate, starving Germany whose people were in no position to do anything but that which the occupying powers wished. This was the political reality of the situation. By the record, the “Zionist International” organized the specific extermination claims that were made, which were given no credence by high and knowledgeable Washington officials. The leading personality in setting up the legal system of the war crimes trials was none other than the American prosecutor at the IMT trial. At that trial, the judges had previously expressed themselves on the obvious guilt of the defendants, and the findings of the trial were formal legal constraints on subsequent trials. The most important of the subsequent trials were those organized by the arch-Zionist David Marcus, future hero of Israel, and then head of the U.S. War Crimes Branch, an agency that had engaged in torture of witnesses in connection with certain trials. The “honor” of the states conducting the trials was committed to the thesis of extraordinary Nazi brutality. Under such conditions it is difficult to see how one could fail to expect a frame-up; this and the following chapter shows that the Auschwitz charges are what one should expect.

It must first be asked: what is the essential attribute, the “trademark” of a hoax on this scale? No sane author of such a thing would present a story which is untrue in every or in most details; ninety nine percent valid fact can be present in a story whose major claim has no truth whatever to it, and recognition of this leads the author of the hoax to the maximally safe approach to his deed: distort the meaning of valid facts.

This is the basic structure of the Auschwitz extermination legend. It is shown here that every real fact contained in the story had (not could have had, but had) a relatively routine significance, having nothing to do with exterminations of people. Thus, those who claim extermination must advance a thesis involving a dual interpretation of the facts, but by then the impartial reader, in consideration of what has just been noted, should be on my side; the need for a dual interpretation of fact, the trademark of the hoax, has emerged.

Another trademark, not so obvious at this point, will be suggested by the analysis.

Also, facts which contradict the extermination claims will be noted, and for those who still believe the claims, these facts are “mysteries.” The inconsistencies and implausibilities and obvious lies will appear, and finally the crushing blow, a fact contradicting the claims, so huge in significance that there can be no mumbling about “mysteries.”

The Höss ‘Confession’

The commandant of Auschwitz from May 1940 to late 1943 was SS Colonel Rudolf Höss. During the IMT trial, he had signed some affidavits for the prosecution, the most noted being signed on April 5, 1946.¹⁹⁰ In accord with a common IMT and NMT practice, he was then called by the Kaltenbrunner defense on April 15, 1946.¹⁹¹ The major content of his testimony was in his assenting, during cross-examination, to his affidavit of April 5, and also in certain points of supporting testimony.

Höss is universally considered the star prosecution witness and, despite the origins of the Auschwitz hoax in the WRB report, the extermination mythologists essentially treat the Höss affidavit as the Auschwitz extermination story or, more precisely, the framework for the story. All pleaders of the Auschwitz extermination legend present a story that is the Höss affidavit, with only numerical variations, as supplemented by the IMT, NMT, and similar evidence. None of the principal extermination mythologists gives prominence to the WRB report, and only Reitlinger seems to perceive a problem of some sort of importance in connection with it.

Thus, it is convenient to allow the Höss affidavit to act as framework for our analysis also. It is presented in full here, and then the individual points are reviewed with due regard for the supplemental and additional evidence. The fateful duality will emerge as an undeniable feature. The contradictions, inconsistencies, wild implausibilities, and lies will appear. The analysis will reveal something of the psychological context of the trials.

Due regard is also given to verifiable interpretation of sources, including instances where it is deemed better to reference Hilberg or Reitlinger rather than an original document, to which the reader is not likely to have convenient access.

“I, RUDOLF FRANZ FERDINAND HÖSS, being first duly sworn, depose and say as follows:

1. I am forty-six-years-old, and have been a member of the NSDAP since 1922; a member of the SS since 1934; a member of the Waffen-SS since 1939. I was a member from 1 December 1934 of the SS Guard Unit, the so-called Deathshead Formation (Totenkopf Verband).

¹⁹⁰ 3868-PS. Editor’s note: for an analysis of all of Höss’s numerous postwar statements and interrogations by the British, the Americans and the Poles, see Mattogno (2020a).

¹⁹¹ IMT, vol. 11, 396-422.

2. *I have been constantly associated with the administration of concentration camps since 1934, serving at Dachau until 1938; then as adjutant in Sachsenhausen from 1938 to May 1, 1940, when I was appointed commandant of Auschwitz. I commanded Auschwitz until December 1, 1943, and estimate that at least 2,500,000 victims were executed and exterminated there by gassing and burning, and at least another half million succumbed to starvation and disease, making a total dead of about 3,000,000. This figure represents about 70% or 80% of all persons sent to Auschwitz as prisoners, the remainder having been selected and used for slave labor in the concentration camp industries. Included among the executed and burnt were approximately 20,000 Russian prisoners of war (previously screened out of Prisoner of War cages by the Gestapo) who were delivered at Auschwitz in Wehrmacht transports operated by regular Wehrmacht officers and men. The remainder of the total number of victims included about 100,000 German Jews, and great numbers of citizens, mostly Jewish from Holland, France, Belgium, Poland, Hungary, Czechoslovakia, Greece, or other countries. We executed about 400,000 Hungarian Jews alone in the summer of 1944.*

3. *WVHA [Main Economic and Administrative Office], headed by Obergruppenführer Oswald Pohl, was responsible for all administrative matters such as billeting, feeding and medical care, in the concentration camps. Prior to establishment of the RSHA, Secret State Police Office (Gestapo) and the Reich Office of Criminal Police were responsible for arrests, commitments to concentration camps, punishments and executions therein. After organization of the RSHA, all of these functions were carried out as before, but pursuant to orders signed by Heydrich as Chief of the RSHA. While Kaltenbrunner was Chief of RSHA, orders for protective custody, commitments, punishment, and individual executions were signed by Kaltenbrunner or by Müller, Chief of the Gestapo, as Kaltenbrunner's deputy.*

4. *Mass executions by gassing commenced during the summer 1941 and continued until fall 1944. I personally supervised executions at Auschwitz until the first of December 1943 and know by reason of my continued duties in the Inspectorate of Concentration Camps WVHA that these mass executions continued as stated above. All mass executions by gassing took place under the direct order, supervision and responsibility of RSHA. I received all orders for carrying out these mass executions directly from RSHA.*

5. *On 1 December 1943 I became Chief of AMT I in AMT Group D of the WVHA and in that office was responsible for coordinating all matters arising between RSHA and concentration camps, under the administration of WVHA. I held this position until the end of the war. Pohl, as Chief of WVHA, and Kaltenbrunner, as Chief of RSHA, often conferred personally and frequently communicated orally and in writing concerning concentration camps. On 5 October 1944 I brought a lengthy report regarding Maut-*

hausen Concentration Camp to Kaltenbrunner at his office at RSHA, Berlin. Kaltenbrunner asked me to give him a short oral digest of this in complete detail. This report dealt with the assignment to labor of several hundred prisoners who had been condemned to death [...] so-called 'nameless prisoners.'

6. *The 'final solution' of the Jewish question meant the complete extermination of all Jews in Europe. I was ordered to establish extermination facilities at Auschwitz in June 1941. At that time there were already in the general government three other extermination camps, BELZEC, TREBLINKA and WOLZEK. These camps were under the Einsatzkommando of the Security Police and SD. I visited Treblinka to find out how they carried out their exterminations. The Camp Commandant at Treblinka told me that he had liquidated 80,000 in the course of one-half year. He was principally concerned with liquidating all the Jews from the Warsaw Ghetto. He used monoxide gas and I did not think that his methods were very efficient. So when I set up the extermination building at Auschwitz, I used Cyclon B, which was crystallized Prussic Acid which we dropped into the death chamber from a small opening. It took from 3 to 15 minutes to kill the people in the death chamber depending upon climatic conditions. We knew when the people were dead because their screaming stopped. We usually waited about one-half hour before we opened the doors and removed the bodies. After the bodies were removed our special commandos took off the rings and extracted the gold from the teeth of the corpses.*

7. *Another improvement we made over Treblinka was that we built our gas chambers to accommodate 2,000 people at one time, whereas at Treblinka their 10 gas chambers only accommodated 200 people each. The way we selected our victims was as follows: we had two SS doctors on duty at Auschwitz to examine the incoming transports of prisoners. The prisoners would be marched by one of the doctors who would make spot decisions as they walked by. Those who were fit for work were sent into the Camp. Others were sent immediately to the extermination plants. Children of tender years were invariably exterminated since by reason of their youth they were unable to work. Still another improvement we made over Treblinka was that at Treblinka the victims almost always knew that they were to be exterminated and at Auschwitz we endeavored to fool the victims into thinking that they were to go through a delousing process. Of course, frequently they realized our true intentions and we sometimes had riots and difficulties due to that fact. Very frequently women would hide their children under their clothes but of course when we found them we would send the children in to be exterminated. We were required to carry out these exterminations in secrecy but of course the foul and nauseating stench from the continuous burning of bodies permeated the entire area and all of the people living in the surrounding communities knew that exterminations were going on at Auschwitz.*

8. *We received from time to time special prisoners from the local Gestapo office. The SS doctors killed such prisoners by injections of benzine. Doctors had orders to write ordinary death certificates and could put down any reason at all for the cause of death.*

9. *From time to time we conducted medical experiments on women inmates, including sterilization and experiments relating to cancer. Most of the people who died under these experiments had been already condemned to death by the Gestapo.*

10. *Rudolf Mildner was the chief of the Gestapo at Kattowitz and as such was head of the political department at Auschwitz which conducted third degree methods of interrogation from approximately March 1941 until September 1943. As such, he frequently sent prisoners to Auschwitz for incarceration or execution. He visited persons accused of various crimes, such as escaping Prisoners of War, etc., frequently met within Auschwitz, and Mildner often attended the trial of such persons, who usually were executed in Auschwitz following their sentence. I showed Mildner throughout the extermination plant at Auschwitz and he was directly interested in it since he had to send the Jews from his territory for execution at Auschwitz.*

I understand English as it is written above. The above statements are true; this declaration is made by me voluntarily and without compulsion; after reading over this statement, I have signed and executed the same at Nürnberg, Germany on the fifth day of April 1946.

Rudolf Höss

By "NSDAP" is meant the Nazi Party, *Nationalsozialistische Deutsche Arbeiterpartei* (National-Socialist German Worker's Party).

Some points of information, which have not been included in the affidavit, although some might consider them relevant, are that Höss, as a nationalist brawler in the twenties, had committed a political killing, for which he served five years in prison,¹⁹² and that he started in the concentration camps at Dachau as a corporal in 1934. He may seem to have risen unusually quickly because in 1945, during the final weeks of the war, he was a colonel and was negotiating concentration camp matters with the Red Cross and representatives of neutral countries.¹⁹³ Most probably, his low rank in 1934 was due to artificial limitations on the size of the SS, imposed for political reasons. His rapid advance was probably the result of the expansion of the SS after the SA-Röhm purge of June 1934 and the greater expansion, which took place after the war began.

We now analyze the significant points of the affidavit. The plan of Birkenau is shown in Fig. 29; it is based on information gathered at the "Auschwitz trial" of 1963-1965, but the WRB report presents a similar plan.¹⁹⁴

Contradictions at the Outset

Paragraph 2

It would have been helpful in putting things into slightly better focus and perspective if Höss had briefly indicated what the nature of the “concentration camp industries” at Auschwitz was, and the enormous importance this industry had for the Germans. In the entire transcript of IMT testimony there appears to be only one specific reference to the nature of the industry at Auschwitz. It is in the testimony of political prisoner Marie Claude Vaillant-Couturier where she makes passing reference to an “ammunition factory” (no doubt the Krupp fuse plant) and to a “large Buna factory, but as [she] did not work there, [she did] not know what was made there.”¹⁹⁵ There are other references, especially in the documents, but they are buried quite deeply.

Not even Höss clung to the figure of 2,500,000 victims gassed; in private at the time of his testimony and also at his own trial in 1947 in Poland (he was hanged), he used a figure of 1,135,000. The lowest figure to be claimed by those who claim that gassings took place is 750,000.¹⁹⁶ The Russians claimed 4,000,000, including some killed by “injections, ill treatment, etc.”¹⁹⁷ but the highest figure claimed seems to be 7,000,000.¹⁹⁸

The remark about 400,000 Hungarian Jews was in accord with a strange emphasis in the legend on the Hungarian Jews. This emphasis existed well before the Höss affidavit, and it has persisted to this day. It was on May 5, 1944, that Eichmann was supposed to have proposed, through the intermediary Joel Brand, a “trucks for Hungarian Jews” swap with the Western Allies.¹⁹⁹ The continued emphasis on the Hungarian Jews seems to be a result of the focus, since 1960, on the activities of Eichmann. For the initial emphasis, the only explanation I can offer is that the problems of the Hungarian Jews started in March 1944 with the German occupation of Hungary, which was simultaneous with the beginnings of the functioning of the War Refugee Board, which had been established in January.

Much of the attention of the WRB was thus directed toward Hungary.²⁰⁰ The problem of the Hungarian Jews is given special attention in the next chapter.

Paragraph 4

Höss places the commencement of the gassings in the summer of 1941. He gets promoted in December 1943 to the Inspectorate of Concentration Camps

¹⁹⁵ IMT, vol. 6, 211.

¹⁹⁶ Reitlinger, 119; Editor’s note: even lower figures were later claimed by Pressac (1993), 148; 1994 (202); and F. Meyer.

¹⁹⁷ 008-USSR (IMT, vol. 39, 261)

¹⁹⁸ Friedman, 14. Editor’s remark: two French sources mention higher figures: 8,000,000 (Aronéanu, 7, 196) and 9,000,000 (documentary *Nuit et Brouillard*; 1955).

¹⁹⁹ Reitlinger, 472-478; US-WRB (1945), 39f.

²⁰⁰ US-WRB (1945), 49f.

at Oranienburg but knows “by reason of [his] continued duties” there that “these mass executions continued.” To claim knowledge of significant events at Auschwitz, while with the Inspectorate, seems very reasonable, but in his testimony he said that in the summer of 1941 he, Höss, had been summoned to report directly to Himmler and that during the interview the concentration camp commandant had received directly from the Reichsführer-SS the order to begin exterminating the Jews, with the stipulation that he should maintain the “strictest secrecy,” not allowing even his immediate superior Glücks to find out what he was doing. “Glücks was, so to speak, the inspector of concentration camps at that time and he was immediately subordinate to the Reichsführer.”²⁰¹

When Did It Start?

Paragraph 6

It will be seen in Chapter 7 what the “final solution” of the Jewish question meant. Höss claims that he “was ordered to establish extermination facilities at Auschwitz in June 1941.” Thus, he reaffirms the date given in paragraph 4 and his testimony in support of the affidavit reaffirmed this date again; there seems no doubt that Höss was knowingly and deliberately given the summer of 1941 as the start and that no slip is involved here. Also, Höss testified that, at the time of the Himmler order, the Inspectorate (Glücks) was “immediately subordinate” to Himmler. This could only have been true prior to March 1942, at which time Oswald Pohl, chief of the WVHA (paragraph 3), took over the Inspectorate and Glücks started reporting to Pohl, who reported to Himmler. Prior to March 1942, the Inspectorate seems to have been an orphan organization and may have reported to Himmler, although it had connections with both Heydrich and Jüttner’s Operational Main Office (*Führungshauptamt*). Höss, of course, was familiar with these administrative arrangements, because in late April 1942 Pohl had held a meeting of all camp commanders and all leaders of the Inspectorate for the specific purpose of discussing them.²⁰²

Despite all this, Reitlinger insists that Höss meant the summer of 1942, not 1941, for certain reasons that will be seen later and also for other reasons. First, an obvious implicit claim of Höss’s affidavit is that the visit to Treblinka took place after large deportations of Warsaw Jews to that camp. Höss confirmed this point explicitly in another affidavit. That puts the Treblinka visit in 1942. Second, according to Reitlinger’s sources, the first large transports (2,000) of Jews to Birkenau date from March 1942, when “the small gassing installation in Birkenwald had only started to work.”²⁰³ Actually, such arguments only in-

²⁰¹ IMT, vol. 11, 398.

²⁰² Hilberg (1961), 556-560; Reitlinger, 107ff.; documents R-129, NO-719 and 1063(F)-PS in NMT, vol. 5, 298-303.

²⁰³ Reitlinger, 109, 115.

crease the confusion, if we are also told that Höss received the extermination orders in the summer of 1942.

These are simply the sorts of contradictions that one should expect to emerge from a pack of lies. However, for the sake of discussion, we should accept that Höss really meant the summer of 1942, and continue on to other matters. By any interpretation, however, Höss says that there were three other extermination camps at the time of the Himmler order, that he had visited Treblinka, and that this camp had been exterminating for one half year. That puts the beginning of the gas chamber exterminations in early 1942 if we accept Reitlinger's point.

The Alleged Gassings and Zyklon

One must agree that gassing with carbon monoxide is inefficient. The source of the carbon monoxide was supposed to have been the exhausts of a diesel engine²⁰⁴ at Belzec and of captured Russian tanks and trucks at Treblinka!²⁰⁵

One must also agree that Cyclon (Zyklon) B was more efficient because it consisted of crystals which, when exposed to air, sublimated into "Prussic acid" (hydrogen cyanide gas). There was no deadlier gas and, in fact, Zyklon was a well-known and widely used insecticide developed by the *Deutsche Gesellschaft für Schädlingsbekämpfung* (DEGESCH), German Pest Control Co. It had been marketed world-wide before the war as an insecticide;²⁰⁶ the word Zyklon means "cyclone," i.e. the product was a "cyclone" for pests. It was used throughout the German armed forces and camp system during the war, and it was thus used as an insecticide at Auschwitz. The ordering and receiving of Zyklon at Auschwitz was done by the so-called *Referat für Schädlingsbekämpfung* (Pest Control Office).²⁰⁷

The constant menace of typhus as carried by lice has been noted, and the calamitous results of a complete breakdown of disinfestation measures at Belzen have been seen. In view of the particular hospitability of the Auschwitz-Kattowitz operations to the typhus-bearing louse, in view of the fact of epidemics at Auschwitz that actually forced work stoppages, and in view of the tremendous importance of the Auschwitz industry to the German war effort, it is not surprising that Zyklon was used in liberal quantities at Auschwitz, and in the surrounding regions, for its intended purpose. It is this chemical product, known to be an insecticide and known to be used at Auschwitz as an insecticide, which, in the WRB report but starting even earlier, was claimed and con-

²⁰⁴ Editor's note: on the absurdities involved with Diesel gas chamber claims see Berg.

²⁰⁵ Reitlinger, 147ff.

²⁰⁶ DuBois, 213. Some of the chemistry of Zyklon ("Cyclon") is discussed in the article on "cyanide" in the *Encyclopedia Britannica* for 1943.

²⁰⁷ Hilberg (1961), 567-571.

tinues to this day to be claimed as the source of the gas used to exterminate Jews at Auschwitz.

It is not correct to say that the insecticide role of Zyklon has been concealed; the WRB report mentions the anti-parasite role of Zyklon, and a dual role for Zyklon at Auschwitz is explicitly claimed in the IMT transcript.²⁰⁸ We must be careful at this point to note the significance of the legend's Zyklon B allegation. Here we have, on a major point, the main attribute of a hoax, as we begin to examine the details of the Auschwitz extermination claims: the fact requiring a dual interpretation. This is not discussed or, apparently, even appreciated in the "final solution" literature. Hilberg merely utters the completely irrelevant assertion that "very little was used for fumigation" and then cites unconvincing authority. Reitlinger does no better.²⁰⁹

The most typical use of Zyklon was in disinfestation rooms and barracks. Everything was sealed, and then the necessary amount of Zyklon, which came in green cans (Figs. 27, 28), was emptied in. After the proper time interval, it was assumed that all the lice and other insects and pests were dead, and the enclosure was aired out. Zyklon could be used for disinfesting clothing by employing an "extermination chamber"; such were marketed by the German "extermination" industry, although at that time, steam baths were also used for the disinfesting of clothing, especially at permanent installations. The "extermination chambers" were preferred in connection with highly mobile or special conditions. The U.S. Army, which also had insect control problems during the war, had correspondingly similar devices, and had devised a "field chamber." Because the U.S. came into the war late, it had time to adopt the newly developed chemical DDT for the functions that Zyklon performed for the Germans.²¹⁰ Naturally, the Americans employed DDT in their "camps," concentration or otherwise. As a more advanced insecticide, DDT was more versatile for various reasons, *e.g.* it was not nearly as lethal for human beings as Zyklon, which was quite lethal, and in its commercial form contained a "warning stuff," an irritant that was noticed much easier than the almost odorless cyanide gas. It is common to leave out frills in military versions of products, and thus the irritant was absent from the Zyklon employed in concentration camps.

The dual role of Zyklon was asserted at the IMT on January 28, 1946, in the testimony of a witness called by French prosecutor DuBost. On January 30, DuBost submitted as evidence document 1553-PS, consisting of a number of invoices from DEGESCH, addressed to SS 1st Lieutenant Kurt Gerstein, for various quantities of Zyklon sent to Oranienburg and to Auschwitz, plus a lengthy "statement" attributed to Gerstein. After some hesitation over certain legal technicalities, both parts of the document were accepted in evidence, notwithstanding the claims of Rassinier and Reitlinger to the contrary that the "statement" was rejected.²¹¹ Two invoices are printed in the IMT volumes, and

²⁰⁸ IMT, vol. 6, 225-332.

²¹¹ IMT, vol. 6, 211, 225, 360-364; Rassinier (1962), 80, 224; Rassinier (1964), 105n; Rassinier

part of the “statement” is printed in one of the NMT volumes.²¹² The invoice samples printed in the IMT volumes include one invoice for 195 kg of Zyklon sent to Oranienburg, and one for the same sent to Auschwitz. It is probable that the Oranienburg Zyklon was ultimately destined for other camps, and that the Zyklon sent to Auschwitz was to be shared with all the smaller camps of the region and possibly also with the coal mines.

The case of Kurt Gerstein shows that there is no limit to the absurdities that intelligent people can attain once they have accepted falsehood as truth. This is the same Gerstein who appears as a major character in Rolf Hochhuth’s play, *The Deputy*.

Gerstein’s title in the SS was Chief Disinfestation Officer in the Office of the Hygienic Chief of the Waffen-SS,²¹³ and as such it was his responsibility to supervise the deliveries of disinfestation supplies to all the camps administered by the SS. Two versions of what happened to him at the end of the war are offered. In the one, he encountered American interrogators by chance in a hotel in Rottweil, Black Forest, to whom he related that he had obtained a responsible post in the Nazi Party while operating as a secret agent for the sometimes anti-Nazi Reverend Niemöller, that he had been involved in operating gas chambers, and that he was prepared to act as a witness in any court. He handed them a seven-page document, typed in French, together with a note in English and some Zyklon invoices, and then vanished.²¹⁴ In the other, he somehow found himself in Cherche-Midi military prison in Paris, composed a document in his own hand in French, added the Zyklon invoices, and then hanged himself in July 1945.²¹⁵ In either case, neither he nor his body has ever been found. He vanished, allegedly leaving a “statement” and some Zyklon invoices that became document 1553-PS. The former version of the Gerstein story is the one claimed in the descriptive material accompanying the document.

Even if we were not presented with such an obviously fishy story concerning Gerstein, we would doubt the authenticity of the “statement” merely on the grounds of its contents, for it is ridiculous in the story it presents, *e.g.* that Gerstein took his position in the SS in order to attempt to sabotage the exterminations (“a man who had penetrated hell with the sole intention of bearing witness before the world and aiding the victims”²¹⁶). The text of the “statement,” including the part published by the NMT, is included here as Appendix A; the “statement” plays no great role in the analysis, but the reader should examine it sometime. It is absolutely insane. It is no marvel that people who can take this story seriously have remarked on the “ambiguity of good” and feel “a certain malaise, an inability to arrive at a full explanation of Gerstein as a person.”²¹⁷ *The Deputy* opens with “Gerstein” forcing his way into the reception

room of the Papal Legation on the Rauchstrasse in Berlin, breathlessly relating the story of his “statement” to the Papal Nuncio!

It is thoroughly unforgivable that Hilberg and Reitlinger use such an obviously spurious “statement” as a source, and without apology. Reitlinger, however, points out that Hitler never visited Lublin, as the “statement” asserts.²¹⁸

DEGESCH was not the only firm involved in the “extermination” business. The firm of Tesch and Stabenow supplied customers with Zyklon and also with equipment for “extermination chambers” that were of typical volume ten cubic meters and smaller. On page 71, we saw that there apparently existed such “gas chambers” at Dachau which were, of course, represented as murder chambers in the early phases of the propaganda, although today no attempt is made to claim they are anything other than “disinfestation chambers.” Tesch and Weinbacher, officers of the firm of Tesch and Stabenow, who had sold some “extermination chamber” equipment to the camp at Gross-Rosen, were hanged for their role in the extermination business, their plea that they did not know that their merchandise was to be used for purposes other than disinfestation and their alternate plea that an order of the SS could not be refused having been rejected by the British military court.²¹⁹

Lines of Authority

Paragraph 7

According to affidavits given by Höss and Friedrich Entress in 1947,²²⁰ the first gas chambers put into operation in the summer of 1942 (now contradicting the affidavit of 1946), were makeshift affairs consisting of two old peasant houses made air tight, with windows sealed up. At the “Auschwitz trial” in 1963-1965, it was held that the “bunker” in Fig. 29 was one of these early gas chambers.²²¹ The nature of later “gas chambers” is examined below.

This is a good point at which to raise objections regarding lines of responsibility and authority in these operations. Höss says he received his order directly from Himmler during – we have agreed to pretend – the summer of 1942. This means that Himmler not only bypassed Glücks, but also Pohl in giving this order directly to the camp commandant, specifying that Glücks was not to learn what was going on. Himmler reached three levels or more down to give the order, and specified that Höss was to maintain an impossible secrecy. Most irregular.

²¹⁸ Reitlinger, 162f. See also *Vierteljahrshefte für Zeitgeschichte* (Apr. 1953), 189n. Editor’s note: for more recent and comprehensive works on Gerstein see Roques, Mattogno (2021c).

²¹⁹ Hilberg (1961), 567; Reitlinger, 155f.; documents NO-4344 and NO-4345 in NMT, vol. 5, 362-364. Editor’s remark: See Mattogno/Jansson on the British show trial against Tesch and his colleagues.

²²⁰ Hilberg (1961), 565; Reitlinger, 158n.

²²¹ Langbein, vol. 2, 930f.; Naumann, opposite of 19.

That is not all. The story we are offered by the Höss affidavit and testimony and all other sources is that (except for certain later developments to be discussed) the German government left the means of killing, and the materials required, a matter for the judgment and ingenuity of the local camp commandant. Höss decides to convert two old peasant houses. Höss found the Zyklon kicking around the camp and decided that it offered a more efficient method of solving the Jewish problem than that employed at Treblinka, where they had scrounged up some captured Russian tanks and trucks to use for exterminations.

All of this is idiotic, and Reitlinger is obviously uncomfortable with the “problem” of the responsibility of the Zyklon decision but gets nowhere with the difficulty except to make it graver by suggesting that Hitler (!) finally decided on Zyklon “with misgiving.”²²²

Transports to Auschwitz

We are told that those Jews not fit for work were gassed immediately upon arrival (and hence do not appear in any written records, for the most part), but an account directly in conflict with this claim appears even in the WRB report.

According to that report, a transport of four to five thousand Jews from Theresienstadt, traveling as families, arrive at Birkenau in September 1943. They kept their baggage, and were lodged as families in the camp sector designated in Fig. 29. They were allowed to correspond freely, a school was set up for the children, and the men were not obliged to work. They were considered to be in six months quarantine. It is said that they were gassed on March 7, 1944, and that “the young people went to their deaths singing.” The relatives of these Jews got mail from them dated March 23 or 25, but it is claimed that the mail had been written on March 1 and post-dated, in obedience to German orders.

This procedure was repeated with another group of Jewish families, 5,000 people who arrived from Theresienstadt in December 1943, and whose quarantine was due for expiration in June 1944. Some men were put to work. According to what are said to be surviving records, in May 1944, two thousand were on the employment list, 1,452 were still in quarantine, and 1,575 were considered “in readiness for transport” (*Vorbereitung zum Transport*), which Reitlinger considers to mean in reality “waiting for the gas chambers.” This was repeated a second time with a group of Theresienstadt families which arrived in May 1944.²²³ Since these people were put into “quarantine,” it is a certainty that their quarters had been disinfested with Zyklon just prior to their moving in, and perhaps at periods while they were living there. Now we are

²²² Reitlinger, 155-158.

²²³ US-WRB (1944), pt. 1, 19-21, 37f.; Reitlinger, 182f.; Blumental, 105.

asked to believe that the Germans planned to kill them with the same chemical product later on!

Essentially the same story was repeated in IMT testimony.²²⁴ The presence of such material in the WRB report is no mystery. Whatever was happening to the Theresienstadt Jews in 1943-1944 was fairly well known in Europe. In October 1943, when 360 Jews were deported from Denmark, they were sent to Theresienstadt, “where the Danish king could be assured of their safety.”²²⁵ We noted on page 108 the Red Cross visit of June 1944; the Red Cross involvement with Theresienstadt receives further treatment in the next chapter. In a 1945 visit, the Red Cross reported transfers to Auschwitz in 1944, adding no sinister interpretations.

To describe the Theresienstadt Jews as “in readiness for transport” just before their quarantine was to expire was perfectly logical, because it is known that many Theresienstadt Jews were being deported East. A source sponsored by the Israeli government, who had been at Theresienstadt, reports that from 1941 to 1944 the Germans were transporting Jews to such places as Minsk in Russia and Riga in Latvia. One must have passed by quite a few “extermination camps” to travel from Theresienstadt to those cities. The source also reports that young Theresienstadt Jews were eager to volunteer for transports to Auschwitz as late as August 1944.²²⁶ Rabbi Leo Bäck has claimed that somebody escaped from Auschwitz in August 1943, and made his way back to Theresienstadt, where he told Bäck of gassings. Bäck has explained why he told nobody else of this at the time. So that explains how it was possible that all those people were so eager to go to Auschwitz in their “ignorance” – at least that is what we will no doubt be told.²²⁷

The part of the Auschwitz legend touching on the Theresienstadt Jews is obvious nonsense even without contrary evidence, however. It is not believable that the Germans would quarter for six months at Birkenau each of three distinct groups of people of a category for which there exists an extermination program at Birkenau. The dual role of Zyklon in this story merely effects passage from the nonsensical to the incomparably ludicrous.

If we examine another extant source of what is said to be statistical data concerning transports to Auschwitz, we meet the same situation. The data offered in the Netherlands Red Cross reports is more reliable than that offered in the WRB report, although it is rather limited. Nevertheless, as shown in Appendix C, the data shows that virtually all of the male Jews who were deported from the Netherlands to Auschwitz in July and August of 1942 entered Birkenau and were given registration numbers. It is also known that these Dutch Jews wrote letters to acquaintances in the Netherlands in which they described the work at Auschwitz as “hard” but “tolerable,” the food “adequate,” the sleeping accommodations “good,” the hygienic conditions “satisfactory” and

²²⁴ IMT, vol. 6, 218.

²²⁷ Reitlinger, 181f.; Boehm, 292f.

the general treatment “correct” (this was reported by the Jewish Council in Amsterdam which claimed, however, that it knew of only 52 such letters). To Reitlinger, these things are “mysteries” for, he says, “at certain periods, entire transports were admitted.”²²⁸

The term “spot decisions” has not been used subsequent to the Höss affidavit, so far as we know. The common term is “selections.” The story is that “selections” were made on incoming transports on a basis of suitability for work. This, of course, must be essentially true; given the extent and variety of the industrial operations at Auschwitz, selections were required not only on a work *vs.* no work basis but also on, *e.g.*, a light work *vs.* heavy work basis. Other factors which must have figured in this connection were whether a given transport was composed of prisoners, volunteer laborers, Jews being resettled (such as the Theresienstadt Jews) or other. The transports were no doubt also screened for certain key professionals, such as medical personnel, engineers, skilled craftsmen, etc. The extermination legend merely claims that one category sought in these elaborate sortings and selections was all non-employable Jews, destined for extermination. This claim has already been seriously undermined by the evidence.²²⁹

A Hospital for the People Being Exterminated?

Selections on incoming transports are not the only mode of gas chamber selections which have been claimed. A Dutch Jew, Dr. Elie A. Cohen, was arrested in 1943 for attempting to leave the Netherlands without authority. In September 1943, he and his family were shipped to Auschwitz, and he was separated from his family, which he never saw again. He later wrote a book, *Human Behavior in the Concentration Camp*, based on his experiences as a member of the hospital staff at Auschwitz I. Because Cohen’s contact with the people who were being exterminated was of a doctor-patient nature, it was necessary to produce an extraordinarily descriptive term for his book, and “objective” was as good a choice as any.

²²⁸ Reitlinger, 118-121. Reitlinger remarks on the “mystery” presented by the data in the Netherlands Red Cross reports, which is presented and discussed here in Appendix C. The letters from Auschwitz are considered by de Jong.

²²⁹ The “Kalendarium,” first published in 1964 in German as a magazine series, says that of 1500 people in a transport that arrived at Auschwitz on April 16, 1944, from the camp in Drancy, France, a certain number of the men were registered as inmates and the others gassed. Many years ago, Robert Faurisson pointed out that, according to the deportation lists, “the others” included Simone Veil, who, as Faurisson wrote (1979, 1986a), was the first President of the European Parliament. Later I noticed that the English translation of the *Kalendarium*, published in 1990, engages in a little bit of revisionism on this, and now says some of the women were registered. A document from the International Tracing Service, Arolsen, Germany, is cited.

Cohen interprets certain selections in the hospital as selections for the gas chamber:²³⁰

"After the 'HKB (camp hospital) administrative room' had given warning that the camp physician was about to make a selection, the whole block became a hive of activity, for everything had to be spic-and-span [...] while everybody stood at attention, he made his entry with his retinue: SDG (medical service orderly), Blockälteste and block clerk. The sick Jews were already lined up – as a matter of course, naked. Simultaneously with the presentation of the card with the personal notes concerning each prisoner, to the camp physician, the block physician, in whose ear the diagnosis was being whispered by the room physician, introduced the patient in question to him [...] in 90 per cent of the cases the card was handed to the SDG, which meant death by gassing for the patient, unless the political department gave orders to the contrary, which frequently occurred in the case of 'Schutzhäftlinge' (people charged with ordinary crime).

Not only emaciated prisoners, but also some who looked well fed were sometimes consigned to the gas chamber; and occasionally even members of the HKB staff, who were officially exempt, had to suffer a similar fate. Therefore, especially when one considered the 'medical style' of the camp physician, it was generally supposed that it was not only people incapable of work who were scheduled for killing, but that the decisive factor must be that a certain number of persons had to be gassed.

Officially no one knew what the final object actually was, not even the staff of the administrative room, for after the names of the gassed the initials S.B., short for 'Sonderbehandlung' (special treatment) were placed."

Cohen does not report having seen any gas chambers; the only evidence which he draws on to support a "gassing" interpretation of such scenes (such interpretation certainly not being evident from the raw facts) consists in the post-war claim of extermination at Auschwitz, and also in that there were rumors inside the camp of extermination somewhere at Auschwitz. The existence of such rumors is practically certain because a delegate of the International Red Cross reported their existence among British POWs at Auschwitz III in September 1944.²³¹ However, nothing much can be inferred from the existence of rumors, as rumor spreading is an elementary aspect of psychological warfare, and we have seen that the OSS and, of course, the Communists engaged in rumor spreading and "black propaganda." In fact, knowledgeable officials of the U.S. government have admitted the "information" spreading. At the Farben trial, prosecuting attorney Minskoff asked defense witness Münch the following question about gassings at Birkenau:²³²

"Now, Mr. Witness, isn't it a fact that, during the time you were at Auschwitz, Allied planes dropped leaflets over Kattowitz and Auschwitz informing the population what was going on in Birkenau?"

²³⁰ Cohen, 38f.

²³¹ Red Cross (1947), 91f.

²³² NMT. vol. 8, 320.

Münch did not know that. Minskoff was knowledgeable in this area because he had been a foreign operations oriented lawyer in the Treasury Department during the war, and was presumably well-informed on WRB matters; the WRB had collaborated with the Office of War Information on various leaflet operations. The head of the prosecution staff at the Farben trial was DuBois, who had been general counsel of the WRB, who wrote that in his "office in 1944, [he] knew [...] what was going on at Auschwitz," and who chose in his book to reproduce with general approval the part of the testimony containing the Minskoff question.²³³ This is good evidence for an American leaflet operation over Auschwitz, although the method seems somewhat crude. My guess is that, if the leaflets were indeed dropped, they were dropped at night and in moderate quantities.

Actually, a leaflet operation was not necessary to get rumors going in the camps, for the highly organized Communists were very active in this area. Their superior organization, which involved systematic illegal listening to radios, had made the other inmates essentially fully dependent on them for "news."²³⁴ Let us remember that it was a small world, even in 1939-1945, and that, on account of the general ease with which information flowed into and out of the camp (a fact noted on page 131), the Allied stories about the camps would have ultimately and necessarily penetrated into those camps by various routes.

The Red Cross delegate mentioned above had attempted to visit the Auschwitz camps but apparently got no further than the administrative area of Auschwitz I and the quarters of the British POWs. The latter were the only persons the existing conventions entitled him to visit; with regard to other matters, the German officers there were "amiable and reticent." The delegate reported without comment that the British POWs had not been able to obtain confirmation of the rumors by consulting camp inmates. It is claimed that, despite these rumors, the British POWs who were interrogated by the Russians after the capture of the camp "knew nothing at all" of the "crimes."²³⁵

Subsequent events have, of course, changed the rumors into "knowledge" in many cases. Incoming Jews certainly had no suspicions of gassings.²³⁶

With the "selections," we are offered another fact for dual interpretation. There is no doubt that the extensive industrial and other activities required "selections" of people for various conventional purposes. We are then asked to add an "extermination" purpose to these activities.

Before leaving Cohen, we should note that there were sick emaciated Jews, as well as others, in the Auschwitz I hospital. He further informs us:²³⁷

"[...] The HKB was housed in five good stone-built blocks. There was one block for surgery, one for infectious diseases, one for internal diseases,

²³³ DuBois, 53, 173, 231; US-WRB (1945), 48-55.

²³⁴ Lerner, 152f.

²³⁵ Friedman, 13f.

²³⁶ Cohen, 119.

²³⁷ *Ibid.*, 60.

one for 'Schonung' (less serious cases) and Block 28 (X-ray, specialists' rooms, medical experiments, admissions). The sick lay in three bunks, one above another, on straw mattresses, and were dressed in a shirt (with, later, a pair of drawers added), under two cotton blankets and a sheet. Every week the patients were bathed, and every two weeks they were given 'clean' underwear and a 'clean' sheet; there were few fleas and no lice. Each berth was seldom occupied by more than two persons. But [...] even patients in a state of high fever had to leave their beds to go to the toilet or to wash in the cold lavatory in the mornings. Because of 'organizations' from the SS, there were always medicines, though not in sufficient quantities, including even sulfa drugs; these had been brought in by large transports of Jews from every European country."

He adds that hospital conditions were much worse in other camps (about which he has only read).

The Auschwitz I hospital was obviously no luxury establishment but nevertheless it showed a serious concern, on the part of the Germans, for the recovery of inmates, including Jews, who had fallen ill.²³⁸ This observation also opposes the claim that those not fit for work were killed. Cohen reports certain selections of an incompletely known character, in connection with unknown destinations. It may be that those considered of no further use as labor were sent to Birkenau; this would be very reasonable because it has been shown that the unemployables from the Monowitz hospital were sent to Birkenau.

"Special Treatment"

The term "special treatment," *Sonderbehandlung*, is supposed to have been one of the code words for gassing. When it is said that N Jews in a transport to Auschwitz were gassed, and that this is according to some German record or document, it is the case that the word "*Sonderbehandlung*" is being interpreted as meaning gassing. The documents in question are two in number, and are printed (not reproduced from originals) in a 1946 publication of the Polish government. Both documents are said to be signed by an SS Lieutenant Schwarz. They state that from several Jewish transports from Breslau and Berlin to Auschwitz in March 1943, a certain fraction of Jews were selected for labor, and that the remainder were *sonderbehandelt*. As far as I know, these documents are not Nuremberg documents; the originals, if they exist (which I am not denying), are in Polish archives.²³⁹

²³⁸ Editor's remark: For a detailed description of the vast healthcare measure undertaken at Auschwitz and especially Birkenau, both in terms of building expansive healthcare facilities as well as caring for sick inmates, see Mattogno (2016d).

²³⁹ Friedman, 14f.; Reitlinger, 172; Hilberg (1961), 587; Blumental, 109f. One of the documents are reproduced in Poliakov & Wulf (1955), 198.

On account of this relatively well publicized interpretation of the term *Sonderbehandlung*, Cohen thinks that he has read “SB” in the notes made in the Auschwitz I hospital, but it is likely that he misread “NB,” *nach Birkenau* (to Birkenau).

There exists a document, apparently genuine, from the Gestapo District Headquarters Düsseldorf, which specifies the manner in which executions of certain offending foreign workers were to be carried out, and which uses the term “*Sonderbehandlung*” as meaning execution. There is also a document, put into evidence at Eichmann’s trial, which referred to the execution of three Jews as *Sonderbehandlung*.²⁴⁰

Thus, it seems correct that, in certain contexts, the term meant execution, but it is at least equally certain that its meaning was no more univocal in the SS than the meaning of “special treatment” is in English-speaking countries. There is completely satisfactory evidence of this. At the IMT trial, prosecutor Amen led Kaltenbrunner, under cross examination, into conceding that the term might have meant execution as ordered by Himmler. Then, in an attempt to implicate Kaltenbrunner personally in *Sonderbehandlung*, Amen triumphantly produced a document which presents Kaltenbrunner as ordering *Sonderbehandlung* for certain people. Amen wanted Kaltenbrunner to comment on the document without reading it, and there was an angry exchange in this connection, but Kaltenbrunner was finally allowed to read the document, and he then quickly pointed out that the *Sonderbehandlung* referred to in the document was for people at “Winzerstube” and at “Walzertraum,” that these two establishments were fashionable hotels which quartered interned notables, and that *Sonderbehandlung* in their cases meant such things as permission to correspond freely and to receive parcels, a bottle of champagne per day, etc.²⁴¹

Poliakov reproduces some documents which show that *Sonderbehandlung* had yet another meaning within the SS. The documents deal with procedures to be followed in the event of the pregnancies caused by illegal sexual intercourse involving Polish civilian workers and war prisoners. A racial examination was held to decide between abortion and “germanization” of the baby (adoption by a German family). The term *Sonderbehandlung* was a reference either to the germanization or to the abortion. In addition, at Eichmann’s trial, some documents were put into evidence which dealt with the treatment of 91 children from Lidice, Bohemia-Moravia. These children had been orphaned by the reprisals which had been carried out at Lidice after Heydrich’s assassination. A certain number were picked out for germanization, and the remainder were sent to the Displaced Persons Center in Lodz (Litzmannstadt), operated by the RuSHA. The commander of the Center, Krumei, regarded the children as a special case within the Center, to be given *Sonderbehandlung* while at the Center. The term or its equivalent (*eine gesonderte Behandlung*) was also used

²⁴⁰ NO-4634 in NMT, vol. 4, 1166; Eichmann, session 79, W1-Y1.

²⁴¹ IMT, vol. 11, 336-339.

in the Foreign Office in connection with special categories of prisoners of war, such as priests.²⁴²

It is only to a person not accustomed to the German language that the term *Sonderbehandlung* sounds like it stands for some very special concept. For a German, however, the term is as diverse in possible application as “special treatment” is in English.

Himmler commented somewhat unclearly on *Sonderbehandlung* when he examined the “Korherr report,” documents NO-5193 through 5198. Korherr was the chief SS statistician, and thus, in late 1942 and early 1943, he prepared a report for Himmler on the situation regarding European Jews. In March 1943, he reported that a total of 1,873,594 Jews of various nationalities had been subjected to a program of “evacuation,” with a parenthetical note “including Theresienstadt and including *Sonderbehandlung*.” The report also gave numbers of Jews in ghettos in Theresienstadt, Lodz and the General Government, the number in concentration camps, and the number in German cities on account of a special status conferred for economic reasons. It was also remarked that, from 1933 to December 31, 1942, 27,347 Jews had died in German concentration camps.

After Himmler examined the report, he informed Korherr through Brandt that the term *Sonderbehandlung* should not be used in the report, and that transport to the East should be specified. Nevertheless, the document, as it has come to us, uses the term in the way indicated. The document gives no hint how the term should be interpreted but, because it occurs in such a way that it is linked with Theresienstadt, it is obviously fair to interpret it in a favorable sense, as a reference to some sort of favored treatment.

In a document said to be initialed by Himmler, he wrote shortly that he regarded the “report as general purpose material for later times, and especially for camouflage purposes.” What was to be camouflaged is not indicated in the document but, at his trial, Eichmann testified that after the Stalingrad disaster (January 1943) the German government quickened the pace of the deportations “for camouflage reasons,” *i.e.*, to reassure the German people that everything was OK out there. Himmler specified that the Korherr report was not to be made public “at the moment,” but the camouflage remark could still be interpreted in the sense in which Eichmann suggested (Eichmann’s statement was not in connection with the Korherr report.)²⁴³

Other documents are 003-L, a letter by SS General Katzmann, speaking of 434,329 resettled (*ausgesiedelt*) Jews of southern Poland as having been *sonderbehandelt*, and NO-246, a letter from Artur Greiser to Himmler dated May 1, 1942, referring to the *Sonderbehandlung* of about 100,000 Jews in the Warthegau (part of annexed Poland) to be completed within 2 to 3 months. Greiser was sentenced to death by a Polish court on July 20, 1946, despite the

²⁴² Poliakov & Wulf (1956), 299-302; Eichmann, session 79, Y1-Bb1; session 101, Hhl-Mml; session 107, U1-V1; session 109, F1-H1, N1, O1; NG-5077.

²⁴³ Most of the Korherr report is reproduced in Poliakov & Wulf (1955), 240-248. Eichmann, session 77, Y1, Z1.

intervention of the Pope on his behalf. There is also a letter by Lohse, which is discussed on page 260.²⁴⁴

Summarizing the situation with respect to documents which speak of *Sonderbehandlung*, we may say that, while one can certainly raise questions regarding the authenticity of the relevant documents, it is nevertheless the case that even if all of the relevant documents are assumed authentic, they do not require an “extermination” interpretation of those that apply to Auschwitz. That the term *Sonderbehandlung* had more than one meaning within one agency of the German government is not very peculiar. For example, I understand that, within the Central Intelligence Agency, “termination” can mean execution or assassination in certain contexts. However, the term obviously could also be applied to the dismissal of a typist for absenteeism.²⁴⁵

The point in paragraph 7 of the Höss affidavit about endeavoring “to fool the victims into thinking that they were to go through a delousing process” is, of course, a logical one because anybody on entering a German camp went through a delousing process such as Höss described in the affidavit and in his testimony – disrobe, shave, shower.²⁴⁶ Again we are offered a fact for dual interpretation.

The Crematories

The last subject in paragraph 7 is the cremations; it is a big one. According to Höss and all other accounts of exterminations, Birkenau cremations took place in trenches or pits prior to the availability of the modern crematory facilities there.²⁴⁷ It is claimed that the new crematories were intended for extermination of Jews, but we have suggested a more routine purpose in the preceding chapter (pp. 87, 130). Let us review their history.

The construction was well into the preliminary stages of planning and ordering early in 1942, and this fact, in itself, makes it difficult, to say the least, to believe that they were related to any extermination program orders by Himmler in the summer of 1942. The construction plans for four structures containing crematory furnaces are dated January 28, 1942.²⁴⁸ On February 27, 1942, the head of the construction department of the WVHA, SS Colonel (later Lieutenant General) Dr. Ing. Hans Kammler, an engineer who also supervised

²⁴⁵ Editor’s remark: On special treatment at Auschwitz, see Mattogno (2016c&d).

²⁴⁶ IMT, vol. 11, 400f.

²⁴⁷ IMT, vol. 11, 420; Central Commission, 87f.

²⁴⁸ Central Commission, 83f.; Rassinier (1962), 85f. Rassinier does not cite a source, so he presumably got it from Central Commission. Editor’s remark: in early 1942, only one new crematory for the Auschwitz Main Camp was planned. The other three crematories were added in the summer of 1942, after an expansion of the camp to some 200,000 inmates had been decided upon, and after the typhus epidemic had already broken out; cf. Mattogno (2019), 261f.

the design of the German V-rocket bases and the underground aircraft factories, visited Auschwitz and held a conference at which it was decided to install five, rather than two (as previously planned), crematory furnaces, each having three muffles or doors.²⁴⁹ This matter, therefore, was not left to the ingenuity of Höss. In the extermination legend, however, Höss definitely gets credit for the Zyklon. The fifteen muffles to be installed in each of the structures or buildings were ordered from Topf and Sons, Erfurt, on August 3, 1942.²⁵⁰ The ovens were of the standard type which Topf (still in business in Wiesbaden in 1962) sold. Fig. 26 is said to be a photograph of one of the crematories at Auschwitz. Each muffle was designed to take one body at a time, as are all standard cremation muffles; there is no evidence for the installation of any non-standard muffles, such as any designed to take more than one body at a time. Topf had also supplied ovens to camps for which exterminations are not claimed, such as Buchenwald.²⁵¹

The plans for the four buildings containing the crematories, numbered II, III, IV and V (Crematory I seems to have been the ultimately dormant crematory at Auschwitz I which contained four muffles²⁵²), show that a large hall or room existed in each. For II and III, these were below ground level and were designated *Leichenkeller* (mortuary cellar – literally corpse cellar – a German word for mortuary is *Leichenhalle*); their dimensions were height 2.4 meters and area 210 square meters and height 2.3 meters and area 400 square meters, respectively. The halls in the building containing Crematories IV and V were at ground level and were designated *Badeanstalten* (bath establishments); they were each of height 2.3 meters and area 580 square meters.²⁵³ According to the information generated at the “Auschwitz trial” of 1963-1965, these four buildings were located as shown in Fig. 29.

The Auschwitz construction department, in erecting the crematories, was assisted not only by Topf but also by the SS company DAW (*Deutsche Ausrüstungswerke*, German Equipment Factory), which helped with miscellaneous constructions. The first ovens installed were in Crematory II and numbered, as we have noted, fifteen muffles in five three-muffle units. The construction took considerable time, although it was carried out with deliberate haste as shown by the documents. The NMT volumes offer us the following English translation of document NO-4473; if the reader thinks he sees some-

²⁵² Friedman, 54; Editor's note: Crematory I later received a third double-muffle furnace, resulting in 6 muffles altogether. See Mattogno (2024), 373-412, and Mattogno (2016b).

²⁵³ The halls adjacent to the furnace rooms of Crematories IV & V were mortuaries. Several more rooms existed in these buildings, of which three small ones do not bear any descriptions in the blueprints. These were obviously shower rooms and/or delousing rooms; orthodox historians claim, however, that these were execution gas chambers; cf. Pressac (1989), 401; Mattogno (2019), 143-162; Editor's note.

thing in the document that is hostile to my thesis he should withhold judgment.²⁵⁴

“January 29, 1943

To the Chief Amtsgruppe C, SS Brigadeführer and Brigadier General of the Waffen SS.,

Dr. Ing. Kammler

Subject: Crematory II, condition of the building.

The Crematory II has been completed – save for some minor constructional work – by the use of all the forces available, in spite of unspeakable difficulties, the severe cold, and in 24-hour shifts. The fires were started in the ovens in the presence of Senior Engineer Prüfer, representative of the contractors of the firm of Topf and Söhne, Erfurt, and they are working most satisfactorily. The planks from the concrete ceiling of the cellar used as a mortuary [Leichenkeller] could not yet be removed on account of the frost. This is, however, not very important, as the gas chamber can be used for that purpose.

The firm of Topf and Söhne was not able to start deliveries of the installation in time for aeration and ventilation as had been requested by the Central Building Management because of restrictions in the use of railroad cars. As soon as the installation for aeration and ventilation arrive, the installing will start so that the complete installation may be expected to be ready for use February 20, 1943.

We enclose a report [not attached to document] of the testing engineer of the firm of Topf and Söhne, Erfurt.

*The Chief of the Central Construction Management,
Waffen SS and Police Auschwitz,
SS Hauptsturmführer*

Distribution: 1 – SS Ustuf. Janisch u. Kirschneck; 1 – Filing office (file crematory); Certified true copy: [Signature illegible] SS Ustuf. (F)”

I interpret this as meaning that, although all work for Crematory II was not completed, the ovens could be used in January 1943 for cremations, despite the impossibility of using the *Leichenkeller*.

On February 12, 1943, Topf wrote to Auschwitz acknowledging receipt of an order for five three-muffle units for Crematory III, the construction to be completed April 10. I have not seen any documentation indicating installation of any ovens in Crematories IV and V, unless a letter of August 21, 1942, from an SS 2nd Lieutenant at Auschwitz, mentioning a Topf proposal to install two three-muffle units near each of the “baths for special purpose,” should be in-

²⁵⁴ NMT, vol. 5, 619f.

terpreted as such.²⁵⁵ There was, however, carpentry work done on Crematories IV and V.²⁵⁶

This brings us to the problem of the number of muffles at Birkenau; it is a problem because it is said that the Germans demolished the crematory buildings before abandoning Auschwitz.²⁵⁷ Obviously, we must assume that there were at least thirty available, fifteen in both Crematory II and Crematory III, sometime in 1943. Evidence for ovens installed in IV and V consists mainly in the appearance of a labor *Kommando* assigned to these crematories, in what is said to be the Birkenau employment roster for May 11, 1944 (the same document the Theresienstadt Jews appear in), plus some witness testimony. The Russians and Poles claimed that each of these crematories had two four-muffle ovens, and that the other two had fifteen muffles each: 46 muffles. The WRB report had specified 36 in both II and III, and 18 in IV and V: 108 muffles.²⁵⁸

Reitlinger claims 60 muffles by assuming that each crematory had fifteen. His only authority for this is the writings attributed to one Miklos Nyiszli, which we should not accept on anything, least of all a number. The Nyiszli account purports to be a record of personal experiences of a Hungarian Jewish doctor deported to Auschwitz in May 1944. It appeared in French in 1951 in the March-April issues of *Les Temps Modernes*, with a preface by translator T. Kremer. Rassinier has reported on his strenuous subsequent efforts to contact Nyiszli and determine whether or not he actually existed; the only person who seemed unquestionably to exist was translator Kremer.²⁵⁹ An English translation of Richard Seaver, foreword by Bruno Bettelheim, was published in New York in 1960 under the title *Auschwitz*. Nyiszli was obviously dead by then because it is specified that the copyright is held by "N. Margareta Nyiszli." As is the usual practice with deceased authors who held doctor's degrees, the title page of a doctoral thesis, by "Nicolaus Nyiszli," Breslau 1930, is reproduced in the 1960 NY edition.²⁶⁰ The book was republished in French and German editions in 1961.

According to Rassinier, it is difficult enough to reconcile the numbers in the various editions, but it is not even possible to get internal consistency in one edition. In the 1960 edition we read (page 55) that the 60 muffles could reduce "several thousand" corpses per day. Further on (page 87) we are told that "when the two (burning pits) were operating simultaneously, their output varied from five to six thousand dead a day, slightly better than the crematori-

²⁵⁵ 008-USSR; Editor's note: the Crematories IV & V each obtained one eight-muffle furnace, whose muffles had a design similar to those of the other crematories; cf. Mattogno (2024) and Mattogno/Deana for details. Regarding the furnaces near the "baths for special purpose" cf. Mattogno (2016c), 70-76; (2019), 186-190.

²⁵⁶ NO-4466 in NMT, vol. 5, 624; Editor's note: see Mattogno (2019), 143-162, on some aspects of construction works on these buildings.

²⁶⁰ On Nyiszli see Provan; Mattogno (2020); Editor's note.

ums,” but then later on (page 92) we learn that Crematories II and III could alone dispose of at least 10,500 per day. This is total confusion.

The writings attributed to Nyiszli also commit what I consider the basic witness-disqualifying act; they claim gratuitous regular beatings of initially healthy prisoners by the SS (*e.g.* pp. 25, 27, 44, 57); it is known that this was not the case. Aside from possible humanitarian objections to such beatings, the prisoners were a source of income to the SS. Many were the complaints, on the part of the SS, against various forms of alleged Farben mistreatment. On the other hand, for security reasons, the SS discouraged fraternization between guards and prisoners. The SS guard was ordered to maintain “distance” (*Abstand*) from the prisoners, not even talking to them unless absolutely necessary. This regulation was of course difficult to enforce, and the regular and very frequent infringements of it produced memoranda from Pohl to the camp commanders, ordering appropriate and systematic instruction of the guards.²⁶¹

Despite a certain amount of SS guard brutality as reported by authors of other books, Cohen does not report such experiences at Auschwitz, and remarks that the “reception ceremony” for his transport “passed without violence.” However, he mentions a specially constructed wooden table used for beating prisoners on the buttocks. This was a formerly regulated mode of punishment of prisoners who committed various offenses in the camps; “intensified” beating was defined as whacking on the *naked* buttocks.²⁶²

When an Auschwitz witness starts claiming regular gratuitous beating, he may be telling the truth on some matters, but one must reject his general credibility.

On the basis of the available evidence, the best assumption is that there were 30 muffles available at Birkenau in the spring of 1943, and 46 a year later. Before leaving the subject of the number of muffles, we should remark that there are certain ambiguities in the documents relating to the crematories. The most obvious is due to the fact that the WRB report does not seem to be the only source that mistakenly numbers the Birkenau crematories I-IV rather than II-V; the Germans sometimes did this themselves, or so it would appear from, *e.g.*, NO-4466.²⁶³

The limit on the rate at which people could have been exterminated in a program of the type alleged is not determined by the rate at which people could have been gassed and the gas chambers ventilated, but by the rate at which the bodies could have been cremated. In estimating the capacity of the crematories, it is possible for arithmetic to produce some impressive figures. At that time, an hour was a very optimistic time to allow for the reduction of one body, and the body’s being wasted would not have made much difference.²⁶⁴ If we allow for one hour of cleaning and miscellaneous operations per day, one muffle could reduce perhaps 23 bodies per day, so 30 muffles could

²⁶¹ DuBois, 221. NO-1245.

²⁶³ NMT, vol. 5, 624f. See also Blumental, 100.

²⁶⁴ Polson, 138, 143-145.

reduce 690, and 46 could reduce 1058 per day. This could accommodate exterminations at the respectable rate of about 240,000 to 360,000 per year, but of course one must bear in mind that, because the exterminations are supposed to have been halted in the autumn of 1944, Auschwitz could not have had 46 muffles for more than about one year of exterminations.

However, the logic leading to such figures as the preceding is rubbish; things do not work that way. People, especially concentration camp inmates, who manned the crematories, do not work with such efficiency, such equipment cannot be used in such a continuous manner, and equipment needs do not occur with such mathematical regularity in any case. If we allow operations to relax toward something more realistic, taking into account downtime for regular and irregular maintenance, and allowing for usual engineering margins of excess capacity, we have figures that are generally in line with anticipated epidemic conditions. It is also possible that, as the WRB report asserts, there was a backlog of buried bodies to dispose of.

It is obvious that, given a policy of cremating dead inmates, a vast operation such as Auschwitz would naturally provide relatively elaborate cremation facilities for the purpose. Thus, we again have a fact for dual interpretation if we are to believe the extermination legend; to the commonplace interpretation of these ovens, unquestionably valid, it is proposed that we also accept as valid a second interpretation of exterminations. Below we will examine specific evidence that the number of muffles was completely compatible with the rate of "normal" deaths.

That is not the last fact for dual interpretation that we are offered in connection with the cremations. Höss tells us that "all of the people living in the surrounding communities knew that exterminations were going on" on account of the "foul and nauseating stench from the continuous burning of bodies." If I were to select just two points in the extermination tale to hold up as near proof that the whole thing is a hoax, it would be this point and also the alleged role of Zyklon.

The hydrogenation and other chemical industry that existed at Auschwitz was notorious for creating stench. Visit the northern part of the New Jersey Turnpike by the Standard Oil (now Exxon) refineries, or any other refineries, to see (or smell) this.²⁶⁵ The only significant difference Auschwitz presented, in terms of a stench, is that the coal the Germans started from is by any relevant measure a "dirtier" source than crude oil. If we are told that 30 to 46 bodies being reduced in modern crematories could even compete with, much less overwhelm, this stench of industrial origin then we know that what is involved here is not a fact for dual interpretation but an obvious lie. Actually, on account of the furor of phony objections raised by various fanatics in the nineteenth and early twentieth centuries, cremation had been developed so that it was a rather "clean" process.²⁶⁶ Höss cannot be believed.

²⁶⁵ Editor's note: equipped with modern technology, today's refineries do no longer produce such an intensive smell.

²⁶⁶ Polson, 138f.

The analysis has revealed a previously unsuspected but nearly inevitable attribute of the great hoax: the excess fact. Following the principle that his story should involve mostly or almost entirely valid fact, the author of the hoax easily slips into the error of including *as much fact as possible*, and commits the major blunder we have just seen; the story would obviously have been much better off without *that* “fact.” Of course, it is only on account of the passage of time that it has become a major blunder. At the time, it was completely effective on account of an hysterical emotional atmosphere that is impossible to recapture. DuBois wrote in 1952:²⁶⁷

“On the stand Schneider had said that he never heard of any exterminations, although he recalled going along the main road one day, past a ‘dormant crematorium.’ At that time this ‘dormant’ crematorium was burning corpses at the rate of a thousand a day. The flames shot fifteen meters into the air; the stink pervaded the countryside to the north for forty miles until it joined the stink of the Warsaw crematorium; the fumes would pucker the nose of anyone within half a mile, and Schneider – a scientist with a specially acute sense of smell – had passed within a hundred yards of the place.”

It does not seem possible that, toward the end of a book, which gives (outside of technical literature) the best available description of the chemical industry at Auschwitz, DuBois could write thus, but there it is. It is not explicable in terms of normal errors of judgment; it is explicable only in terms of hysteria.

It would seem that somebody at the trial would have challenged Höss on this point. There was a challenge, but it was weak and ambiguous. The following exchange occurred near the end of Höss’s testimony (Kaufman was counsel for Kaltenbrunner):²⁶⁸

“THE PRESIDENT: The last sentence of Paragraph 7 is with reference to the foul and nauseating stench. What is your question about that?”

DR. KAUFMAN: Whether the population could gather from these things that an extermination of Jews was taking place.

THE PRESIDENT: That really is too obvious a question, isn’t it? They could not possibly know who it was being exterminated.

DR. KAUFMAN: That is enough for me. I have no further questions.”

It is possible that there was a language difficulty at the time of this exchange, and that a misunderstanding existed, and that Kaufman really meant “persons” rather than “Jews” in his question. In any case, this episode suggests the utterly irrational atmosphere that must have pervaded the IMT trial; Höss was not caught in a clumsy and transparent lie. It is not possible for us to grasp the spirit of these proceedings except to classify them as a form of hysteria. Speer was there, and he could have seen through this lie easily. Was he effectively asleep, resigned to the futility of opposition? Was he or his lawyer merely being careful to avoid becoming entangled in the extermination question? Only he can tell us; we do not know. All that is certain is that the spirit of the trial

²⁶⁷ DuBois, 340f.

²⁶⁸ IMT, vol. 11, 421.

was such that even a simple truth such as the true source of the stench, exposing with great deftness that the witness was lying and suggesting the nature of the factual basis for the charges, could not emerge.

The stench was the basis for quite a bit of witness testimony to knowledge of exterminations,²⁶⁹ and its use at one particular point of the Farben trial, to be discussed on page 242, was not only rather amusing but also revealing and illustrative of an important point to bear in mind when reading the records of these trials. This is discussed later.

In his booklet, Christophersen considered the problem of the factual basis, if any, for references to a pervasive stench at Auschwitz. The only thing he could recall was a blacksmith establishment at Auschwitz I; when horses were being shod, the burning hoofs created a stench, which could be perceived in the immediate neighborhood. Christophersen recognized that this could not account for a stench of the extent claimed in connection with the exterminations.

I communicated with Christophersen on this point, inquiring into the possibility that Christophersen might have forgotten the stench of industrial origin, in searching his memory for some stench that might have approximated the stench of burning flesh. Christophersen recalled no stench of industrial origin. I also communicated with Stäglich, who distinctly recalled only clean and fresh air near Auschwitz.

The recollections of Christophersen and Stäglich are, however, consistent with the theory that the stench of the hoax is none other than the stench associated with the Farben plant. With reference to Fig. 5, the map of the Auschwitz area, Christophersen was quartered at Raisko during his year at Auschwitz and had occasional business at Auschwitz I and Birkenau. Stäglich was quartered in the town of Osiek, which is about 6 miles due south of the town of Oświęcim, and mentions that he visited the “*KZ-Lager Auschwitz*” (presumably meaning Auschwitz I) “three or four times.” We do not know exactly where the Farben plants were, but we know that the camp called “Monowitz” was either within or immediately next to the town of Monowitz, and that the camp had been placed there so that it would be close to the Farben plants. In consideration of the locations of the rail lines, rivers and roads in the area, it is probable that the Farben plants were either immediately to the east or to the west of the town Monowitz. If the former, they were four or five miles from Auschwitz I and, thus, people at that camp, at Birkenau, and *a fortiori* at Raisko and Osiek would never have smelled the chemical industry (which was very modest in size compared to a typical American cracking plant). If the Farben plants were immediately to the west of the town, it is possible that people at Auschwitz I might have gotten a whiff now and then when peculiar wind conditions prevailed, but that could not qualify as a *pervasive* stench. Thus, close consideration of the point shows that Christophersen and Stäglich should not have experienced the stench of industrial origin to any extent that they

²⁶⁹ DuBois, 218, 230, 232.

would recall thirty years later. Moreover, the trial at which the pervasive stench was a pervasive feature of witness testimony was the Farben trial, at which most of the Auschwitz related defense witnesses and almost all of the prosecution witnesses were people who either lived near or worked at the Farben plant. Thus, they did indeed experience a stench and testified correctly in this respect, adding only an erroneous interpretation of the stench.

Back to the ‘Gas Chambers’

The final subject in paragraph 7 is the gas chambers that, except for Höss’s early sealed up huts, are supposed to have been integrated into the crematory buildings. Reitlinger and Hilberg take different approaches to making this claim. Reitlinger interprets NO-4473, whose translation is presented above as it appears in the NMT volume, as evidence for a gas chamber in Crematory II. This is a result of mistranslation.

The crematories at Auschwitz are frequently referred to as “gas ovens” but this is hardly informative since, with the exception of electric crematories which enjoyed a brief existence during the Thirties, all modern crematories consist of “gas ovens,” a fuel-air mixture, which may be considered a “gas,” is introduced into the oven to start, control and finish the burning. The fuel used may be “gas,” town gas or some sort of liquefied gas is popular. Such a crematory is termed “gas-fired” on account of the use of gas as a fuel. Other types are “oil-fired” and “coke- (or coal-)fired,” but all are “gas ovens” because in all three cases it is a fuel-air mixture which is injected under pressure into the oven.²⁷⁰

The customary German word for the concept in question here is *Gaskammer*, but the word in NO-4473 which was translated “gas chamber” is *Vergasungskeller*, which Reitlinger also mistranslates as “gassing cellar.”²⁷¹ Now the word *Vergasung* has two meanings. The primary meaning (and the only one in a technical context) is gasification, carburetion or vaporization, *i.e.*, turning something into a gas, not applying a gas to something. A *Vergaser* is a carburetor and, while *Vergasung* always means gasification in a technical context, it usually means, specifically, carburetion in such a context.

There is also a secondary meaning of *Vergasung*, established by military usage in World War I: attacking an enemy with gas. Why the word *Vergasung* was used in this sense is not clear; it may be because the gases used in that war were really dusts and were generated by exploding some chemical into the atmosphere: *Vergasung*.

The translation “gassing cellar” is thus not absolutely incorrect; it is just over-hasty and presumptuous. A “gas oven” requires some sort of gasification

²⁷⁰ Polson, 137-146.

²⁷¹ Reitlinger, 158f. Editor’s remark: the English gerund suffix “-ing” can very well be translated using the German prefix “ver-”, hence Reitlinger’s is not wrong as such.

or carburetion. In the case of the gas-fired ovens of Utting and Rogers in 1932:²⁷²

“Burners set in the crown and sole of the furnace are fed by a mixture of air and gas under pressure; the mixture is regulated by fans, housed in a separate building. Separate control of both air and gas provides better regulation of the furnace temperature.”

That building is just a big carburetor. Oil-fired crematories are so similar in design that most gas-fired ovens can be easily adapted for use with oil.

The ovens at Birkenau seem to have been coke or coal-fired,²⁷³ and with this type, there is an extra stage of fuel processing due to the initially solid state of the fuel. The two most-common methods of producing fuel gases from coal or coke are, first, by passing air through a bed of burning coke to produce “coke oven gas,” and second, by passing steam through the coke to produce “water gas.”²⁷⁴ The first coke cremators employed what amounted to coke oven gas.²⁷⁵ Processes for generating such gases are termed *Vergasung* in German, as well as processes of mixing them with air. The coal-fired crematory ovens that W. H. Lawrence saw at the Lublin camp after its capture by the Russians employed equipment, including fans, very similar to that described in the above quotation. Lawrence, incidentally, termed a “gas chamber” what was obviously a steam bath.²⁷⁶

In any case, it is obvious that the crematories at Auschwitz required equipment for doing *Vergasung* in order to inject a fuel-air mixture into the ovens, and that the translation of NO-4473 should be revised, possibly to “gas generation cellar.” I have confirmed this interpretation of the *Vergasungskeller* with the technically competent sources in Germany. The reasons for installing such equipment in special separate rooms or even buildings are most probably the considerable noise that must be made by the fans and, in coal-fired ovens, the heat of the burning coal.

The primary meaning of the word *Vergasung* is of necessity applicable to document NO-4473. It is written in a technical context; it is a letter from the chief of the Auschwitz construction management to the head of the SS engineering group. It makes reference to a process, *Vergasung*, which is standard with all crematories, and the wording of the letter is such that it is implied that it would normally be peculiar to find bodies in the *Vergasungskeller*, because bodies are normally stored in what is correctly translated as the “cellar used as a mortuary.”

Document NO-4473 tends, in fact, like so many prosecution documents, to rejection of the prosecution’s claims when it is properly understood. We see

²⁷² Polson, 142.

²⁷³ 008-USSR; Central Commission, 89.

²⁷⁴ Johnson & Auth, 259-261.

²⁷⁵ Polson, 141.

²⁷⁶ *New York Times* (Aug. 30, 1944), 1.

that in Crematory II there were at least two cellars, a *Leichenkeller* and a *Vergasungskeller*, and that neither was a “gas chamber.”²⁷⁷

Now NO-4473 is included in the NMT volumes in a *selection* of prosecution evidence from Case 4 (trial of concentration camp administration). One must assume that the prosecution has selected well. Yet this is as close as it has gotten to offering the documentary evidence that “gas chambers” existed in the crematory buildings at Birkenau. The three “gas tight *Türme*” (towers) ordered from DAW in NO-4465²⁷⁸ are obviously irrelevant.

Hilberg takes a different and even less sound approach. He inexplicably passes over NO-4473 without dealing with the problem it raises; he even quotes from the document without quoting the phrase containing the word “*Vergasungskeller*.” He simply declares that the *Leichenkeller* in Crematories II and III and the *Badeanstalten* in Crematories IV and V were, in reality, gas chambers. Absolutely no evidence is offered for this; the documents cited by Hilberg at this point do not speak of gas chambers.²⁷⁹ The only “evidence” for interpreting the *Leichenkeller* and *Badeanstalten* in this manner is in the affidavits and testimony (June 27 and 28, 1947) in Case 4 of witness (not a defendant) Wolfgang Grosch, an engineer and Waffen-SS major, who “baptized” these as “gas chambers,” the existence of Zyklon at Auschwitz being obvious justification for such baptisms.²⁸⁰ However, Grosch was a very unsteady witness since in affidavits of February 20 and March 5, 1947, he claimed knowledge of the existence of gas chambers, and then on June 26, 1947, the day before he was to testify, he retracted all these statements during interrogation and denied any knowledge of gas chambers.²⁸¹ None of Grosch’s testimony is reproduced in the NMT volumes, and Hilberg does not cite his testimony or affidavits.

There is no reason to accept, and every reason to reject, the claims regarding the *Leichenkeller* and *Badeanstalten*. As for the *Badeanstalten*, we have observed that a shower for incoming inmates was standard procedure at all German camps, so there must have been showers at Birkenau. Now, according to Fig. 29, the “baths” or *Badeanstalten* associated with Crematories IV and V are near “filtration plants” and also near “Canada,” where the clothes of incoming inmates was stored.²⁸² The “steam bath” was no doubt for disinfesting clothes, either prior to storage or after being temporarily taken away from inmates.²⁸³ If it was a sauna for incoming inmates, the inmates would need a

²⁷⁷ Editor’s remark: This 1976 interpretation turned out to be wrong. See the author’s new interpretation in the Appendix, Supplement 5: *Vergasungskeller*.

²⁷⁸ NMT, vol. 5, 622f.

²⁷⁹ Hilberg (1961), 566.

²⁸⁰ Grosch’s testimony is supposed to be in the Case 4 transcript, 3565-3592, but these pages were missing in the transcript copy I consulted. Presumably he testified in agreement with his affidavit NO-2154.

²⁸¹ NO-2154 quoted in Rassinier (1962), 84ff, and also in Poliakov & Wulf (1955), 136. Grosch’s pre-court wavering is reported in the Ortmann memorandum attached to NO-4406.

²⁸² Central Commission, 41, 43; Naumann, 194, 254; German edition of Naumann, 540.

²⁸³ IMT, vol. 6, 211.

cold shower afterwards in any case. The people remove their clothing near “Canada,” and then shower. What could be simpler?

No reasonable considerations can make these gas chambers materialize. The claim that the shower baths, which are said to have been housed in the same buildings as some of the crematory ovens, were really gas chambers is just as unfounded as was the identical claim concerning the Dachau shower bath, which existed in the crematory building at that camp.

There is, incidentally, a small amount of doubt whether the shower baths were, indeed, in the same buildings as Crematories IV and V, because the camp plan given in the WRB report has the baths in a separate building. However, the point is of no importance.

This completes the analysis of the points raised in paragraph 7 of the Höss affidavit.

Why in English?

Final paragraph

This is a minor point. It seems strange that the Höss affidavit is in English. We are not aware of any evidence that Höss knew the English language but, in common with many Germans, he might have known something about it.

However, a prudent German, signing a document of this importance “voluntarily and without compulsion,” would not be satisfied with an ordinary foreign language ability; he would either have considered himself expert at English or he would have insisted upon a German translation to sign (a request that would necessarily have been honored). Höss was evidently not in a spirit to insist on anything.

There is no doubt that Höss hoped to buy his life by cooperating with the IMT prosecution, and it is most probable that a specific offer was made in this connection. However, Höss’s reward for his services was to be packed off to Poland about a month after his IMT testimony. In Poland he dutifully wrote out an “autobiography” for his captors, wherein he explained that he was just following orders in the exterminations. His reward on this occasion was final; he was “tried” and killed in April 1947. The “autobiography” was published in Polish translation in 1951 and in German and English in 1959.

The Role of Birkenau

Birkenau, of course, performed the normal functions of a German concentration camp; it quartered inmates for the principal or ultimate aim of exploiting their labor. Thus, when we refer to the “role” of Birkenau, we are referring to a

theory that Birkenau was the site of certain very special functions that bear particularly strongly on the matters we have been considering.

The theory, which I consider beyond dispute, is simply that Birkenau was designated to accommodate all persons who were in the non-worker category but were, for whatever reason, the responsibility of the Auschwitz SS administration. Thus, Birkenau was designated to receive the permanently or semi-permanently ill, the dying, the dead, the underage, the overage, those temporarily unassigned to employment, and those for whom Auschwitz served as a transit camp. These categories could have been received either from other camps (including the many small camps in the Kattowitz region) or from incoming transports. This theory is based on the following considerations.²⁸⁴

First, as has been noted, Birkenau was clearly the “principal” camp in terms of inmate accommodating functions. Auschwitz I was the “main” camp in an administrative sense, but it was a converted and expanded military barracks, while Birkenau had been designed from the beginning as a much larger camp intended for the specific needs of the SS operations in the area.

Second, it has been noted that people discharged from the Monowitz hospital as unfit for work were sent to Birkenau.

Third, family camps existed at Birkenau (the “gypsy” and “Theresienstadt” camps in Fig. 29). It has been seen that these people had been designated as being “in readiness for transport” during their stays of pre-specified limited duration, so that the obvious interpretation of these family camps is that they were transit camps, comparable to those that existed at Belsen and Westerbork. The destination of transport has been suggested, and will be discussed further in Chapter 7.

Fourth, it was only at Birkenau that unusually extensive facilities for disposal of the dead via cremation were constructed.

Fifth, it was quite normal for a very high proportion of Birkenau inmates to be unemployed. In the two years summer 1942 to summer 1944, as Reitlinger remarks, “only a fraction of the starved and ailing Birkenau population had been employed at all.” On April 5, 1944, 15,000 of the 36,000 Birkenau inmates were considered “unable to work,” while only about 3,000 of the 31,000 other prisoners of the Auschwitz area were considered in this category. A month later, two-thirds of the 18,000 inmates of the Birkenau male camp were classed as “immobile,” “unemployable,” and “unassigned,” and were quartered in sick and quarantine blocks.²⁸⁵

This makes it impossible, of course, to accept the assumption, so often expressed, that to be sick and unemployable and to be sent to Birkenau meant execution. This has been expressed in particular in connection with sick people being sent from Monowitz to Birkenau, the assumption being reinforced by the fact that such inmates’ clothing came back to Monowitz. The return of the

²⁸⁵ Reitlinger, 125; NO-021 in NMT, vol. 5, 385. See also Phillips, 729, or Appendix D herein.

clothing, of course, was due to their being transferred from the Farben to the SS budget.²⁸⁶

Sixth and last, there was an unusually high death rate at Birkenau, although there are some difficulties in estimating the numbers except at particular times. The first major relevant event is the typhus epidemic of the summer of 1942, which resulted in the closing of the Buna factory for two months starting around August 1. The major evidence of this is the WRB report,²⁸⁷ but there is confirming evidence. First, there certainly were typhus epidemics at Auschwitz.²⁸⁸ Second, the data presented by the Dutch Red Cross (Appendix C) shows that the average death rate at the Birkenau men's camp from July 16 to August 19, 1942, was about 186 per day, with the rates toward the end of the period noticeably higher than those toward the beginning. Third, there exists in Amsterdam a single volume of the Birkenau death book (also discussed in the Netherlands Red Cross Report).²⁸⁹ This volume contains death certificates for the five days September 28 to October 2, 1942. The number of deaths is 1,500, and the causes of death that are given are those typical of typhus epidemic conditions, although Reitlinger seems to consider such recorded causes as "weakness of the heart muscles" and others as "invented [...] fanciful diagnoses of internee doctors, who were trying to save their patients from the 'transport list' or the phenol syringe."²⁹⁰ In fact, such causes of death are typical with typhus; under the "Typhus Fever" listing in the *Encyclopedia Britannica* (eleventh edition) we read:

"Typhus fever may, however, prove fatal during any stage of its progress and in the early convalescence, either from sudden failure of the heart's action – a condition which is especially apt to arise – from the supervention of some nervous symptoms, such as meningitis or of deepening coma, or from some other complication, such as bronchitis. Further, a fatal result sometimes takes place before the crisis from sheer exhaustion, particularly in the case of those whose physical or nervous energies have been lowered by hard work, inadequate nourishment and sleep, or intemperance."

On account of the policy of sending sick people to Birkenau, it appears that the victims of the typhus epidemic got recorded as Birkenau deaths, regardless of where they had been working. The WRB report claims that there were fifteen to twenty thousand deaths at Auschwitz during the two or three months of the epidemic.²⁹¹ Despite the unreliability of the source, the claim seems consistent,

²⁸⁹ The death book is at the *Rijksinstituut voor Oorlogsdocumentatie*, and is discussed by the Netherlands Red Cross, vol. 1, 8-12. Editor's remark: See the *Sterbebücher von Auschwitz* (Auschwitz Death Books) as published by the Auschwitz Museum (Staatliches Museum... 1995); see also the analysis by Aynat (1998); Mattogno (2023a), Part 2: *Transports, Occupancy, Mortality*.

²⁹⁰ Reitlinger, 122f.

²⁹¹ US-WRB (1944), pt. 1, 32. Editor's remark: The typhus epidemic in fact raged at Auschwitz

at least in order of magnitude, with such other information as we have concerning this period at Auschwitz (although there is probably at least some exaggeration). It is also the case, as we shall see below, that the summer of 1942 was by far the worst at Auschwitz.

Incidentally, the “phenol syringe” which Reitlinger mentions comes up in so many places in the literature that it appears to have been real; mortally ill concentration camp inmates were sometimes killed by phenol injections into the heart.²⁹²

The fact of a very high death rate at Auschwitz during the summer of 1942 is, of course, at best only indirectly material to an “extermination” problem because these were recorded deaths from normal reasons, not exterminations carried out in attempted secrecy. They also have nothing to do with Jews as such, although some of the victims were Jews.

Reitlinger considers the high death rate at Auschwitz, and offers an estimate of 160 to 179 deaths per day as a normal rate. However, the data he employs is essentially that which applies to the summer of 1942, which was a particularly catastrophic period. In the connection with these high death rates, we should observe the fact that the extermination mythologists Reitlinger and Hilberg make much over such happenings at Auschwitz, although they recognize the distinction between high death rates and exterminations. It is therefore remarkable, indeed almost incredible, that they do not consider the possibility that the crematories existed on account of these high death rates. On the contrary, they both treat the crematories as having been provided primarily to serve in the extermination program.

In establishments that were supposed to be providing desperately needed labor, these high death rates were naturally intolerable, so in late 1942 a special campaign got under way to reduce the concentration camp death rate, and on December 28, 1942, Himmler ordered that the rate “be reduced at all costs.”²⁹³ On January 20, 1943, Glücks, in a circular letter to all concentration camp commanders, ordered that “every means must be used to lower the death rate.” On March 15, 1943, Pohl wrote Himmler that:²⁹⁴

“[...] the state of health [...] of the prisoners sent in by the administration of Justice is catastrophic. In all camps a loss of between at least 25-30 per cent is to be reckoned with [...] till now there were 10,191 prisoners [...] of which 7,587 were assigned to [...] Mauthausen-Gusen. From these the deaths totaled 3,853; 3,306 of them died in Mauthausen-Gusen. The reason [...] must presumably be that the many prisoners [...] who have been in prisons for years are suffering from physical debility owing to the

with varying intensity until late 1943, *i.e.* almost one and a half years, with a total of probably twice as many victims as given in the WRB report; see Mattogno (2023a), Part 2, esp. 188-193.

Table 6: Death cases in the concentration camps, July 1942 to June 1943

MONTH	INMATES	DEATHS	PERCENT	MONTH	INMATES	DEATHS	PERCENT
July	98,000	8,329	8.50	Jan	123,000	9,839	8.00
Aug.	115,000	12,217	10.62	Feb.	143,000	11,650	8.14
Sept.	110,000	11,206	10.19	March	154,200	12,112	7.85
Oct.	85,800	8,856	10.32	April	171,000	8,358	4.71
Nov.	83,500	8,095	9.69	May	203,000	5,700	2.80
Dec.	88,000	8,800	10.00	June	199,500	5,650	2.83

transfer to a different milieu [...] a great number of tuberculosis patients were also delivered.”

On April 10, 1943, Pohl requested Himmler’s approval of the draft of a letter to the Reich Minister of Justice. The letter, approved and presumably sent, points out that of 12,658 prisoners transferred to concentration camps, 5,935 had died by April 1. Pohl complained in the letter that these:

“[...] shockingly high mortality figures are due to the fact that the prisons transferring them have literally released inmates who were in the worst possible physical condition [and] that in spite of all medical efforts the [...] death of the prisoners cannot be retarded. [...] I do not wish to support a quarantine station in the concentration camps. [...]”

What seems involved here is inter-departmental rivalry or, at least, conflict of interest. The prisons of Germany no doubt had their own economic-productive aspects, and were not only reluctant to part with their more healthy prisoners but also eager to part with the more sickly ones.

We do not know whether or not Pohl managed to get more cooperation from the prison system. However, on September 30, 1943, he was able to report progress, due mainly to hygienic, nutritional, and procedural measures; he presented the Reichsführer-SS the following two tables with a promise that, allowing for the onset of the cold weather, the results achieved would be of a permanent nature.²⁹⁵

Thus, after more than a half year of a campaign to reduce the death rate in the camps, Auschwitz still had about 80 per day on the average. Because, as had been seen, almost all those “unable to work” were at Birkenau, it is certain that almost all of these deaths occurred there.

Auschwitz also seems to have received some rather bad selections of inmates from other concentration camps.²⁹⁶

The Netherlands Red Cross report on Auschwitz (vol. 2) also offers some data on the death rates at Auschwitz for 1942-1943. For the period October 30, 1942 to February 25, 1943, the death rate is specified as about 360 per week on the average, and about 185 per week for the period February 26 to July 1, 1943. It is also said that a total of 124 of the Dutch Jews who entered Birkenau in July-August 1942 (mentioned above) died in the period October 30, 1942 to July 1, 1943. However, their figures for total deaths seem somewhat low and

difficult to reconcile with the data presented above, so there may be some error or misunderstanding here.

It is perfectly obvious that these deaths, however deplorable and whatever the nature and location of the responsibility, had nothing to do with extermination or with Jews as such. From the point of view of the higher SS administration, they were “catastrophic,” and efforts were made to bring them under control. It is not at all remarkable that with such death rates, cremation and mortuary facilities anticipating worst period death rates of even hundreds per day existed at Auschwitz.

The Auschwitz death rate improved but slightly during the course of the war. During 1944, when the inmate population of the camp had expanded to 100,000 or more (probably on account of territorial losses in the east which forced evacuations of labor camps), the death rate was 350 to 500 per week at Birkenau (which, as we have seen, accounted for almost the entire Auschwitz death rate).²⁹⁷

²⁹⁷ Phillips, 729, or Appendix D herein. Case 6 transcript, 14326. Editor’s note: For a more-recent detailed analysis of the Auschwitz Camp’s mortality during its entire existence, see

It is a tragic fact that, even in modern times, “camps” established during wartime have amounted to death traps for many sent to them. The basic causes for such conditions have been similar: people thrown together chaotically in hastily organized camps, with inadequate sanitary measures and an uncertain situation as regards food and other supplies. Thus, during the American Civil War, the POW camps in the North such as Rock Island and Camp Douglas experienced death rates of 2%-4% per month. These figures were even exceeded in camps in the south such as Florence, where diarrhea and scurvy caused 20 to 50 deaths per day, in a prisoner population of about 12,000. Conditions at Andersonville were even worse, and 13,000 of the 50,000 Union POWs who were interned there perished.²⁹⁸

During the 1899-1902 Boer War in South Africa, about 120,000 non-combatant white Boers and 75,000 black Africans were placed in British concentration camps. For about a year, the Boer mortality rate ranged from 120 to 340 deaths per thousand per year (1.1% to 3.4% per month) while the Boer infant mortality rate, due chiefly to epidemics of measles, was as high as 600 per thousand per year (7.35% per month). About 20,000 Boer women and children died in these camps.²⁹⁹ During World War I, the Germans mixed Russian POWs with those of other nationalities, resulting in typhus epidemics in their POW camps; conditions were strikingly similar to those experienced in the World War II concentration camps.³⁰⁰ We have seen that Russians were used as labor at the concentration camps, especially at Auschwitz, so they were no doubt one of the principal sources of typhus. Because they were not considered regular concentration camp inmates, it is not clear whether or not they were included in the camp death figures which were reviewed above. However, it is certain that they contributed to the overall death rates at the camps, and that their bodies were disposed of in the same crematories, but numbers are not available.

A ridiculous feature of all this, as it strikes the student of the subject, appears in NMT volume 5, which summarizes Case 4, “U.S. vs. Pohl.” In section B, “The Concentration Camp System,” we are presented with documents which show that the camps experienced remarkably high death rates. These have just been summarized above. Then in section E, “The Extermination Program,” we are presented with documents showing that the Germans were building crematories at these camps at the time of the high death rates. Apparently, it is believed that nobody would actually read one of these volumes, or maybe the compilers of the volumes did not read them!

Taking into account the different death rates, we can see that the number of muffles at Auschwitz was completely comparable to those which existed at camps where there were no exterminations. In 1942, crematories were constructed at Dachau and at Sachsenhausen; each contained four muffles. At Da-

Mattogno (2023a), Part 2, 163-211.

²⁹⁹ Amery, vol. 5, 252f., 601; vol. 6, 24f.

³⁰⁰ *Encyclopedia Britannica*, 12th ed., vol. 32 (third volume supplementing 11th ed.), 157.

chau, a crematory consisting of two muffles had existed prior to 1942, and the older crematory continued to be used after 1942. It is most likely that the same situation with respect to an earlier crematory held at Sachsenhausen. At Buchenwald, the pre-war cremation facilities were those, which existed in the nearby towns of Weimar and Jena. After the war started, crematories were constructed at the camp, and by the end of 1941, Buchenwald had a two triple-muffle oven crematory. It appears that the Weimar crematory continued to be used until the end of the war.³⁰¹ It is also possible that concentration camp crematories, whether at Auschwitz, Dachau, or elsewhere, were used to dispose of the bodies of people who had nothing to do with the camps (e.g. Russian POWs).

This, then, is our view of the “death camp” aspect of the Nazi concentration camps. It is a view which does not harmonize with those of Christophersen and of Stäglich, who saw no high death rates, and are not convinced that there existed extensive cremation facilities at Auschwitz. Our view is based on the relevant prosecution documents and comparable material, and their views are based on their observations at Auschwitz in 1944. It may seem that their observations are more to be trusted than the documentary material, but I believe that a careful consideration of the matter resolves the point in favor of our theory, while not denying their observations.

It is true that there exists a possibility of forged documents; indeed, it is more than a possibility. We shall see that there was considerable forgery of documents at Nuremberg. However, it does not appear that the documents dealing with deaths in the camps and with the constructions of crematories were forged, for the simple reason that there is absolutely nothing about extermination in them, as the reader can verify by consulting the “selections” of documents in NMT volume 5. They speak of a very high death rate, at certain times, in penal institutions (concentration camps), which a relatively small country, fighting against overwhelming odds for its existence, was attempting to exploit for labor. That high death rates might have been one consequence is perfectly plausible.

While the documents we have reviewed say nothing of extermination, they are nevertheless somewhat unsatisfactory in the sense that one does not get a full picture from them in regard to the causes of the death rates and the specific victims involved. The unhealthy prisoners contributed by the Ministry of Justice do not explain everything. The picture must be guessed and inferred, so here we will offer our impressions.

German concentration camps during the Thirties had only punitive and security functions, and no economic function. After the war with Russia got started, the camps underwent rapid expansion, and also assumed their economic roles. Thus in 1942, there were three things happening in the camps:

- a. the rapid expansion was accompanied by the general chaos, unanticipated problems, and organizational difficulties which are common when large

³⁰¹ Komitee der Antifaschistischen..., 86; M.J. Smith, 95; NO-3863 and NO-3860 in NMT, vol. 5, 613-616; Internationales Buchenwald-Komitee, 206f. and Fig. 55; Musiol, Figs. 88-91.

- new enterprises are put into operation; this is particularly true of Auschwitz, which was a new camp in the process of rapidly expanding into the largest of all camps;
- b. the continued German victories and advances in Russia resulted in hordes of Russian POWs, some of whom were absorbed by the camps;
 - c. unhealthy prisoners were contributed by the Ministry of Justice.

There were probably other problems, but these three factors seem to me sufficient to explain a high death rate in late 1942 – early 1943.

By late 1943 the death rate, while still deplorably high, was relatively under control as compared to the previous year, and remained under control until the collapse at the end of the war. The statement of the Birkenau camp commander (Appendix D) indicates that at Auschwitz, by 1944, the deaths occurred primarily among ordinary criminals who had been transferred out of prisons. I have seen no documents, comparable to those we have reviewed, which deal with high death rates for late 1943 or any later period.

Now we are in a position to consider the observations of Christophersen and of Stäglich, which included neither crematories nor a high death rate at Auschwitz. Very simple considerations support their observations. First, deaths are naturally not things that the Auschwitz camp administration would have advertised; both the deaths and the associated cremations would naturally have been concealed to the extent that such concealment was possible. Thus in mid-1943, Pohl complained to concentration camp commanders that, too commonly, crematory buildings were situated in excessively public locations where “all kinds of people” could “gaze” at them. In response to Pohl’s complaint, Höss had a belt of trees planted around Crematories II and III. Moreover, it was the policy to carry corpses to the crematory only in the evening.³⁰² That Christophersen and Stäglich, who had only slight contacts with Birkenau, were unaware of the existence of a high death rate or of large crematories, is perfectly understandable.

The role that Birkenau plays in the hoax is very simple. Like any large industrial operation, Auschwitz was organized in a systematic manner thought to be of the greatest efficiency. The unemployed were quartered at Birkenau. Thus, the transit camps, to be discussed again in Chapter 7, were at Birkenau. This explains the existence of the gypsy and Jewish camps there. Also, the sick and the very sick and the dying and, perhaps, the dead were sent to Birkenau, and such concentration of the ill naturally meant that Birkenau was a “death camp,” complete with mortuary and cremation facilities, if one chooses to describe things thus. Indeed, of the order of one-half of all of the deaths in the entire German concentration camp system for 1942-1944 occurred at Birkenau. While the whole thing looks quite foolish when examined closely, as we have done in these chapters, the propaganda inventors obviously made a very rational choice in deciding to claim Birkenau as an extermination camp. The death rate in the concentration camp system was very high; it was near its

³⁰² Documents NO-1242 and NO-4463, cited by Hilberg (1961), 566; Phillips, 731 or Appendix D herein.

highest at Auschwitz, which was the largest German concentration camp, and the Auschwitz deaths were concentrated at Birkenau.

Summary for Auschwitz

In the introduction to this chapter, it was promised that the Auschwitz extermination legend would be shown to possess the basic trademark of the great hoax: the need for a dual interpretation of facts. This is true in every significant respect conceivable:

1. Zyklon was employed for disinfestation and also allegedly for exterminations.
2. The “selections” were necessary by the nature of the operations at Auschwitz and also allegedly for exterminations.
3. It would not have been inaccurate (although perhaps somewhat misleading) to call Birkenau a “death camp,” especially at certain times (and especially when the Baruch Committee was in existence and immediately thereafter); it was also allegedly an “extermination camp.”
4. Disrobing – showering procedures were followed for delousing and also allegedly for exterminations.
5. Conventional crematories existed for accommodating both the death camp role and alleged extermination camp role of Birkenau.
6. Some *Leichenkeller* were mortuaries while it is alleged that others were, in reality, “gas chambers.” The two types of *Leichenkeller* were in proximate locations at Birkenau.
7. Some *Badeanstalten* were bath establishments while it is alleged that others were, in reality, “gas chambers.” The two types of *Badeanstalten* were in proximate locations at Birkenau.
8. The stench that the people of the area experienced was due not only to the hydrogenation and other chemical processes at Auschwitz but also allegedly to the cremations.

Actually, in view of the points made in the analysis, it is only charity to say that there are proposed dual interpretation of fact in connection with these eight points. The proposed interpretations of extermination are obvious lies, and the last, concerning the stench, is the “excess fact”; the authors of the hoax should never have used the fact of the stench in their story.

The facts in contradiction to the claims, the inconsistencies and the implausibilities have been reviewed. Himmler gives his orders directly to Höss, but leaves the means to the ingenuity of Höss. The interview emphatically took place in the summer of 1941; on the other hand it must have taken place in the summer of 1942, so Höss started improvising half a year after the plans for the four crematories which were used in the exterminations were formulated. The crematories were not left to the ingenuity of Höss. Or something. Jewish families with children reside for months at Birkenau, their quarters having been

previously disinfested with the same chemical product they are supposed to have been killed with on entering, but they will be killed with it later. Or something.

The analysis of Auschwitz is not complete. Although it may seem that the promised “crushing blow” has been delivered, the material of this chapter was not what was being referred to when that expression was used in the introduction to the chapter. Our analysis has, thus far, focused on happenings at Auschwitz, and has not considered the fate of any specific nationality group of Jews at Auschwitz. For the sake of thoroughness, this must be done, and we can think of no better case for emphasis than that which the bearers of the legend have selected themselves: the Hungarian Jews, whose fate or whatever it should be called will be examined in the next chapter, with special regard for the Auschwitz claims.

Chapter 5: The Hungarian Jews

The International Red Cross

Because the Germans and their allies allowed the Red Cross, both the International Committee (ICRC) and the various national societies, a not negligible liberty to operate in Axis-controlled Europe, it developed that the ICRC was able to report a great deal concerning the European Jews. The reports of such a neutrally situated organization are naturally of great importance in connection with our problem.

We say “neutrally situated” rather than “neutral” because there is no such thing as strict political neutrality; every organization is subject to political pressures. It is a question of degree.

Two ICRC publications are of major interest to us. The first is *Documents sur l'activité du CICR en faveur des civils détenus dans les camps de concentration en Allemagne (1939-1945)*, Geneva, 1947. This is a collection of document reprints, the documents being correspondence between the ICRC and various governments and Red Cross societies, and also reports of ICRC delegates to the ICRC itself. Commentary sufficient only to interpret the documents is provided by the Red Cross. The publication is invaluable and has been cited several times in this book. Another 1947 publication was *Inter Arma Caritas*, but this was primarily a public relations effort.

The second important publication is the three volume *Report of the International Committee of the Red Cross on its Activities During the Second World War*, Geneva, 1948. This has the form of a historical report; quotations from documents appear only occasionally. Below is reproduced in full an excerpt from volume 1, namely pages 641-657. I believe that some political pressures are evident in the excerpt of the *Report*, but it will not be necessary for the reader to share my notions regarding the specific manifestations of these pressures in the excerpt in order to accept the major conclusion that I draw from the excerpt. However, some obvious urgent questions will arise during the first reading, and all that can be said here is that two points should be kept in mind.

First, this *Report* was published in 1948, at a time when the authors could not have failed, especially in view of the politically sensitive nature of the subject matter, to be thoroughly familiar with the Allied claims, exhaustively aired at the war crimes trials and in the press, regarding the fate of the European Jews. We expect no careless remarks here. Second, we are not consulting the ICRC as a general sort of authority. That is to say, we are interested only in the

reports that fall within the ICRC area of competence. It had delegations in various European countries that were heavily involved in Jewish affairs, and what we want to know is what, insofar as the ICRC was able to observe, happened to these Jews. Our emphasis, in fact, is on the Jews of Slovakia (Eastern Czechoslovakia), Croatia (Northern Yugoslavia) and Hungary. In a way, our interest is even more narrow; we are interested in Hungary, but the other two lands are contiguous, and to the extent that the Germans controlled things, there was no reason for major differences in Jewish policy.

From a numerical point of view, it might seem that Poland should be selected as the key country in the problem. However, the fact remains that Hungary is the key because the creators of the legend chose to emphasize Hungary and not Poland in offering evidence for their claims. They offer no evidence for exterminations of Polish Jews, apart from witness testimony and the general extermination camp claims, which the analysis has already demolished. By a happy circumstance, it is possible to consult the reports of the ICRC to learn what happened in Hungary, but this is not the case with Poland. The reason for this is that the Germans did not permit the ICRC to involve itself in Jewish affairs in countries in which they considered themselves sovereign. However, the allies of Germany that were considered independent states admitted the ICRC into Jewish affairs. Thus develops the central importance of Hungary in the examination of the legend.

There are other respects in which the *Report* excerpt is of the greatest importance in our study, but this point is more effectively made in Chapters 6 and 7 (pp. 259, 276, 284).

The *Report* excerpt is reproduced in full here because it is written in such a way that it is difficult to cite on specific points without risking the possibility of being accused of distorting meaning. This will be clearer after the reading:

“VI. Special Categories of Civilians

(A). JEWS

Under National Socialism the Jews had become in truth outcasts, condemned by rigid racial legislation to suffer tyranny, persecution and systematic extermination. No kind of protection shielded them; being neither PW nor civilian internees, they formed a separate category, without the benefit of any Convention. The supervision which the ICRC was empowered to exercise in favour of prisoners and internees did not apply to them. In most cases, they were, in fact, nationals of the State which held them in its power and which, secure in its supreme authority, allowed no intervention in their behalf. These unfortunate citizens shared the same fate as political deportees, were deprived of civil rights, were given less favoured treatment than enemy nationals, who at least had the benefit of a statute. They were penned into concentration camps and ghettos, recruited for forced labour, subjected to grave brutalities and sent to death camps, without anyone being allowed to intervene in those matters which Germany and her allies considered to be exclusively within the bounds of their home policy.

It should be recalled, however, that in Italy the measures taken against the Jews were incomparably less harsh, and that in the countries under the direct influence of Germany, their situation was usually less tragic than in Germany itself.

The Committee could not dissociate themselves from these victims, on whose behalf it received the most insistent appeals, but for whom the means of action seemed especially limited, since in the absence of any basis in law, its activities depended to a very great extent upon the good will of the belligerent States.

The Committee had in fact, through the intermediary of the German Red Cross, asked for information concerning civilian deportees 'without distinction of race or religion,' which was plainly refused in the following terms: 'The responsible authorities decline to give any information concerning non-Aryan deportees.' Thus, enquiries as a matter of principle concerning the Jews led to no result, and continual protests would have been resented by the authorities concerned and might have been detrimental both to the Jews themselves and to the whole field of the Committee's activities. In consequence, the Committee, while avoiding useless protest, did its utmost to help the Jews by practical means, and its delegates abroad were instructed on these lines. This policy was proved by the results obtained.

Germany. — Even when the German Wehrmacht was winning, the Committee's activities in behalf of the Jews met with almost insupportable difficulties. Towards the end of 1943, however, the German authorities allowed the Committee to send relief parcels to detainees in concentration camps, many of them Jews, whose names and addresses might be known to it. The Committee was able to collect a few dozen names, and by these slender means the system of individual and then collective relief for political detainees was started, an account of which is given elsewhere in this Report. Each receipt returned bore several names, and these were added to the list of addresses: thus the receipts often gave the first news of missing persons. By the end of the war, the Committee's card index for political detainees (Jewish and non-Jewish) contained over 105,000 names.

During the last year of the War, the Committee's delegates were able to visit the camp of Theresienstadt (Terezin), which was exclusively used for Jews, and was governed by special conditions. From information gathered by the Committee, this camp had been started as an experiment by certain leaders of the Reich, who were apparently less hostile to the Jews than those responsible for the racial policy of the German government. These men wished to give to Jews the means of setting up a communal life in a town under their own administration and possessing almost complete autonomy. On several occasions, the Committee's delegates were granted authority to visit Theresienstadt, but owing to difficulties raised by the local authorities, the first visit only took place in June 1944. The Jewish elder in charge informed the delegate, in the presence of a representative of the

German authorities, that thirty-five thousand Jews resided in the town and that living conditions were bearable. In view of the doubt expressed by the heads of various Jewish organizations as to the accuracy of this statement, the Committee requested the German government to allow its delegates to make a second visit. After laborious negotiations, much delayed on the German side, two delegates were able to visit the camp on April 6, 1945. They confirmed the favourable impression gained on the first visit, but ascertained that the camp strength now amounted only to 20,000 internees, including 1,100 Hungarians, 11,050 Slovaks, 800 Dutch, 290 Danes, 8000 Germans, 8000 Czechs and 760 stateless persons. They were therefore anxious to know if Theresienstadt was being used as a transit camp and asked when the last departures for the East had taken place. The head of the Security Police of the Protectorate stated that the last transfers to Auschwitz had occurred six months previously, and had comprised 10,000 Jews, to be employed on camp administration and enlargement. This high official assured the delegates that no Jews would be deported from Theresienstadt in future.

Whereas other camps exclusively reserved for Jews were not open to inspections for humanitarian purposes until the end, the Committee's activities were at least effective in several concentration camps containing a minority proportion of Jews. During the final months, the Committee, in urgent circumstances, took on a task of the greatest importance by visiting and giving aid to these internees, providing food, preventing last-minute evacuations as well as summary executions, and even taking charge during the critical hours, sometimes days, which passed between the retreat of the German forces and the arrival of the Allies from the West or the East.

A more detailed account of these various activities is given in the chapters on Political Detainees in this volume and in Vol. III, as well as in special publication entitled Documents sur l'activité du CICR en faveur des civils détenus dans les camps de concentration en Allemagne, 1939-1945.

Less is known of the part played by the Committee in countries whose governments were subject, in varying degrees, to German influence and where special laws concerning Jews had been enacted, similar to those under German legislation.

Through its delegates, particularly in Budapest, Bucharest, Bratislava, Zagreb and Belgrade, the Committee was able to make the best possible use of its moral authority and the well disposed attitude shown to it by a few non-German authorities, who had more or less freedom of action, but who were not so relentlessly bent on carrying out a racial policy as the German government. In its capacity as a neutral intermediary, the Committee was in a position to transfer and distribute in the form of relief supplies over twenty million Swiss francs collected by Jewish welfare organizations throughout the world, in particular by the American Joint Distribution Committee of New York. Without the help of the ICRC, this concerted effort

made by a whole community would have doubtless been vain, as no Jewish organization was allowed to act in countries under German control. A detailed account of this important relief scheme will be found in Vol. III.

The efforts of the Committee were not limited to the activities described above; as time went on, it eventually became in truth a 'Protecting Power' for the Jews, by interceding with governments in their behalf and in some cases exercising a genuine right of protection, by obtaining the benefit of extraterritoriality for hospitals, dispensaries and relief organizations, and even by acting as arbitrators in the settlement of disputes. This was its task, especially in Rumania and Hungary, for over a year during the last phase of the war in 1944 and 1945. In countries where the efforts of the Committee were less considerable, they were none the less of great benefit to the Jews. These may be described in a brief summary before reverting to the Committee's activities in Hungary and Rumania.

France. – In November 1940, the Committee obtained permission from the authorities for one of its members to visit camps in the South, where a certain number of Jews were amongst the civilian internees. The camp at Gurs, in particular, contained six thousand Jews from the Bavarian Palatinate. The visit gave a clear idea of the situation inside the camp and the urgent necessity for relief; appropriate steps were taken in the internees' behalf.

The Jews from Poland who, whilst in France, had obtained entrance-permits to the United States were held to be American citizens by the German occupying authorities, who further agreed to recognize the validity of about three thousand passports issued to Jews by the consulates of South American countries. The persons concerned were lodged in camps reserved for Americans at Vittel. In 1942, when Germany and the States in South America began negotiations for the exchange of internees, it was found that the majority of the internees at Vittel held accommodation passports and consequently were in danger of being deported. The ICRC interceded in their behalf through the Berlin Delegation and succeeded in arranging for them to remain at Vittel, only a few being deported.

Greece. – Immediately after the German occupation, the Committee was called upon to deal with the case of 55,000 Jews in Salonica, who were the victims of racial legislation. In July 1942, all men between eighteen and forty-five were registered, and the majority were enrolled in labour detachments. The delegation furnished them with medical and toilet supplies. In May 1943, these workers were sent to Germany, and the delegation in that country insisted on the right to give them food-parcels. This course led to difficulties with the German authorities, who in their resentment demanded that one of the delegates should be replaced.

Slovakia. – Many thousands of Jews had been forced to leave the country and enlist in what was called 'labour service,' but which in fact seems to have led the greater number to the extermination camps. At the same time, a large proportion of the Jewish minority had permission to stay in

the country, and at certain periods Slovakia was even looked upon as a comparative haven of refuge for Jews, especially for those coming from Poland. Those who remained in Slovakia seemed to have been in comparative safety until the end of August 1944, when a rising against the German forces took place. While it is true that the law of May 15, 1942, had brought about the internment of several thousand Jews, these people were held in camps where the conditions of food and lodging were tolerable, and where internees were allowed to do paid work on terms almost equal to those of the free labour market. In 1944, the Jewish community had managed to secure an almost complete suspension of forced immigration towards the territories under German control.

At the time of the rising, the interned Jews escaped from the camps; some returned home, and others took to the hills. The measures of repression which followed fell on the Jewish population as a whole. The German military authorities summoned the Slovak government to make wholesale arrests for the purpose of deporting the Jews to Germany. The order dated November 16, 1944, laid down that all Jews should be mustered in the camp of Sereď, and to that end, that Jews living in the capital should previously be assembled, on November 20, in the Town Hall of Bratislava. On the same day, the delegate went to the Town hall and noted that only about fifty Jews had obeyed the summons. The rest had gone into hiding, as the Slovak authorities had foreseen, either by fleeing to the country or concealing themselves in the town in the so-called 'bunkers.' In his concern over this situation, the President of the ICRC wrote to the Head of the Slovak government asking him to put an end to the deportations. Monsignor Tiso received this letter on January 2, 1945, and answered at length on January 10. He recalled the fact that up to that time the Jews had been spared, adding however that in view of the rising, his government had been forced to yield to the pressure which had been brought to bear upon them. He concluded by saying: 'To sum up, it remains wholly true that in the solution of the Jewish question, we have endeavoured to remain faithful to humane principles to the full extent of our powers.' Official aid to the fugitives in the 'bunkers' was out of the question; the delegation in Bratislava, however, with the help of the Slovak Red Cross and, in the provinces with that of the Catholic Church, succeeded in providing them with funds, which were handed to their spokesmen, and which allowed them to support life during the last months of the war.

The Committee's representative was unable to secure permission to visit the camp of Sereď. He was, however, allowed to enter the camp of Marienka, where Jews of alien nationality were interned.

Croatia. – From May 1943 to the end of 1945, the delegation gave aid to the Jewish community of Zagreb, to whom on behalf of the Joint Committee of New York, it paid out an average amount of 20,000 Swiss francs monthly. It also made available to it considerable quantities of food supplies, clothing and medical stores.

In October 1944, the German authorities, on the pattern of measures taken in the neighbouring countries, imprisoned the Jews of Zagreb, and seized their food stores. The delegation at once made representations to the Croat government, and secured the return of these stores.

Hungary. – As in Slovakia, the Jews were relatively spared, in so far as the local government retained a certain freedom of action. But when German pressure was reasserted, from March 1944 onwards, the position of the Jews became critical. The replacement in October 1944, of Horthy's government by one in bondage to Germany, provoked a violent crisis; executions, robberies, deportations, forced labour, imprisonments – such was the lot of the Jewish population, which suffered cruelly and lost many killed, especially in the provinces. It was at this point that the Committee, to alleviate these sufferings, took action with vigour and authority. At the same time the aid prompted by the King of Sweden, was given with considerable courage and success by the Swedish Legation in Budapest, helped by some members of the Swedish Red Cross.

Until March 1944, Jews who had the privilege of visas for Palestine were free to leave Hungary. On March 18, 1944, Hitler summoned the Regent, Admiral Horthy, to his headquarters. He expressed his indignation that 'in Hungary very nearly a million Jews were able to live in freedom and without restrictions.' Even before the Regent had returned to Budapest, German troops had begun the occupation of Hungary in order to prevent her from abandoning her alliance with Germany. This occupation forced upon the Head of the Hungarian State a new government that was far more dependent on German authority than the one preceding it. Emigration of the Jews was straightway suspended, and the persecutions began.

This was a matter of the gravest concern to the ICRC. The President appealed to the Regent, Admiral Horthy: 'The matters brought to our knowledge seem to us,' he wrote on July 5, 1944, 'so utterly contrary to the chivalrous traditions of the great Hungarian people that it is difficult for us to credit even a tithe of the information we are receiving. In the name of the ICRC, I venture to beg Your Highness to give instructions enabling us to reply to these rumours and accusations.' The Regent replied, on August 12: 'It is unfortunately not within my power to prevent inhuman acts which no one condemns more severely than my people, whose thoughts and feelings are chivalrous. I have instructed the Hungarian government to take up the settlement of the Jewish question in Budapest. It is to be hoped that this statement will not give rise to serious complications.'

In the spirit of this reply, the Hungarian authorities allowed the delegate in Budapest to affix shields on the camps and internment buildings for the Jews, conferring on them the protection of the Red Cross. If the use of these shields (hardly compatible, moreover, with the precise terms of the Geneva Convention) was no more extensive, this was due to the fact that

the Jewish Senate of Budapest was of the opinion that the measure would doubtless lose its effectiveness if generally applied.

The Hungarian government, furthermore, showed themselves willing to favour a resumption of Jewish emigration. The Committee got in touch with the British and United States governments as a matter of extreme urgency and, during August, obtained a joint statement from these two governments declaring their desire to give support by every means to the emigration of Jews from Hungary.

To this end, the Committee was requested to transmit the following message to Budapest from the United States government: 'The United States government has been advised by the ICRC of the Hungarian government's willingness to permit certain categories of refugees to emigrate from Hungary. [...] The Government of the United States, taking into account the humanitarian considerations involved as regards the Jews in Hungary, now specifically repeats its assurance that arrangements will be made by it for the care of all Jews who in the present circumstances are allowed to leave Hungary and who reach the territory of the United Nations or neutral countries, and that it will find for such people temporary havens of refuge where they may live in safety. The governments of neutral countries have been advised of these assurances and have been requested to permit the entry into the territory of Jews from Hungary who may reach their frontiers.'

On October 8, the Hungarian authorities, in conformity with the undertaking given to the Committee, announced the final suspension of deportations and made known that the Kistarcea Camp for Jewish intellectuals, doctors and engineers, had been broken up and the internees released.

The hope raised by this statement was short-lived. A few days later the full tide of the great tribulations of the Hungarian Jews was to set in. In view of the setbacks of the German Army, Admiral Horthy had decided to sever his country's connection with Germany. On October 15, he asked the Allied Powers for an armistice for Hungary. This proclamation had an immense effect amongst the Jews, who were ardent in their demonstrations against the occupying Power. Although the German Army was in retreat both in Eastern and Western Europe, it had still a firm foothold in Hungary. The Regent failed in his plan and was arrested. Hungarian supporters of the Germans seized power and set about a repression, increasing in severity as the fighting zone came nearer, placing Budapest in a state of siege. It is alleged that shots were fired from Jewish houses on the German troops; however that may be, repression was centered on the Jews. It was immediately decided to remove them from Budapest and to confiscate their property. Sixty thousand Jews fit for work were to be sent to Germany, on foot, in parties of one thousand, by way of Vienna. Moreover, among the able-bodied, men between sixteen and sixty, and women between fourteen and forty were commandeered for forced labour in building fortifications in Hungary. The rest of the Jewish population, including the disabled and

sick, was confined in four or five ghettos near Budapest. The only Jews to escape evacuation were those in possession of passports with visas for Palestine, Sweden, Switzerland, Portugal or Spain.

These measures were accompanied, at the outset, by brutalities and thefts against which the delegate immediately protested. The Ministry of the Interior, giving heed to this action, issued a decree forbidding pillage as from October 20. Meanwhile, the delegation was giving refuge to the members of the Jewish Senate of Budapest. Since their position was apparently threatened, the delegate renewed his appeals to the German authorities, as to the Hungarian government and on October 29, the wireless announced that the ICRC buildings were granted extraterritoriality, similar to that of the Legations.

His position thus strengthened, the delegate devoted himself with all the more assurance to the relief work he had courageously undertaken in behalf of the Jews. 'It is hard,' he wrote, 'to imagine the difficulty I had in holding out against a gang in whose hands the power lay, and at a time when disorder, murder and aggression were the order of the day, to compel it still to show some restraint and to observe the respect due to the Red Cross emblem [...]'

The fate of children whose parents had been deported to the labour camps was especially tragic. The delegate succeeded, with the help of the 'Jo Pasztor' organization, in setting up some twenty homes in which these children, accompanied in some cases by their mothers, could be accommodated. The hospital staff consisted of trained nurses and of Jews, whose employment in these homes ensured them a certificate of protection similar to those which the delegate issued to his fellow workers.

The Committee's representatives also opened soup-kitchens, each able to provide about a hundred hot meals a day. Reception and accommodation centres were set up, as well as hospitals with children's and maternity wards, and a first aid station open to the public 'without distinction of race or creed.' Furthermore, the delegate issued thirty thousand letters of protection, which although without any legal basis, were respected by the authorities and exempted their holders from compulsory labour.

In November, one hundred thousand Jews poured into Budapest from the provinces. The government decided to shut them up in a ghetto, and with them the Jews who had remained in Budapest, in particular the children sheltered in the Red Cross homes. 'I considered that my main task,' wrote the delegate, 'lay in ensuring that this ghetto life was at least as bearable as possible. I had incredible difficulty in obtaining from the Hungarian Nazis, in the course of daily bargaining, conditions and concession which would ensure to some degree the means to exist for those in the ghetto. Continual interviews took place with the Jewish Senate on the one hand, and with the town administration on the other, to ensure at least minimum food supplies for the ghetto at a time when all traffic had stopped, owing to the constant bombing, and provisioning was becoming more and more dif-

ficult. The delegate secured that the Jews' rations should be fixed at 920 calories, i.e. two thirds of the minimum Hungarian prison fare. Later on it was possible to make a slight increase of this figure, thanks to the issue of relief supplies.

In spite of the delegate's efforts, the children transferred to the ghetto had been put sixty in a room in premises which it had been impossible either to clean or to disinfect. Pleading the danger of epidemics, he succeeded in getting the children inspected by a committee who had authority to make some decision on their situation. This health inspection allowed 500 of the 800 children examined to be sent back to the homes from which they had been removed, and for 300 to be placed in hospitals. The other children did not leave the ghetto, but were taken care of there by relatives or friends. Furthermore, the Delegation sent into the ghetto, with permission of the government, five persons instructed to furnish regular and detailed reports on each child's need of food and clothing. Finally, on the initiative of the delegate, one thousand orphans selected 'without distinction of race or religion' were assembled in the Abbey of Panonalma, a Benedictine monastery placed at the delegate's disposal by the Bishop of Gyor. This refuge, under the protection of the Red Cross, was respected by the German and Hungarian troops in retreat, and also by the Soviet Army.

The devotion and generosity of the Bishop of Gyor were a fruitful help to the delegate in the relief work he had undertaken. His task was to improve the food and shelter of the convoys of Jews who were being deported to labour camps in Germany and compelled to do stages of twenty-five to thirty kilometres a day on foot. The Bishop organized a relief centre en route, which he financed and which was administered by representatives of the Committee. It gave shelter from bad weather, for a few hours at least, to thousands of Jews during their terrible exodus. The 'transport groups' of the delegation issued food to them on the road, paid the peasants to carry the weakest, fifteen to twenty at a time, in their carts, gave medical attention to the sick and dispensed medical supplies.

On November 12, a new threat hung over the hospitals protected by the Red Cross emblem, which the police had searched with an order to turn out the Jews. The delegate, on the strength of the authority he had been granted, protested to the government. As a result, the police authorities were instructed not to proceed with the evictions from the hospitals.

It must be apparent what difficulties and dangers were encountered at every turn by the Committee's representatives in a town subject to the most violent bombardments. They were supported in their courageous work by the untiring devotion to duty of the members of the Jewish Senate, and by the equally generous activity of the representatives of the two main protecting Powers, Switzerland and Sweden.

As soon as Budapest was liberated, the delegate and the local Jewish organizations established, with the funds of the New York Joint Committee stocks of foodstuffs and of the most necessary medical supplies. The Rus-

sian military authorities had ordered all foreigners to leave Budapest. When our delegate had to go, a Hungarian minister paid him the tribute of stating that he had, in a time of historic crisis, succeeded in making the capital a 'protectorate of Geneva.'

Rumania. — The delegate's part was a very important one, owing to the opportunities there were in that country for the purchase of foodstuffs. Financial aid and relief in kind could be sent from Bucharest to Poland and neighbouring countries. The Committee came to an agreement concerning relief in Rumania itself with the National Red Cross there, to whom our delegate handed funds for the purchase of goods. It should be emphasized that wealthy Rumanian Jews contributed in large measure towards assisting their co-religionists in need. From 1943, the Committee's work in Rumania was made easier by the fact that the delegate had been able to inspire the Rumanian government with trust.

During the period in September 1940, when the 'Iron Guard,' supported by the Gestapo and the German SS, had seized power, the Jews had been subjected to persecution and deportation to death camps. Later, under the dictatorship of Marshall Antonescu, they met with less severity. Special understanding was shown by the Vice-president of the Council, Mr. Mihai Antonescu, who was entrusted with the settlement of the Jewish question. 'The Rumanian government,' he wrote to the delegate in Bucharest, 'repudiates any material solution contrary to civilized custom and in defiance of the Christian spirit which dominate the conscience of the Rumanian people.'

In December 1943 Mr. Mihai Antonescu had an interview with this delegate which led to making their activities of the Committee in behalf of Jews far easier. This talk bore mainly on the case of Jews deported beyond the Dniester to the Ukraine, who were native of Bessarabia and the Bukovina. These provinces had been returned to Rumania after the first World War, and came again under Soviet power by the terms of the Soviet-German treaty at the beginning of the Second War. After the reshuffle in 1941, Rumania, who had become Germany's ally against the USSR, reoccupied these two provinces. The Jews, whom the Rumanians considered guilty of having welcomed too easily a return to Russian allegiance, were then deported. The Rumanian government's plan, drawn up in agreement with Germany, seems to have been to settle these Jews on lands in the region of the Sea of Azov. This could not be carried out, however, unless the USSR were defeated. In the light of the Russian victories, the Rumanian government decided, towards the close of 1943, to repatriate the survivors of this deplorable migration, the numbers of which had fallen from 200,000 to 78,000. Mr. Mihai Antonescu welcomed the opportunity of the approaches made by the delegate in Bucharest, to entrust him with a mission of enquiry into the means of carrying out this repatriation, and authorized him to tour Transnistria to distribute clothing and relief to these unfortunate people. Furthermore, the delegate succeeded in getting an assurance

that the Czernowitz Jews, the only ones still compelled to wear the yellow star, should be exempted, as this badge exposed them to the brutality of German troops passing through. Finally, it was agreed that Red Cross purchases might be freely made at the official rates.

When the delegate saw the Vice-president of the Council again on his return, he drew his attention specially to the plight of the children who had lost their parents and were left abandoned in Transnistria. Mr. Mihai Antonescu promised to allow 150 children to leave each week for Palestine or elsewhere, if the Committee could arrange their journey. Three months later, the Rumanian government offered two recently-built first-class steamers, the Transilvania and the Bessarabia, then held in Turkish waters, and suggested the Committee should buy them, reserving to Rumania the option of repurchase, for use as transports for emigrants under the Swiss flag. Switzerland, as the protecting Power for British interests, could in fact be considered as the protecting Power for Jews bound for Palestine, since these Jews were to become on arrival assimilated to British nationals.

Up to that time, the remedy of emigration had been no more than a meagre palliative for the sufferings of the Jews. Bulgaria had shut her frontiers to emigrants traveling on a collective passport, and only Jews under eighteen years of age or over forty-five had been able to reach Turkey, under individual permits. Transport by sea from Rumanian ports would have afforded the best means of emigration. But besides the difficulties met with by the Jews in leaving, account had to be taken of the political problem raised for the British authorities by an influx of Jews, considered as intruders by the majority of the local population of a territory under British mandate. The first vessel, the Struma, which left Constanza for Palestine independently of any action by the Committee, at the beginning of 1942, had been detained at Istanbul owing to engine trouble, and was subsequently obliged to sail again for Rumania, as it was impossible to obtain the necessary permits to continue on its route. It was wrecked, and 750 emigrants were drowned. This pioneer expedition, ending so disastrously, was a lesson in the need of prudence.

The Committee was asked to grant the protection of the Red Cross emblem to emigrant transports and would have consented to this, on the basis of a very liberal interpretation of the provisions of the Tenth Hague Convention of 1907, which govern the use of hospital ships, whilst reckoning too that cargo-boats sailing under their control and carrying relief supplies for PW or civilian internees were covered by the Red Cross emblem. However, it would have wished to do this in agreement with all the Powers concerned. Therefore, the Committee made its consent conditional on the following terms. The transport organizations should charter neutral vessels which would be accompanied by the Committee's representative, and would be used exclusively for the transport of emigrants. The ships were not to sail before obtaining safe-conducts from all the belligerents concerned, as well as their agreement as to the route to be followed.

These conditions were unfortunately never obtained. The Bellacita, however, was authorized by Rumania to carry out a daily service for the transport of Jewish children from Constanza or Mangalia to Istanbul, and sailed under the protection of the Rumanian Red Cross, the Committee having notified all belligerents of these voyages.

The delegate in Bucharest was faced with a very grave decision when the question arose of embarking Jews for Palestine on two Bulgarian vessels, the Milka and the Maritza, both chartered by Zionist organizations. There was reason to fear the same fate for them as for those who sailed in the Struma. Moreover, the heads of Jewish organizations did not agree as to the names for the list of emigrants, and the Rumanian authorities applied to the Committee to arbitrate. The delegate confined himself to a check of the emigration permits and thus aided their departure. They arrived safely in Istanbul a few days later. In August 1944, the Committee finally agreed that vessels carrying emigrants might display the Red Cross emblem, even in the absence of certain of the conditions which had been laid down.

On August 23, the King of Rumania took advantage of the retreat of the German troops to put an end to the dictatorship of Marshal Antonescu, and to enter into armistice negotiations with the Allies. The racial laws were thereupon abolished in Rumania.

The Committee continued their relief work on behalf of Jews, however, until the close of hostilities.

In its report of December 1944, the delegation in Bucharest stated that, thanks to consignments from the Joint Committee of New York and to collections made on the spot, it had been able to come to the help of 183,000 Rumanian Jews, comprising: 17,000 deportees repatriated from Transnistria; 30,000 men liberated from forced labour with their families (90,000 persons); 20,000 evacuees from small towns and villages; 10,000 evacuees from the war zone; 20,000 homeless persons, as a result of bombardments; 20,000 workmen and officials dismissed from their employment; and 6,000 Hungarians who had succeeded in escaping deportation and were found in Northern Transylvania.

Tribute was paid to this humanitarian work by the President of the American Union of Rumanian Jews. He wrote, in March 1945, to the Committee's delegate in Washington as follows:

'The work of the International Red Cross in helping the Jewish population in Rumania, and the Jews transported to Transnistria has been appreciated at its true worth not only by Dr. Safran, the Chief Rabbi in Rumania and the Jewish Community of Rumania, but also by the many thousands of members of our Union whose own relatives benefitted by that help. The International Red Cross Committee had rendered truly invaluable service to our people in Rumania.'

Mr. Joseph C. Hyman, Vice-President of the American Joint Distribution Committee of New York, had already made public the debt of gratitude

due to the International Red Cross. In an article published in the journal 'News' on February 16, 1945, under the title 'The Joint Distribution Committee Lauds International Red Cross Co-operation,' he is quoted as follows: 'Thousands of Jews in newly liberated lands and in German concentration camps owe their lives to the sanctuary and the help given them by the International Red Cross. In those parts of the world where J.D.C., major American agency for the rescue and relief of distressed Jews overseas, cannot itself work directly, we know we can count on the International Red Cross [...] to act for us in bringing aid to suffering Jewry.'

Volume 3 of the *Report*, particularly pages 73-84, 335-340, 479-481, 505-529, contains additional material that can be cited as needed.

Recall that our objective here is to form a reasonably accurate picture of what happened to the Jews of Slovakia, Croatia, and Hungary. However, there are some matters raised in the excerpt which deserve at least a few remarks.

There are enough references to "extermination" here to lead the casual reader to the impression that the Red Cross accepted the extermination claims. On reflection, however, such an inference is seen as being not so clearly necessary and, even if made, not very relevant. We are told that "the Jews had become [...] condemned by rigid racial legislation to [...] systematic extermination" but there was, as is well known, no such legislation if by "extermination" is meant mass murder. Also "they were [...] sent to death camps," which was true of those who had been conscripted for labor and sent to the concentration camps during the camps' two worst periods (1942 and 1945). It "seems" that "many thousands" of Slovakian Jews went "to the extermination camps." It is anybody's guess what is meant by the "death camps" to which some Romanian Jews were sent in 1940; whatever is meant, it was not a German measure.

In Volume 3 we read (page 479) that "when military operations spread to Hungarian soil (in early October 1944), the ICRC delegate in Budapest made the uttermost exertions to prevent the extermination of the Hungarian Jews." Further on (pages 513-514) we read that during the war, "threatened with extermination, the Jews were, in the last resort, generally deported in the most inhuman manner, shut up in concentration camps, subjected to forced labor or put to death." The Germans "aimed more or less openly at their extermination."

We can see two possible reasons for the presence of such (ambiguous and/or very general) remarks. The first is that they are there because the authors of the *Report*, or most of them, on the basis of news reports, the war crimes trials, the fact of deportations, the fact of Nazi hostility toward the Jews, and the fact that the Germans wanted the Jews out of Europe, believed the wartime and post-war extermination claims (they obviously did not see any Jews being exterminated). The second possible reason is that the remarks are there for political-public relations reasons. For example, although the Germans and Hungarians had allowed the ICRC to operate in Hungary, and the Russians had expelled it, the *Report* nevertheless finds it expedient to say that Budapest was "liberated" by the Russian capture.

The critical reader will obviously wish that the first explanation for the appearance of these remarks be accepted, at least for purposes of discussion. We should have no objections to this; it makes little difference in the analysis because all we want to know from the *Report* is what happened to the Jews of Slovakia, Croatia, and Hungary. The presence of the remarks about “extermination,” put into the *Report* at a time when the detailed extermination charges had received the widest publicity, is actually helpful to our case because, whatever the explanation for the remarks, the possibility of extermination of most or many of the Jews of Slovakia, Croatia and Hungary most definitely is part of the proper subject matter of the *Report*. An absence of claims bearing on extermination should not, thus, be interpreted as meaning that the possibility of extermination is not part of the matters being treated, but that the ICRC did not observe occurrences consistent with the extermination claims.

With these considerations in mind, what does the *Report* say happened to the Jews of Slovakia, Croatia and Hungary? The extent of German influence had differed prior to 1944, and some number of Slovakian Jews had been deported to the East, but the *Report* makes no speculations of extermination here, and obviously accepts that they had merely been deported. By 1944, German influence in the three countries was about uniform, and nothing very consequential happened until the autumn of 1944 when the Germans interned, or attempted to intern, many of the Jews for very valid security reasons, and also deported a number of Hungarian Jews to Germany for labor.

On the subject of the Hungarian Jews, a certain amount was going on between March and October 1944, but whatever it was, the events which began in October 1944 after the arrest of Horthy were the most severe. The excerpt is most emphatic on this point in two places and, moreover, to place the critical date in the autumn of 1944 is fully consistent with the identical claim for the contiguous countries of Slovakia and Croatia.

It was after October 15 that “the full tide of the great tribulations of the Hungarian Jews was to set in” on account of the “German pressure (which) was reasserted, from March 1944 onwards,” which in October 1944 “provoked a violent crisis; executions, robberies, deportations, forced labor, imprisonments.” The Jews “suffered cruelly and lost many killed, especially in the provinces.”

To repeat, there was a certain amount going on prior to October 1944, including deportations, but the *Report* asserts unambiguously that the events beginning October 1944 were the major ones for the Hungarian Jews. The “executions” and “robberies” probably refer to private actions of Hungarians taken, perhaps, with the implicit encouragement or at least unconcern of the new puppet government. The *Report* is fully precise about the “deportations” and “forced labor” measures that were instituted in October 1944. Jews were put to work on fortifications in Hungary, and the Germans decided to send 60,000 to Germany for labor (the number actually deported in this action was between 35,000 and 45,000). There being no rail transport available, the Jews had to

walk, at least as far as Vienna, but the Red Cross organized aid along the route.³⁰³

It is not possible that the ICRC delegation in Hungary could have been unaware of anti-Jewish measures occurring significantly earlier in 1944, which even equaled in severity, much less dwarfed, the events beginning in October 1944. After all, the Jewish Senate of Budapest was being quartered in the Red Cross legation, and was doubtless fully informed on Hungarian Jewish matters. In addition, the later extermination claims would have “reminded” the delegate of far more drastic events earlier in the year, if they had actually occurred, as we shall see shortly.

Before passing on to consider the specific claims of extermination of Hungarian Jews, we should touch briefly on a few points made in the excerpt in connection with Theresienstadt.

We have had occasion in previous chapters to remark on Theresienstadt in Bohemia-Moravia (western Czechoslovakia) and our remarks are consistent with those of the excerpt. What is arresting in the Red Cross account is the report that “this camp had been started as an experiment by certain leaders of the Reich, who were apparently less hostile to the Jews than those responsible for the racial policy of the German government. These men wished to give to Jews the means of setting up a communal life in a town under their own administration and possessing almost complete autonomy.”

Jewish policy was administered by Eichmann’s office in the RSHA of the SS, and it was Karl Adolf Eichmann, “specialist for all Jewish questions,” who had accompanied the head of the Security Police of Bohemia-Moravia, Colonel Erwin Weinmann, in showing the Red Cross delegation around Theresienstadt during the April 6, 1945 visit. During a gathering in the evening, Eichmann had explained to the delegates “that Theresienstadt was a creation of Reichsführer-SS Himmler” and had explained the philosophy involved, accurately passed on to us in the *Report* excerpt. Eichmann added that he, “personally, did not entirely approve of these methods but, as a good soldier, he naturally blindly obeyed the orders of the Reichsführer.”³⁰⁴

It is quite clear, therefore, that Theresienstadt was an operation of the SS, who were the “certain leaders of the Reich” involved here. In addition, it is known that it was RSHA chief Heydrich who made the Theresienstadt decision shortly after he had acquired his secondary role of Deputy Protector of Bohemia-Moravia in September 1941.³⁰⁵

What the Red Cross saw at Theresienstadt was part of regular SS policy. It is of some interest that the *Report* tells us, without comment, that the delegate had asked about “departures for the East” and that the ICRC makes no speculations regarding any sinister interpretations to be placed on the “transfers to Auschwitz,” despite the notorious and universally known charges in this connection.

³⁰³ Red Cross (1948), vol. 3, 523.

³⁰⁴ Reitlinger, 512f.; Red Cross (1947), 99f.

³⁰⁵ Reitlinger, 176f.; Shirer (1960), 991.

In critical evaluation of the Red Cross *Report*, one must obviously be wary in two senses. First, one should reserve some judgments in relation to a *self-serving* aspect of the *Report*. The typical respects in which a charitable organization's publications might be self-serving are in exaggerating the efficacy of measures taken and, in cases where it is evident that no efficacious measures have been taken, in hastily blaming the lack of efficacy on the tight fists of potential contributors (and often there are very solid grounds for such claims). Thus, we should not be crushed if it were found that the Hungarian Jewish children or the Jews who walked to Vienna, both of whom were aided by the Red Cross, actually suffered a little bit more than might seem suggested by the *Report* (I am not, of course, making any claim that such was the case).

A second reservation concerns inevitable political bias as a result of external political pressures; the "liberation" of Budapest by the Russians shows this at work in the *Report*. The situation of 1948 clearly implied that when political bias appeared in the *Report* it be anti-German bias. We observe that this exists in the *Report*, but fortunately, this bias is effectively non-existent, if one reads the *Report* with well-defined questions in mind, such questions bearing only on matters within the actual sphere of competence of the ICRC and its delegates.

Nevertheless, it should again be stressed that my argument in no way depends upon interpreting the *Report* as meaning other than what it says, or as not really meaning what it says, at those points selected by me. I offer no parallel of the extermination claims, which insist that phrases such as *Leichenkeller*, *Badeanstalt*, special treatment and "readiness for transport" be attributed meanings consistent with wartime propaganda claims. There is no quarrel with the person who insists on interpreting the *Report* as declaring in a very general way that the Germans were attempting to exterminate the Jews, because all we want to know is what the ICRC delegates were able to witness in their positions in Slovakia, Croatia, and Hungary.

1944 Propaganda

We have seen roughly what happened in Hungary, and now the extermination claims should be examined. We first review the relevant propaganda during 1944 and then the charges made after the war, constituting the legend of the extermination of the Hungarian Jews. There are both significant differences and significant similarities between the 1944 propaganda and the later claims. Our survey of the former again employs the *New York Times* as source.

In 1944, atrocity and extermination propaganda of a general sort continued:

12 Feb. 1944, p. 6: "*A young Polish Jew who escaped from a mass execution in Poland [...] repeated a story [...] that at Bełżec] Jews were forced naked onto a metal platform operated as a hydraulic elevator which low-*

ered them into a huge vat filled with water. [...] They were electrocuted by current through the water."

This claim had also been made in London in November 1942,³⁰⁶ and we encountered it on page 111 in the *New York Times* story of December 20, 1942. The emphasis in the propaganda during the spring and summer of 1944 was, however, on the Hungarian Jews. Immediately after the German occupation:

21 Mar. 1944, p. 4: "*The fate of 800,000 Jews in Hungary was one immediate concern of Jewish circles in Stockholm.*"

Roosevelt involved himself directly with a speech prepared for him by the War Refugee Board.³⁰⁷

25 Mar. 1944, p. 4: "*In the meantime in most of Europe and in parts of Asia the systematic torture and murder of civilians – men, women and children – by the Nazis and Japanese continue unabated. In areas subjugated by the aggressors innocent Poles, Czechs, Norwegians, Dutch, Danes, French, Greeks, Russians, Chinese, Filipinos – and many others – are being starved or frozen to death or murdered in cold blood in a campaign of savagery.*

The slaughters of Warsaw, Lidice, Kharkov and Nanking – the brutal torture and murder by the Japanese, not only of civilians but of our own gallant American soldiers and fliers – these are startling examples of what goes on day by day, year in and year out, wherever the Nazis and the Japs are in military control – free to follow their barbaric purpose.

In one of the blackest crimes of all history – begun by the Nazis in the day of peace and multiplied by them a hundred times in time of war – the wholesale systematic murder of the Jews of Europe goes on unabated every hour. As a result of the events of the last few days hundreds of thousands of Jews, who, while living under persecution, have at least found a haven from death in Hungary and the Balkans, are now threatened with annihilation as Hitler's forces descend more heavily upon these lands. That these innocent people, who have already survived a decade of Hitler's fury, should perish on the very eve of triumph over the barbarism which their persecution symbolized, would be a major tragedy.

[...] All who knowingly take part in the deportation of Jews to their death in Poland or Norwegians and French to their death in Germany are equally guilty with the executioner. All who share the guilt shall share the punishment.

[...] In the meantime, and until the victory that is now assured is won, the United States will persevere in its efforts to rescue the victims of brutality of the Nazis and the Japs. In so far as the necessity of military operations permit this government will use all means at its command to aid the escape of all intended victims of the Nazi and Jap executioner – regardless of race or religion or color. We call upon the free peoples of Europe and Asia temporarily to open their frontiers to all victims of oppression. We

³⁰⁶ Reitlinger, 148.

shall find havens of refuge for them, and we shall find the means for their maintenance and support until the tyrant is driven from their homelands and they may return.

In the name of justice and humanity let all freedom loving people rally to this righteous undertaking."

April 1, 1944, p. 5: "*HUNGARY ANNOUNCES ANTI-JEWISH DECREES*

[...] based on the Nazi Nuremberg laws [...]"

whose nature was further specified as:

April 16, 1944, p. 17: "*[...] the registration and closing of all Jewish properties. [...]"*

April 28, 1944, p. 5: "*[...] recent reports from Hungary said 300,000 Jews had been moved from the eastern and northeastern parts of the country to so-called collection camps."*

May 10, 1944, p. 5: "*by Joseph M. Levy*

[...] it is a fact that Hungary [...] is now preparing for the annihilation of Hungarian Jews by the most fiendish methods. [...] Sztojay's [...] government [...] is about to start the extermination of about 1,000,000 human beings. [...] The government in Budapest had decreed the creation in different parts of Hungary of 'special baths' for Jews. These baths are in reality huge gas chambers arranged for mass murder, like those inaugurated in Poland in 1941."

May 18, 1944, p. 5: "*by Joseph M. Levy*

80,000 Jews of the Carpathian provinces [...] have been sent to murder camps in Poland."

June 9, 1944, p. 5: "*300,000 Hungarian Jews have been interned in camps and ghettos [within Hungary...]"*

June 18, 1944, p. 24: "*[...] recent statements made by the Hungarian Premier, Doeme Sztojay, that Jews were being exterminated to provide 'room for American Hungarians to return to their native country after the war.'*"

June 20, 1944, p. 5: "*Czechoslovak Jews interned in [...] Terezin [...] were dragged to gas chambers in the notorious German concentration camps at Birkenau and Oswiecim. Confirmation of the execution there of uncounted thousands was brought to London recently by a young Pole who had been imprisoned in both camps."*

June 25, 1944, p. 5: "*[A Polish underground] message said that new mass murders were taking place at the Oswiecim concentration camp. They were carried out by gas in the following order: Jews, war prisoners, whatever their nationality, and invalids. A hundred thousand Jews have already been sent to Oswiecim for execution. [...]"*

June 27, 1944, p. 6: "*Hull [called] upon Hungary to halt her mistreatment of Jews [and warned that] those German officers and men [...] who have [...] taken [...] part in the [...] atrocities, massacres and executions will be punished."*

July 2, 1944, p. 12: *"Hungarian sources in Turkey reported that the 350,000 Jews [...] were being rounded up for deportation to death camps in Poland. By June 17, 400,000 had been sent to Poland; the remaining 350,000 are expected to be put to death by July 24."*

On July 3 (page 3) the "report" that eventually became the WRB report appeared as a report of two relief committees in Switzerland, specifying that since April 400,000 Hungarian Jews had been sent to Auschwitz-Birkenau. The crematories are reported to contain 50 furnaces each taking 8-10 corpses at a time. On July 6 (page 6), the story was repeated, Eden endorsed the charges, and the World Jewish

"Congress was notified more than two weeks ago that 100,000 Jews recently deported from Hungary to Poland had been gassed in the notorious German death camp at Oswiecim. Between May 15 and 27 sixty two railroad cars laden with Jewish children [...] and six cars laden with Jewish adults passed daily through the Plaszow station near Cracow. Mass deportations have also begun from Theresienstadt, Czechoslovakia, where the Jews have heretofore been unmolested."

July 13, 1944, p. 3: *"2,500 Jewish men, women and children [...] will arrive in the Auschwitz and Birkenau camps by this week-end, probably with previous knowledge of their fate."*

On July 15, (page 3) Hull again condemned the alleged killing of Hungarian Jews, and then from the "Polish underground":

August 4, 1944, p. 5: *"courier [...] declared that Hungarian Jews were still being sent to Oswiecim, twelve trainloads every twenty-four hours. In their haste [...] the Germans [...] were killing small children with bludgeons. Many bodies were being burned in open fires, he said, because the crematories were over-taxed."*

On August 11 (page 4) is reported a letter by Horthy to the King of Sweden declaring that deportations of Jews had been stopped and that they were being allowed to leave Hungary.

There are too many contradictions in the propaganda for it to equal later charges. However, the charges resemble the propaganda somewhat. The present story is that between the middle of May and sometime in early July 1944, approximately 400,000 Hungarian Jews, from districts outside of the capital of Budapest, were deported by rail by the Germans, and that almost all of these were killed at Birkenau, the killings having been the primary purpose of the deportations. This operation essentially cleaned out the Hungarian Jews, except for Budapest, where the Jews were left essentially intact. Even Birkenau was not designed for such large numbers of killings, so many bodies were disposed of in burning pits, and many were shot rather than gassed.³⁰⁸

It is obvious that no such thing could have happened, and received worldwide publicity during the war and at the later trials, without the ICRC delegation in Budapest learning of it. After all, we are speaking here of the near en-

³⁰⁸ Reitlinger, 447-487, 540-542; Hilberg (1961), 509-554, 599-600. Reitlinger figures some of the Hungarian Jews among the Romanians.

tirety of non-Budapest Jews, and such massive and monstrous events could not have been flippantly forgotten by the person contributing the “Hungary” section of the excerpt we have examined. The excerpt says emphatically that the major negative events effecting the Hungarian Jews occurred starting on October 1944 after Horthy’s arrest. Moreover, the *Report* contains the general remarks about “extermination” which we have noted, so any extermination of Hungarian Jews would, if it were a reality, definitely be mentioned in the *Report*. There is clearly no truth to the claim of exterminations of Hungarian Jews.

At this point, it is appropriate to provide some remarks on Hungarian Jewish population in early 1944. The Nazis used a figure of about 700 or 750 thousand.³⁰⁹ Ruppin’s 1940 book reports that the Hungarian Jewish population rose from 440 to 480 thousand in the autumn of 1938, due to the annexation of parts of Slovakia. In the spring of 1939, the Carpatho-Ukraine was annexed so that, in June 1939, there were about 590,000 Jews in Hungary. It is known that a good number of non-Hungarian Jews, mainly Polish, took refuge in Hungary after 1939, so Ruppin’s pre-war figure of 590,000 could easily have swelled to the 700,000 or 750,000 figure that the Nazis used. Ruppin’s figure for Budapest’s Jewish population is 200,000 in 1930. This figure would not have been supplemented by the annexations, but it would have been supplemented to some degree during the Thirties by German and Austrian Jews, and to a greater degree by Polish and other Jews after 1939. It seems reasonable to assume that there were about 300,000 Jews in Budapest in the spring of 1944. Thus, we seem to have a fairly good idea of Hungarian and Budapest Jewish population in 1944. Clearly the removal of 400,000 or more non-Budapest Jews in the spring of 1944 would have entailed the removal of essentially all non-Budapest Jews. Not only could this not have failed to be noticed by the Red Cross delegation, it is also difficult to see where the “one hundred thousand Jews” who “poured into Budapest from the provinces” in November could have come from.³¹⁰

There are other arguments against the extermination claims. First, it will be seen that the charges specify that special arrangements were made at a conference in Vienna in early May to provide four trains per day to effect these deportations, and that the trains were in fact provided on schedule. That is, in the crucial few weeks before and after D-Day (June 6), at a time of desperate rail shortages, with both fronts threatening to collapse, the Germans provided an amount of extra rail transportation that would strain the resources of any rail system under the best of circumstances. That is just not believable. It is worth remembering that the rail journey from Budapest to Auschwitz is much more formidable than the map might suggest, on account of the mountains in eastern Czechoslovakia.

³⁰⁹ NG-2586-G in NMT, vol. 13, 212; NO-5194, part of the Korherr Report, which is reproduced in Poliakov & Wulf (1955), 240-248; NG-5620, cited by Hilberg (1961), 513.

³¹⁰ Ruppin, 30f., 68.

Where are the pictures?

A second additional argument against the charges relate to the question, often asked, why did not the Allies attempt to bomb the gas chambers that, by the time of the alleged killings of Hungarian Jews, the whole world “knew” about? The question can be considerably broadened.

On June 8, 1944, the U.S. Fifteenth Air Force, based in southern Italy, was ordered to emphasize oil targets in its bombings, and was given a list of specific oil targets in eastern and southeastern Europe. The principal target, and the one that received the major share of attention, was the Ploesti area in Romania. However, Auschwitz, which was also one of the targets on the list, was first bombed on August 20, and was subsequently bombed in September and December.³¹¹

Now, in the Allied bombing operations in World War II it was customary to make extensive use of photographic intelligence. One objective was the assessment of damage done by attacks, and another was the planning of attacks: determining whether or not the target was worth attacking, and also determining the extent and nature of the defenses in the area of the target.³¹² It is a certainty that intelligence had photographed Auschwitz and the surrounding area, rather thoroughly, soon after the June 8 order. In this case, the Americans should have been able to provide actual photographs of all these Hungarian Jews being moved into Auschwitz, and shot and burned out in the open. They should not even have been obliged to take any special measures to produce for us, either at the time of the alleged killings or at the later trials, photographic evidence for their claims. Of course, to have been fully convincing, the former time should have been chosen, because the Russians controlled Auschwitz after January 1945.

The photograph of Fig. 7 is claimed to have been taken at Auschwitz in August 1944, but it has already been discussed in proper context. In any case, the number of bodies evident in the photograph roughly corresponds to the rate of ordinary deaths at Auschwitz, especially for 1942.

Despite all the attention the Hungarian Jews and Auschwitz were receiving at the time, and despite the Roosevelt promise publicized on March 25, the Americans did not lift a finger either to interfere with the alleged deportations – by bombing the specific rail lines involved – or with the alleged killings – by bombing the “gas chambers.” They not only failed to take the opportunity to provide us with photographic evidence for their claims, they also do not seem to have the evidence despite having taken the photographs.³¹³

All of these considerations, the Red Cross *Report*, the wild impracticality of exterminating Hungarian Jews in the spring and summer of 1944, and the

³¹¹ Craven, 280-302, 641f; Carter (see Index under “Auschwitz”).

³¹² C. B. Smith, 167.

³¹³ Editor’s note: The U.S. eventually released air photos taken by Allied reconnaissance planes over Auschwitz, yet they refute rather than confirm extermination claims. See Mattogno (2016a), 50-89, and Rudolf (2020a), 35-120.

non-existence of any relevant consequences of the Allied control of the air, compel the conclusion that nothing resembling or approximating extermination actually happened to the Hungarian Jews.

Air Raids on Auschwitz: Rudolf Vrba Overreaches Himself

We will shortly review the evidence for the extermination claim, but first we should provide an aside relative to the problem of the date of the first air raid at Auschwitz. We remarked on page 136 that Rudolf Vrba's claim that there was an air raid at Auschwitz on April 9, 1944, undermines his credibility. We have indicated above that Auschwitz was first bombed in August. This view is based mainly on the *Combat Chronology*, edited by Carter and Mueller, that the U.S. Air Force published in 1973, and on the standard and semi-official work by Craven *et al.*, *The Army Air Forces in World War II*. The latter also treats the activities of the RAF Bomber Command, especially in connection with the oil campaign. The corresponding four volume British work by Webster and Frankland, *The Strategic Air Offensive Against Germany 1939-1945*, bases its account of the oil campaign on that of Craven *et al.*

An attack in early April seems completely out of the question. Auschwitz was of strategic importance only as an oil target. Craven *et al.* provide an excellent summary of the air force oil campaign. There had been a spectacular raid at Ploesti in 1943, but there was no sustained oil campaign until the spring of 1944, on account of disagreements among Allied leaders regarding target priorities. By May 1944, only 1.1% of Allied bombs had fallen on oil targets. On March 17, 1944, the Fifteenth Air Force was advised to undertake attacks against Ploesti at the first opportunity, but "surreptitiously under the general directive which called for bombing transportation targets supporting German forces that faced the Russians." The first such attack came on April 5, and there were also attacks on April 15 and 24, in all three cases directed mainly against the rail centers near Ploesti, with a hope that there would be "incidental" damage to oil refineries. Oil-related bombings by England-based aircraft did not commence until April 19, but these were also carried out under cover of an objective other than oil. The Fifteenth Air Force carried out several more raids against Ploesti before the June 8 order, after which the oil campaign got under way officially and extensively.³¹⁴

This being the situation, and in consideration of the confirmation provided by the *Combat Chronology*, it is impossible to believe that Auschwitz was bombed in April, when it was difficult to justify, within the Allied command, raids even against choice targets such as Ploesti. That a relatively minor oil target such as Auschwitz, much smaller than the not distant synthetic oil plants

³¹⁴ Craven, 172-179.

at Blechhammer, was bombed in April, is most unlikely. Even Blechhammer is not mentioned as a target until long after April.

Only the U.S. and British air forces are relevant to the problem of possible air raids at Auschwitz in the period April to September 1944. The Russians did not engage in industrial-strategic bombing operations of this nature.

Our conclusions, drawn from the official U.S. Air Force war histories, are confirmed by the recollections of two Germans who were at Auschwitz in 1944. Thies Christophersen, author of the booklet *Die Auschwitz Lüge* (mentioned on p. 31), wrote that the first air raid was "in the autumn of 1944." Christophersen seems to be completely unaware that there is any significance in the question of the date of the first air raid at Auschwitz.

In Dr. Wilhelm Stäglich's statement, published in German journal *Nation Europa* (also mentioned here on page 32), he did not make any remarks in connection with air raids, but he did write that he was a member of an anti-aircraft unit that was stationed near Auschwitz for a very short time starting in mid-July 1944. In reply to a neutrally worded inquiry by this author, with no reference to the nature of the underlying issue involved, Stäglich replied that there were no air raids while he was there, and that he believed there had been none earlier, because he had not been informed of any, and had not seen any corresponding destruction.

When I finally determined that the attack had taken place on August 20, 1944, I wrote him again, and asked him to reconsider this anew, or to investigate it again. In fact, his wife found a letter from that time, written on August 20, 1944, with the sentence, "Today in the morning, we had the first attack against the object we are to protect." For me, this episode was very instructive regarding the reliability of our memory.

The August date for the first air raid is confirmed by the Italian Jew Primo Levi, who wrote in his book *Se Questo è un Uomo* (early in the chapter entitled *I fatti dell'estate*) that the first raid was in August, when he had been there five months.

Another confirmation can be gleaned from the *Kalendarium* as published in the *Hefte von Auschwitz* (nos. 7 & 8, 1964). In it, the first reference to an air raid on Auschwitz dates from September 6, 1944.

My analysis of the problem of the first air raid at Auschwitz is also essentially confirmed by the extermination mythologists. Reitlinger does not explicitly take a position on the date of the first raid but remarks (page 383) on "the failure of the Allies to bomb the passes between Hungary and Auschwitz in May – July, 1944." Hilberg (page 632) is well off the mark in placing the first raid on December 16, 1944, and this date is accepted by Levin (page 701). Friedman (page 78) is relatively on the mark in reporting a raid on September 13, 1944.

Because all evidence rejects a claim that there was an air raid at Auschwitz in April 1944, Vrba's claim that there was such a raid while he was sitting there peeking out from the woodpile is an important factor in demolishing his credibility, in addition to the others mentioned in Chapter 3 (pp. 134-138).

Moreover, it would be difficult for Vrba to claim a faulty memory comparable to Stäglich's, because the raid supposedly occurred at a uniquely crucial point in Vrba's life.

Documentary Evidence?

Returning to the immediate subject, we now review the evidence which is offered for exterminations of Hungarian Jews. It is mainly documentary.

We will essentially disregard the IMT affidavit (2605-PS) of Kastner, given September 13, 1945. Kastner was a Hungarian Jew who was in contact with Eichmann and associates in Budapest in 1944. His affidavit declares that 475,000 Hungarian Jews had been deported by June 27, 1944. It also gives a general "history" of the entire extermination program, said to be based on things told Kastner by SS Colonel Kurt Becher and SS Captain Dieter Wisliceny. That he enjoyed the confidence of these men is entirely possible, however, because in 1954, as an influential member of Ben-Gurion's Mapai party in Israel, he was accused by another Hungarian Jew of having been a collaborator of Becher, one of Eichmann's superiors in the SS operations in Hungary. The resulting libel actions, with verdicts against Kastner, generated a major political crisis in Israel whose catastrophic consequences were averted by the assassination of Kastner in 1957.³¹⁵ Kastner was another victim of the hoax.

Wisliceny, Eichmann's subordinate in Hungary, also gave an affidavit on November 29, 1945, and supporting testimony at the IMT on January 3, 1945.³¹⁶ The affidavit is another English-language job with, *e.g.*, the obscure (for a German) expression "heads" for people in transports. In Wisliceny's story, there were written orders, given in early 1942 by Himmler, to exterminate the Jews. The orders were addressed to, among others, the "Inspector of Concentration Camps" who, according to the later testimony of Höss, was not intended by Himmler to know anything about the program.

The major evidence is a collection of reputed German Foreign Office documents. In March 1944, one Dr. Veessenmayer of the Foreign Office was sent to Hungary as "plenipotentiary" to act for the German government, supplementing the activities of special Ambassador Ritter. Veessenmayer communicated a great deal with the Foreign Office in Berlin via telegram. A document, NG-2263, shown in Fig. 30, is typical of those which are said to be one of these telegrams, taken from Foreign Office files. As a telegram received at the Foreign Office, it naturally does not have Veessenmayer's signature. The endorsements consist in the Foreign Office stamps that have been used, and the handwritten notation on the left which says that the document is to be filed un-

³¹⁵ Reitlinger, 421f.; Hilberg (1961), 528; Rassinier (1962), 229f.; Sachar, 463f.; John & Hadawi, vol. 2, 36n.

³¹⁶ IMT, vol. 4, 355-373; U.S. Chief of Counsel, vol. 8, 606-621.

der “Hungary” (*Ungarn*) and is initialed by von Thadden and dated: vTh 4/7. It reads:

“I.) Transport of Jews out of Zone III concluded with 50,805 according to plan. Total number out of Zones I – III 340,162.

II.) Concentration in Zone IV and transport out of that Zone concluded with 41,499 according to plan. Total number 381,661. Continuation of operations had been separately reported with teletypes no. 279 of 27 June, no. 287 of 29 June and no. 289 of 30 June to Fuschl. Concentration in Zone V (hitherto uncovered region west of the Danube without Budapest) commenced 29 June. Simultaneously smaller actions in the suburbs of Budapest commenced as preparatory measures. A few small transports of political, intellectual and specially skilled Jews, and Jews with many children, are also under way.”

It is a collection of such documents that constitutes the evidence for the deportation of over 400,000 Hungarian Jews between May 15 and early July of 1944. In my determination, the relevant documents are summarized as below. The nature of the endorsements is indicated in each case. Naturally, not all documents dealing with anti-Jewish measures, including deportations during the relevant time period, are involved; only those are listed which might be claimed to compel an interpretation consistent with the extermination claims.

NG-2059: Mimeographed copy of a telegram from Veessenmayer to the Foreign Office, dated May 8, 1944. A certain number of Jews previously scheduled for deportation are to be put to work on military projects in Hungary instead. Application for the 100,000 employable Hungarian Jews requested by Organization Todt (the Speer ministry) must be made to Glücks of the WVHA, who is in charge of the deportation of Hungarian Jews. The endorsement is Thadden’s initials.

NG-2060: In two parts. The second part is a mimeograph copy of a telegram from Veessenmayer to Ribbentrop via Ritter, dated April 21, 1944. It reports that 100,038 Hungarian Jews have been confined to camps as a result of the “Special Operations.” The endorsements are a top-secret stamp and Thadden’s initials. The descriptive material accompanying the document (the “staff evidence analysis”) indicates that Geiger’s initials also appear, but this is not confirmed by examination of the rest of the material (in this case the English translation only).

NG-2061: Mimeographed copy of a telegram from Veessenmayer to the Foreign Office, dated May 20, 1944. It reports arrests of people involved with the anti-Nazi underground, and the interception of “intelligence material concerning the alleged conditions in the German concentration camps in the Government General. In particular the happenings in the Auschwitz camp are described in detail.” The endorsements are a Foreign Office stamp and Thadden’s initials, although the staff evidence analysis says it is initialed by Geiger.

NG-2190: The first part is a covering note for the second part. Signed by Thadden and Wissberg and initialed by Wagner, and stamped Top Secret. The second part is a report from Thadden to the Foreign Office on anti-Jewish

measures in Hungary, dated May 26, 1944. It is reported that the Hungarian government has agreed to the deportation to the Eastern territories of all Hungarian Jews, with the exception of 80,000 to be retained for labor on military projects. The number of Hungarian Jews is estimated at 900,000 to 1,000,000. Most of the Jews outside Budapest have been concentrated in ghettos. As of May 24, 116,000 had been deported to the General Government in daily shipments of 14,000. The Jewish Council in Budapest (same as the Jewish Senate of the Red Cross *Report* excerpt) was reassured that these measures were directed only against unassimilated Jews, and that others were to be treated differently. However, the SS expects difficulties with future concentration and deportation measures anyway. Plans for future measures are outlined. Problems stemming from the differing German and Hungarian definitions of a Jew are discussed. It is estimated that about one third of the Hungarian Jews deported to Auschwitz are able to work, and that these are distributed immediately after arrival to Sauckel, Organization Todt, etc. Stamped Top Secret and signed by Thadden. The third part is a covering note for the fourth part, initialed by Wagner and Thadden, with handwritten references to Eichmann. The fourth part is a summary of Thadden's report, with no endorsement.

NG-2230: A copy of a two page letter, dated April 24, 1944, from Thadden to Eichmann relaying the contents of NG-2233 (next to be discussed). Both pages initialed by Thadden. Date stamp and handwritten notations on bottom of page one. Note: the second time I consulted document NG-2230, it was an entirely different document, so there may be some error here.

NG-2233: In two parts. First part is a copy of a telegram from Veessenmayer to Ritter, dated April 23, 1944. It reports on the work of interning Jews from the Carpathians in ghettos. 150,000 Jews have already been rounded up. It is estimated that 300,000 Jews will have been affected when the action is completed. The internment of Jews in other areas is then to follow. From May 15 on, 3,000 Jews are to be shipped daily to Auschwitz, and in order not to hold up their transport, the transfer of the 50,000 Jews, demanded for work in the Reich by Veessenmayer, will temporarily be held up. For reasons of security, feeding, and footwear, it is not considered practicable to send them on foot. The endorsement is the stamp of the foreign Office (Classified Material). The second part of the document is a carbon copy of a letter from Thadden to Eichmann, dated April 24, repeating the substance of the telegram. Initialed by Thadden.

NG-2235: A carbon copy of a telegram from Wagner to Veessenmayer, dated May 21, 1944. It is reported that Thadden is to visit Budapest shortly to discuss the disposal of the property of German and Hungarian Jews, within the framework of the general European solution of the Jewish question. Initialed by Wagner. There also appear to be initials "VM" on the document, but it does not appear that this is supposed to be Veessenmayer's initials.

NG-2236: A typed memo from Wagner to Steengracht, dated July 6, 1944. Wagner states that it is the Reich policy to prevent Jewish emigration. The War Refugee Board request, through Switzerland, that emigration of Hungari-

an Jews to Palestine be permitted, must be denied because that would alienate the Arabs. Anyway, the Swiss-American intervention will be too late by the end of the month, for the anti-Jewish action in Hungary will be completed by that time. Stamped Secret and signed by Wagner. Initialed by Thadden and, possibly, by Hencke.

NG-2237: A mimeographed copy of a telegram from Veesenmayer to the Foreign Office, dated June 10, reporting that the measures for the concentration of Jews located north of Budapest had started, and that deportation of the Jews would start June 11. The endorsement is a Foreign Office stamp and Thadden's initials.

NG-2238: Typewritten memo by Wagner proposing that negotiations with the Swiss and Swedes on emigration of Hungarian Jews be treated in a dilatory manner until the question of the treatment of the Jews remaining in Hungary had definitely been solved. Dated September 16, 1944. Signed by Wagner, initialed by Thadden and illegible others.

NG-2262: A mimeographed copy of a telegram from Veesenmayer to Ritter, Dated May 4, reporting that evacuation of 310,000 Jews of the Carpathian and Transylvanian regions into Germany ("*nach Deutschland*") is scheduled to begin in the middle of May. Four daily transports, each holding 3,000, are contemplated. The necessary rail arrangements will be made at a conference in Vienna on May 4. Foreign Office stamp and Thadden's initials.

NG-2263: A mimeographed copy of a telegram from Veesenmayer to the Foreign Office, dated June 30, reporting that 381,661 Hungarian Jews had been deported as of June 30. Roundups had started west of the Danube, not including Budapest, and also in the suburbs of Budapest. Foreign Office stamp and Thadden's initials.

NG-2424: In two parts. The first part is a typed letter from Foreign Office press chief Schmidt to Foreign Office Secretary of State Steengracht, dated May 27, suggesting a propaganda campaign ("the discovery of explosives in Jewish clubs and synagogues," etc.) to precede any actions against the Jews of Budapest. The endorsement is initialing by Wagner. The second part is a typed copy of a telegram from Thadden to Budapest, dated June 1, passing on the suggestion. Initialed by Wagner and Thadden.

NG-2980: In three parts. The first part is a typed copy of a telegram from Wagner to Budapest, dated May 21, announcing a forthcoming visit to Budapest by Thadden, for negotiations on the Jewish problem. Stamped and initialed by Wagner. The second part is an unsigned carbon copy of a letter from Thadden to Wagner, constituting a covering letter for Thadden's report on his activities in Budapest. Stamped Top Secret. The third part is the typed five-page report, dated May 25. It is reported that special referent for Jewish questions at the German Embassy in Budapest von Adamovic, "has no idea of the actual intentions (or) of the practical application of the measure against the Jews." He also reports a visit to Eichmann's office, where he learned that 116,000 Jews had been deported to the Reich, and that the deportation of another 200,000 was imminent. Concentration of about 250,000 Jews of the

provinces north and northwest of Budapest will begin June 7. More plans are given. It is estimated that only about 80,000 Jews able to work will remain in Hungary. The entire operation is to be concluded by the end of July. The report is five pages long, and the only endorsement is a top-secret stamp on the first page.

NG-5510: A typed copy of a telegram from Veessenmayer to the Foreign Office, date May 8, stating that Count Bethlen and Dr. Schilling do not approve of the Jewish action, and that Veessenmayer will therefore request their dismissal. "Count Bethlen declared that he did not want to become a mass murderer and would rather resign." The endorsements consist of a top-secret stamp and a handwritten notation to file under "Hungary."

NG-5532: A typed copy of a telegram from Veessenmayer to Foreign Minister Ribbentrop, dated July 9, reporting Hungarian Minister of the Interior Jaross' intention to concentrate the Budapest Jews outside of Budapest and then "release them gradually in batches of 30 – 40,000 Jews for transport to the Reich." No endorsement.

NG-5533: A typed copy of a telegram from Veessenmayer to the Foreign Office, dated June 14, asserting that numerous Hungarian Jews had been slipping into Slovakia "since we pounced upon them" after March 19. Stamped with "Hungary," and "State Secretary" handwritten on the bottom.

NG-5565: An original typed copy of a telegram from Thadden to the German Embassy in Pressburg, dated May 2, announcing that a conference will be held May 4-5 in Vienna for the purpose of organizing rail transport for "a large number of Hungarian Jews for work in the Eastern Territories." Stamped secret and initialed by Thadden.

NG-5567: A mimeographed copy of a telegram from Veessenmayer to the Foreign Office, dated June 17, giving the total number of Hungarian Jews deported to the Reich as 326,009. Stamped and initialed by Thadden (the staff evidence analysis states that the document is initialed by Wagner and Reichel, but this is not confirmed by the documents I examined).

NG-5568: A mimeographed copy of a telegram from Veessenmayer to the Foreign Office, dated June 8. "In execution of Jewish measures in Hungary, basic principle to be observed is secrecy regarding dates of deportation and of zones, which will be cleansed one after the other in order to avoid disquieting of Jewish elements and attempts to emigrate. This applies especially to the city district of Budapest, which is to be the last zone, and where difficulties in this respect are to be expected." Stamped and blue pencil noted by Thadden.

NG-5569: In several parts. The first and major part is a mimeograph of a telegram from Ludin in Pressburg (Slovakia) to the Foreign Office, dated June 14. It is reported that guards had entered the trains deporting Jews from Hungary across Slovakia, and had robbed the Jews of money and jewelry, and had shot some. They had then used the proceeds to get drunk at a nearby restaurant. Stamped. Next four parts are notes discussing the incident. Various stamps; initials of Wagner, Thadden, and Mirbach.

NG-5570: Mimeographed copies of five telegrams. The first is dated October 14, and reports the plans to deport about 50,000 Jews by foot from Hungary for labor in the Reich. It is added, confidentially, that "Eichmann plans [...] to request 50,000 additional Jews in order to reach the ultimate goal of cleaning of Hungarian space [...]" Stamped and handwritten notes. Next four parts discuss operations with Budapest Jews and also with the Jews being deported for labor. Stamps and initialings by Wagner and Thadden.

NG-5571: Typewritten telegrams exchanged by Veessenmayer and Altenburg of the Foreign Office, dated June 25 and 28. In view of the "liquidation of the Jewish problem" in Hungary, the Hungarian government should reimburse the Reich with the corresponding amounts of food-stuffs. Stamps.

NG-5573: Typed report by Wagner to Ribbentrop, dated October 27. Of the 900,000 Jews who had been in Hungary, 437,402 had been sent for "labor to the East." A discussion of Hungarian Jews being allowed to emigrate follows. Stamped and initialed by Mirbach.

NG-5576: Typewritten copy of a telegram from Veessenmayer to the Foreign Office, dated June 30. Horthy objected to measures against the Budapest Jews but agreed to postponed measures. Thus, "assembling in last provincial Zone V [so far not covered space west of Danube, with exclusion of Budapest] has started. Simultaneously assembling will be carried out within jurisdiction of first constabulary commando in remoter suburbs of Budapest in order to facilitate drive in capital." Stamped.

NG-5594: Anonymous telegram from Budapest to the Foreign Office, dated April 18. The "Hungarian population urgently desires a swift, radical solution to the Jewish problem, since fear of Jewish revenge is greater than the fear of Russian brutality." Handwritten notations to file.

NG-5595: Typewritten copy of a telegram from Veessenmayer to the Foreign Office, dated April 28. "Special operations" in Hungary had resulted in the arrest of 194,000 Jews. Stamped and handwritten notations.

NG-5596: Typewritten copy of a telegram from Veessenmayer to the Foreign Office, dated April 28. 194,000 Jews arrested by the special operations, and Hungarian plans to distribute the Budapest Jews throughout the city on account of the Allied bombing raids. Stamped.

NG-5597: Typewritten copy of a telegram from Veessenmayer to the Foreign Office, dated April 30. 194,000 Jews arrested by the special operations, and discussion of Jews trying to be conscripted for labor in Hungary in order to avoid concentration camps. Stamped and handwritten notations.

NG-5599: Typewritten copy of a telegram from Veessenmayer to the Foreign Office, dated May 5. 196,700 Jews arrested by the special operations. Stamped and handwritten notations.

NG-5600: Typewritten copy of a telegram from Veessenmayer to the Foreign Office, dated May 6. Jews are being rounded up, and the Jews think that they are "only going to the special camps temporarily." Stamped.

NG-5602: Typewritten copy of a telegram from Veesenmayer to the Foreign Office, dated May 24. 110,556 Hungarian Jews have been deported. Stamped, handwritten notations, and illegible initials.

NG-5603: Typewritten copy of a telegram from Veesenmayer to the Foreign Office, dated May 19. 51,000 Hungarian Jews deported. Stamped and handwritten notations.

NG-5604: Typewritten copy of a telegram from Veesenmayer to the Foreign Office, dated May 20. 62,644 Hungarian Jews deported. Stamped and handwritten notations.

NG-5605: Typewritten copy of a telegram from Veesenmayer to the Foreign Office, dated May 20. Same report as NG-2061. Handwritten notations.

NG-5607: Typewritten copy of a telegram from Veesenmayer to the Foreign Office, dated May 16. The deportation of the 300,000 Jews concentrated in the Carpathian area and in Transylvania had begun on May 14, with four special trains with 3,000 Jews in each leaving daily. Stamped and handwritten notations.

NG-5608: Typewritten copy of a telegram from Veesenmayer to the Foreign Office dated May 25. 138,870 Hungarian Jews had been deported to the Reich. Stamped and handwritten notations.

NG-5613: Typewritten copy of a telegram from Veesenmayer to the Foreign Office, dated July 20. The Hungarian Nazis got the Franciscans to schedule a Thanksgiving mass to celebrate the deportation of the Jews, but the bishop objected, and certain compromises had to be made. Stamped and handwritten notations.

NG-5615: Typewritten copy of a telegram from Veesenmayer to the Foreign Office, dated July 11. 437,402 Hungarian Jews had been deported. Stamped and handwritten notations.

NG-5616: Typewritten copy of a telegram from Veesenmayer to the Foreign Office, dated July 8. 422,911 Hungarian Jews had been deported to the Reich. Stamped.

NG-5617: Typewritten copy of a telegram from Veesenmayer to the Foreign Office, dated June 17. 340,142 Hungarian Jews had been deported to the Reich. Stamped and handwritten notations.

NG-5618: Typewritten copy of a telegram from Veesenmayer to the Foreign Office, dated June 17. 326,000 Hungarian Jews had been deported to the Reich. Stamped and handwritten notations.

NG-5619: Typewritten copy of a telegram from Veesenmayer to the Foreign Office, dated June 13. 289,357 Jews had been deported from the Carpathian and Transylvanian regions. Future plans for deportation are outlined. Stamped and handwritten notations.

NG-5620: Typewritten copy of a telegram from Veesenmayer to the Foreign Office, dated June 8. Document, except for staff evidence analysis, was missing from the collection consulted, but it is apparently similar to those immediately preceding and immediately following.

NG-5621: Typewritten copy of a telegram from Veessenmayer to the Foreign Office, dated June 2. 247,856 Hungarian Jews had been deported to the Reich. Stamped and handwritten notations.

NG-5622: Typewritten copy of a telegram from Veessenmayer to the Foreign Office, dated June 1. 236,414 Hungarian Jews had been shipped to the Reich. Stamped.

NG-5623: Typewritten copy of a telegram from Veessenmayer to the Foreign Office, dated June 1. 217,236 Hungarian Jews had been shipped to the Reich. Stamped and handwritten notations

NG-5624: Typewritten copy of a telegram from Veessenmayer to the Foreign Office, dated May 31. 204,312 Hungarian Jews had been shipped to the Reich. Stamped and handwritten notations.

NG-5637: Typed memo from Wagner to Steengracht, dated May 21, 1943. Wagner reports a visit from the Hungarian Ambassador. Difficulties relating to solution of the Jewish problem in Hungary were discussed. The deportations would have to be carried out in stages and, in order not to alarm those left behind, the ones deported should be allowed "a possibility to earn a living, at least for a short period." Stamped and signed by Wagner.

NG-5684: Typewritten copy of a telegram from Veessenmayer to Ribbentrop, dated July 6. A six page report of a conference with Horthy, who mentioned that "he received a flood of telegrams every day from all quarters abroad and at home, for instance from the Vatican, from the King of Sweden, from Switzerland, from the Red Cross and other parties," in regard to the Hungarian Jews. He advocated keeping Jewish physicians and also the Jewish labor companies who had been assigned to war related tasks. Veessenmayer told him that "the solution of the Jewish question [...] was carried out by Hungary [but] could never [have been] completed without [SS and SD] support." Initialed by Steengracht.

A few words on the general conditions under which this documents analysis was carried out are in order before proceeding to interpret this evidence. Unless one goes to Washington to examine original documents, what one typically has made available when a specific document is examined may consist of as many as four parts. First, there may be a photostatic copy of the original document. This happens only in a minority of cases. The other three parts are almost always available. First, there is the mimeographed reproduction, in German, of the original document. Thus, instead of any handwritten material, there is typewritten material that is indicated as having been handwritten. Second, there is the English translation of this German language document. Third, there is the accompanying descriptive material, the "staff evidence analysis." Among the four parts, quite a few minor contradictions were noted in the course of the study. In addition, a very few documents were missing from the collection examined.

It might be said, with good grounds, that certain of these documents should not be in the list, because they admit of many interpretations other than transport of the majority of Hungarian Jews to the Reich. NG-2424 is of this

nature; we have seen that the proposed Budapest action finally took place in October. NG-5533 and NG-5684 admit of many interpretations; with respect to the latter, there is no doubt that some Hungarian Jews were deported to the Reich specifically for labor, and the document may be interpreted in that respect.

Nevertheless, it is obvious that I must declare, at this point, that a quite considerable amount of forgery was involved in the production of these documents; they were written after the war. That the events the documents speak of, involving over 400,000 Hungarian Jews transported to the Reich (or Poland) in May – July of 1944, did not occur is a certainty, for reasons given. However there are grounds for a certain uneasiness here because forgery does not seem to have been practiced with respect to the parts of the Auschwitz extermination legend which have been examined up to this point. Forgery is a risky business. Thus, although forgery seems a certainty, we should wish for some independent evidence for a charge of forgery.

Forgery is less risky if it does not involve the actual forgery of signatures; if the cooperation of the persons who signed or initialed the forged documents could have been obtained, then it might have seemed that the risk was removed or minimized. Thus, we should take a close look at the endorsers of these documents. If NG-5684 is excepted, we have endorsements consisting of initials and/or signatures (or alleged initials and signatures) by Geiger, Wissberg, Hencke, Reichel, Mirbach, Wagner and Thadden, with the great majority of the endorsements coming from the latter two. These seven people have one very interesting thing in common; none were defendants in Case 11 or, apparently, in any other trial. In the cases of the first five, this can be argued to have been reasonable, either on account of the low rank of the person or on account of his peripheral involvement with the alleged crimes. Thus, the first five people had only a minor involvement in Case 11; Mirbach appeared as a defense witness, and Hencke was a defense affiant.³¹⁷

With Wagner and Thadden, however, the immunity from prosecution is most mysterious, if one does not grasp that the apparently safe manufacture of the incriminating Hungary documents required, basically, only their cooperation. We should thus examine their roles in the Foreign Office, and their experiences after the war.

Eberhard von Thadden was an official in “*Inland II*” in the Foreign Office. This group’s responsibility was liaison with the SS, and thus, Thadden was the “Jewish expert” of the Foreign Office, so to speak. Communication with Eichmann relative to the carrying out of Jewish policies, whatever those policies were, was a quite normal part of his duties. NG-2233 and NG-2980 are quite accurate in at least that respect. Horst Wagner was a member of Foreign Minister Ribbentrop’s personal staff and, as the head of *Inland II*, was Thadden’s superior and, as the documents correctly suggest, he was equally involved in the Jewish policies of the German government. The Foreign Office

³¹⁷ NMT, vol. 14, 1023, 1027.

had been accused by the various military tribunals of being implicated in the extermination of Jews, and at the IMT, Ribbentrop had been found guilty in this respect. The main defendants in Case 11 were some officials of the Foreign Office, most of them ordinary diplomats, and implication in Jewish extermination was naturally one of the charges. Both *ex officio* and in consideration of the documents that have been reviewed, both Thadden and Wagner would have seemed, at the start of Case 11, to have been in serious trouble. Moreover, they could not have been considered too obscure in relation to Case 11, the Ministries or Wilhelmstrasse Case. For example, the *New York Times* story announcing the opening of Case 11 chose to mention eight prominent “defendants or witnesses,” and Thadden was one of those in the list.³¹⁸

It is thus inexplicable, on normal grounds, that they were not even defendants in the trial; they both appeared as prosecution witnesses.³¹⁹ Strange occurrences continued for several years. With respect to Thadden, German tribunals attempted to correct the glaring omission by prosecuting him. After he was released from American detention in 1949, a German court in Nuremberg charged him in December 1950, but he went to Cologne in the British zone, and extradition was denied. Then a Cologne court charged him in May 1952, but the trial never materialized. He signed a prosecution affidavit for Eichmann’s trial in 1961. In early 1964, he was arrested again but released after he managed to produce \$500,000 bail, but then in November 1964, he was in an automobile accident and died of the injuries received.

Similarly, Horst Wagner was arrested by German authorities in 1949, but he managed to flee to Spain and then to Italy. Extradition proceedings commenced in 1953 but failed. In 1958, he returned to Germany to apply for a pension, was arrested, but soon released on \$20,000 bond, despite his previous flight to escape prosecution. His case seemed to disappear, but a trial was finally scheduled for May 20, 1968, ten years after his return to Germany. However, there were several postponements for various stated reasons, and finally, in late 1972, his trial was postponed indefinitely. In late 1975, he was living in quiet retirement in a suburb of Düsseldorf.³²⁰

So much for the documentary evidence supporting the claims of extermination of Hungarian Jews.³²¹ Wagner and Thadden had joined, as had Höss and others, the “new *Meistersinger von Nürnberg*,” but they evidently did it in an intelligent manner, because they acquired effective immunity from prosecution. In this connection, a detailed study of the documents by some expert person would be, most probably, very worthwhile. One object of analysis should be the language used. For example, the expression “*nach Deutschland*” in NG-

³¹⁸ *New York Times* (Feb. 26, 1947), 4; Hilberg (1961), 350f; NMT, vol. 14, 1057f.; Steengracht 86.

³²¹ Editor’s remark: For more recent contributions to that topic see Butz (2000) and Mattogno (2023).

2262 sounds as peculiar to me as “to America” would sound in an official State Department document, but I am not the appropriate judge in this matter. In any case, Wagner and Thadden held some cards merely by virtue of knowledge of the existence of false documents, that others did not hold. For example, Höss was in a position of dependence only on the gratitude of the Allies.

I have not examined all of the documents in the NG series (there are more than 5,000), and therefore I cannot reject the possibility, or even probability, that a few more exist. It is also possible that one or two might turn up with scribbles, said to be initials, for which I have no immediate answer. However, the documents study has been relatively thorough in consideration of the purposes of our study. It goes far beyond the documents that happen to have been referenced by Hilberg and by Reitlinger, far enough to satisfy me three times over on the fundamental dependence of this evidence on the post-war cooperation of von Thadden and Wagner.

It is well worth noting that Wagner and Thadden were not the only Germans involved with the Hungarian Jews who were mysteriously excused from prosecution. SS General Otto Winkelmann, Higher SS and Police Leader for Hungary and in command of all SS operations in Hungary, was also a prosecution witness in Case 11. SS Colonel Kurt Becher, representative in Hungary of the SS *Führungshauptamt* (and thus of Himmler), served the prosecution at the IMT.³²² In fact, none of the principals unquestionably involved in whatever were the German measures relative to the Hungarian Jews stood trial at Nuremberg or (with the exception of Eichmann) anywhere else. Eichmann was missing at the time of the Nuremberg trials, and the others gave evidence for the prosecution of those whose involvement had been at most peripheral.

The Producers

Nobody should be surprised to find the most sordid practices behind these trials. We have seen in Chapter 1 (pp. 45-48) that no ethical limitations were respected in the means sometimes employed to produce “evidence.” We should, therefore, take a closer look at who was in charge in Case 11. Recall that there was no substantial “indictment” process involving a grand jury, and that, as one may confirm by reading DuBois’s book, it was the prosecution in each case that decided who was to be put on trial and with what he was to be charged.

The Wilhelmstrasse Case was not really commensurate with the other cases tried before the NMT; all of the latter had had special purpose characters, as Table 4 shows (p. 40). The Ministries or Wilhelmstrasse Case, however, was somewhat like a “little IMT,” that is, people from an assortment of German government ministries were put on trial, and the trial had a correspondingly

³²² Editor’s remark: On Becher’s collaboration, see Holming.

wide scope. Thus, it was split into an “economic ministries section” and a “political ministries section,” each of which had different prosecution staffs.

The important section from our point of view and, indeed, the most politically important case to come before the NMT was the political ministries section of Case 11, whose chief prosecutor was Robert M. W. Kempner, who has quite a history. It is very useful to present a short summary here of the “high” points of his career.

Kempner, a Jew, was born in Germany in 1899, studied law, and joined the Prussian Ministry of Interior during the Twenties. In the years 1928-1933, he was a senior counsel for the Prussian State Police (under the Ministry of the Interior) and specialized in investigating the rising Nazi Party. He became an anti-Nazi crusader in his official capacity, and energetically attempted, without success, to have the party outlawed.

When the Nazis took over the German government in 1933, he was dismissed from his government position, but although Jewish, he was able to continue his legal practice for a short while as a counselor in international law and Jewish migration problems and also, apparently, as legal counsel for the German taxi drivers’ organization. Whether or not he spent any time in a camp or in some other form of detention is not clear. In any case, he moved to Italy in 1935 to take an administrative and teaching (political science) position at a small school in Florence. The Mussolini government closed the school in 1938, so the school and Kempner moved to Nice, France. He did not remain with the school for very long, however, and emigrated to the United States in 1939. His mother already had a research job at the University of Pennsylvania, and this connection seems to have landed him his “research associate” position at that University.³²³

He immediately resumed his anti-Nazi crusading. He had somehow managed to smuggle out of Germany some of the Prussian police papers, to which he had contributed, and these became the basis of a book, which he published privately in 1943. The book, in stencil form, attempted to show, on the basis of Kempner’s past experiences in Germany, what should be done in Germany after the war in order to permanently suppress Nazism. It did not achieve wide circulation but, together with some other books and articles that he wrote, established him as a sort of expert on fighting Nazis. He had also smuggled out some phonograph recordings of Nazi meetings; these had been made by the Prussian police during the years of his service. He contributed them to the University of Pennsylvania. He also did a certain amount of anti-Nazi letter writing to the newspapers. As the war was drawing to a close, he wrote that the Nazi leaders should be tried in the U.S. before regular American courts. In the meantime, he had acquired U.S. citizenship.³²⁴

³²⁴ Kempner, 1-12; *New York Times* (Sep. 28, 1941), sec. 2, 6; (Jan 20, 1945), 10.

During the war, he worked for both the U.S. Department of Justice and the OSS. In the latter agency, he was charged with drawing up lists of German anti-Nazis who could be trusted with posts in the coming occupation government of Germany. He was one of a large group of German Jews in the OSS (which included, *e.g.*, Herbert Marcuse).

At the end of the war, Kempner switched to the War Department and accompanied the U.S. Army back into Germany “on the payroll of the Judge Advocate General.” Prior to the opening of the IMT trial, he served in the fairly significant role of prosecution liaison with defense counsel, and later on was in charge of the division that prepared the U.S. trial briefs against individual defendants. During the trial, he was an apparently ordinary member of the prosecution staff, and specialized in the prosecution of the Nazi Minister of the Interior Frick. He does not appear to have been particularly prominent, although immediately after the trial, he contributed a magazine article to the *New York Times* on the great work the trial had done in educating the Germans. The killings of the German military and political leaders had not yet been carried out, so he simultaneously predicted, with great satisfaction, that the doomed Nazis would be buried in unmarked graves to “avoid fanatical pilgrimages by still ardent Nazis.” Actually, the ultimate procedure was even more hysterical, because the bodies of Göring *et al.* were photographed (in order to be gloated over shortly later in the press and in newsreels), disguised in U.S. Army uniforms, taken secretly to Dachau and cremated there, the ashes being sifted into a nearby stream.³²⁵

As he was taking over his responsibilities in Case 11 in 1947, Kempner was in the news in a related but nevertheless highly important connection from the point of view of our subject. In 1943 and 1944, there had been held, in the land of the “free press,” some “sedition trials” of Americans whose views of the U.S. government’s war policies were considered unwelcome. The U.S. prosecutor was O. John Rogge, an Ohioan who had, in his youth, been expected by family and friends to enter the ministry. He became a lawyer instead, and is said to have turned in a brilliant performance at the Harvard Law School. Attorney General Biddle chose him to prosecute the “sedition” case, replacing William P. Maloney, whose methods had provoked protests from several influential members of Congress. The proceedings, involving 30 defendants, were completely contrary to U.S. constitutional principles, and were fortuitously aborted when the trial judge passed away in November 1944, and a mistrial was declared. While the government was planning to resume the case, the Supreme Court had reversed another sedition conviction, and grave doubt arose within the Justice Department about the wisdom of continuing the spectacle. We hope the reader will abide this long digression on the “sedition” episode within the present digression on Kempner, for the point to be made is most important.³²⁶

³²⁵ R. H. Smith, 217, 222; *Yad Vashem Studies*, vol. 5, 44; *New York Times* (Oct. 6, 1946), sec. 6, 8; (Oct. 7, 1946), 2; (Mar. 18, 1947), 4; Select Committee, 1536, 1539.

³²⁶ *Current Biography* (1948), 533f.; *New York Times* (Feb. 7, 1943), 34.

Rogge lost interest in the sedition case as such, but he did not lose interest in the general subject of a "Fascist" internal menace in the U.S. In the spring of 1946, he went to Germany on an 11 week "information" gathering expedition, and accumulated some alleged facts that he summarized in a report, which he submitted to the Justice Department later in the year. Because there was no immediate reaction from the Justice Department to the material he had submitted, it appears that he got impatient and could not restrain himself. He therefore resorted to going around giving speeches in which he divulged some of the "information" he had been able to gather by interrogating Germans. In a speech to B'nai B'rith in New York in October 1946, he reported in very general language that Fascists are still at large "in the world and in this country. [...] Now the Fascists can take a more subtle disguise; they can come forward and simply say 'I am anti-Communist'." A few days later, he was much more specific whom he was talking about. John L. Lewis, President of the United Mine workers, and the late William R. Davis, an oil operator and promoter, had, he declared in a speech at Swarthmore College, conspired with Göring and Ribbentrop to defeat President Roosevelt in the elections of 1936, 1940 and 1944. According to the "evidence" that he had obtained in Germany, other prominent Americans who, in the view of the Nazis, "could be organized against United States participation in the war" included, he said, Senator Burton K. Wheeler, former Vice President John N. Garner, former President Herbert Hoover and Democratic big-wig James A. Farley. Rogge had also given some of his material to Drew Pearson, and it appeared in Pearson's column at about the same time. For such flagrant violation of the rules and standards of the Justice Department and of the legal profession and also, presumably, for stepping on some important political toes, Rogge was immediately dismissed from the Justice Department by Attorney General Clark. Rogge defended his actions, explaining that, after all, he had merely made "a study of international Fascism, for the people under investigation were part of an international movement to destroy democracy both here and abroad." Again he was specific; two of the people posing the Fascist threat were Mr. Douglas MacCollum Stewart and Mr. George T. Eggleston, at the time a member of the staff of the *Reader's Digest*. Rogge said that in Germany he had obtained information about them from former German diplomats who had had official connections with the U.S. before Pearl Harbor. *Pravda* described Rogge's removal as a "scandal."³²⁷

In the period before Pearl Harbor, Stewart and Eggleston had published the *Scribner's Commentator*, which was dedicated to keeping the U.S. out of World War II. During 1941, Stewart had received a large sum of money, \$38,000, and could not explain where it came from. He told the "sedition" grand juries of 1943-1944 that he had found this money in his home. Since such a story sounds ludicrous even to an impartial observer, Stewart was as-

³²⁷ *Current Biography* (1948), 534; *New York Times* (Oct. 14, 1946), 44; *New York Times* (Oct. 23, 1946); 8; (Oct. 26, 1946), 1; (Oct. 27, 1946), 16; (Nov. 3, 1946), 13; *Newsweek* (Nov. 4, 1946), 26.

sailed by the prosecutor and judge for giving such testimony. His refusal to change it led to his being held in contempt of court, and he was sentenced to serve 90 days in jail (he was paroled after 75 days).

In the course of 1946, the Justice Department, including even Rogge, had become convinced that no "sedition" charge could succeed in court, so the case that had been opened in 1943 was finally closed. However, there was still the matter of Stewart's testimony, which seemed a good basis for a perjury charge. Thus, in March 1947, Stewart was put on trial for committing perjury in testifying before the wartime grand jury.

The prosecution claimed that Stewart had received \$15,000 of the \$38,000 from the German government, and produced two witnesses to support its contention. Baron Herbert von Strempel, former First Secretary of the German Embassy in Washington, testified that he had given Stewart \$15,000 in the Hotel Pennsylvania in New York in the fall of 1941. The money had been obtained, he said, from Dr. Hans Thomsen, German Chargé d'Affaires. Thomsen then testified in support of von Strempel's story. The testimony of Strempel and Thomsen was, in fact, the direct consequence of Rogge's information gathering expedition in Germany in 1946.

Stewart's defense produced evidence that Stewart had received large sums of money from American sources in 1941. It claimed that some wealthy Americans wished to support the, by then, beleaguered cause of staying out of the war, but anonymously, so they slipped money to Stewart anonymously. Whether this claim was truthful or the truth was that Stewart had, indeed, lied before the wartime grand jury on account of feeling himself obliged not to divulge the identities of his American supporters, is scarcely relevant to our subject. More relevant was the defense cross examination of the prosecution's German witnesses, because the defense was able to discredit the prosecution case by showing that the testimony had been coerced. Baron von Strempel said that he had been arrested in Hamburg by two British agents who, when asked for their warrant, "smiled, drew their guns from their shoulder holsters, and said that was their warrant." He then spent four weeks in an American interrogation center and then seven months in a detention camp, where he was again subject to continual questioning. During this period, his health was "never so bad." He was questioned by Robert M. W. Kempner, but did not want to talk about this. Judge Laws was obliged to direct von Strempel to reply to defense attorney Magee's questions about this feature of his experiences. He finally said that Kempner had told him that if he "concealed any embassy dealings" he would be court martialed and sentenced to death. He then told the whole story. Incessant, intensive questioning by interrogators made him feel as if he had been "hypnotized." O. John Rogge became one of von Strempel's interrogators in Germany. During Rogge's interrogation, he said, his necktie and shoelaces were removed, he was kept in solitary confinement, was questioned all day without food, and was "at all times under duress." He admitted that he had signed a statement, but said that this was on account of fear of further solitary confinement. He gave this testimony, so destructive to the prosecution's

case, despite the fact that the U.S. was paying him \$70 per week, plus hotel expenses, in connection with his appearance as a witness against Stewart. There was also the possibility of U.S. retaliation via some sort of “war crimes” charge. Thomsen was likewise cross-examined; he admitted that von Stempel had told him of the death threat, and said that he had been “coached” by Rogge in recalling details. The jury found Stewart innocent during the course of a lunch break. Thus had Kempner appeared in the newspapers even before Case 11 had gotten underway.³²⁸

In examining the sedition affair, we have, therefore, encountered the Wilhelmstrasse Case, in the sense that Kempner enters the picture as interrogator and potential prosecutor of incarcerated former officials of the German Foreign office. The connection with Case 11 is even more substantial because Stewart’s attorney in the 1947 trial, Warren E. Magee, was shortly later to become co-counsel for Baron von Weizsäcker, the principal defendant in Case 11. We therefore have the unusual fact that the two sides involved in Case 11 had, almost simultaneously, clashed in a regular U.S. legal proceeding, and that the testimony that had been the result of the interrogation of the captive Germans had been successfully challenged by the defense as coerced. This is an extraordinary and important confirmation of the kind of activity, indicated by the evidence we have already reviewed, which must have transpired behind the scenes at the NMT – carrot and stick tactics of various sorts, including even third degree methods in some cases (but not necessarily in all cases where the evidence could correctly be said to have been “coerced”). Magee’s successes along these lines did not, moreover, cease with the Stewart trial. In another extraordinary choice of a person to use as a prosecution witness rather than put on trial, Kempner had used Friedrich Gaus, who had a reputation as “Ribbentrop’s evil spirit,” as the chief prosecution witness against von Weizsäcker. Magee, evidently by virtue of being an American having access to documents denied the German lawyers, was able to prove in court that Kempner had threatened to hand Gaus over to the Russians if Gaus did not cooperate with the prosecution, a frequent and effective threat that had certain variations. Häfliger, one of the defendants in Case 11, was a Swiss citizen, but according to his trial testimony, he was told by interrogator Sachs that if he stood on his Swiss nationality he would be turned over to the Russians, and Sachs urged him “to note that there were no diplomatic relations between Russia and Switzerland.” Much more to the point is the fact that von Thadden, under cross examination by defense attorney Dr. Schmidt-Leichner, admitted that Kempner, in connection with an execution that had supposedly been carried out by German authorities in France:

“had made me understand that there were two possibilities for me, either to confess or to be transmitted to the French authorities, before a

³²⁸ *New York Times* (Mar. 12, 1947), 6; (Mar. 13, 1947), 17; (Mar. 14, 1947), 12; (Mar. 15, 1947), 11; (Mar. 18, 1947), 4; (Mar. 19, 1947), 5; (Mar. 26, 1947), 4; *Chicago Tribune* (Mar. 19, 1947), 20.

French tribunal, where the death penalty would be sure for me. A delay of twenty four hours was accorded me, during which I had to decide."

A Swiss journalist wrote at the time that Kempner and colleagues were attempting to misrepresent Nazism as a "concoction of the German upper classes" in order to destroy the pre-Nazi social structure of Germany.³²⁹

Rogge had a long and interesting career, but a thorough summary would carry us too far afield. In fairness to him, we should say that his behavior in connection with the "sedition" cases should not lead one to assume that he was insensitive in regard to civil liberties, because when the first postwar steps were being taken to set up an anti-Communist internal security program, Rogge started yelling about "witch hunts" and, in the following years, became Chairman of the New York State (Henry) Wallace for President Committee, a perfectly logical appointment, because Rogge embodied all that was unique in that movement's approach to dealing with the Soviet Union. Characterized by the left-wing *Nation* in 1950 as "the lone independent in various Communist-operated congresses, committees, and delegations," he had traveled to Moscow in March to attend the "World Congress of Partisans for Peace." He explained to the Soviets that the cold war was equally the fault of both sides, and stood up in a formal meeting in the Kremlin and quoted Thomas Jefferson, actions that were not appreciated by his Soviet hosts. The *Nation* commented further that³³⁰

"It is easy to put down O. John Rogge as a quixotic busybody, a fuzzy-minded liberal so out of touch with reality that he believes the ills of the world to be merely the result of unfortunate misunderstanding. [...] He has shown why the Russian rulers regard with suspicion even their own followers who have had contact with the West."

Rogge also involved himself in the widely publicized "Trenton Six" murder case of 1948-1953 as a lawyer for the "Civil Rights Congress." In December 1949, the judge barred him from the New Jersey trial for

"[...] violating the lawyers' canons of ethics by denouncing the conduct of the trial in public, by showing 'studied discourtesy and contempt' in the court and by 'deliberately distorting the facts.' [The judge also charged that] the Civil Rights Congress [...] collected more money from the public than was needed for the trial."

Seven months later, a U.S. court held that Rogge's barring from the trial was wrong but did not order his restoration.³³¹ This short discussion of Rogge suffices for our purposes.

³²⁹ Utley, 172, 177; Gaus (Case 11 transcript, 5123-6167) denied the coercion but, as Magee commented in court, "we have the questions and answers that the witness gave" in the relevant interrogation. The von Thadden and Häfliger declarations were made in the sessions of March 3 and May 11, 1948, respectively, and the corresponding parts of the trial transcript are quoted by Bardèche, 120ff, who gives other examples of coercion and intimidation of witnesses at Nuremberg.

To return to Kempner. When the Bonn government had been newly constituted in 1949, he warned of incipient Nazism there. Such a view did not prevent him from serving, two years later, as Israel's representative to Bonn in negotiations relative to the restitution of Jews who had suffered injury at the hands of the Nazi government. However, the next month, he was attacking the reprieves and reductions of sentences of "war criminals" that had been granted by the U.S.³³²

Kempner next appeared in connection with the 1952 House investigation of the Katyn Forest massacre, a well-known Russian atrocity whose handling by the IMT throws full light on the absurdity of that tribunal's claim to respect.

On April 13, 1943, the Germans announced that, in the Katyn Forest near the city of Smolensk in Russia (mid-way between Minsk and Moscow), mass graves of Polish officers who had been captured by the Russians in 1939 had been uncovered. Four days later, the minister of defense of the Polish government in exile (in London) announced that he was requesting the International Red Cross to make an inquiry. The Germans supported the proposed inquiry but the Russians opposed it, referring to the London Poles as "Hitler's Polish collaborators," and on April 26 broke diplomatic relations with that government over the matter.

On account of the Russian opposition, the Red Cross refused to get involved. However, the German government exhibited the Katyn mass graves to various parties of Poles, to a group of foreign newspaper correspondents, to a group of German journalists, to small parties of British and American POW's, to a technical team of the Polish Red Cross and, most importantly, to an international commission of experts in forensic medicine (specialists in rendering medical opinions in legal proceedings). The commission concluded with a report which demonstrated the certainty that these Polish officers had been murdered by the Russians prior to the outbreak of war between Russia and Germany in June 1941.

When the graves had first been discovered, the German propaganda service, not knowing how many bodies were to be found there but knowing the approximate number of Polish officers who could have been involved as victims, used the figure of 10,000 and 12,000 as the number of bodies discovered, and these were the figures which were given the widest publicity during the war. Consequently, at the IMT, the indictment charged the Germans with murdering 11,000 Polish officers at Katyn, although it had been established, later in 1943, that there were only 4,253 bodies to be found. This fact was published by the German government, but naturally, because it contradicted their earlier claims, the Germans did not give the correct figure great publicity. But since the remaining officers were never found, it can be assumed they all fell victim to the Soviet firing squads.

What happened at the IMT with respect to this charge illustrates the foolishness of that tribunal's claim to anything approximating legal jurisdiction.

³³² *New York Times* (Sep. 30, 1949), 2; (Jan. 12, 1951), 7; (Feb. 2, 1951), 8.

The testimony of members of the forensic commission was naturally of interest, so the Russians produced Professor Marko Markov, a citizen and resident of Bulgaria, who had been one of the signers of the commission report. Bulgaria being, by then, under Soviet control, Markov had changed his mind and testified in support of the Russian position, *i.e.*, that the Germans had intimidated him into approving the commission report.³³³

Göring's counsel, on the other hand, applied to have Professor F. Naville, the chairman of the commission, called to testify. On this point, one can see the emptiness of the tribunal's effectiveness in getting at the truth, even if it had wished to. Naville was a Swiss citizen, resident in Geneva, and could not be forced to testify and, in fact, he declined to testify. The motivation is obvious. The counsel for Field Marshall Keitel also requested that Naville (who had also been an International Red Cross representative) answer some questions (relative to a different subject) to be put to him in writing, but it appears that this interrogation did not materialize. Thus, the IMT tribunal, by its very nature, was prejudiced against the appearance of the most reliable type of witness: the citizen of a country which had been neutral during the war and independent after the war (I am only saying that the IMT could not *compel* testimony from such people; we have seen that Burckhardt, the President of the Red Cross, voluntarily answered written questions put to him in Switzerland for Kaltenbrunner's defense). The defense ended up by calling three German soldiers to testify (three witnesses were allowed to each side on this matter).³³⁴

The tribunal's final disposition of the Katyn issue was a disgrace even independent of the true facts concerning the atrocity: it was quietly dropped and does not appear in the judgment. The Germans were not "found" either guilty or not guilty of this Russian atrocity. The IMT ducked the whole matter.

In 1952, the U.S. House of Representatives investigated the Katyn massacre, and naturally made an inquiry into what had happened at the IMT in this respect. The Select Committee set up for this purpose accordingly held some hearings in Frankfurt, Germany, in April of that year. The Committee heard, among others, representatives of both the defense and prosecution legal staffs of the IMT. To speak for the German side, the Committee logically called Dr. Otto Stahmer, who had been counsel for the principal defendant Göring, who had also been the defendant who had pressed this particular matter at the IMT. To speak for the American prosecution, the Committee, surprisingly, chose Robert M. W. Kempner. Examination of the trial record reveals no reason why Kempner should have been selected for this role. That Kempner appears to have been living in Germany at this time, and that the Committee naturally thought it convenient that he testify at the Frankfurt hearings, does not explain anything. During the course of all of its hearings, the only other member of the prosecution that the Committee heard was Justice Jackson, but his appearance in November in Washington was somewhat ceremonial, and added nothing to the record.

³³³ Belgium, 64-78.

³³⁴ IMT, vol. 10, 648.

According to the record of the public hearing held in Frankfurt, Kempner explained that the Katyn massacre was, according to the understandings among the prosecution staffs, “a clear-cut Russian affair and was handled right from the beginning by the Russians. [...] We had no right to interfere in any way.” Nevertheless, after the witnesses had been heard, the general view, according to Kempner, was that Göring had scored a victory on this point. Thus, the failure to mention Katyn in the judgment called into question the integrity of the Nuremberg trials, and a realization of this was implicit in the questions asked by the committee members. Kempner was asked about possible participation by the U.S. prosecution staff in the behind-the-scenes activity in regard to Katyn, and denied that such had taken place. In response to questioning, he also denied that there had been any “conspiracy or attempt to collude between anybody on the American side and anybody on the Russian side.”³³⁵

The *New York Times* reported that the tone of the Frankfurt hearing was such that “the principles governing the trial procedure in Nuremberg were being questioned. United States officials at the hearing privately expressed concern over the situation.”³³⁶ The *Chicago Tribune* reported that, at a secret session the night before the public hearing in Frankfurt, Kempner had admitted that the U.S. prosecution staff at the IMT had possessed evidence showing that the Russians had committed the Katyn murders.

The Select Committee on the Katyn Forest massacre concluded that the U.S. government had suppressed the truth about Katyn both during and immediately after the war. In particular, a report by Lt. Col. John H. Van Vliet, Jr., one of the American POW’s who had witnessed the mass graves, “later disappeared from either Army or State Department files.” It was also found that the Federal Communications Commission had intimidated radio stations in order to suppress criticism of the Russians.³³⁷

In the years immediately following 1952, there was little for Kempner to do in relation to Nazis, but with the Eichmann affair he was back in action and served as a “consultant” to the Israeli government in assembling evidence for the trial. From that point on, he was very active. He contributed an article to the *Yad Vashem Studies* on methods of examining Nazis in trials, and he published a book in German, rehashing old propaganda myths. In 1971, he expressed approval of the conviction of Lt. Calley, and in December 1972, he endorsed the “evidence” that Ladislav Farago had gathered in connection with Farago’s Martin Bormann-is-in-Argentina fiasco of that month. Evidently yearning for the old days, Kempner declared that the “United States and its Allies should reopen the Bormann case within the framework of the International Military Tribunal.”³³⁸ Bormann had been tried *in absentia* at the IMT and sentenced to death. He was never found, and it is now generally agreed that he died in Berlin.

In regard to Kempner, three principal conclusions may be drawn from this short summary of the man's career (based entirely on material in the public record). First, he could accurately be characterized as a fanatical anti-Nazi, starting in the Twenties, when the Nazis were certainly no more criminal than several other groups on the violent and chaotic German political scene (the Communists and Social Democrats also had private armies). Anti-Nazism is obviously Kempner's consuming vocation. Second, he was an extremely important figure in the trials that the U.S. held in Nuremberg. We have seen that he had critically important responsibilities in connection with the IMT, and was also treated, later on, as a particular authority on what had gone on there. At the end of the IMT trial, the press described him as "Jackson's expert on German matters" and "chief of investigation and research for [...] Jackson."³³⁹ At the NMT, he took over the prosecution of the most important case, the political section of the Wilhelmstrasse Case, and he may well have been the most important individual on the Nuremberg staff, although further research would be required to clarify the real power relationships that existed on the Nuremberg staff, if such clarification is possible. James M. McHaney headed the division that prepared Cases 1, 4, 7, 8, 9, and 12. Other significant persons at the NMT have been discussed by Taylor.³⁴⁰ The *Encyclopedia Judaica* describes Kempner as "chief prosecutor" at the NMT trials.

The third conclusion that may be drawn is that there are excellent grounds, based on the public record, for believing that Kempner abused the power he had at the military tribunals, and produced "evidence" by improper methods involving threats and various forms of coercion. The Stewart case makes this conclusion inescapable.

This is the man who held the power of life and death over Eberhard von Thadden and Horst Wagner.

Our digression on Kempner is concluded. We came to the point, in our analysis of Hungary, where irregularities in the production of evidence in Case 11 were clearly indicated. Thus, it was necessary to examine two subjects: who was in charge in Case 11, and what was the level of integrity maintained in the operations of the trials at Nuremberg. It was found that the truth in regard to the latter subject was established rather decisively in the course of examining the former; a study of Kempner's career reveals all that one needs to know in order to evaluate the reliability of the evidence generated at the Nuremberg trials.

Clearly, any person who wished to maintain the authenticity of the Hungary-related documents that imply extermination must produce some tortured story whose structure we cannot begin to imagine.

Another person involved in the documents is Veessenmayer, who was a defendant in the Wilhelmstrasse Case, and who was questioned in connection with some of these documents. The general position taken in his testimony was a reasonable one in view of his objective of gaining acquittal or a light sen-

³⁴⁰ Taylor (Aug. 15, 1949), 38+.

tence. He had to report everything that went on in Hungary, and thus, Jewish measures were in his reports. However, these measures did not have the importance in his mind at that time that they have in our minds at this time. He testified that he often got twenty assignments a day, and in the course of a month would receive mutually contradictory assignments. His reports, he said, were naturally prepared by assistants, hastily scanned by him, and then signed. Shown documents, which have him reporting that two transports, each of 2,000 Jews fit for work, were sent to Auschwitz in April 1944, and asked if this were correct, he remarked that he had no specific memory but that it was "quite possible," but that he never knew what Auschwitz was. Shown NG-5567, which had him reporting that up to June 17, 326,009 Jews had been deported from Hungary, he also remarked "quite possible." In other words, he did not want to involve himself, in any way, in these matters by taking any strong position, either assenting or dissenting, with respect to the alleged facts. If he had said that he clearly recollected, in detail, mass deportations of Jews in the numbers alleged in the spring and summer of 1944, then such testimony would have implicated him in the alleged exterminations. On the other hand, if he had denied that such mass deportations had taken place, then he would, in effect, have been claiming close involvement in whatever had happened, and he would have also, by such testimony, flung down a challenge to the prosecution and court which they couldn't possibly have ignored. Thus the logic of his testimony. He said that he was concerned with moving the Jews out of Budapest because of the danger of revolt as the Russians approached. Pressed on this matter, he explained that:

"In practice the question was, will the front hold or won't it? If Budapest revolts, the whole front will be rolled up. [...] If I participated in such conversations, which I won't deny is possible, then I participated exclusively from a military point of view. What can I do to hold up the Eastern front as long as possible? Only from that point of view."

Veesenmayer was sentenced to twenty years imprisonment, but he was out by early 1952.³⁴¹

This seems to be as good a place as any to point out a fact that seems to be effectively forgotten by many writers on this subject. There was a war going on during World War II. The Germans were thinking about ways of winning it, not about exterminating Jews. The claim of NG-2233 that the extermination program had rail priority over military production is absolutely ridiculous.

What Happened in Hungary?

On the subject of what actually happened in Hungary, note that the *Red Cross Report* says that the basic German policy in 1944 was to intern East European Jews, on account of their posing a security menace as the front came nearer.

³⁴¹ NMT, vol. 13, 487-508; Reitlinger, 566.

Now, the documents reporting concentration and deportation of large numbers of Hungarian Jews may be correct in regard to concentration alone; this was the policy in neighboring countries. However, it seems unlikely that anywhere near 400,000 were concentrated. That would have been quite a huge operation.

It appears possible to get a fairly accurate picture of what happened in Hungary by supplementing the story of the Red Cross with an examination of the documents, rejecting the documents which are obvious forgeries. We are fortunate in having the two-volume collection of reproductions of selected original documents, *The Destruction of Hungarian Jewry*, edited by Randolph L. Braham; these volumes offer the normally circumstanced reader a handy substitute for a regular documents collection. Examining the documents included, and rejecting as forgeries those that pertain to alleged deportations of 400,000 Hungarian Jews, a believable story unfolds. On April 14, 1944, Hungary agrees to the deportation of 50,000 employable Jews to Germany for labor (page 134, NG-1815). On April 19, Veessenmayer requests freight cars, whose procurement is “encountering great difficulties,” for the deportation of 10,000 employable Jews delivered by the Hungarians (page 138, NG-5546). Finally on April 27, Veessenmayer reports on the imminent shipment of 4,000 employable Jews to Auschwitz (page 361, NG-5535). Also on April 27, Ritter reports on delays in the deportation of the 50,000 on account of rail shortages (page 362, NG-2196). Later in the year, July 11, Veessenmayer reports on the difficulty of carrying out the Jewish policy in Hungary because of the more lenient policies practiced in Romania and Slovakia (page 194, NG-5586). On August 25, Veessenmayer reports Himmler’s offer to stop deportations from Hungary (page 481, no document number), and on October 18, Veessenmayer reports on the new Jewish measures in Hungary (page 226, no document number). A believable story, and one consistent with the Red Cross *Report*. One may also remark that, on Hungary, the authors of the hoax have again attempted to supply a dual interpretation to a perfectly valid fact. There were, indeed, deportations of Hungarian Jews in the spring of 1944 to, among other places, Auschwitz. However, the deportations, which were for labor purposes only, were severely limited by the disintegrating European rail system, and do not appear to have been carried out on the approximate schedule originally contemplated or aspired to.³⁴²

A few words regarding the Joel Brand affair, the proposed swap of Hungarian Jews for trucks and other supplies, are in order.

The pre-war German policy, which was also maintained to some extent early in the war, was to encourage Jewish emigration by all means. However, after the war had developed into a great conflict, the policy changed, and emigration from countries in the German sphere was made very difficult for Jews. The principal reason for this was, of course, that such Jews were manpower that could and would be used against them. There were a variety of lesser rea-

³⁴² Editor’s note: more documentary and anecdotal evidence exists regarding the deportation of Jews from Hungary between mid-May and early July 1944, which is thoroughly presented and analyzed in Mattogno (2023).

sons, one of the most important being that, in an attempt to drive a wedge between Britain and the Arabs, the Germans supported the Arab side on the question of Jewish immigration into Palestine. Thus, the standard German attitude in the latter half of the war was that Jewish emigration could proceed in exchange for Germans held abroad, especially if the Jews were not to go to Palestine. We have seen that Belsen served as a transit camp for Jews who were to be exchanged. What was involved in the Brand Affair was the same sort of thinking on the German side, with a variation regarding the form of the *quid pro quo*. The Germans were willing to let the Jews emigrate in exchange for the trucks and other supplies. Thus, there is nothing implausible in the Brand affair, provided one understands that it was not the lives of the Hungarian Jews that were at stake in the matter.

Although the Brand deal was not consummated, there was a trickle of German and Hungarian authorized emigration of Jews from Hungary to, e.g., Sweden, Switzerland, and the U.S. A rather larger number slipped into Romania and Slovakia illegally in 1944 (reversing the earlier direction of movement, which had been into Hungary). The defense documents Steengracht 75, 76, 77 and 87 give a picture of the situation.

The survey of 1944 propaganda that was presented in this chapter shows that Auschwitz (referred to as Oświęcim) finally emerged in the propaganda as an extermination camp in the period immediately after D-Day, when nobody was paying any attention to such stories. Later in the summer of 1944, the emphasis switched to the camp at Lublin, which was captured by the Russians in late July. The expected propaganda nonsense was generated in respect to the cremation ovens (five in number) that were found there, the Zyklon, some bones (presumably human), etc. Lublin remained the propaganda's leading extermination camp well into the autumn of 1944.³⁴³

Can Anybody Believe such a Story?

This concludes our analysis of the Auschwitz charges. It is impossible to believe them; the allegations are so breathtakingly absurd that they are even difficult to summarize. We are told that the Nazis were carrying out mass exterminations of Jews at the industrial center Auschwitz, employing the widely used insecticide Zyklon B for the killing. The 30 or 46 cremation muffles at Auschwitz, used for disposing of the bodies of the very large numbers of people who died ordinary deaths there, were also used for making the bodies of these exterminated Jews vanish without a trace. As an extermination center, Auschwitz was naturally the place that the Hungarian Jews were shipped to for

³⁴³ Lublin (Majdanek) propaganda appeared in *Life* (Aug. 28, 1944), 34; (Sep. 18, 1944), 17; *Newsweek* (Sep. 11, 1944), 64; *Reader's Digest* (Nov. 1944), 32; *Time* (Aug. 21, 1944), 36; (Sep. 11, 1944), 36; *Saturday Review Lit.* (Sep. 16, 1944), 44; on Majdanek see Graf & Matogno (2016).

execution. Shipments of Jews conscripted specifically for desperately needed labor in military production were delayed in order to transport the Hungarian Jews to Auschwitz for execution. The 46 cremation muffles, which existed at Auschwitz, turned out to be inadequate to dispose of people arriving at the rate of about 10,000 per day, so the bodies were burned out-of-doors in pits. This cleaning out of the Hungarian Jews escaped the notice of the International Red Cross delegation in Budapest, which was deeply involved in Jewish affairs. The evidence for all of this, presented to us by the U.S. government, consist of documents whose authenticity is proved by the endorsements of Jewish policy specialists Wagner and von Thadden, who are also incriminated by the documents. However, the U.S. government did not prosecute Wagner and von Thadden in the Wilhelmstrasse Case, where the indictments were in the hands of a lifelong Nazi-hater (Kempner) and where an American lawyer had exposed the evidence as coerced, just as he did in a regular U.S. legal proceeding in Washington where Kempner was involved.

The U.S. government also failed, despite all of its talk in 1944, to interfere in any way with, or even make photographs of, these alleged events at Auschwitz.

Can anybody believe such a story?

Chapter 6: Et Cetera

The extermination claims have been so concentrated on Auschwitz that this book could justifiably end right here; because the central part of the extermination legend is false, there is no reason why the reader should believe any other part of it, even if the evidence might appear relatively decent at first glance. Hundreds of trained staff members were dispatched to Europe and employed there to gather the “evidence” for exterminations and related crimes, and we have seen what kind of story they have presented with respect to Auschwitz; a fabrication constructed of perjury, forgery, distortion of fact and misrepresentation of documents. There is no reason to expect a better case for the less publicized features of the extermination legend. Nevertheless, the remainder of the story should be examined, partly for the sake of completeness, partly because the examination can be accomplished rather quickly, and partly because there is a respect in which one feature of the legend may be partially true. It is also convenient to review here a few odd matters that might strike some readers as evidence in support of the extermination claims.

More ‘Extermination’ Camps

The evidence for exterminations at Bełżec, Chełmno, Lublin, Sobibór, and Treblinka is fairly close to zero. There is the Höss affidavit and testimony and the “Gerstein statement.” There is a draft of a letter by Dr. Wetzel, another Nazi who became immune from prosecution, speaking of there being “no objections to doing away with those Jews who are unable to work, by means of the Brack remedy” (NO-0365). The draft is typewritten and apparently initialed by Wetzel, who had been head of the Race-Political Office of the NSDAP, but was transferred in 1941 to Rosenberg’s Ministry for the East, where he served as the expert for Jewish affairs. There is no evidence that the letter, which is addressed to Hinrich Lohse, Reichskommissar for the Ostland (map, Fig. 3), was ever sent. A similar document, bearing a typewritten Wetzel signature, is NG-2325. Wetzel was not called as a witness at any of the Nuremberg trials, and was not threatened with prosecution until 1961, when he was arrested by German authorities in Hannover, but his case seems to have immediately disappeared from the public record, and nothing more was heard of him, except that he is said to have been finally charged in 1966; if such is the case, it is odd that he is not listed in the 1965 East German *Brown Book*. However, no trial ever materialized.³⁴⁴ We will have occasion to comment on Lohse below.

³⁴⁴ Hilberg (1961), 562; Reitlinger, 137, 567; Rassinier (1962), 80n.

The Viktor Brack of Wetzel's letter was an official of the Führer-Chancellery, involved in the Nazi euthanasia program. The present claim is that the gas chambers in Poland, exclusive of those allegedly used at Auschwitz, "evolved" from the euthanasia program which, it is claimed, employed gas chambers. Despite Brack's testimony, it is difficult to believe that euthanasia was practiced in German hospitals by a method of gassing 20 or 30 persons at a time with carbon monoxide.³⁴⁵ Auschwitz, of course, must be excluded from this "evolution" from the euthanasia program on account, among other reasons, of the Höss testimony. Reitlinger and Hilberg do not seem worried over the confusion thus created in the structure of the legend.

The euthanasia program came into existence via a Hitler decree of September 1, 1939, authorizing the mercy killing of mortally ill patients. Later, the severely insane were included. The program encountered deep hostility in the German population, especially because rumors of unknown origin immediately started circulating; the rumors claimed, *inter alia*, mass gassings of the sick and elderly. On November 6, 1940, Cardinal Faulhaber of Munich wrote to the Ministry of Justice, setting forth the Catholic Church's objections, and pointing out³⁴⁶

"[...] that a great disturbance has arisen in our people today because the mass dying of mentally ill persons is discussed everywhere, and unfortunately the most absurd rumors are emerging about the number of deaths, the manner of death, etc."

It did not take long for the euthanasia program to appear in propaganda, and in December 1941, the BBC broadcast an address by author Thomas Mann, in which Mann urged the German people to break with the Nazis. In listing the Nazi crimes, Mann said:³⁴⁷

"In German hospitals the severely wounded, the old and feeble are killed with poison gas – in one single institution, two to three thousand, a German doctor said."

This seems to be the first appearance of gas chambers in the propaganda but, as far as we can see, this claim was not related to the extermination propaganda which started half a year later, and in the course of which no reference, apparently, was made to the euthanasia program. The relating of the euthanasia program to exterminations came much later.

At the IMT, the prosecution did not attempt to relate euthanasia to exterminations. It remained for a defense witness to do this. In the closing days of the IMT, Konrad Morgen appeared as a defense witness for the SS. We have seen that it was Morgen who had exposed the ring of murder and corruption centered around commandant Koch of Buchenwald. Morgen was thus considered a "good" SS man, in contrast to the bloodthirsty scoundrels who had been his colleagues and comrades (he continues to be considered a good guy, although not as good as Gerstein, who has by now achieved beatification in the "holo-

³⁴⁵ NMT, vol. 1, 876.

³⁴⁶ NO-824 (Hitler order), NO-846 (Faulhaber letter), NO-844 (report on rumors).

³⁴⁷ *New York Times* (Dec. 7, 1941), 45.

caust” litany). As a defense witness for the SS under seemingly hopeless circumstances, Morgen presented a story that had an inevitable logic to it and, indeed, the logic of Morgen’s testimony has an importance in our analysis which transcends the immediate point we are discussing.

Morgen testified that in the course of his investigations of the camps, carried out in pursuance of his duty as an SS official, he unexpectedly encountered extermination programs at Auschwitz and at Lublin, but that SS involvement was nonexistent or minimal. At Lublin, the exterminations were being conducted by Wirth of the ordinary criminal police, with the assistance of Jewish labor detachments (who were promised part of the loot). Wirth supervised three additional extermination camps in Poland, according to Morgen. Although the criminal police, the Kripo, was administratively under the RSHA, Morgen was careful to point out that Kriminalkommissar Wirth was not a member of the SS. Morgen claimed that Wirth had been attached to the Führer Chancellery, had been involved in the euthanasia program (which is possibly true), and had later received orders from the Führer Chancellery to extend his exterminating activities to the Jews. Although the only real point of Morgen’s testimony was the futile attempt to absolve the SS, the testimony is considered “evidence” by Reitlinger and by Hilberg, who avoid considering the fact that Morgen, in his attempt at excusing the SS, also testified that at Auschwitz the extermination camp was Monowitz, the one of the complex of camps that was administered by Farben. Morgen did not go so far as to claim that Farben had its own company extermination program, but he declared that the only SS involvement consisted of a few Baltic and Ukrainian recruits used as guards, and that the “entire technical arrangement was almost exclusively in the hands of the prisoners.”³⁴⁸

Morgen’s ploy obviously inspired the prosecution anew, because it had not occurred to relate exterminations to euthanasia. It was too late to develop the point at the IMT, so it was developed in Case 1 at the NMT (actually the euthanasia program is loosely linked with exterminations in the “Gerstein statement,” reproduced here in Appendix A – the Gerstein statement was put into evidence at the IMT long before Morgen’s testimony, but nobody paid any attention to its text). To us, this relating of exterminations to euthanasia is just another example of the “excess fact”; the inventors were so concerned with getting some real fact into their story that it did not occur to them that there are some real facts that a good hoax is better off without.

This seems to cover the evidence for gassings at the camps in Poland exclusive of Auschwitz.

We again remark that the logic of Morgen’s testimony, as courtroom defense strategy, is of some importance to our study. His side obviously calculated that the court was immovable on the question of the existence of the exterminations, and thus, Morgen’s testimony invited the court to embrace the theory that somebody other than the SS was guilty.

³⁴⁸ IMT, vol. 20, 487-515.

Logic of Defense Testimonies

Before passing to consideration of the activities of the *Einsatzgruppen* in Russia, it is convenient to review various statements made or allegedly made by various Nazis, mostly after the war, which explicitly or implicitly claim exterminations.

An important category consists of statements made by German witnesses and defendants at the war crimes trials. In evaluating such statements, one must bear in mind the simple fact that the powers which conducted these trials were committed, as an immovable political fact, to the legend of Jewish extermination, especially in regard to Auschwitz. Their leaders had made the relevant charges long before they possessed a scrap of what is today called “evidence.” Thus, the courts were committed *a priori* to the extermination legend. A finding that exterminations had not occurred was simply not in the realm of political possibility at these trials, in any practical sense. This is an undeniable fact.

On the other hand, with only a tiny handful of exceptions, the courts were not *a priori* committed on questions of personal responsibility of individuals. With respect to individuals, the courts were not as greatly constrained, politically speaking. In most cases judgments of absence of personal responsibility were well within the realm of political possibility (as distinct from probability). All defense cases were organized in relation to these undeniably valid observations, and even with those individuals whose cases were hopeless, the lawyers had no choice but to proceed on the assumption that a favorable verdict was within the realm of the possible. In considering the trials from this point of view, it is very helpful to consider them chronologically.

Josef Kramer, ‘Beast of Belsen’

The first relevant trial was not the IMT but the “Belsen trial,” conducted by a British military court, of Germans who had been on the staff of the Belsen camp when it was captured. The commandant, SS Captain Josef Kramer (the “Beast of Belsen”), was naturally the principal defendant. The importance of the Belsen trial derives, however, from the fact that Kramer had previously been (during 1944) the Birkenau camp commander. Kramer’s trial was conducted in the autumn of 1945, and was concluded in November, just as the IMT trial was beginning. Kramer was hanged in December 1945.

We are fortunate in having the lengthy first statement that Kramer made in reply to British interrogation. The importance of this statement lies in the fact that it was made before any general realization developed among Germans that the Allied courts were completely serious, and immovable, on the question of the reality of the exterminations (it might have been made within about a month after the capture of Belsen, but this is not certain). There is little courtroom logic playing a role in Kramer’s first statement, and for this reason it is reproduced here in Appendix D. Kramer’s story was completely in accord with

what we have presented here, *i.e.*, there were crematories in all of the concentration camps, some had rather high death rates, especially Auschwitz, which required relatively extensive cremation facilities, because it was also a huge camp. His statement is quite frank regarding the more unhappy features of the camps, and is as accurate a description of the camps as we are likely to get. In regard to atrocities, he firmly asserted:

"I have heard of the allegations of former prisoners in Auschwitz referring to a gas chamber there, the mass executions and whippings, the cruelty of the guards employed, and that all this took place either in my presence or with my knowledge. All I can say to all this is that it is untrue from beginning to end."

Kramer later retreated from this firm stand and made a second statement, also reproduced in Appendix D, in which he testified to the existence of a gas chamber at Auschwitz, adding that he had no responsibility in this connection, and that the exterminations were under the direct control of the central camp administration at Auschwitz I. At his trial, Kramer offered two reasons for the discrepancy between his two statements:³⁴⁹

"The first is that in the first statement I was told that the prisoners alleged that these gas chambers were under my command, and the second and main reason was that Pohl, who spoke to me, took my word of honor that I should be silent and should not tell anybody at all about the existence of the gas chambers. When I made my first statement I felt still bound by this word of honor which I had given. When I made the second statement in prison, in Celle, these persons to whom I felt bound in honor – Adolf Hitler and Reichsführer Himmler – were no longer alive and I thought then that I was no longer bound."

The absurdity of this explanation, that in the early stages of his interrogations, Kramer was attempting to maintain the secrecy of things that his interrogators were repeating to him endlessly, and which by then filled the Allied press, did not deter Kramer and his lawyer from offering it in court. The logic of Kramer's defense was at base identical to that of Morgen's testimony. Kramer was in the position of attempting to present some story absolving himself from implication in mass murder at Birkenau. The truth that Birkenau was not an extermination camp had no chance of being accepted by the court. That was a political impossibility. To have taken the truth as his position would have been heroic for Kramer but also suicidal, because it would have amounted to making no defense at all in connection with his role at the Birkenau camp. Even if he had felt personally heroic, there were powerful arguments against such heroism. His family, like all German families of the time, was desperate and needed him. If, despite all this, he persisted in his heroism, his lawyer would not have cooperated. No lawyer will consciously choose a suicidal strategy when one having some possibility of success is evident. Kramer's defense, therefore, was that he had no personal involvement in the exterminations at

³⁴⁹ Phillips, 157.

Birkenau. Höss and the RSHA did it. Remember that these proceedings were organized by lawyers seeking favorable verdicts, not by historians seeking the truth about events.

An incidental matter is the claim that Kramer, as commandant at Natzweiler, had had eighty people gassed there for purposes of medical experiments. These people had supposedly been selected at Auschwitz by unknown criteria, and then transported to Natzweiler to be killed, because the bodies were needed fresh in nearby Strassburg. Kramer affirmed this story in his second statement but, because it is (implicitly, but unambiguously) denied in his first statement, I am inclined to believe that it is untrue. However, it is quite possible that some people were executed at Natzweiler when somebody else was commandant, and that the bodies were then used at the anatomical institute in Strassburg (which certainly possessed bodies for its research purposes). In any case, the matter is not relevant to an extermination program.

Hermann Göring *et al.* at the IMT

The IMT trial is somewhat more complicated to consider, because of the great number of defendants, each one having his own possibilities in regard to excusing himself from any real or imaginary crimes. The trial transcript is not really adequate to study the behavior of the IMT defendants, but the record kept by the Nuremberg prison psychologist, Dr. G. M. Gilbert, and published by him as *Nuremberg Diary*, supplements the transcript to an extent that is adequate for our purposes. Gilbert's book gives an account of the attitudes and reactions of the IMT defendants, not only at the trial but also in the Nuremberg prison. One cannot be absolutely confident in regard to the accuracy of Gilbert's account. Most of the material consists of summaries of conversations the defendants had in the prison, either with each other or with Gilbert. However, Gilbert took no notes on the spot and wrote everything down each day from memory. His manuscript was critically examined by a former employee of the Office of War Information and by the prosecutors Jackson and Taylor. Even with the best will and most impartial disposition, Gilbert could not have captured everything with complete accuracy. His book has a general accuracy, but one must be reserved about its details.

The IMT defendants were arrested shortly after the German capitulation in May 1945, imprisoned separately, and interrogated and propagandized for six months prior to the opening of the IMT trial in November, when they met each other for the first time since the surrender (in some cases, for the first time ever). There are four particularly important observations to make. First, not surprisingly, all except Kaltenbrunner had developed essentially the same defense regarding concentration camp atrocities and exterminations of Jews, whatever the extent to which they might have actually believed such allegations; it was all the fault of Hitler and Himmler's SS. Kaltenbrunner, sitting as a defendant as a substitute for the dead Himmler, was ill when the trial opened, and did not join the other defendants until the trial was a few weeks old. When he appeared, the

other defendants shunned him, and he said very little to the others during the course of the next ten months.

The second observation is not quite so expected. Indeed, it may be mildly startling; with the exception of Kaltenbrunner and perhaps one or two others, these high ranking German officials did not understand the catastrophic conditions in the camps that accompanied the German collapse, and which were the cause of the scenes that were exploited by the Allied propaganda as “proof” of exterminations. This may appear at first a peculiar claim, but consultation of Gilbert’s book shows it to be unquestionably a valid one (the only other possibility is that some merely pretended to misunderstand the situation). The administration of the camps was far removed from the official domains of almost all of the defendants, and they had been subjected to the familiar propaganda since the German surrender. To the extent that they accepted, or pretended to accept, that there had been mass murders, for which Hitler and Himmler were responsible, they were basing their view precisely on the scenes found in the German camps at the end of the war, which they evidently misunderstood or pretended to misunderstand. This is well illustrated by Gilbert’s account of an exchange he had with Göring:³⁵⁰

“‘Those atrocity films!’ Göring continued. ‘Anybody can make an atrocity film if they take corpses out of their graves and then show a tractor shoving them back in again.’

‘You can’t brush it off that easily,’ I replied. ‘We did find your concentration camps fairly littered with corpses and mass graves – I saw them myself in Dachau! – and Hadamar!’

‘Oh, but not piled up by the thousands like that –’

‘Don’t tell me what I didn’t see! I saw corpses literally by the carload –’

‘Oh, that one train –’

‘– And piled up like cordwood in the crematorium – and half starved and mutilated prisoners, who told me how the butchery had been going on for years – and Dachau was not the worst by far! You can’t shrug off 6,000,000 murders!’

‘Well, I doubt if it was 6,000,000,’ he said despondently, apparently sorry he had started the argument, ‘– but as I’ve always said, it is sufficient if only 5 per cent of it is true –.’ A glum silence followed.”

This is only one example; it is clear from Gilbert’s book that, when the subject of concentration camp atrocities came up, the defendants were thinking of the scenes found in the German camps at the end of the war. It is probably not possible to decide which defendants genuinely misunderstood the situation (as Göring did) and which merely pretended to misunderstand, on the calculation that, if one was not involved with concentration camps anyway, it was a far safer course to accept the Allied claims than to automatically involve oneself by contesting the Allied claims.

³⁵⁰ G.M. Gilbert’s book should be read in its entirety, but pp. 15, 39, 46f., 64, 78, 152, 175, 242, 273-275, 291 are of particular interest.

Our third observation is in regard to a calculation that must have figured in the minds of most of the defendants during the trial. It seemed probable, or at least quite possible, to them that the Allies were not completely serious about carrying out executions and long prison sentences. The trial was certainly a novelty, and the defendants were well aware that there was considerable hostility to the war crimes trials in the public opinion of the Allied countries, especially in the U.S. and England. Many must have calculated that their immediate objective should be to say or do whatever seemed necessary to survive the transient wave of post-war hysteria, deferring the setting straight of the record to a not distant future when a non-hysterical examination of the facts would become possible.

Fourth, extermination of Jews was only one of the many accusations involved at Nuremberg. In retrospect, it may appear to have been the main charge, but at the time, the principal accusations in the minds of almost everybody concerned responsibilities for “planning, preparation, initiation, or waging of a war of aggression” – so-called “Crimes Against Peace.”

With the preceding four observations in mind, we can see that the behavior of the defendants during the trial was about what one would expect from a diverse collection of dedicated Nazis, technocrats, conservative Prussian officers, and ordinary politicians. In “private,” *i.e.* in prison, when court was not in session, the prisoners were just as guarded in their remarks as they were in public, and there was an abundance of mutual recrimination, buck passing, and back biting. Frank made the worst ass of himself in this respect, but the practice was rather general. The Nazis were not one big happy family. In regard to trial defense strategy, it will suffice to discuss Speer, Göring and Kaltenbrunner.

Speer’s trial strategy was simple and also relatively successful, because he did not hang. He claimed that his position did not situate him so as to be able to learn of the various alleged atrocities. Even today, he is permitted to get away with this nonsense. In fact, Speer and his assistants were deeply involved in, *e.g.*, the deportations of employable Hungarian Jews in the spring of 1944 for work in underground aircraft factories at Buchenwald.³⁵¹ Any rail transport priority given to Hungarian Jews to be exterminated, as opposed to employable Hungarian Jews, would have become known to them, if such had actually happened. If Speer had testified truthfully, he would have declared that he had been so situated that, if an extermination program of the type charged had existed, he would have known of it, and that, to his knowledge, no such program had existed. However, if Speer had testified truthfully, he would have joined his colleagues on the gallows.

In his book, Speer gives only one ridiculous piece of “evidence” that he encountered during the war that he now says he should have interpreted as suggesting the existence of an extermination program, and that was the suggestion of his friend Karl Hanke (who was appointed Himmler’s successor as

³⁵¹ Hilberg (1961), 599; Reitlinger, 460-463; IMT vol. 16, 445, 520.

Reichsführer-SS by Hitler in the last days of the war), in the summer of 1944, that Speer never “accept an invitation to inspect a concentration camp in Upper Silesia.” Speer also passes along Göring’s private remark just before the IMT trial about Jewish “survivors” in Hungary: “So, there are still some there? I thought we had knocked off all of them. Somebody slipped up again.”³⁵² Such a sarcastic crack was understandable under the circumstances, because Göring never conceded the reality of any extermination program, and insisted that he had known only of a program of emigration and evacuation of Jews from the German sphere in Europe.

The introduction to Speer’s book, by Eugene Davidson, mentions the fact (noted here on page 151) that many Dutch Jews sent to Birkenau, “within sight of the gas chambers,” were unaware of any extermination program. They wrote cheerful letters back to the Netherlands.³⁵³ The remarks about Jewish extermination were not in the original version of Speer’s manuscript; they were added at the insistence of the publisher.³⁵⁴

Unlike the other defendants, Göring assumed throughout the trial that he was to be sentenced to death, and his testimony appears to be the approximate truth as he saw it. Although he never conceded the existence of a program of extermination of Jews, we have seen that he misunderstood what had happened in the German camps at the end of the war, and assumed that Himmler had, indeed, engaged in mass murder in this connection. However, he never conceded any number of murders approaching six million.³⁵⁵

An incidental remark that should be made in connection with Göring is that he was not, as legend asserts (and as Speer claimed in private on several occasions during the IMT), a drug addict. The Nuremberg prison psychiatrist, Douglas Kelley, has attempted to set the record straight in this regard. Göring was a military man, had been an air ace in World War I, and had been the last commander of the “Flying Circus” of von Richthofen (the “Red Baron”). Refusing to surrender his unit to the Allies at the end of the war, he returned to Germany, and found himself a hero without a profession. Eventually joining the Nazi Party, he naturally, as a holder of the *Pour-le-mérite* (Germany’s highest military decoration), soon became a leader of the small party. As such, he was a leader of the putsch of 1923, in which he was wounded in the right thigh. The wound developed an infection which caused him to be hospitalized for a long while, during which time he was injected with considerable amounts of morphine. He developed a mild addiction but cured it shortly after being released from the hospital in 1924. Much later, in 1937, Göring developed a condition of aching teeth and began taking tablets of paracodeine, a very mild morphine derivative that was a common prescription for his condition, and he continued to take the paracodeine throughout the war. His addiction for (or, more exactly, habit of taking) these paracodeine tablets was not severe, be-

cause he was taken off them before the IMT by Dr. Kelley, who employed a simple withdrawal method involving daily reductions of the dosage.³⁵⁶

To return to the IMT defendants, Kaltenbrunner's position seems to us today to have been somewhat hopeless, and it is probable that his lawyer felt the same way, but he nevertheless had to present some sort of defense, and his defense on the matters that we are interested in rested on two main points.

The first point was that he was head of the RSHA, which was charged with security, and not the head of the WVHA, which administered the concentration camps. He thus claimed that he had had almost nothing to do with the camps. The only known instance of Kaltenbrunner's involvement with the internal operation of the camps was in his order of March 1945, concerning permission for the Red Cross to establish itself in the camps (how he assumed authority for giving this order we do not know). He made a great deal of this matter in his defense and, rather than setting the record straight in regard to the catastrophic conditions in the camps at the end of the war, he inflated his action in connection with the Red Cross to make it appear to be an act against concentration camps as such, which, of course, he had always deplored anyway, he said.

Kaltenbrunner's second point was that, as everybody would agree, it was his predecessor Heydrich, and not he, who had organized the details of the Jewish policy, whatever that policy was. He took over the RSHA in 1943 with a directive from Himmler to build up the intelligence service of the SD, a fact which he distorted in claiming that, under the new arrangement, in which Himmler was not going to allow anybody to grow to the stature that Heydrich had attained, Kaltenbrunner was to concern himself only with intelligence, and not to have any control over the police and security functions of the RSHA, in particular the Gestapo, which sent political prisoners to the camps and also, through Eichmann's office, administered the Jewish deportations. Thus, according to Kaltenbrunner, there was no respect in which he could be held responsible for exterminations of Jews that, he conceded, had taken place just as the Allies charged (except that they had started, according to Kaltenbrunner, in 1940). Indeed, according to him, it was not until the summer of 1943 that he learned of the extermination program that Eichmann of his department was conducting. He learned from the foreign press and the enemy radio. He got Himmler to admit it early in 1944 and then protested, first to Hitler, then to Himmler. The extermination program was stopped in October 1944, "chiefly due to (his) intervention."³⁵⁷ The manner in which Kaltenbrunner claimed to have learned of the exterminations, while nonsense, is nevertheless consistent with the extreme secrecy that is always said to have been maintained in connection with the extermination program.

Kaltenbrunner's story was complete rubbish, but this fact should not blind us to the serious character of this testimony as defense strategy. Suppose that Kaltenbrunner had testified that no extermination program had existed. In such

³⁵⁶ Kelley, 54-58.

³⁵⁷ IMT, vol. 11, 273-276, 335.

a case, any leniency shown by the court in the judgment would have been tantamount to that court's conceding the untruth, or possible untruth, of the extermination claim, a political impossibility. By claiming that, while the extermination program had existed, Kaltenbrunner had had no responsibility and had even opposed it, the defense was making it politically possible for the court to be lenient in some sense, or was at least making a serious attempt along this line. A few seconds' reflection reveals that this was the only possible strategy for Kaltenbrunner on the extermination charge. The trial was obviously going to end with some death sentences, some acquittals, and some in between dispositions of cases; this was necessary in order to give it the semblance of a real trial. Thus, on analysis, we see that there was perfectly sound lawyer's logic operating in Kaltenbrunner's defense. That the specific story presented was unbelievable was not very important from this point of view; the manner in which facts have been treated in connection with these matters, has been endless nonsense anyway. The case of Speer shows that a nonsensical story not only had a chance of being accepted by the IMT, but also by general opinion much later, when there should have been adequate opportunity to see matters clearly.

The ordinary person, and even the informed critic, can easily fail to understand the significance of such things as the Kaltenbrunner testimony, because he fails to grasp the perspective of the defendants, who did not have the historical interests in these trials that we have. Their necks were at stake, and they regarded the trials, quite correctly, as a manifestation of hysteria. Attempting to save their necks meant devising trial strategies to suit the prevailing conditions, and no optimum trial strategy seeks to move the court on matters on which the court is immovable. This also happens in ordinary legal proceedings. Once something had been decided, it had been decided, and the lawyers organize their cases accordingly.

Of course, it is deplorable that Nazis or anyone else should lie in order to promote their personal interests. I have seen scholars tell lies almost as big just to pick up an extra bit of summer salary, and that too is deplorable.

Oswald Pohl at Nuremberg

At Kramer's trial and at the IMT, the courts were effectively committed *a priori* to the conclusion that Nazi Germany had had a program of exterminating Jews. At the later NMT trials, the courts were committed *a priori* as a formal matter, on account of the legal constraint previously noted (page 49), that statements made in the IMT judgment constituted "proof of the facts stated." The IMT judgment said that millions had been exterminated in German concentration camps, particularly at Auschwitz, which was "set aside for this main purpose"; specifically, 400,000 Hungarian Jews were said to have been murdered there.³⁵⁸ Thus, defendants and witnesses at the NMT faced a situation similar to that faced by earlier defendants and witnesses, except that it was

³⁵⁸ IMT, vol. 22, 494-496.

formalized. Prosecutors were known to redirect the attentions of judges to this legal constraint, when there seemed a chance of its being overlooked.³⁵⁹

Here we will take special note of only two cases. Defendant Pohl, of course, did not deny the extermination program; in denying personal involvement in the exterminations, he took advantage of the fact that the Allied charges had naturally been directed at the Gestapo and the SD functions of the SS, which were not in Pohl's domain as head of the WVHA.³⁶⁰ Even the Höss affidavit and testimony explicitly support him in this position. After all, who ever heard of the *Wirtschafts-Verwaltungshauptamt*? Nevertheless, Pohl was hanged.

The testimony of Münch, a doctor at Auschwitz, is of some interest. He appeared as a defense witness at the Farben trial, having previously been acquitted by a Polish court. This is the witness whom prosecution lawyer Minskoff asked about the leaflets dropped at Auschwitz by Allied planes (p. 153). While Münch testified that he had known about the exterminations while he was at Auschwitz and had even witnessed a gassing, he also testified that people outside the Auschwitz area, that is those in Germany, did not know. Also, the whole thing was arranged "masterfully" so that "someone who visited a plant in Auschwitz twice or three times a year for a period of one or two days" would not learn of the exterminations. Almost all of the defendants, of course, were in the category of those who could not have known, according to Münch, but he did not stop there. He also asserted that, while all of the SS men and prisoners knew of the exterminations, they did not talk to civilians about them for fear of punishment. For example, Farben engineer Faust, whom Münch knew very well at Auschwitz, did not know about the exterminations. Münch also remarked several times that all one could perceive of the exterminations was the odor, "perceptible everywhere," of the cremations. Nobody at this trial of chemical engineering experts bothered to point out that the chemical industry of the area also created a bit of an odor. An odd feature of Münch's testimony is his placing of the crematories and the gas chambers "one or one and half kilometers southwest of the Birkenau camp camouflaged in a small woods."³⁶¹

The Münch testimony is merely another illustration of the manner in which defense cases were formulated. The strategy was to avoid contesting things that the courts were already decided on but to present stories exonerating defendants of personal responsibility. Thus, it was invariably claimed that the extermination program had features that happened to excuse the relevant defendants, but by claiming that such features of the program existed, it was obviously necessary to claim also that the program itself existed.

Adolf Eichmann

The next trial that is worth examination is the Eichmann trial. It will be recalled that Adolf Eichmann was illegally abducted from Buenos Aires in May 1960 by Israeli agents, who sent him to Israel to become the victim of a “trial” that was to break all records for illegality, because the state conducting the trial had not even existed at the time of the alleged crimes. The illegal courtroom proceedings opened in Jerusalem on April 11, 1961, the Jewish court pronounced the death sentence on December 15, 1961, and the murder was carried out on May 31, 1962.

In order to understand Eichmann’s defense strategy, consider his situation prior to the trial as a lawyer would have seen it. It was basically a political situation involving an Israeli determination to stage a show trial. In capturing Eichmann, Israel had spat on Argentine sovereignty and, from a lawyer’s point of view, the only hope of securing a favorable verdict (a prison sentence to be later commuted) depended upon world opinion developing so as to encourage Israel to temper its arrogance somewhat with a magnanimous gesture. However, the possibility of such an outcome depended upon presenting a defense whose fundamental acceptance by the Jerusalem court would have been within the realm of political possibility. Thus, just as with the Nuremberg defendants, Eichmann’s only possible defense under the circumstances was to deny personal responsibility.

Eichmann conceded the existence of an extermination program, and the first edition of Reitlinger’s book was accepted by both sides as approximately descriptive of what had happened. Eichmann’s fundamental defense, thus, was that he had merely organized the transports of Jews in obedience to orders that could not be disobeyed. In one respect, his defense was partially successful, for his (accurate) picture of himself as a mere “cog in a machine” has been more or less universally accepted by those who have studied and written about this trial (e.g. Hannah Arendt’s book).

Actually, Eichmann inflated himself a bit beyond “cog” status, for a secondary feature of his testimony is that he claimed that he, Eichmann, had done whatever a person as lowly as he could do in order to sabotage the extermination program, and his interpretations of the meanings of many of the documents used in the trial were obviously strained in this respect. A good example was Eichmann’s commentary on two particular documents. The first document was a complaint by the commander of the Lodz resettlement camp, dated September 24, 1941, complaining of overcrowding at the camp due to tremendous transports of Jews that were pouring in:

“And now they face me with a fait accompli, as it were, that I have to absorb 20,000 Jews into the ghetto within the shortest possible period of time, but further that I have to absorb 5,000 gypsies.”

The letter is addressed to the local head of government. The second document is a letter by that local head, dated October 9, 1941, passing on the complaint to Berlin, and adding that Eichmann had acted like a “horse dealer” in sending

the Jewish transport to Lodz, for, contrary to Eichmann's claim, the transport had not been approved. Eichmann's Jerusalem testimony in regard to these documents was that there were only two places he could have shipped the Jews to, the East (where he was supposed to send them, he said) or Lodz. However, according to him, there were exterminations in the East at that time, but none at Lodz. Being in strong disapproval of the exterminations and doing everything that his low office permitted to thwart them, he shipped the Jews to Lodz despite the inadequate preparations there.³⁶²

This feature of Eichmann's defense strategy is also illustrated by his testimony regarding the "trucks for Hungarian Jews" proposals of 1944. He naturally attempted to represent efforts on the German side to conclude the deal as being due in no small measure to the force of his initiative, motivated, again, by Eichmann's desire to save Jews.³⁶³

It is worth mentioning that the major thrust of the prosecution's cross-examination of Eichmann did not treat wartime events directly. The prosecution's chief effort was to hold Eichmann, in court, to whatever he was supposed to have said to Israeli interrogators during his year of imprisonment prior to the trial, and also to what he was supposed to have said to one Sassen in Argentina in 1957. According to Eichmann's testimony, he encountered Sassen, an ex-SS man, in Buenos Aires in 1955. At this time, Eichmann was, except within tiny circles, a very much forgotten man. The Eichmann-Sassen relationship eventually led to a project to write a book on the persecutions of the Jews during the war. The book, to be completed and promoted by Sassen, was to be based on tape recorded question-and-answer sessions with Eichmann, but according to Eichmann's testimony, the original form of these sessions could not be retained:

"[...] when these questions were put to me, I had to reply from time to time, that I did not remember and did not know; but, obviously, this was not the way to write a book [...] and then it was agreed that it did not really matter what I remembered – the main thing was to describe the events as they had happened; then we spoke about poetic license, about license for journalists and authors, which would entitle us to describe the events – even if I did not remember certain details, the essence which would remain would be a description of the events as they had taken place and this is really what was eventually taken down.

[Sassen] told me to say something about every point, so that the necessary quantity be obtained.

[...] it was also agreed that he, Sassen, would then formulate everything in the form of a book and we would be co-authors in this book."

Sassen's material eventually appeared, in the autumn of 1960, in *Life* magazine, so it is clear that Sassen's sessions with Eichmann were designed for the primary purpose of producing a marketable book, as distinct from a historical one. Eichmann obviously planned to acquire a share of the profits, but this tes-

³⁶² Eichmann, session 78, N1-O1; session 98, T1-W1.

³⁶³ Eichmann, session 103, Jj1; session 106, V1.

timony does not shed any light onto the specific financial expectations that Eichmann and Sassen had.

Sassen transcribed some of the tape-recorded material into typewritten form, and Eichmann added comments and corrections in the margins of some of the pages in his own hand. He also composed 83 full pages of handwritten comments. After the appearance of the *Life* articles, the prosecution obtained material from Sassen, namely a photostat of a 300-page typewritten document with marginal comments, apparently in Eichmann's hand, purporting to be a transcript of 62 of 67 tape recorded sessions, and also a photostat of what was said to be the 83-page document in Eichmann's hand. Original documents were evidently not procured, thus raising the possibility of tampering and editing, especially in the case of the 300-page document. In regard to the original tapes, the prosecution commented:

"We do not know about the tapes themselves – I don't know whether the people who took part in this conversation kept the tape or whether the tape was erased and re-used for other recordings."

The defense challenged the accuracy of the documents, claimed that the majority of marginal corrections were not included in the document, and further claimed that if Sassen himself could be brought to court to testify, it could be proved that:

"[...] he changed and distorted what was said by the accused, to suit his own aims. He wanted to produce a propaganda book; this can be proved, how the words were distorted."

However, the prosecution assured the court that if Sassen were to come to Israel, he would be put on trial for his SS membership.

The court decided to admit the photostats of the 83 pages in Eichmann's hand, but the prosecution, finding during the course of the rest of the trial that there was virtually nothing in the 83 pages that it could use, made another bid very late in the trial, and finally managed to get accepted into evidence the excerpts of the typewritten document which carried handwritten corrections. *Life* magazine, which apparently received the same material from Sassen, treated all of it as unquestionably authentic.³⁶⁴

We close this short discussion of the Eichmann trial by reporting Eichmann's reaction to the allegation, widely publicized, that at the end of the war he had declared that he would "jump gladly into the grave" with the knowledge that five or six million Jews had been killed. Eichmann testified that he had, indeed, made a bitter remark such as this to his staff at the end of the war, but that the five million killed were not "Jews" but "enemies of the Reich," *i.e.* enemy soldiers, principally Russians. While his defense strategy entailed not contesting the general reality of the extermination program, he insisted that he was in no position to know even the approximate number of

³⁶⁴ Eichmann, session 72, Aal-Kk11; session 73, A1-R1; session 74, Hh1-Iil; session 88, L1-P2 and appendices; session 104, T1-V1; session 105, W1-Z1; *Life* (Nov. 28, 1960), 19+; (Dec. 5, 1960), 146+.

Jews killed, and that all remarks attributed to him in this connection (e.g. Höttl's affidavit) are falsely attributed.³⁶⁵

West German Trials

The trials held in West Germany during the Sixties are barely worth mentioning and, moreover, rather difficult to study, on account of the obscurity of the defendants involved. The most publicized, of course, was the "Auschwitz trial" of 1963-1965, and a few words are perhaps in order.

This group of war crimes trials, of which the Auschwitz trial was the most prominent, was held for political reasons in the aftermath of the hysterical publicity surrounding the capture of Adolf Eichmann. One of the first victims was Richard Baer, successor to Höss and last commandant of Auschwitz, who was arrested on December 20, 1960, near Hamburg, where he was working as a lumberjack. He was imprisoned and interrogated in prison, and insisted that the Auschwitz gas chambers were a myth. Unfortunately, he did not live to take this position in court, because he died in prison on June 17, 1963, at the age of 51, apparently from a circulatory ailment, although his wife considered his death rather mysterious.³⁶⁶

When the trial finally opened in Frankfurt in December 1963, the principal defendant was one Robert K. L. Mulka, an ex-SS Captain who had served briefly as adjutant to Höss at Auschwitz. Mulka had been tried and sentenced, by a German chamber immediately after the war in connection with his role at Auschwitz, and quite a few of the other 21 defendants at the Auschwitz trial were standing trial for the second time on basically the same charges.

The court, of course, did not ignore legal matters entirely, and it took the trouble to explain that the Bonn Government considers itself the legal successor to the Third Reich, and thus, it was competent to try persons for infringing laws that were in force in Germany during the war. Killing Jews, of course, had been illegal in Nazi Germany, and thus, the majority of the defendants were charged in that respect. In regard to the reasonableness of such a trial, one can do no better than to quote from the opinion of the Frankfurt court itself:³⁶⁷

"This determination of guilt has, however, confronted the court with extraordinarily difficult problems.

Except for a few not very valuable documents, almost exclusively only witness testimonies were available to the court for the reconstruction of the deeds of the defendants. It is an experience of criminology that witness testimony is not among the best of evidence. This is even more the case if the testimony of the witness refers to an incident which had been observed twenty years or more ago under conditions of unspeakable grief and anguish. Even the ideal witness, who only wishes to tell the truth and takes

³⁶⁵ Eichmann, session 85, J1-K1, T1-U1; session 87, M1-O1, Y1; session 88, G1-H1.

³⁶⁶ Aretz, 58; Naumann, 8.

³⁶⁷ Naumann, 8-26, 416f.

pains to explore his memory, is prone to have many memory gaps after twenty years. He risks the danger of projecting onto other persons things which he actually has experienced himself and of assuming as his own experiences things which were related to him by others in this terrible milieu. In this way he risks the danger of confusing the times and places of his experiences.

It has certainly been for the witnesses an unreasonable demand for us to question them today concerning all details of their experiences. It is asking too much of the witnesses if we today, after twenty years, still wish to know when, where and how, in detail, who did what. On this basis astonishment was repeatedly expressed by the witnesses, that we asked them for such a precise reconstruction of the past occurrences. It was obviously the duty of the defense to ask about those details. And it is unjust to impute to the defense that it wished to make these witnesses appear ridiculous. On the contrary, we must call to mind only once what endless detail work is performed in a murder trial in our days – how, out of small mosaic-like pieces, the picture of the true occurrences at the moment of the murder is put together. There is available for the court's deliberations above all the corpse, the record of the post-mortem examination, the expert opinions of specialists on the causes of death and the day on which the deed must have occurred, and the manner in which the death occurred. There is available the murder weapon and fingerprints to identify the perpetrator; there are footprints he left behind as he entered the house of the slain, and many more details at hand which provide absolute proof to the court that this person was done to death by a definite perpetrator of the deed.

All this was missing in this trial. We have no absolute evidence for the individual killings; we have only the witness testimonies. However, sometimes these testimonies were not as exact and precise as is necessary in a murder trial. If therefore the witnesses were asked, in which year or month an event happened, it was entirely necessary for the determination of the truth. And these dates sometimes presented to the court the only evidence for the purpose of determining whether the event related by the witness did in fact happen as the witness related it, or whether the witness had committed an error or confused victims. The court was naturally aware that it was an extraordinary burden for the witnesses, in view of the camp conditions, where no calendars, clocks or even primitive means of keeping records were available, to be asked to relate in all details what they experienced at the time. Nevertheless, the court had to be able to determine whether an individual defendant did in fact commit a real murder, and when and where. That is required by the penal code.

This was an ordinary criminal trial, whatever its background. The court could only judge according to the laws it is sworn to uphold, and these laws require the precise determination of the concrete guilt of an accused on both the objective and subjective side. The overburdening of the witnesses shows how endlessly difficult it is to ascertain and portray concrete

events after twenty years. We have heard witnesses who at first appeared so reliable to the court that we even issued arrest warrants on their declarations. However, in exhaustive examination of the witness declarations in hours-long deliberations, it was found that these declarations were not absolutely sound and did not absolutely correspond to objective truth. For this purpose, certain times had to be ascertained and documents reexamined – whether the accused, who was charged by a witness, was at the camp Auschwitz at all at the time in question, whether he could have committed the deed there, or whether the witness perhaps projected the deed onto the wrong person.

In view of this weakness of witness testimony – and I speak now only of the sworn witnesses whose desire for the truth, the subjective and objective truth, the court was thoroughly confident of – the court especially had to examine the witness testimonies. Only a few weeks ago we read in the newspapers that a member of the Buchenwald concentration camp staff had been convicted of murdering an inmate who, it is clear today, is alive and was certainly not murdered. Such examples should make us think. These cases of miscarriages of justice do not serve to strengthen the respect for the law. On these grounds also the court has avoided whatever could even in the most remote sense suggest a summary verdict. The court had examined every single declaration of each of the witnesses with great care and all earnestness, and consequently is unable to arrive at verdicts of guilty on a whole list of charges, since secure grounds could not be found for such verdicts. The possibilities of verifying the witness declarations were very limited. All traces of deeds were destroyed. Documents which could have given the court important assistance had been burned. [...]"

Although these admissions on the part of the Frankfurt court should be conclusive in forming one's opinion of such trials, we must add that the court understated the facts of the situation. The great majority of the witnesses were citizens of Soviet bloc countries, with all that such a fact implies regarding their testimonies. The court complained that "this witness testimony was not so accurate and precise as is desirable," but one should observe that it was certainly attempted to organize the memories of the witnesses suitably, for the "Comité International d'Auschwitz" had set up its headquarters in Frankfurt, and from there had issued "information sheets" on the terrible things that had happened at Auschwitz. These "information sheets" had been made available to, and had been read by, the witnesses before they testified. There was also a "Comité des Camps" in circulation, and other persons, e.g. the mayor of Frankfurt, made suggestions to the witnesses of varying degrees of directness and subtlety.³⁶⁸

The farce extended also into the matters that the court considered in the course of the long trial and the sentences that were imposed. Mulka, found guilty of being second man in the administration of the great extermination camp, of having ordered the Zyklon B on at least one occasion, of having been

³⁶⁸ Laternser, 85-94.

in charge of the motor pool, which transported the condemned, of having handled some of the paperwork dealing with transports, and of having been involved in the construction of the crematories, was sentenced to 14 years at hard labor, but was released less than four months later on grounds of ill health. Defendant Franz Hofmann, ex-SS Captain who had been in charge of Auschwitz I, received a life sentence for the simple reason that, although found guilty in connection with exterminations, he had really been tried on a charge of having thrown a bottle at a prisoner, who later died from the head injury received. This incident evidently had a greater impact on the court than mass exterminations, which is not surprising, because the bottle episode could clearly be recognized as the sort of thing that happens in penal institutions. Hofmann was sentenced to life imprisonment, but shortly later released anyway on the grounds of his previous detention.³⁶⁹

Precedents for the Trials?

In searching the history books for proceedings comparable to the “war crimes trials,” it is not suitable to fasten on prior politically motivated trials for precedents. Such trials, *e.g.* the trial of Mary, Queen of Scots, lack the hysterical atmosphere of the war crimes trials. Another feature of the usual political trial is that there is generally only one, or at any rate only a few, victims, and the proceedings are not spread over more than two decades. Even the trial of Joan of Arc, which had aspects of hysteria, is not really comparable to the war crimes trials, because only a single person was on trial, but not an entire nation.

In determining precedents for the war crimes trials, only the witchcraft trials of Europe’s younger days offer satisfactory comparisons.³⁷⁰ A most important similarity lies in the fact that the accused in witchcraft trials frequently found it expedient in the contexts, in which they found themselves, to go along with the charges to some extent. In fact, in many cases a partial confession offered the only possible trial strategy. One could not deny the very existence of the sorts of Sabbaths that the popular imagination had decided must have existed. When the sentences of the condemned were carried out, one had scenes like this:³⁷¹

“On one scaffold stood the condemned Sorceresses, a scanty band, and on another the crowd of the reprieved. The repentant heroine, whose confession was read out, stuck at nothing, however wild and improbable. At the Sabbaths they ate children, hashed; and as a second course dead wizards dug up from their graves. Toads dance, talk, complain amorously of their mistresses’ unkindness, and get the Devil to scold them. This latter sees the witches’ home with great

³⁶⁹ Naumann, 412f., 418f., 422f.; Reitlinger, 551, 561.

³⁷⁰ Editor’s note: for a more-thorough comparison between medieval witchcraft trials and modern-day trials against alleged National-Socialist perpetrators, see Rudolf (2024b), 118f.

³⁷¹ Michelet, 151-157, 313f.

politeness, lighting the way with the blazing arm of an unbaptized infant, etc., etc.”

The situation was such that one had to feed the fantasies and passions of the judges and the population, and there were even ways of getting ahead by claiming to be a witch, and thus being informed on the activities of certain other witches, knowledgeable on ways of exposing them, etc.

The comparison of the war crimes trials with the witchcraft trials is almost perfect. Both involve large numbers of potential victims, and the possibilities for mutual recrimination are boundless. Most important, both take place in an atmosphere of unreality and hysteria. The person who will not disbelieve those who claim that a modern state was exterminating masses of human beings at a center of chemical industry, employing an insecticide, and that the pervasive stench at that site was due to the associated cremations, is the complete Twentieth-Century equivalent of the person who, in earlier centuries, believe those who claimed that misfortunes were caused by people who conversed with toads, had intercourse with the Devil, etc.

Torture?

Another important relationship between witchcraft trials and the war crimes trials is that torture of witnesses and defendants played roles in both. Invented testimony at witchcraft trials is usually explained in terms of torture (although our reference employed above points out that mass hysteria also provides a completely effective motivation). We know that some people were tortured in connection with the war crimes trials, and we should therefore consider the problem of the extent to which torture might have accounted for testimony, especially defendant testimony, in support of exterminations.

Available evidence indicates that torture was frequently employed in the war crimes trials. We have noted at length, on p. 45, the tortures inflicted on German defendants in the Dachau trials. Very similar scenes took place, under British sponsorship, in connection with the Belsen trial, and Josef Kramer and other defendants were tortured, sometimes to the point where they pleaded to be put to death.³⁷²

On the other hand, it appears that defendants at the IMT were too prominent to torture, although Julius Streicher was an exception, and it is even said that he was forced to eat excrement. Streicher complained at the IMT that he had been beaten up by Negro soldiers after his arrest. On the motion of prosecutor Jackson, this testimony was stricken from the record because otherwise “the court would have had to conduct an investigation.” Streicher was the editor and publisher of a disreputable and quasi-pornographic magazine *Der Stürmer*, which attacked not only Jews, Freemasons, and clerics but on occasion even top Nazis. Streicher once claimed in *Der Stürmer* that Göring’s daughter had not been fathered by Göring but by artificial insemination. *Der*

³⁷² Belgium, 80f. Editor’s note: On the systematic and pervasive nature of British wartime and post-war torture of capture German officials, see Cobain (2005a&b, 2012, 2013).

Stürmer was considered offensive by nearly all political leaders in Germany, but Streicher had the protection of Hitler out of gratitude for Streicher's having delivered Nuremberg to the Nazi Party. In 1940, Göring arranged for Streicher to be put partially out of action; although *Der Stürmer* was not suppressed, Streicher was deprived of his Party position of *Gauleiter* of Nuremberg. Streicher never held a position in the German Government, before or during the war, and his inclusion in the first row of "defendants" at the IMT was ludicrous.³⁷³

There was never any general or massive exposé of torture of witnesses and defendants at the NMT trials, but we believe that the fact, noted in the previous chapter (p. 219), that the Nuremberg prosecution did not hesitate to torture witnesses even in connection with a regular U.S. legal proceeding, is strong support for our assumption that torture was employed rather commonly at Nuremberg or, more precisely, employed on witnesses and defendants who played roles in the trials at Nuremberg.

We are inclined to believe that Adolf Eichmann was not tortured by his Israeli captors, at least not for the purpose of forcing him to give specific trial testimony. This view is based on the simple fact that he did not complain, in his trial testimony, that he had been tortured thus, although he did complain, early in his trial testimony, that he had suffered rather rough treatment during the few days immediately after his capture, particularly when his captors forced him to sign a declaration that he had come to Israel voluntarily (and which the prosecution had the audacity to put into evidence at the trial). However, the extreme secrecy that surrounded Eichmann's imprisonment in Israel allows the possibility that he was tortured in some sense, but that he had tactical or other reasons for not charging torture in his testimony.³⁷⁴

In considering the problem of torture, it is important to observe that the efficacy of torture in producing testimony having a desired content is rather questionable. We cannot believe that the prosecuting authorities at Nuremberg had any moral compunctions about using torture, but they most probably made the rather obvious observation that, no matter how much you torture a man, you still cannot be absolutely sure what he will say on the witness stand. Exceptions to this statement are provided by the "Moscow trials" of the Thirties and other trials staged by Communists, but the defendants in such cases are always "brainwashed" to the extent that they utterly prostrate themselves before the court when on trial, and denounce themselves as the foulest beings on earth.³⁷⁵ No such attitude is perceptible in the Nuremberg defendants who, despite much untruthful testimony damaging to the Nazi regime in general, always argued their personal innocence.

³⁷³ Bardèche, 12, 73; Davidson, 44-47, 51.

³⁷⁴ Eichmann, session 75, U1. For the fanatical measures taken to isolate Eichmann from the outside world during his imprisonment in Israel see, e.g., the *London Jewish Chronicle* (Sep. 2, 1960), 15.

³⁷⁵ Solzhenitsyn has given the definitive account of the historical development of the Communist political "trial." See also Conquest, 82-147.

In examining the torture problem, we must be careful regarding what questions one might ask, and what inferences may be drawn from the answers. Obviously, there is the question of whether or not a man was tortured. Second, there is the question of whether or not he testified to the reality of exterminations. Assuming that affirmative answers apply to both questions, it is a *non sequitur* to infer that the former accounts for the latter. This is illustrated by the case of Kramer who, despite torture, spoke the truth in his first statement, and evidently only changed his story when his lawyer explained to him the logical implications of insisting on a story that the court could not possibly accept. On the other hand, if a witness had been tortured, we may infer that the authorities in charge are not to be trusted.

Moreover, one must not make assumptions too quickly in regard to the probable motivations that the Nuremberg jailers might have had for employing torture; the motivation need not have been to produce specific testimony, and may have been either more or less thoughtfully conceived. First, torture might have been employed purely to produce pleasure; the Jews in charge hated their German victims. Second, torture may have been employed merely on the basis of the passing observation that, while it was not guaranteed to be helpful, it also could not hurt matters as long as the proceedings were kept suitably confidential.

A third possible motivation, a far more intelligent one, could have been that torture, while not of much use in producing specific pieces of testimony, could be of assistance in a less specific and more general sense. If my interrogator threatens that he will take steps against my family if I do not cooperate, I may doubt him on the basis that I see no evidence that he either has the necessary power or the necessary cruelty or both. However, if he imprisons me for a year or more, torturing at will, I will eventually believe that he is both powerful and cruel. Thus, we see that torture, while indeed inadequate in itself to produce the sort of testimony that was produced at Nuremberg, might very well have been employed to achieve a general "softening up" of witnesses and defendants that would help the process of coercion and intimidation at other points.

A few complications are also worth mentioning. First, physical torture is not such a very well-defined thing. One could argue that extended imprisonment under unhealthy or even merely uncomfortable conditions with daily interrogation is a form of torture. Another complication is that there are modes of torture, mainly sexual in nature or related to sex, that one could never learn about because the victims simply will not talk about them. Finally we should observe that almost none of us, certainly not this author, has ever experienced torture at the hands of professionals bent on a specific goal, and thus we might suspect, to put it quite directly, that we simply do not know what we are talking about when we discuss the possibilities of torture.

Our basic conclusion in respect to the torture problem is that there is something of an imponderable involved. We believe it likely that torture was employed to achieve a general softening up of the victims, so that their testimonies would more predictably take courses that were motivated by considera-

tions other than torture, and we have analyzed witness and defendant testimony in preceding pages of this chapter on this basis; the effects of and fear of torture do not, in themselves, explain testimony in support of exterminations. We thus tend to disagree with much of the existing literature in this area, which, it seems, places too much weight on the singular efficacy of torture at Nuremberg, although we concede that our analysis of this hard subject is not conclusive. We have similar suspicions that writers on witchcraft trials have also leaped to invalid conclusions on the basis of the two indisputably valid facts that, first, victims in witchcraft trials were tortured and, second, many of these people later testified to impossible happenings. The former does not really account for the latter, but it can be a contributing factor when its effects are added to the weightier motivations for delivering certain kinds of false testimony.

Adolf Hitler

We will return to some statements made at trials in due course. There are a few remarks, allegedly made by top Nazis, that should be mentioned.³⁷⁶ On April 17, 1943, Hitler met Admiral Horthy at Klessheim Castle. Hitler was critical of Horthy's lenient Jewish policy and, it is said, explained to Horthy that things were different in Poland:

"If the Jews there did not want to work, they were shot. If they could not work, they had to be treated like tuberculosis bacilli, with which a healthy body may become infected. This was not cruel if one remembers that even innocent creatures of nature, such as hares and deer, which are infected, have to be killed so that no harm is caused by them."

The evidence that Hitler said this is the alleged minutes of the meeting, and the supporting IMT testimony of Dr. Paul Otto Schmidt, Hitler's interpreter, who normally sat in on such conferences and prepared the minutes. Schmidt testified that he was present at the meeting, and that the minutes were genuine and prepared by him. However, in his later book, he wrote that he was not present, because Horthy had insisted on his leaving the room!³⁷⁷

There is also a statement in Hitler's political testament :

"I also made it quite plain that, if the peoples of Europe were again to be regarded merely as pawns in a game played by the international conspiracy of money and finance, they, the Jews, the race that is the real guilty party in this murderous struggle, would be saddled with the responsibility for it. I left no one in doubt that this time not only would millions of grown men meet their death and not only would hundreds of thousands of women and children be burned and bombed to death in cities, but this time the real

³⁷⁶ Editor's note: For a comprehensive collection and analysis of Adolf Hitler's remarks on the Jews throughout his life, see Dalton (2022).

³⁷⁷ Reitlinger, 450-452; Hilberg (1961), 524; Schmidt, 248.

culprits would have to pay for their guilt even though by more humane means."

This statement is frequently interpreted as an admission of exterminations, but its meaning is at least ambiguous. After all, the payment spoken of was by "more humane means than war." The Jews who had been in Hitler's domain had lost property and position in Europe, and that fact may offer the correct interpretation. Loss of property and position might seem a woefully inadequate payment for the events charged to the Jews, but it is well known that all politicians, before leaving the public scene, like to exaggerate the significance of their works.

There also exists a possibility that the text of the testament was tampered with, because its discovery by British and American authorities was not announced until December 29, 1945, and because only the last page is signed. Only the typewriter and stationery Hitler's secretary used would have been required to make an undetectable alteration.³⁷⁸

Heinrich Himmler

There is a speech allegedly given by Himmler in Posen in October 1943. The translation of the relevant part, as it appears in the NMT volumes, is as follows, with the original German given in some cases:³⁷⁹

"I also want to talk to you, quite frankly, on a very grave matter. Among ourselves it should be mentioned quite frankly, and yet we will never speak of it publicly. Just as we did not hesitate on June 30, 1934, to do the duty we were bidden and stand comrades who had lapsed up against the wall and shoot them, so we have never spoken about it and will never speak of it. [...]"

I mean the evacuation of the Jews (die Judenevakuierung), the extermination (Ausrottung) of the Jewish race. It's one of those things it is easy to talk about, 'The Jewish race is being exterminated [ausgerottet],' says one Party Member, 'that's quite clear, it's in our program – elimination [Aus-schaltung] of the Jews and we're doing it, extermination [Ausrottung] is what we're doing.' And then they come, 80 million worthy Germans, and each one has his decent Jew. Of course the others are vermin, but this one is an A-1 Jew. Not one of all those who talk this way has watched it, not one of them has gone through it. Most of you must know what it means when 100 corpses are lying side by side, or 500, or 1,000. To have stuck it out and at the same time – apart from exceptions caused by human weak-

³⁷⁸ Last page of testament reproduced by Trevor-Roper, 180. Discovery and text of testament reported in *New York Times* (Dec. 30, 1945), 1; (Dec. 31, 1945), 1, 6. Text also given by Shirer (1947), 180-181; Domarus, vol. II, 2237.

³⁷⁹ 1919-PS in IMT, vol. 29, 110-173 (in German). Excerpts in English translation in NMT, vol. 13, 318-327.

ness – to have remained decent fellows, that is what has made us hard. This is a page of glory in our history which has never been written and is never to be written, for we know how difficult we should have made it for ourselves, if with the bombing raids, the burdens and the depravations of war we still had Jews today in every town as secret saboteurs, agitators, and trouble-mongers. We would now probably have reached the 1916-1917 stage when the Jews were still in the German national body.

We have taken from them what wealth they had. I have issued a strict order, which SS Obergruppenführer Pohl has carried out, that this wealth should, as a matter of course, be handed over to the Reich without reserve. We have taken none of it for ourselves. [...] We had the moral right, we had the duty to our people, to destroy this people (dieses Volk umzubringen) which wanted to destroy us. But we have not the right to enrich ourselves with so much as a fur, a watch, a mark, or a cigarette, or anything else. Because we exterminated (ausrotteten) a germ, we do not want in the end to be infected by the germ and die of it. [...] Wherever it may form, we will cauterize it."

The evidence that Himmler actually made these remarks is very weak. The alleged text of the Posen speech is part of document 1919-PS, and covers 63 pages in the IMT volumes. The quoted portion occurs in a section of 1-1/2 pages length which stands about mid-way in the text under the heading "Jewish evacuation." The manuscript of the speech, which bears no signature or other endorsement, is said (in the descriptive material accompanying the trial document) to have been found in Rosenberg's files. It was put into evidence at the IMT as part of document 1919-PS, but it was not stated, during the IMT proceedings, where the document was supposed to have been found, and nobody questioned Rosenberg in connection with it. On the other hand, Rosenberg was questioned in regard to 3428-PS, another document said to have been found in his files (which is discussed briefly below), and he denied that it could have been part of his files.³⁸⁰ It is further claimed that during Case 11 "the Rosenberg files were rescreened and 44 records were discovered to be a phonographic recording of Himmler's Poznan speech of October 4, 1943."³⁸¹ The records are supposed to be document NO-5909, and were put into evidence during the testimony of defendant Gottlob Berger, SS General, former head of the SS administrative department, Himmler's personal liaison with Rosenberg's Ministry for the Occupied East, and chief of POW affairs toward the end of the war. In his direct examination, Berger had testified that he had known nothing of any extermination program and also that Himmler had indeed delivered an "interminable" speech at Posen in 1943, to an audience of higher SS leaders which included himself. However, he denied that document 1919-PS was an accurate transcript of the speech, because he recalled that part

³⁸⁰ IMT, vol. 11, 561.

³⁸¹ NMT, vol. 13, 318.

of the speech had dealt with certain Belgian and Dutch SS leaders who were present at the meeting, and³⁸²

"[...] that is not contained in the transcript. I can say with certainty that he did not speak about the Ausrottung of the Jews, because the reason for this meeting was to equalize and adjust these tremendous tensions between the Waffen SS and the Police."

In the cross examination, prosecutor Petersen played a phonograph recording of somebody speaking the first lines of the alleged speech, but Berger at first denied that the voice was Himmler's, and then, after a second playing of the same lines, he said that it "might be Heinrich Himmler's voice." The records were then offered in evidence, and more excerpts, including the one dealing with Jewish evacuation, which is quoted above, were played in court. Berger was not questioned further, however, on the authenticity of the voice, and was excused immediately after the playing of the records. It was only with some reluctance that the court accepted these records in evidence:

"Judge Powers, Presiding: Well, I think that there is enough evidence here, prima facie, that the voice is the voice of Himmler to justify receiving the document in evidence. There is no evidence, however, that it was delivered at Poznan or any other particular place. The discs will be received in evidence as an indication of Himmler's general attitude."

The only "*prima facie*" evidence for the authenticity of the voice (at only one point in the speech), as far as I can see, was the Berger statement at one point that the voice "might be Heinrich Himmler's."

In our judgment, the prosecution did not submit one bit of evidence that the voice was that of Himmler or even that the Posen speech, which everyone would agree dwelled on sensitive subjects, was recorded phonographically. Thus, the authenticity of these phonograph recordings has not even been argued, much less demonstrated.

Reitlinger remarks that a "partial gramophone recording" of the Posen speech exists, but he does not say what part still exists.³⁸³ I have not pursued the question any further, because I would not be qualified to evaluate such recordings if they were produced.

Note that these recordings, claimed to have been belatedly discovered in a dead man's files, were put into evidence at the same "trial," Kempner's circus, which the analysis had already conclusively discredited on independent grounds. In addition, it seems quite peculiar that Himmler would have allowed the recording of a speech containing material that he "will never speak of [...] publicly," and then, despite his control of the Gestapo, have seen these recordings fall into the hands of his political rival Rosenberg. On the basis of these considerations, and also on account of the fact that it is very difficult to believe that Himmler would have wasted the time of so many high SS leaders by delivering the supposed text in document 1919-PS (a most general discussion of the war), one can be sure that we have another forgery here. However, parts of

³⁸² NMT, vol. 13, 457-487.

³⁸³ Reitlinger, 317.

the alleged speech may be authentic, and some parts may have been delivered during the Posen speech or on other occasions.

It is true that Pohl testified in Case 4 that he was present at the Posen speech (probably true) and that Himmler did deliver the remarks concerning extermination of the Jews.

However, Pohl's real point was a ludicrous one. We have noted that Pohl's basic trial strategy was to attempt to exploit the fact that the extermination charges had been thrown specifically at the Gestapo and the RSHA, and he was quick to pounce on such things as the Höss affidavit as absolving him in regard to exterminations. His defense strategy had the same basic logic as the strategies of all defendants we have examined, except for Göring. Thus, Pohl's testimony concerning the Posen speech came in the context of his declaration that the speech was his first information about the exterminations! In other words, the exterminations were allegedly so far removed from his official responsibilities that it required a declaration by Himmler for him to learn of them. He naturally further testified that he shortly later protested to Himmler but was told that it was "none of your business." Thus was expressed merely Pohl's defense strategy of putting self-serving interpretations on that which was passing as fact in court.³⁸⁴

A lesser point should be made before we leave the subject of the Posen speech. It is possible to argue that the text may be genuine at this point but that by "*Ausrottung*" Himmler merely meant "uprooting" or some form of elimination less drastic than killing. The principal basis for such an argument would be that *Ausrottung* is indeed explicitly equated in the text with *Judenevakuierung* and with *Ausschaltung*. The corpses referred to could easily be interpreted as German corpses produced by the Allied air raids, for which the Nazis often claimed the Jews were ultimately responsible. On the other hand, it can be noted that if the remarks are authentic then Himmler regarded it as a right and a duty *dieses Volk umzubringen*, and the comparison with the bloody purge of 1934 at the outset of the remarks seems to justify taking "*Ausrottung*" in its primary sense of extermination. Thus, while such an argument could be made, it would not be very solid.

The conclusive point is that in being asked to believe that the text is genuine we are, in effect, being asked to believe Kempner.

Joseph Goebbels

Finally, there are a number of remarks in *The Goebbels Diaries* but, as the "Publisher's Note" explains, the "diaries were typed on fine water-marked paper" and then "passed through several hands, and eventually came into the possession of Mr. Frank E. Mason." Thus, the authenticity of the complete manuscript is very much open to question, even if the authenticity of much of

³⁸⁴ NMT, vol. 5, 666, 675.

the material can be demonstrated somehow. Interpolation with a typewriter is simple. The original clothbound edition of the “*Diaries*” even contains a U.S. government statement that it “neither warrants nor disclaims the authenticity of the manuscript.”³⁸⁵

Wilfred von Oven, who was an official in the Goebbels Ministry and became, after the war, the editor of the right-wing German-language Buenos Aires journal *La Plata*, had come forward with a curiously eager endorsement of the authenticity of *The Goebbels Diaries*. However, the net effect of his comments is in the reverse direction, for he tells us that (a) the diaries were dictated from handwritten notes (which were subsequently destroyed) by Goebbels to *Regierungsrat* Otte, who typed them using the special typewriter, having characters of almost 1 cm height, that was used for typing the texts that Goebbels used when he gave speeches (!) and (b) Oven “often observed” Otte, at Goebbels order, “carefully and precisely as ever” burning these pages toward the end of the war after having made microfilms of them. The point of the latter operation, as Goebbels is said to have explained to Oven in the April 18, 1945 entry in the latter’s diary (which was published in 1948/1949 in Buenos Aires), was that Goebbels “had for months taken care that his treasure, his great secret, result and accumulation of a more than twenty year political career, his diary, will remain preserved for posterity but not fall into unauthorized hands.”

This strange story of Oven at least throws some light on the reference to an unusual typewriter in Louis P. Lochner’s Introduction to the *Diaries*. If Oven’s account is true, then it is possible that persons unknown obtained the special typewriter or a facsimile and a set of the microfilms and manufactured an edited and interpolated text. However, it is next to impossible to believe that Goebbels’s diaries were indeed transcribed as Oven has described.³⁸⁶

The *Einsatzgruppen*

The remaining part of the extermination legend is that the *Einsatzgruppen* exterminated Russian Jews in gasmobiles and by mass shootings. This is the only part of the legend which contains a particle of truth.³⁸⁷

At the time of the German invasion of Russia in June 1941, there was a Führer order declaring, in anticipation of an identical Soviet policy, that the war with Russia was not to be fought on the basis of the traditional “rules of warfare.” Necessary measures were to be taken to counter partisan activity, and Himmler was given the power to “act independently upon his own respon-

³⁸⁵ Editor’s note: For a comprehensive collection and analysis of Joseph Goebbels’s remarks on the Jews, in particular as documented in his diaries, see Dalton (2019).

³⁸⁶ Lochner, 126, 138, 147f., 241, viii. Oven’s remarks are in *Nation Europa* (Apr. 75), 53-56.

³⁸⁷ Editor’s note: For a comprehensive and critical analysis of extant physical, documental and anecdotal evidence on the *Einsatzgruppen*’s activities, see the massive two-volume work by Mattogno (2022a).

sibility.” Everybody knew that meant executions of partisans and persons collaborating with partisans. The dirty task was assigned to four *Einsatzgruppen* of the SD, which had a total strength of about 3,000 men (*i.e.* of the order of 500 to 1,000 men per group). Knowledgeable authorities, incidentally, have accepted that such anti-partisan operations were necessary in the Russian theater, where the enemy had no regard for the “rules.”³⁸⁸

We have had occasion to note in several instances that Jews did, in fact, pose a security menace to the German rear in the war. The Red Cross excerpt makes this quite clear. The task of the *Einsatzgruppen* was to deal with such dangers by all necessary means, so we need not be told much more to surmise that the *Einsatzgruppen* must have shot many Jews, although we do not know whether “many” means 5,000, 25,000 or 100,000. Naturally, many non-Jews were also executed.

However, the claim goes beyond this, and asserts a *dual* role for the *Einsatzgruppen*; they were charged not only with keeping the partisan problem under control but also with exterminating all Jews (and gypsies). Common sense alone should reject the notion that the *Einsatzgruppen*, which had a total strength of about 3,000 men, as a matter of general policy, spent their time and effort pursuing objectives unrelated to military considerations. We are again offered a fact for dual interpretation.

The story is that there was no written order to exterminate the Jews, but that the *Einsatzgruppen* commanders got their orders orally and at different times. Ohlendorf commanded Group D in southern Russia, and he got his orders orally from Streckenbach in June 1941. Rasch of Group C, operating to the immediate north of Ohlendorf, did not get his orders until August 1941. Groups A and B operated around the Baltic states and to the south-east of the Baltic States, respectively, and were commanded by Stahlecker and Nebe, respectively.³⁸⁹

The main evidence for exterminations is a huge amount of documentary evidence which is simply funny. There is the celebrated document 501-PS, which the Russians possessed at a show ‘trial’ that they staged in December 1943.³⁹⁰ One part is said to be a letter to Rauff in Berlin, written by an SS 2nd Lieutenant Becker. This is apparently the only document claimed to be signed by Becker, who is said to have been dead at the time of the IMT trial. It reads:³⁹¹

“The overhauling of the Wagen by groups D and C is finished. While the Wagen in the first series can also be put into action if the weather is not too bad, the Wagen of the second series (Saurer) stop completely in rainy weather. [...] I ordered the Wagen of group D to be camouflaged as house trailers. [...] the driver presses the accelerator to the fullest extent. By do-

³⁸⁸ Veale, 220-224; Reitlinger, 83, 198; Dawidowicz, 125.

ing that, the persons to be executed suffer death from suffocation and not death by dozing off as was planned."

The text of the document is as spurious sounding as one should expect the text of such a document to be; it was allegedly written by an obscure 2nd Lieutenant, and fortuitously fell into the hands of the Russians in 1943! Aleksandr I. Solzhenitsyn, in *The Gulag Archipelago*, mentions the case of the Bavarian Jupp Aschenbrenner, whom the Russians persuaded to sign a similar declaration that he had worked on wartime gas vans, but Aschenbrenner was later able to prove that, at the time he had supposedly been working on the vans, he was actually in Munich studying to become an electric welder.³⁹²

The most frequently cited evidence is a collection of documents purporting to be daily and other reports of the *Einsatzgruppen* to Himmler and Heydrich for the period June 1941 to May 1942. Document numbers are 180-L – said to be a report of Stahlecker found in Himmler's files³⁹³ – 2273-PS – said to be another Stahlecker report on actions up to January 31, 1942, "captured by Russians in Riga" (Stahlecker was killed in March 1942)³⁹⁴ – 119-USSR, and many others, too numerous to list, most having numbers around NO-3000. Beside telling of regular anti-partisan activities, the reports tell of individual actions of mass executions of Jews, with numbers of victims usually running in the thousands. It is indicated, in most cases, that many copies, sometimes as many as a hundred, were distributed. They were mimeographed, and signatures are most rare and, when they occur, appear on non-incriminating pages. Document NO-3159, for example, has a signature of a R. R. Strauch, but only on a covering page giving the locations of various units of the *Einsatzgruppen*. There is also NO-1128, allegedly from Himmler to Hitler reporting, among other things, the execution of 363,211 Russian Jews in August-November 1942. This claim occurs on page 4 of NO-1128, while initials said to be Himmler's occur on the irrelevant page 1. Moreover, Himmler's initials were easy to forge: three vertical lines with a horizontal line drawn through them.³⁹⁵

In connection with these matters, the reader should be informed that, when examining printed reproductions of documents in the IMT and NMT volumes, a handwritten signature not be assumed unless it is specifically stated that the signature is handwritten; "signed" generally means only a typewritten signature. Document 180-L, for example, is reproduced in German in the IMT volumes, and excerpts in English are reproduced in the NMT volumes. In both cases, signatures are indicated, but the actual document merely has "gez. Dr. Stahlecker" (signed Dr. Stahlecker) typewritten in two places.³⁹⁶

There are two documents said to have been authored by Hinrich Lohse, Reichskommissar for the Ostland, who was also the person to whom Wetzel's "Brack remedy" letter was addressed (see p. 231). One of the documents deals

³⁹² Solzhenitsyn, 112n.

³⁹³ IMT, vol. 3, 559.

³⁹⁴ Reitlinger, 201, note 70 on page 611.

with *Sonderbehandlung* and was alluded to in Chapter 4 (p. 158). Like Wetzel, Lohse was never called as a witness at Nuremberg. Unlike Wetzel, however, Lohse stood trial before a German court, and was sentenced in 1948 to ten years imprisonment. However, he was released in 1951 on grounds of ill health, and awarded a pension, which was shortly later disallowed on account of public protest. As for the comments attributed to him, Reitlinger remarks that they “saved him from the Allied Military Courts and perhaps the gallows” for, while they speak of atrocities, they are so worded as to put the author of the documents in opposition to the crimes. The document dealing with *Sonderbehandlung* is a letter from Lohse to Rosenberg dated June 18, 1943. The actual document, 135-R, seems to be claimed to be an unsigned carbon copy of the correspondence, found in SS files. The relevant passage reads:³⁹⁷

“That Jews are sonderbehandelt requires no further discussion. But that things proceed as is explained in the report of the Generalkommissar of 1 June 1943 seems scarcely believable. What is Katyn compared to that?”

Three unsigned reports supposedly received from the Generalkommissar (Wilhelm Kube, Generalkommissar for White Russia) are attached to the document.

The second Lohse document is 3663-PS, and is one of several documents bearing the major irregularity of having been processed by the Yivo (Yiddish Scientific Institute) of New York before being submitted as Nuremberg trial documents. There are about 70 such documents said to have been found in the Rosenberg Ministry in September 1945 by Sergeant Szajko Frydman of the U.S. 82nd Airborne Division. Frydman, however, was a staff member of the Yivo both before and after his service in the Army. Indeed, the Yivo was so active in producing documents supposedly found in the Rosenberg Ministry that it may very well have some enlightening information on the origins of the supposed text of Himmler’s Posen speech. The first part of the document is written on the stationery of the Ministry. It is a letter to Lohse, dated October 31, 1941, with a typewritten signature by Dr. Leibbrandt and an illegible handwritten endorsement by somebody else. It reads:

“The RSHA has complained that the Reichskommissar for the Ostland has forbidden executions of Jews in Libau. I request a report in regard to this matter by return mail.”

The second part of the document is the reply, handwritten on the reverse side of the first part, supposedly in the hand of Trampedach and initialed by Lohse (with a letter “L” about 1-1/2 inches high). It reads:

“I have forbidden the wild executions of Jews in Libau because they were not justifiable in the manner in which they were carried out.

I should like to be informed whether your inquiry of 31 October is to be regarded as a directive to liquidate all Jews in the East? Shall this take place without regard to age and sex and economic interests (of the Wehrmacht, for instance, in specialists in the armament industry)? Of course,

³⁹⁷ Hilberg (1961), 252n; Reitlinger, 232f. documents 135-R and 3633-PS reproduced in Poliakov & Wulf (1955), 190ff.

the cleansing of the East of Jews is a necessary task; its solution, however, must be harmonized with the necessities of war production.

So far, I have not been able to find such a directive either in the regulations regarding the Jewish question in the 'Brown Portfolio' or in other decrees."

Obviously, Lohse could not have any conceivable reason to contest the authenticity of these documents because, though they suggest exterminations, they emphatically excuse him.

Another document from the Yivo is 3428-PS, supposedly a letter from Kube to Lohse, reporting shipments of German, Polish, and other Jews to the Minsk area, and the liquidation of some of them. From the mimeographed summary examined, it is not clear whether or not the document is supposed to have a handwritten signature. Wilhelm Kube was assassinated in September 1943.³⁹⁸

Other documents that are relevant are numbered 3660-PS through 3669-PS (excepting 3663-PS). The documents are attributed to various people, e.g. Kube and Gewecke, and in every case the descriptive material accompanying the document specifies that the location of the original is unknown, and that only a photostat is available. With only a couple of exceptions, there are no handwritten signatures.

Even Reitlinger seems puzzled by the existence of these reports and other documents, because he remarks:³⁹⁹

"It is not easy to see why the murderers left such an abundant testimony behind them, for in spite of their wide circulation list, Knobloch's [the Gestapo official who edited the reports] reports seem to have been designed primarily to appeal to Himmler and Heydrich. Thus, in addition to much juggling with the daily death bills in order to produce an impressive total, there are some rather amateur essays in political intelligence work."

It is the "amateur essays" that convince one of forgery here; the contents of these reports are ridiculous in the selection of things reported. To give a few examples from excerpts reproduced in NMT volume 4:⁴⁰⁰

"The tactics, to put terror against terror, succeeded marvelously. From fear of reprisals, the peasants came a distance of 20 kilometers and more to the headquarters of the Teilkommando of Einsatzgruppe A on foot or on horseback in order to bring news about partisans, news which was accurate in most of the cases. [...]"

In this connection, a single case may be mentioned, which proves the correctness of the principle 'terror against terror.' In the village of Yachnova it was ascertained on the basis of a report made by the peasant Yemelyanov and after further interrogations and other searches that partisans had been fed in the house of Anna Prokovieva. The house was burned down on 8 August 1941 at about 21 hours and its inhabitants arrested.

³⁹⁸ Hilberg (1961), 709; Reitlinger, 560; 3428-PS in NMT, vol. 4, 191-193.

³⁹⁹ Reitlinger, 213f.

⁴⁰⁰ NMT, vol. 4, 168f., 187, 190.

Shortly after midnight partisans set light to the house of the informer Yemelyanov. A detachment sent to Jachnowa on the following day ascertained that the peasant woman Ossipova had told the partisans that Yemelyanov had made the report, which had caused our action.

Ossipova was shot and her house burned down. Further, two 16-year-old youths from the village were shot because, according to their own confession, they had rendered information and courier service to the partisans. [...]

[...] Several Jews who had not been searched thoroughly enough by the Lithuanian guards drew knives and pistols and uttering cries like 'Long live Stalin!' and 'Down with Hitler!' they rushed upon the police force of whom 7 were wounded. Resistance was broken at once. After 150 Jews had been shot on the spot, the transport of the remaining Jews to the place of execution was carried through without further incident.

In the course of the greater action against Jews, 3,412 Jews were shot in Minsk, 302 in Vileika, and 2,007 in Baranovichi.

The population welcomed these actions, when they found out, while inspecting the apartments, that the Jews still had great stocks of food at their disposal, whereas their own supplies were extremely low.

Jews appear again and again, especially in the sphere of the black market. In the Minsk canteen, which serves the population with food and is operated by the city administration, 2 Jews had committed large-scale embezzlements and bribes. The food, which was obtained in this way, was sold on the black market."

It is not difficult to see why these documents exist: without them, the authors of the lie would have no evidence for their claims except testimony. We have seen that with Auschwitz there was an abundance of material facts to work with, and whose meanings could be distorted: shipments of Jews to Auschwitz, many of whom did not return to their original homes, large shipments of a source of hydrogen cyanide gas, elaborate cremation facilities, selections, the stench. The situation with the *Einsatzgruppen* was different; there was only one fact: the executions. Standing alone, this fact does not appear impressive as evidence, and this consideration was no doubt the motivation for manufacturing these documents on such a large scale. This is in contrast to the Auschwitz hoax, for which forgery of documents is not nearly so prominent, and where the forgeries were accomplished with more care. With Auschwitz, we are dealing with a lie manufactured by Washington, but with the *Einsatzgruppen*, we are dealing with one manufactured by Moscow, and the hand is correspondingly heavier.

It is worth mentioning that the "gasmobiles" were not charged in Soviet propaganda until the middle of the war. Massacres of Jews were claimed, of course, early in the development of the propaganda, and the *New York Times* story of April 6, 1942 (Chapter 3, p. 100), is an example. The massacres are not claimed to have taken place via gasmobiles. A contemporary Soviet propaganda production was the book *We Shall Not Forgive!* (Foreign Languages

Publishing House, Moscow, 1942). The book opens with a summary, presented by Molotov on April 27, 1942, of the crimes that the Germans had supposedly committed in their invasion of Russia. The remainder of the book elaborates the charges with commentaries and photographs, with quite a few obvious phonies in the collection. Since the Germans are charged with virtually every crime imaginable, they are naturally charged with pogroms and massacres of Jews, but gasmobiles do not appear in the charges. As far as we can see, the first claims of gasmobile exterminations on Russian territory (as distinct from claims of gasmobiles at Chełmno in Poland) came in July 1943 during a Soviet trial of 11 Russians accused of having collaborated with the Germans at Krasnodar. This suggests that the Russian claims may have been inspired by the gas-chamber propaganda that had started in the West late in 1942. In any case, the late appearance of the gasmobile charges, just as in the case of the Auschwitz propaganda, is further proof that the charges are inventions.⁴⁰¹

There is also a certain amount of testimony that should be mentioned. At the risk of belaboring a perfectly simple point, let us again observe what had been pointed out here from many different angles: that a witness testifies in court to the truth of *X*, under conditions where the court is already committed to the truth of *X*, is historical evidence of absolutely nothing.

The most frequently referred to testimony is that of Ohlendorf, an SS Lieutenant General and an economist, who had had some differences with Himmler, and consequently found himself assigned to command group D for one year – summer 1941 to summer 1942 – in southern Russia. Ohlendorf was the most literate of the people involved in this matter.
